The problems confronting farmers because of the growth of vertical integration and contract farming are an example. FCS has made a series of case studies of highly integrated cooperatives and has been developing some measures of the extent of integrated operations in cooperatives. It has issued publications based on surveys of what has been happening in petroleum and dairy cooperatives.

FCS has also been providing basic information for a number of cooperatives considering the possibilities of merger. Results of its studies have recently been used in mergers of four egg and poultry cooperatives in New England with a regional farm supply association and of two dairy associations in the Midwest. Other cooperatives are using studies of FCS in evaluating whether or not mergers will contribute to more efficient operations for their members.

To help keep up with the increasingly complex problems of cooperatives, FCS has been studying ways to help them strengthen their management. It has issued a report on the extent and ways key employees and farmer directors get management training. To help cooperatives develop better directors, it is now completing a study to find out what directors know about their jobs and what evaluation may be placed on their performance.

The Service has sponsored several national conferences of bargaining associations. It has been cosponsor of a series of regional member relations conferences to help cooperatives find ways to give their members a better understanding of their operations. Its studies have also contributed to annual conferences on research by those regional farm supply cooperatives that have established economic research departments.

Cooperation with land-grant colleges has increased. Starting in 1954 it has jointly sponsored five regional conferences and two national ones for research workers who deal with cooperative problems.

FCS has continued its efforts to help strengthen marketing operations of cooperatives—studying grain storage in the South to improve handling and get greater returns for this increasingly important crop in that area; conducting research to find the best ways to operate livestock auctions in the South and in the Northeast; and making numerous cost studies to help cooperatives reduce their operating costs.

One of the problems limiting the effective development of farm supply cooperatives is credit control. In 1955, FCS initiated a series of studies in various parts of the country to find better ways for cooperatives to handle farmers' accounts. It is also making a series of studies on inventory handling and control by farm supply associations.

The increased interest in possibilities of farmers using cooperatives to help improve their marketing and buying power is reflected in the larger number of requests for information and for publications issued by this agency.

FARMERS HOME ADMINISTRATION

Helping farm families strengthen their positions on family-type farms throughout the 50 States of the Nation and Puerto Rico and the Virgin Islands continues to be the objective of the Farmers Home Administration. The agency serves the farmers eligible for its credit by making and insuring loans suited to their individual needs and accompanying the loans with whatever farm and home management assistance is needed. The agency does not compete with other leaders.

The agency's loans help eligible farm families operate more efficiently; become owners of family-type farms by buying land and improving land and buildings; carry out measures of soil and water conservation; develop water systems for irrigation and farmstead use; take measures to protect small watersheds; and build or repair farmhouses and other essential farm buildings. The agency also extends emergency credit to farmers in areas hard hit by floods, drought, or other natural calamities.

The administration has sponsored measures in the past 6 years which have expanded the Farmers Home Administration's regular loan services, increased the number of the agency's credit services, and improved the efficiency of its operations.

To meet the increased cost of modern farming, the maximum amount a family-type farmer may be indebted for operating loans has been increased from $10,000 to $20,000.

To implement the rural development program, eligible farmers who have part-time employment off the farm may obtain operating and farm development loans.

The scope of the emergency loan program has been broadened in the past 6 years, especially in areas that experienced prolonged droughts and in other areas where farmers suffered losses to crops and property from hail, windstorms, and other causes.

Soil and water conservation loans, formerly available only as water facilities loans and in 17 Western States, are being made to farmers and their associations throughout the Nation.

The agency now is making loans to qualified organizations to help pay for planning and carrying out structural and land treatment measures to protect and develop small watershed land and water resources. The first loans of this type were made in 1959.

Loans to buy or improve farms and for soil and water conservation are made from funds advanced by private lenders and insured by the Farmers Home Administration, as well as from appropriated funds. This insured loan program has been greatly improved since 1953. Use of private capital reduces the need for appropriated funds. Routines for handling insured loans have been simplified and many steps have been

taken to increase the attractiveness of this form of investment. While insurance companies and other large lenders have invested heavily in insured farm loans, country banks have come to be the principal sources of insured loan funds. Insured loans made during the fiscal years 1954 through 1959 totaled $202,457,000. During the 6 previous fiscal years the insured loans totaled $65,708,000.

There has been a general increase in the total loans of all types, made and insured, in the past 6 years. The fiscal 1959 total was $361,629,000. In 1953, the total was $228,461,000.

A similar increase is noted in borrowers' repayments. Collections totaling $347,700,000 were made in fiscal 1959, compared with $174 million in 1953.

Improvements made in the administration of the agency's operations since 1953 include speeding up loan service by placing more authority in county supervisors' hands, developing a well-organized training program for new employees, strengthening the audit system, shortening regulations, eliminating unnecessary forms, and consolidating four area finance offices into one national finance office.

The staffing pattern has been rearranged and placed on a more efficient basis which has resulted in the need for fewer employees and in greater opportunities for advancement by the more capable employees.

The agency has increased the emphasis on helping borrowers develop sound farming systems, making certain that it does not compete with other lenders, graduating borrowers to other sources of credit at the earliest opportunity, and helping applicants for credit make full use of private and cooperative credit sources.

RURAL ELECTRIFICATION ADMINISTRATION

During this session of Congress there has perhaps been more demagoguery and unfounded charges involving rural electrification than any other subject. It is a tragedy that this aspect of the Department of Agriculture's program that is so universally supported in the Congress should be subjected to the political shenanigans of a few who would unethically distort the true picture. I won't take the time to repeat or refute the incredible and ridiculous charges that were made in recent months against the Administration and against Secretary Benson involving rural electrification, but will let the record of accomplishment speak for itself.

Since January 1953, the Rural Electrification Administration has stepped up its activities to help 985 active rural electric systems and 661 rural telephone systems to meet a continuously rising demand for their services.

During fiscal year 1959, loans to rural telephone companies and cooperatives by REA reached a record fiscal year high of $98.9 million. Total telephone loans now stand at $575.2 million, and more than four-fifths of this amount has been loaned under this administration.

Loans to rural electric systems during fiscal 1959 totaled $177.3 million. About two-thirds of these funds will be used to help borrowers increase system capacity to meet the increase in the use of electricity by rural people. More than 32 percent of the $3.9 billion in electric loans approved since REA began has been approved during the little more than 6½ years of this administration.

In recent years, REA has given particular attention to the needs of its borrowers for an expanding supply of power at lower cost. It has pressed the search for more economical means of power production and has assisted electric borrowers in obtaining substantial savings in initial investment and operating costs through interconnection, joint operations, and more efficient generating units.

During fiscal 1959, loans were approved to provide additional generating capacity in the amount of 163,600 kilowatts. Generation and transmission loans have accounted for almost 30 percent of the total loaned for rural electrification since January 1, 1953, compared with only 19 percent before that date. These have included first loans to five new G. and T. federations and to two established borrowers for conventional generating facilities to be used at proposed atomic energy plants. One of these atomic plants (Elk River, Minn.) is under construction.

Rural electric systems financed by REA serve more than 4.6 million consumers. About 800,000 of these received service during the past 6 years. This current rate of growth—about 130,000 a year—is expected to continue.

The average cost of power to rural residential consumers has dropped about seven-tenths of a cent per kilowatt-hour since 1952. The cost now is 2.65 cents per kilowatt-hour, the lowest in REA history.

REA activities since 1953 have brought strength and direction to the rural telephone program. This plus an improvement in supplies of materials and equipment after settlement of the Korean conflict, has speeded the job of giving better telephone service to rural communities. In early 1953, some 40 REA borrowers had cutover 85 dial central offices to bring new or improved service to 7,500 subscribers. As of June 30, 1959, 531 borrowers had cutover 2,062 new dial exchanges. Loans approved since January 1, 1953, will benefit about 900,000 farm families and other rural subscribers. Total telephone loans to date will benefit about 1,200,000 rural subscribers.

Given encouragement toward interdependence and self-reliance, REA borrowers have made substantial financial growth since 1953. Net worth of electrification borrowers has more than tripled, increasing from $161 million at the end of December 1952, to $515 million on December 31, 1958. During the period January 1, 1953 to June 30, 1959, the number of electrification borrowers behind in their payments dropped from 45 to 2. Payments on debt in advance of due date have risen from $52.5 million to about $146 million. In the much newer telephone program advance payments now stand at almost $1.6 million, and all but 13 borrowers are current or ahead of schedule on debt payments.

REA has streamlined procedures to speed processing of loans, give improved service to borrowers, and reduce administrative costs. With 11 percent fewer employees, REA is now carrying out much bigger electric and telephone programs than in 1952. Working with industry, REA carries on constant research to hold down construction costs and improve performance and service.

To help borrowers keep ahead of new power demands, REA has developed new techniques and approaches to long-range planning for rural electric systems. Borrowers will be able to schedule construction for several years ahead and to expand at minimum cost. New telephone construction is also planned to meet needs over an extended period.

CONCLUSION

Mr. Speaker, I submit these facts for consideration of the Congress and the Nation. When the smoke from inflammatory statements by demagogues has cleared away, these facts will continue to stand.

The Democrat-controlled Congress has failed to pass needed changes in existing, obsolete farm laws. While virtually everyone agrees a fresh approach is needed, Congress has not acted.

Meanwhile, agriculture is moving forward not particularly because of what Congress is doing, but in many cases, in spite of what Congress has failed to do.

Let the record stand and let the Nation know it.

Tragedy in World's Refugee Camps

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HENNINGS. Mr. President, on August 11, 1959, I introduced S. 2513, to authorize the admission into the United States of certain refugees, as a legislative means, in my opinion, of carrying out obligations and meeting responsibilities of the United States in the world refugee year.

The world refugee year runs from July 1, 1959, until June 30, 1960.

The United Nations, with the necessary cooperation of the countries throughout the world, hopes to solve some of the critical problems concerning refugees who are outside their homelands because of war or other armed hostilities, political situations, or natural disasters. The plight of many of these stateless persons appears hopeless unless the nations of the world work together in giving them grounds for hope rather than despair.

I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD an article written by William R. Frye, published in the Sunday Star of Washington, D.C., August 30, 1959, entitled "San Sabba Symbol of Tragedy in World's Refugee Camps."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAN SABBA SYMBOL OF TRAGEDY IN WORLD'S REFUGEE CAMPS

(By William R. Frye)

TRIESTE, ITALY.—San Sabba, the forbidden camp of Europe, is a tragic spectacle of inhumanity and suffering with overtones of courage, tenacity, and struggle for a better future.

For something like a year, San Sabba—a refugee camp in an abandoned warehouse here—has been closed to outsiders because Italy feared publicity on what had become an international scandal. I am the first newspaperman to visit this camp since the day its doors slammed shut.

Much has been done to clean up San Sabba. Men still come out of its brawls with knife wounds, wine still flows freely at 3 cents a glass, and some of the girls are still drawn into prostitution, but it is no longer the hellhole it used to be.

Except for family quarters, men's and women's barracks are physically separated now and guards are posted to keep them apart at night—with what success remains to be seen since refugee guards can be bribed. There are 700 single men here as a against 90 girls and they have just come out of the pressure chamber of Yugoslav communism.

TO HELP THE CHILDREN

Stellio Crasnig, Italian camp director, showed me with pride the plot of earth be-

side a shed where he plans to build a playground for the children—and nearly every family has several. There already is a nursery complete with babysitter for youngsters of ill or working mothers, obviously built with care and compassion.

But none of this can do more than perfume the dirty underwear of San Sabba, or make it anything but a tragedy to have to live there. Some 1,270 refugees, nearly all of them from across the Yugoslav border a scant mile away, constitute the present camp population.

They are packed in like fish in the hold of a ship. Beds are jammed together, 17 to a barren barrackslike room with no space between. Despite all efforts, the building is disintegrating inside and out, and laundry hangs from stair wells as if to underline the tenement appearance. Railroad tracks which once brought in rice for storage still run down the middle courtyard.

A 7-year-old boy and his little sister, 6, were riding tandem on a wooden rocking horse when I came into the yard. Brown-haired with bright brown eyes, they were delightful children—with a gayety and spontaneity which only a child could manage in San Sabba.

Their names were Bruno and Luciana Mlakar. They had never known any other home. Their parents had fled from Pola, Yugoslavia, when Bruno was an infant of 3 months. Luciana was born in camp.

Soon thereafter, their father deserted the family, leaving his wife with the children. No country wants a destitute family without a breadwinner; it isn't economically profitable. So Virginia Mlakar, 30, is stuck in San Sabba with no prospect that either she or her children will ever get out.

A REFUGEE TWICE

Ivan Karcenko, 64, a gray-haired mason with a deeply lined face, came to see me. He has been a refugee twice in his life—once from Russia in 1920 and again from Yugoslavia his adopted home, in 1950. Both times, he said, he fled for the same reason—to escape Communist oppression.

Karcenko has been in San Sabba more than 9 years. He prays to emigrate to the United States and has been told that the wheels are turning—but he has heard this before and it has always turned out to be a bitter illusion.

"If only I can get somewhere while I am still able to work," he said wistfully. To men in forced idleness for years, regular work seems the next thing to heaven.

"They've been telling me for 8 years, you will go. But I stay. This time it will be the same old story."

I said I hoped not. His eyes filled with tears, and you could see that hope had not yet died. For plenty of others it has. There are 111 people at San Sabba who have been there 10 years or more. Most of them have been passed over dozens of times by governmental selection missions.

They are too old (some governments refuse to consider anyone over 40) or they have had TB or they once got into a fight and served a jail term or perhaps, like Mrs. Mlakar, they just aren't considered economic assets. Few countries base their immigration policies on humanitarianism.

Just such people—people who have been in refugee camps for tragically long periods of time—are being given top priority by the U.N. this year, World Refugee Year. By next year, the U.N. High Commissioner for Refugees hopes to have them all out of camps.

This would not mean that the refugee problem had been solved; far from it. But at least the pipeline would have been cleared so that new people entering it could see a little light at the end of the tunnel and not be faced with indefinite years of dreary camp life.

COMING IN BY HUNDREDS

Some 400 refugees a month are flooding into San Sabba. It is not considered discreet, since Yugoslavia is a friendly neutral, to emphasize that they are fleeing from communism; but it is a fact.

Here in Italy, according to Mr. Crasnig, 95 percent are given refuge. Others say the figure is a bit lower, but at any rate nearly everyone but criminals, known prostitutes, and spies are admitted.

In Austria, well over half the Yugoslav refugees were turned back and forced to repatriate—a fact which has aroused a storm of protest. Austrians say publicly that it is because they are economic refugees, that is, just people who want a better life, not political refugees escaping persecution.

Privately, Austrians say: "If you are so concerned about these people, why don't you take some of them yourself?" As evidence that the outside world sets one standard for Austria and another for itself, they point to the case of the four Yugoslavs who stowed away on a Danish freighter and were denied entry by half a dozen countries, including Canada and the United States, until finally, last week, Austria gave them refuge. Refugees are already a tremendous burden on the Austrian economy.

The U.N. is working hard to make World Refugee Year a success and so are many other organizations. But money is slow in coming in; some countries have not even organized United Fund drives. And most immigration legislation is still impersonal, cruel, and restrictive.

It is obvious from this side of the ocean, after a survey of camps in four countries, that a lot more will have to be done. If World Refugee Year fails, the doors of San Sabba will slam shut again—not to keep the world out, but to lock tragedy in.

Resolution of Polish Legion of American Veterans, Bay City, Mich., September 5, 1959

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I wish to insert into the Appendix of the CONGRESSIONAL RECORD a resolution adopted by the Polish Legion of American Veterans at Bay City, Mich., September 5, 1959.

The resolution follows:

RESOLUTION ADOPTED BY THE POLISH LEGION OF AMERICAN VETERANS AT BAY CITY, MICH., SEPTEMBER 5, 1959

The Polish Legion of American Veterans Department of Michigan and Ladies Auxiliary meeting in convention hereby resolve as follows:

"Whereas (1), our constitution in its preamble provides that one of the purposes of our organization is to 'combat the destructive propaganda of communism and other alien influences endeavoring to weaken or destroy our American institutions and democratic form of government'; and

"Whereas (2), we are mindful of the obligation we owe to the land of our Forefathers, also being mindful that this is the 20th anniversary of the invasion of Poland by Nazi and Communist armies, and being mindful of the fact that Poland is subject to pressures by the armed forces of Soviet Russia and that the Communist government in Poland was foisted on that country contrary to the will of its people, and that as a consequence, civil liberties and the right to the pursuit of happiness do not exist in Poland, and all basic human rights are trampled; all of which is contrary to the basic freedoms which we Americans regard as fundamental for all human beings; and

"Whereas (3), we anticipate the exchange visits between President Eisenhower and Nikita Khrushchev will serve as a means of relieving tensions between East and West, but we also anticipate that such visits can be misinterpreted by the entire world as condoning the Communist system by the United States: Now, therefore, be it

"*Resolved*, That (4), as loyal American citizens, we respect the decision of the President of the United States in extending this invitation. However, we do not feel that the resulting visit merits any enthusiasm from us, nor do we feel that Mr. Khrushchev is entitled to anything more than civil courtesy. He should not be subjected to any personal affronts or indignities, but all citizens of our country should receive him for what he is, namely, the head of the Government of the U.S.S.R. and the leader of the world Communist movement; and further be it

"*Resolved* (5), that during his stay in the United States, Mr. Khrushchev be given every opportunity to study the American way of life, our high regard for civil liberties, and our high standards of living, and the opportunities for advancement which can only be enjoyed by a free people; further be it

"*Resolved* (6), that our President, his Cabinet, and our Congress remind the leader of the Russian people that we demand the withdrawal of all Russian troops from Poland, free and unfettered elections in all the captive countries, and the return of local self-government for all the peoples of the world, as an inherent right of free men."

BENJAMIN C. STANCZYK,
Common Pleas Judge, Detroit, Mich., Chairman, Post 1.

CHESTER WIERZBINSKI,
Post 12.

National Milk Producers Federation Opposes Use of Oleo by the Navy

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I received from the National Milk Producers Federation in opposition to the Navy's use of oleomargarine in their rations.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL MILK PRODUCERS FEDERATION,
Washington, D. C., September 8, 1959.
Senator WILLIAM PROXMIRE,
U.S. Senate,
Senate Office Building, Washington, D.C.

DEAR SENATOR PROXMIRE: This is to urge you to oppose enactment of S. 2168, relating

to the use of oleomargarine in Navy rations.

Very real progress is being made in reducing the stocks of butter and other dairy products held by the Commodity Credit Corporation. For the past 3 or 4 years, CCC butter stocks have been held within reasonable and manageable proportions. The situation is particularly good at the present time, and all current stocks have been committed to available outlets. A similar situation existed for a short time in the fall of 1956 when there were no stocks for which a disposal outlet was not available.

This does not mean that the problem has been solved, nor that we have reached a stage where we can throw overboard the outlets which have made this progress possible.

One of the programs making an important contribution toward improving the support program is the utilization of dairy products by the Armed Forces. Congress on several occasions has passed legislation making it possible to greatly increase the use of butter and other dairy products by the Army, Navy, Air Force, and Coast Guard, and by the military and veterans' hospitals. This has been done on the theory that since we have abundant supplies of dairy products, and need to find outlets for CCC stocks, we ought to let our military forces have as much of them as they want and can use.

S. 2168 would be a reversal of the progress made in this direction. We believe it would be a mistake to interfere with the military use program in view of the important contribution it is making toward keeping CCC stocks of butter and other dairy products within reasonable bounds.

Since we have abundant supplies of butter, it does not make sense to feed our fighting men oleomargarine and then give away the butter overseas or convert it to byproduct uses.

It seems to us, also that the very small benefits, if any, that might result to agricultural producers of cottonseed oil under this bill are quite disproportionate to the rather substantial harm that would be done to dairy farmers and the dairy support program.

The only parties who would really benefit under S. 2168 are the oleomargarine manufacturing companies. These are few in number and large in size, and we think it is not unreasonable to assume that whatever gains they made under S. 2168 would not be passed back to the farmers.

S. 2168 would not result in economies to the Government as its proponents claim. This is because decreased use of butter by the Navy would be counterbalanced by increased Government purchases under the support program. Thus a dollar saved in Navy rations would mean a dollar lost under the support program, plus storage and disposal costs.

Although cotton also is under a support program, the factors are not the same. Cottonseed oil is less perishable and is more easily diverted to nonfood uses. The cost of removing cottonseed oil from the market, should that become necessary, at 11 or 12 cents per pound is much less than the cost of removing butter at about 58 cents per pound.

A great deal of thought has been given to attracting young men to the armed services and to holding in the services men who have been trained. Changing our policy of providing the fighting forces with the very best of food would not further this goal.

It has not been necessary in the past for the Navy to use a butter substitute any more than it has been necessary for it to replace its meat ration with cheaper vegetable calories, and there is no compelling reason why it should do so now. On the contrary, there are substantial reasons why this long continued policy ought not to be changed.

E. M. NORTON,
Secretary.

Sun Dance of the Dakota

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. McGOVERN. Mr. Speaker, from July 29 through August 1 the Oglala Sioux Tribal Sun Dance was observed on the Pine Ridge Reservation of South Dakota. Ben Chief, the honorary sun dance chief, was on hand to welcome the many visitors, both white and Indian, who flock to South Dakota each year to partake of the natural beauty of the Black Hills and the colorful attractions of the State, ranging from the world's only corn palace at Mitchell to the sun dance of the Sioux.

There is a real tragedy, however, in the efforts of my fellow South Dakotans of Indian descent to recapture something of the past glory of the mighty Sioux Nation. Their magnificent history is well known to every American schoolboy, and yet today the Department of Health, Education, and Welfare can say that the "poorest, sickest, and least educated" of any racial group in the United States are our Indian citizens. These are our true marginal men—unable to go back to the old culture and ill equipped to participate in the new. This is why a point 4 program for our American Indians such as I have introduced in Congress is a necessity.

It is significant that in the sun dance celebration the tribal committee tried to make the "sun dance a place where better health is the goal." Our Indian people have too much to contribute to the advancement of American civilization for us to neglect the imaginative resources at our command to enable them to move forward to take their rightful places with Americans of all creeds and colors.

The Shannon County News has an interesting article by Will Spindler describing the event and a news column bearing on the public health emphasis of the sun dance. Under unanimous consent to extend my remarks, I insert these in the RECORD:

PINE RIDGE SUN DANCE DRAWS HUGE CROWDS

(By Will Spindler)

The colorful, picturesque 25th Annual Pine Ridge Sun Dance is now history and was one of the most successful events since the revival of the ancient sacred ritual back in the middle 1930's. An estimated 6,000 people were in attendance during the 4 days of July 29 to August 1.

The colorful parade on Saturday morning was one never to be forgotten and one of the best in several years. Included in it were many historical floats by tribal members of the Pine Ridge and Rosebud Indian Reservations, as well as from visiting tribes from Wyoming, Nebraska, Iowa, Oklahoma, New York, North Dakota, and other States, the sun dance beauty winner who will appear next week at the Sheridan, Wyo., All-American Indian celebration, the American Legion band and color guard of Pine Ridge, colorful clowns, and a long line of cowboys and cowgirls on horseback.

Highlighting the spectacular celebration was the reenactment on the first 3 mornings of the colorful, sacred sun dance itself. This was witnessed by several thousand spectators, including Fred Hackett, of Kansas, the largest donor yearly to the sun dance, Rosebud Tribal Council President Robert Burnette, Vernon Malan, and Ernie Schuskey of the State college, Brookings, and other distinguished visitors.

The tribal council and American Legion were in charge of the celebration, with Ben Chief as the president. Among those in charge of events were Matthew High Pine as official announcer, Leo Vocu, Lloyd Eagle Bull, Levi Fast Horse, Jake Herman, noted rodeo clown, artist, and writer, Charles Janis, Francis Janis, and others.

Many tourists and visitors from all over the Nation were present, which attested to the fact that this annual sun dance is becoming better known and more popular with each passing year. All in all, it was an extremely colorful sun dance and much praise is due the Indian people of the Pine Ridge Reservation for staging such a delightful and memorable event.

PUBLIC HEALTH AT THE SUN DANCE

Looking east from the Pine Ridge PHS Indian Hospital the past week, an area about a mile distance was filled with about 300 tents circling a large arena, edged with a shade for the many visitors. A passage around the shade seemed like a large aisle for people to walk to all sides and visit the many stands and entertainment surrounding the aisle. In the main arena, one of the most colorful Indian dance ceremonies in the United States was held during the 4 days.

The Pine Ridge tribal council sponsored the sun dance ceremonies and should have the appreciation of all this part of South Dakota for the tireless effort to improve all conditions concerning health, safety, convenience and entertainment for the large gathering of people. The reservation bureau of Indian affairs, under the direction of Superintendent L. P. Towle, supported the tribal council greatly.

Through aid of the Public Health Service and the Lakota public health committee, the tribal council strived hard to control disease and sickness that could have happened if preventive measures were not planned.

As you arrive at the sun dance grounds on the southeast corner, a Public Health Service and Lakota health booth was arranged with messages of the health needs of the Pine Ridge Reservation. This year, since the biggest problem on the reservation is infant sickness of all kinds, the theme was on better care for babies under 1 year of age. Demonstrations, signs, discussions, and health bulletins were presented.

Richard Ruddell, field worker for the State tuberculosis and health association, aided in the health displays as well as making it possible for paper cups to be used at the sun dance.

Also at the booth dental displays were shown, televiewer slides were shown, and molasses milk was served free to demonstrate how powdered milk could be made a healthier drink.

Minor first aid was administered by the public health nurses and practical nurses as well as explaining to visitors at the booth the needs for better health of infants.

Probably the greatest health work was done in the field of sanitation which will be told in a separate article. All of these things were made possible under the direction of Dr. Lewis E. Patrie, medical officer in charge of the Pine Ridge PHS station and the cooperation of Alfreda Janis, chairman of the Lakota public health.

The hospital and health committee combined in entering a float in the parade on Saturday. The theme of the float was "Let's Join Hands To Save Our Babies." Kathleen Janis, Ramona Janis, Dolly HeCrow, and

Clarence Runs After, Jr., rode the float. Moses Catches drove the wagon for the parade.

It was very fine working with Frank Wilson, tribal chairman; Sam Stands, vice chairman; Lloyd Eagle Bull, tribal secretary; Leo Vocu, tribal treasurer; and others on the committee to make the sun dance a place where better health is the goal.

What You Can and Cannot Do Under the New Labor Law

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. GOLDWATER. Mr. President, during my years as a member of the Senate Labor Committee I have been fortunate in having the invaluable counsel of Mr. Michael Bernstein. I do not know another lawyer in the United States who can speak as knowledgeably or who knows the Taft-Hartley law better than this man does. Therefore, I think it is fitting that the magazine, U.S. News & World Report, in presenting an explanation of the recently passed Labor-Management Reporting and Disclosure Act of 1959 to its readers, called upon Mr. Bernstein to review the specifics of this law. The information contained in this interview is, I feel, of interest to my colleagues and to all Americans whether they are directly or indirectly associated with either management of unions.

I therefore ask unanimous consent that there be printed in the Appendix the first part of this interview published in a recent issue of U.S. News & World Report.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

WHAT YOU CAN AND CANNOT DO UNDER THE NEW LABOR LAW

(Interview with Michael J. Bernstein, a counsel of Senate Labor Committee)

(Will the new labor law change a way of life for unions? What new rights will workers have? Are employers to have more freedom in running their businesses? These questions, and many others, are raised by passage of the most important labor legislation since the Taft-Hartley Act. Here is a primer of the new law that answers a long list of questions. This primer cuts through the technical language and explains the law in simple terms. You get an explanation of the bill of rights, secondary boycotts, hot cargo, extortion, picketing, and other unfamiliar phrases. The explanation, given to U.S. News & World Report in an exclusive interview, comes from Michael J. Bernstein, a labor-relations expert, who helped draft the bill. Mr. Bernstein has long been a counsel for the Senate Labor Committee.)

Question. Mr. Bernstein, what's going to be different for unions under the new labor reform law? What does the bill of rights do for individual union members?

Answer. Under the new bill a member has a right to attend union meetings, in the first place.

Question. Was he ever denied the right to attend a meeting?

Answer. He could be. Presumably, if the union constitution now says that only a certain class of members should be permitted to attend meetings, why, that's the way it is. There are some unions in which this is true. For instance, the Operating Engineers have what are known as class A and class B locals, and only the class A local members have rights to vote, to attend meetings, participate in the discussion and so on—but all members must pay dues.

Question. So there is no such thing as a class B member under this law?

Answer. That's correct. Now, mind you, those distinctions in the Operating Engineers are not based on race, color, or anything like that. It's a matter of seniority, with the favored few in the class A local.

Now, that type of thing would be eliminated. The member would have the right to attend the meeting, he would have the right to express his views at the meeting freely—but, of course, this would be subject to the union's right to impose reasonable rules for the conduct of the meeting.

Question. Could they, for instance, limit the amount of time he could talk?

Answer. That's right—provided it was done on a nondiscriminatory basis. I think it would be a violation of this provision if they permitted certain members to speak—what shall I say?—for half an hour at a time, and others would be limited to only 2 minutes or 5 minutes. It would have to be applied in a nondiscriminatory fashion.

Question. Would they have more freedom to express themselves and take part in the proceedings and vote and so on?

Answer. Yes, and the language specifically says that "every member shall have equal rights and privileges within such organization." So that means that, if there are limitations upon the rights of the members, there have to be limitations on all of the members, equally.

Question. If a man were delinquent on his dues, for example, could he be barred from voting?

Answer. Well, now, actually the language of the bill of rights doesn't say anything about that. It says equal rights and privileges to do certain things: to nominate candidates, to vote in elections or referendums, to attend meetings and to participate in the deliberations and voting upon the business of such meetings.

I would think that they would have a right, for instance, to prohibit members who are delinquent from voting, provided it was done on a nondiscriminatory basis. In other words, if they had a uniform rule with respect to delinquency and voting, that would be all right.

In another part of the bill they have a safeguard against the checkoff. For example, some union constitutions, such as the Teamsters', say that a member doesn't have the right to vote unless his current dues are paid by a certain date. If they're not paid by that date, he can't vote. Under a checkoff, sometimes the union claims that the member hasn't paid his dues because the union hasn't received them. That may simply be due not to the delinquency of the union member, but to the fact that the employer hasn't forwarded the money to the union.

A specific provision in another part of this bill says that, where they're operating under a checkoff agreement and the man is having his money deducted from his pay envelope, then such lateness or tardiness may not be used to disqualify him.

Question. Does this all mean that the ordinary union member will have more say about how much he pays in dues and initiation fees?

Answer. There's a specific provision in the its improper practices, and affirmatively to changing of the amount of the dues and assessments, initiation fees, except upon certain majority decisions. In other words, it has to be done by democratic procedure. The officers cannot arbitrarily decide to change the amount of the dues, even if the constitution gives them authority to do that—it must be done in accordance with the democratic voting procedures which are set forth in the bill of rights.

Question. What if they're denied these rights? Can they sue?

Answer. They have a right to sue in a Federal district court for appropriate relief in a civil proceeding, which would include injunctions. Now, an injunction would mean, if they got it, that the court would order—order the union to cease and desist its improper practice, and affirmatively to take such steps as might be necessary to eradicate the effects of the improper practices they have already engaged in.

Question. Can you see this as putting a heavy load on the courts?

Answer. All new litigation puts some load on the courts.

Of course, in another part of the bill—not in the first title, which is the bill of rights—there are also criminal penalties, with respect to denial of these rights. There's a provision in title VI which says that "it shall be unlawful for any person through the use of force or violence, or the threats of the use of force or violence, to restrain or coerce or intimidate, or attempt to do these things, to any union member in order to interfere with the exercise of these rights." And that's a crime.

A RIGHT TO CRITICIZE

Question. Is there anything more you would like to say about the bill of rights?

Answer. I might also say one other thing that's sort of important. Most unions make it a subject for disciplining—even up to expulsion—for a union member to be critical of his union or his union officers, particularly if he's critical outside the confines of the union membership or the union hall—in other words, if he makes his criticism public, by writing a letter to the newspaper. This would protect that right. He has a right of freedom of speech and expression, including criticism of the union.

Question. He can write to the editor and complain?

Answer. That's right.

Question. Let's take the matter of union recordkeeping. Will the unions have to keep many more records than they have had to keep in the past?

Answer. Let me put it this way: I don't know what the practice is in many unions, but, if the union is running its affairs properly in the fiscal field—financial field—then actually the only thing that it would be required to do under this bill that it is not now doing is to take from its books and accounts and records the material which this bill requires, enumerates, and put it in the form of a report, which is then submitted for filing with the Secretary of Labor.

Actually, under the present law they do make such reports—under the Taft-Hartley Act. The only difference is that these reports are not made public, whereas, the reports that they would have to make under the new law, the Secretary is required to make public. They are public documents, and anybody has a right to look at them. This is not permissive; this is mandatory.

Question. So that the books of every union——

Answer. Not the books, now—these are the reports. Now, there is also a provision which makes it a crime for the union to fail to preserve the basic books and records on which the reports are based for a period of 5 years.

Question. By "reports" you mean financial statements?

Answer. That's right. And, in addition to that, the union member has a right to go

into court. He's entitled, just as is the general public, to see the reports. But, in addition to that, he can go into court, the union member may, and for "just cause"—that's the phrase used, he must have some basis—he may get an order compelling the union to let him see not merely the reports but the basic documents and records on which the reports are based.

Question. What this amounts to is that unions are going to have to give more information to their members than in the past——

Answer. And to the public, which means to the press, as well. Just the fact that the union member can get a look at the basic documents on which the reports are based is to some degree a safeguard against falsification of the reports. If all you do is see the report itself, you have no way of knowing, unless you have some auxiliary information, that the report is false—if it is.

Question. He can see how his money's being spent then——

Answer. He can also see the records, the basic records from which they prepared the report.

Question. Is there some provision requiring unions to supply copies of collective-bargaining agreements to the members?

Answer. That's right. If the local union signs a collective-bargaining agreement, upon request, each member of the local may get a copy of the collective-bargaining agreement. In other words, the union must give it to him.

Question. Is that standard practice in unions now?

Answer. No, it is not. If it's a collective-bargaining agreement signed by an international consisting of many locals, then the international must furnish to each of the locals a copy of the contract, and the local must keep it in a place where all of the members of the local can see it.

Question. Does the bill also say that every union must inform its members concerning the provisions of the new law?

Answer. That's right.

Question. How's that to be done?

Answer. I suppose what they'll do is simply post a copy of the law on the union bulletin board.

Question. That would be sufficient?

Answer. I think so.

Question. What about salaries of union officers? Must they be made public now?

Answer. Yes. One of the items that has to be reported under the reporting provisions for labor unions is the salary, allowances, and other direct or indirect disbursements, including reimbursed expenses to each officer and employee who received an aggregate of more than $10,000 during the fiscal year.

Question. If an officer of a union lends union funds to somebody, does he have to tell the members how much he's lending and to whom?

Answer. Here are the things that have to be reported: "direct and indirect loans made to any officer, employee or member which aggregated more than $250, and direct and indirect loans made by the union to any business enterprise." In other words, there are two types of loans that must be reported—loans made by the union to any officer, employee, or member, and loans made by the union to any business enterprise.

Question. Does this apply to pension funds as well?

Answer. No. Pension funds, you know, are covered under a separate section of the Taft-Hartley Act—section 302.

IF GIFTS ARE ACCEPTED

Question. What about union officers accepting gifts of money or securities from employers?

Answer. There is a complete, separate section which requires individual officers and employees of labor unions, without any limitation as to salary, and except for employees who perform purely clerical or custodial duties—all others, all officials, all employees, to report to the Secretary transactions which are broken down into six different types of transactions which constitute conflict-of-interest transactions. These are transactions which create a suspicion that the union official or employee is on both sides of the table, so to speak. In other words, he's getting a benefit from an employer, while at the same time acting as a representative of the union.

Now he must report those. It's spelled out in very great detail. In addition to reporting those, I would think that any union official or employee who had to report any of these transactions—these conflict-of-interest transactions—would also be in violation of another provision which imposes a fiduciary status on such officials and employees, and makes them liable to suit by union members if they do engage in these transactions.

Question. Are employers also liable for advancing such funds?

Answer. That's right. There are separate provisions, which are an amendment to this section 302 of the Taft-Hartley Act, which make it a crime, generally speaking, for an employer to make payments or loans to unions, union officials, union representatives, and for union officials, employees, and representatives to accept such payments or loans from employers.

Question. Are there any restrictions on such things as testimonial dinners given by employers for union officials?

Answer. Well, you see, that's a question of interpretation. Now, actually, some of us fought against this language in the criminal provision, because we think, if you construe it literally, that, for example, you get a situation like this: An employer is aware of the fact that a union is going to begin an organizing campaign in his plant. Now, under existing law, he has a right to speak against the union and to distribute literature critical of the union, as long as his speech or his literature does not embody a threat or a promise of benefits. In other words, he can't say to the employees, "If you don't join the union, why, I'll raise your wages." That would be an unfair labor practice, a violation of existing law.

Or he can't say to them, "If you join the union, why, I'll have to fire half of you." That would be a violation of existing law.

Now, the question arises under the new bill: Suppose he gives all of his employees a dinner for which he pays. He's got 90 percent of his employees at the dinner, and he gets up and makes a speech and tells them about the disadvantages of unionism, and how many crooks and racketeers there are in unions, and that employees who have joined unions have found to their regret that they're paying money for dues and initiation fees, and so on, and not getting the benefits they had promised, and so on. Now, he makes no promise and he makes no threat. So he's not in violation of existing law. Query: If he pays for that dinner—let's say it costs him $5 a head for each of 500 employees—that's an expenditure of $2,500, right? Has he given something to his employees in order to get them to persuade the rest of his employees not to join a union?

Now, the literal language of this new bill would seem to make that a crime. Also, it would require him to report this expenditure to the Secretary of Labor, and, literally applied, would make it a crime for him to engage in this type of activity.

Question. What about the kinds of dinners that employers sometimes give labor leaders?

Answer. Well, now, that sort of thing is just a testimonial dinner.

Question. Where they might give a union president a Cadillac——

Answer. Ah, now, that's the point. It's not the testimonial dinner that's significant—it's the giving of something of value to him—a Cadillac, or any other thing that costs money. I would say that the union officer who received that sort of testimonial would have to report it under the conflict-of-interest reporting provision. And that, in all probability, under the fiduciary-obligation provision, union members could bring suit against him to recover that Cadillac or the value thereof for the benefit of the union.

Question. What about the employers who gave the gift?

Answer. Well, the employer who gave him that, under the literal language of the provision I just referred to in connection with the type of dinner I described, might be guilty of a crime. Because that new section specifically says, and I'll read it to you just so that you can see how literally the language covers that sort of situation: "It shall be unlawful for any employer or association to pay, lend or deliver, or agree to pay, lend or deliver any money or other thing of value to any labor organization or any officer or employee thereof, which represents, seeks to represent or would admit to membership any of the employees of such employer."

I don't think there's any question that the literal language covers the type of situation that you picture and comes pretty close to getting a situation which is much more innocuous than I pictured.

WHEN INTERESTS CONFLICT

Question. Can we go a little further into that? I'm thinking about business transactions between employers and union officials. What are the restrictions?

Answer. There are six specific types of business transactions between a union official and an employer which constitute a conflict-of-interest transaction, which he would have to report and which, simultaneously, would constitute a breach of his fiduciary obligation—I'm talking about the union official—and would open him up to a suit by the union members, a civil suit. It might also amount to a criminal violation under this other section that I read to you.

Question. What types of transactions are those?

Answer. Well, let me give you a few: "Every officer of a union shall file with the Secretary a report describing any transaction of this type: Any stock, bond, security, or other interest, legal or equitable, which he"—that's the union official—"or his spouse, or minor child, directly, or indirectly held in, and any income or any other benefit which he or his spouse or minor child derived from, an employer whose employees such union represents or is actively seeking to represent."

Question. Is there any restriction against a union lending money to an employer who needs financing for his business?

Answer. No, except that remember they have to report that under the provision I described previously. Any loan to a business enterprise has to be reported so that the public and the membership knows the details of the loan. But there's no prohibition against it. So that, for instance, Dubinsky and Potofsky in New York can continue as they have done in the past to make loans to employers who are on the rocks, for the purpose of saving the jobs of the people who work there, provided they put the information in the report which they file with the Secretary of Labor, which is then public information. [David Dubinsky is president of the International Ladies Garment Workers Union; Jacob S. Potofsky is general president of the Amalgamated Clothing Workers of America.]

The basic philosophy behind these provisions we're discussing now—and I'm not arguing their merits—is that, if you get a sufficient spotlight in terms of public information about these transactions, their undesirable effects can be minimized.

SCANNING PERSONAL FUNDS

Question. Do union officials have to make public their own personal holdings?

Answer. Yes, where they are involved in any one of these conflict-of-interest transactions.

Question. Otherwise not?

Answer. Otherwise not.

Question. What about employers? Do they have to file reports of their financial dealings with union officials, if they have any?

Answer. Here's what they have to file reports in connection with: An employer who makes any payment or loan of any kind to any union must report it—to a union, any payment or a loan to a union or its officers, with an exception, of course, for banks, credit unions, insurance companies, and so on, because, obviously, financial lending institutions of that kind are always making loans not only to unions but to many others. In other words, if their regular business is the making of loans, they do not have to report. But if it's an employer who is engaged in some business other than the making of loans, then, if such employer makes a loan or a payment to a labor union or its officials, it must be reported. That's one.

Now, the second thing that an employer must report is where he directly makes any payment to any of his employees, to any of his employees—employees, this has nothing to do with union members—for the purpose of getting employees who receive the payment to persuade other employees with respect to union organization.

RAISES CAN BE ILLEGAL

Question. In other words, he can't offer them a bribe not to join a union?

Answer. No, that isn't quite it. It's more precise than that. Under the present law he can't offer them a bribe not to join a union—that would be a violation of the Taft-Hartley Act, because that's a promise of benefit. This is if he calls in 10 of his employees that he knows are antiunion—he doesn't have to persuade them—and he says to them, "Look, if you will circulate among the rest of the employees and use your persuasive efforts to get them not to join the union, then I will pay you each $25 a week extra." He has to report that.

Question. That's forbidden?

Answer. He commits a crime in making such a payment, and also he must report it.

Any expenditure that he makes where the purpose is directly or indirectly to interfere with the rights of his employees to join a union he must report. In other words, if he makes any expenditure the purpose of which is a violation of the Taft-Hartley Act, that he must report.

That's all for the employer as such. Here's another thing he must report but which is more indirect: If he makes an agreement or an arrangement with a labor-relations consultant, the purpose of the arrangement being for the labor-relations consultant to persuade employees not to join unions, then the employer must report that arrangement, giving the details thereof and any payments made pursuant to that arrangement.

Question. In every case when you say "report" you mean to the Secretary of Labor?

Answer. Right—he has to file a formal report to the Secretary of Labor on an annual basis.

Question. Doesn't this add up to a lot more recordkeeping for employers and unions?

Answer. Sure, sure.

Question. And for the Secretary of Labor, too?

Answer. That's right—no question about that.

FINES: UP TO $10,000

Question. What is the penalty for not making reports of this nature?

Answer. Failure to file reports is a misdemeanor punishable by a fine of up to $10,000 and a year in prison. Moreover, the Secretary of Labor is given power to bring civil suit, to go into a Federal court and get an order compelling those who are required to report to do so or be in contempt if they don't. There's a double sanction.

Question. Do you think we've covered now the requirements of employers?

Answer. Just to complete it—mind you, I just said that the employer must report any arrangement he has with a labor-relations consultant. The labor-relations consultant has to make a report, too. If he enters into such an arrangement with an employer, then he must report not only that arrangemnt and the money that he receives under it, but all of his labor-relations activities, even with other employers, for the whole year. If he enters into one such agreement, then he's got to reveal all of his activities in the labor-relations field.

Question. Is this broad enough to mean that every employer who is covered by this law who employs a labor-relations consultant must report the terms of that arrangement to the Secretary of Labor?

Answer. If the purpose of the arrangement is to have the labor-relations consultant persuade employees with respect to joining unions.

There is an exemption from the reporting requirement for any information given by a client to his attorney in the normal, confidential, attorney-client relationship, which means, in my opinion, that, if the labor-relations consultant—if the person who is performing the labor-relations consultant's services—is an attorney and is retained as such, then information given by the employer to that attorney—then the attorney, even though he's a labor-relations consultant, in my opinion, need not report it, because it's given to him in his capacity as an attorney.

Question. Any company that employs a labor-relations consultant to watch legislation, as some companies do in Washington, has no such obligation?

Answer. That's right.

Then there's a further qualification of that: The labor-relations consultants, the arrangements involving whom have to be reported, have to be independent contractors. In other words, this has to be an individual or a person who is not working for the employer but whose relationship to the employer is contractual. In other words, if he is a regular staff man, if he is a permanent employee of the employer who performs labor-relations work—he's on the regular payroll—then the employer does not have to report any payments made to him by way of salary, and that person doesn't have to report any receipts or activities and so on that he engaged in.

This requirement, with respect to labor-relations consultants, applies only with respect to independent consultants, like lawyers, as with the same type of relationship in business terms—a contractual, rather than an employer-employee relationship.

Question. There's a section on trusteeships. What's this about and what's required there?

Answer. Well, the international unions have had for many years a mechanism whereby they can control or discipline their locals. In other words, if the local does something that's contrary to international policy, what the internationals are permitted to do under practically all union constitutions is to step in and take over the local. They throw out all the incumbent officers, they put the local in charge of a trustee designated by the international, and he runs the local affairs. He collects the money in the way of dues, he runs it—there are no elections. What happens is that the local completely loses its autonomy.

Now, this may or may not be justified. However, this has been subject to great abuse. At one time, of the 800 locals in the Teamsters, I think over a hundred of them were in such trusteeship. From the standpoint of the incumbent international officers, this is a great advantage, and let me tell you why: International officers in most unions are elected through the delegate-convention method. If the president of an international union in which there is an opposition can throw a substantial percentage of the locals into trusteeship, then he has control of the delegates to the international convention from those trusteed locals. So he can go into the international convention with a minimum percentage of delegates sewed up.

HOW HOFFA GAINS POWER

In other words, Hoffa [Teamsters President James Hoffa] names the delegates, the convention delegates, in the trusteed locals. So he can move into the convention, let's say, with 25 percent of the delegates in his pocket to begin with, because they're his handpicked people in each local. The union members in the trusteed locals are not permitted to select the delegate.

This is the basic reason.

Now, in the Operating Engineers, there was evidence in the McClellan committee to show that there have been locals in trusteeship for periods as long as 30 years—have been completely deprived of all local autonomy. The only privileges that the members of those locals enjoyed is that, if they didn't join the local, despite its completely dependent position, they couldn't get a job. And, when they did join it, their only right was to pay dues. All the money was siphoned off to the international, and the international would select the delegates for each of those locals in the international convention.

Now, what this provision in the new law does is to put certain limitations on the way these trusteeships can be imposed and to limit their validity to a period of 18 months. Let me put it this way: You don't limit their validity—they are presumed to be valid for 18 months, unless you can show that they've actually violated their own constitution or bylaws, or that they have violated some of the limitations laid down in the section itself. And, at the end of 18 months, although they may be continued thereafter, anyone can challenge them—any union member can complain to the Secretary, who can go into court and ask that the trusteeship be dissolved. This is the Secretary of Labor. And after 18 months the presumption is against the validity of the continuance of the trusteeship.

The first 18 months they're presumed valid, and you've got to show by clear and convincing proof that they're in violation. Once 18 months are up, then it's the union—the international has to show by clear and convincing proof that the trusteeship should be continued. So that you have this break.

Question. Will this prevent local officials from milking some of these locals?

Answer. That's right—this specific provision that, while the local is in trusteeship, none of its funds can be transferred out of the local, other than the normal per capita dues payments which locals normally pay to an international.

Question. Let's talk a little bit about elections. Do unions have to hold elections more often than in the past?

Answer. The answer is yes. There are some unions, many unions, which do hold elections as frequently as is now required under this bill, but there are some who do not. This would give them a maximum of 5 years for international and of 3 years for locals.

Question. And these elections must be by secret ballot?

Answer. The elections must be by secret ballot, they cannot be by proxy voting, there

must be written notice—15 days' written notice to every single member—before the election is held, that an election is going to be held. The rival candidates must be provided with equal facilities for the distribution of their campaign literature, as enjoyed by the incumbents. Once during the 30-day period preceding the election, any candidate has the right to come into the office of the union and inspect the list of the members covered by a union-shop agreement.

Question. No limit on the number of candidates?

Answer. No limit on the number of candidates. It says "bona fide candidates," and that's something a court would have to determine, if you get some guy who's in there—who's not a genuine candidate but is just in there to make trouble. But courts deal with questions of that kind.

Question. Are all the rival candidates entitled to have an observer present at the casting of the ballots and at their counting?

Answer. That's right.

ABUSES HAVE BEEN BAD

Question. What is this designed to get at? What kind of abuses have occurred?

Answer. Oh, well, this is an area where the abuses have been really very bad. In many unions the elections are just simply—well, they are like Soviet elections.

Question. Do you mean they are either not held, or there is only one candidate?

Answer. One candidate, or, if there's another candidate, nobody knows that he's running—his name never gets mentioned, his literature never gets sent out, he isn't permitted to have any observers at the casting of the ballots, he has no observers present at the counting of the ballots, he doesn't know when they're being miscounted, whether they're falsified, and so on.

In fact, they've even got a little provision in here which says that, when an international has an election, either through the convention method or direct referendum, as some do, the counting of the ballots, the tallying, has to be done separately for each local, and they have to be kept separate. That's a very, very important safeguard.

Question. There will be no elections by acclamation?

Answer. Nothing like that. All the election records have to be kept, including the ballots, for a period of at least 1 year. And all violations of all this are subject to criminal penalties.

And I might add one other thing that's in this election provision, which is very important, and that is this:

There's a procedure, not only protecting the electroal process, the regular electoral process, but there's a guarantee of a procedure to get rid of officers—removal provisions. In other words, if the union constitution doesn't have a provision which permits the removal of officers guilty of misconduct, then the complaining union members can go to the Secretary of Labor, and he can initiate a suit in which the court will order such an election for the removal of an officer.

Question. Can an individual union member initiate a suit?

Answer. No, not under these provisions. This has to be done by complaint to the Secretary, who makes an investigation, and if he finds out in his investigation that this provision is being violated, then he brings the suit.

Question. So, if I am a member of a union and I feel that I've been denied some voting rights, I go to the Secretary of Labor?

Answer. Right.

GUARDING UNION MONEY

Question. Can a candidate for union office use union money to promote his candidacy?

Answer. No. There's a specific prohibition against any candidate for union office using any union funds of any kind—or any employer funds.

Question. What about the safeguards in the legislation against embezlement, theft, etc.?

Answer. Well, now, embezzlement of union funds, as well as of any other funds, is now a crime in every State in the Union. This would now make it a Federal crime, which it is not now.

Question. What is the advantage of making it a Federal crime?

Answer. What's the advantage of making kidnaping a Federal crime? You see, there's a certain—what shall I say?—feeling that in local areas—well, local law enforcement breaks down for one reason or another, sometimes as a result of little deals between politically powerful union officials and local law-enforcement officers. The feeling is that, if you can get the FBI to do the investigating and the U.S. Department of Justo do the prosecuting, you get a much better chance of getting these things handled effectively. And that's about it.

Question. What does the law do specifically to keep union officers from misusing or stealing union funds?

Answer. There's a specific provision with respect to embezzlement.

Then, in addition to that, there is a provision that I spoke to you about earlier which imposes on union officials a fiduciary responsibility. Now, this is a rather difficult thing to explain to the layman. As you probably know, for instance, a bank official, an insurance official, a trustee, an administrator or executor of an estate, a guardian of a ward, a trustee of a trust—all of these people are handling other people's money. And, under the law as it has developed, the law has taken the position that the responsibility and obligations of the people in that position go beyond their merely contractual obligations.

You don't look for the letter of their obligations, you go beyond it, and you say: These people have to exercise a care which goes beyond what the letter of the contract requires, you see. They are held to a much higher degree of care than in the ordinary contractual business arrangements.

So that people like that can be held responsible, not merely for acts of commission, but for acts of omission.

Now, let me give you an illustration: If, for example, you have an executor of an estate, the beneficiaries of which are minor children who do not come into the estate until they reach majority, and during that period the executor is in effect the trustee who invests their money—he might make an investment which realizes profit but, if it can be shown that, with reasonable care, he could have made a better investment, he can be held liable for the difference—between what he got, what he realized, and what he didn't realize—and may be made to pay that out of his own pocket for the benefit of the estate.

In other words, the fiduciary status imposes a very, very high degree of obligation. That's one aspect.

The other aspect is that if a person who is in a fiduciary status even innocently makes a profit or reaps an advantage by virtue of his position, even though it is not to the detriment of the people he is representing, he is held to have acquired that profit or that benefit for their advantage—he can't keep it himself.

Under this provision, union officers are subjected to that type of responsibility with respect to union funds, property, and so on, and with respect to any transactions in which they may engage in which they profit by virtue of their position—where they profit personally by virtue of their official position.

The Nixon Touch

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. DENT. Mr. Speaker, the typical NIXON touch has been added to the Russia moon shot. NIXON creates doubt by suggesting it is not so. He wants proof or maybe confusion, you figure it out.

This is the same NIXON who rose to the Vice Presidency of the United States by being a rabid anti-Communist, follower of the late Joe McCarthy and one of the worst red-baiters in the history of the U.S. Congress.

Those of us who have kept silent, to date, on the Khrushchev visit have very good reasons for so doing.

Yesterday it meant disgrace, ridicule, loss of job and prestige, and even jail sentences to speak of Communist achievement or even to suggest coexistence.

Today we hear of the reformation in Russia; the need to coexist has now become the order of the day.

One wonders, what is to be tomorrow's line? Where oh where are the $200-odd billions spent in foreign aid to keep our allies from socializing politically or commercially with Russia, where are the $400-odd billions spent in the arms race.

If we had minted our money in silver dollars we could have climbed up to the moon on the billions we have spent kidding ourselves and our friends.

When NIXON went to Moscow he opened up Pandora's box and let loose the world's greatest propaganda flood ever set loose upon our honest, sincere and trusting world.

Now we find ourselves sandwiched between Russian moonshots, handshakes, bluff and personal magnetism and American Madison Avenue buildup over radio, TV, and the press on the Eisenhower-Khrushchev meetings changing the hammer and sickle into a cheese knife and a slice of watermelon.

Somewhere along the line the American people may decide one of two things, they may say Russia is alright lets deal and trade and be buddy-buddy with the commies or they may say, this is a lot of malarkey, commies are still commies, they are still trying to take our kind of life away from us, this exchange meeting business is nothing but more political expediency and right now we want to know what is the position of the United States in this new and jumpy mess we have gotten into.

These are the worries of all the world, especially that part of the world we have tried to lead to believe we were their friends. The captive nations may also be wondering about this new type tea party.

Lost in the shuffle has been the complete change from the Dulles diplomacy to the Eisenhower-Nixon new look in foreign relations. One wonders where Herter is in on all this new anti-Dulles diplomacy.

Herter was hailed by all the leaders in this country as a worthy successor to Dulles and one who would maintain the Dulles line of action. We have not only buried Dulles but it seems that we have made Herter and the State Department a minor office run by a page boy.

I happen to be one who believes Herter has the ability, experience, and the will to head the State Department. It is too bad he has been placed in the shadows in order to build a new Eisenhower and elect a GOP President.

When this country starts acting like a grownup and quits fooling around with make-believe, we will not have to worry about Russia or anybody else.

All we need is our own self-confidence and in the words of F.D.R. we have nothing to fear but fear itself.

Congressman Charles A. Boyle, Final Report, 1st Session, 86th Congress

EXTENSION OF REMARKS
OF

HON. CHARLES A. BOYLE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BOYLE. Mr. Speaker, under leave to extend my remarks, I submit herewith a summary of the 86th Congress, 1st session, which I am sending to my constituents:

DEAR FRIENDS: As I write my closing newsletter of the 1st session of the 86th Congress, the leaves of the Washington trees are turning yellow, the grass of the Washington parks and lawns are putting on their fall coats of brown, and eight of my kiddies are back in school; seven in Arlington, Va., and Pat, the oldest, matriculated at Loyola University in Chicago. This session, which has been the longest peacetime session since 1922, concluded as I moved to adjourn the House sine die while acting as majority leader for the fifth consecutive year.

The ever-growing bigness of government had necessitated the leadership again this session to use the much-overworked emergency provision of the 1946 Reorganization Act to keep us here in Washington. For without invocation of that procedure, the Congress should adjourn July 31 of each year. Although the bills introduced and pending in this session are not functus officio, and do not die between the first and second terms of the session, there is considerable irritation to the public because so many important and worthwhile bills are not processed for want of time. A good example of this situation obtained in Congressman O'BRIEN's lake diversion bill, which, after passage by the House, was in the 11th hour of the session, referred to the Senate Foreign Relations Committee. The move resulted in postponing final action on this important bill until sometime after we return in January of 1960.

LABOR MANAGEMENT REFORM LEGISLATION

The most controversial and heated piece of legislation to reach the floor of the House in years was the labor management reform bill. Pressure was brought to bear upon the whole Congress, and was accentuated through mass media by the President, the Senate Rackets Committee and prolabor and antilabor forces. As a result, Congress was besieged by carloads of mail and the Capitol was crowded with hundreds of lobbyists and pressure groups. Labor-management reform was supported almost unanimously by Congress, but how to effect remedial legislation that would clear corrupt elements out of unions without imposing punitive measures on all unions caused much heated disputation on the bills.

The Senate passed the Kennedy-Ervin labor-management reform bill on August 25, 1959, by a vote of 90 to 1. When the legislation reached the floor of the House, the committee bill was sidetracked, and the Landrum-Griffin bill was substituted. The Senate and House bills were then sent to a conference committee to work out the differences between them. On September 4, 1959, I voted in favor of the conferees labor-management bill. It is my belief that failure of Congress to carry out this responsibility might well have touched off a wave of antilabor sentiment that could have set back the cause of honest unionism.

CONGRESS OVERRIDES PUBLIC WORKS VETO

By a vote of 280 to 121 in the House and a vote of 72 to 23 in the Senate, the Congress overrode the President's veto of the public works appropriation bill by more than the necessary two-thirds vote, on Thursday, September 10. The measure automatically became law.

This action represented the first time in 6½ years that Congress had been able to override one of the 146 bills rejected by the President. Among the appropriations in this bill are a number of flood control, navigation, and reclamation projects which have considerable merit and are necessary for the welfare of our country. To note, as Mr. CANNON pointed out, "this legislation is a precedent."

HOME RULE FOR THE DISTRICT OF COLUMBIA

Recently, for the first time in a decade, hearings were held in the House on self-government for the District of Columbia. In past years the Senate has passed many home rule measures but all have been bottled up in House committees. As a sponsor of H.R. 5677, a bill on home rule for the District, I believe the time has come to install the rights of local self-government to nearly 1 million citizens of the District of Columbia. To me, it is a glaring contradiction that those who live in the very shadow of the Capitol of freedom and democracy, are denied the privileges of citizenship accorded everywhere to free people of the world. In a bipartisan-sponsored move, I signed with my fellow colleagues, a discharge petition to bring the vital issue of home rule promptly to the House floor for a vote. Although final action was not forthcoming prior to adjournment, the discharge petition will rest on the Speaker's desk to be called up as one of the first orders of business in January, when the 2d session of the 86th Congress convenes.

GREAT WHITE FLEET—HOUSE CONCURRENT RESOLUTION 319

A considerable amount of publicity has recently been given to the idea of reviving the Great White Fleet of Teddy Roosevelt days and to put such a fleet to work for world peace. I have introduced a resolution which, according to a recent report, has the support of 351 Members of Congress in both Houses. This resolution calls for the President to use part of our mothball naval fleet to help carry surplus food and technical assistance to distressed and undeveloped areas in the world. Through this action, we can at least place a part of our mutual aid program on a person-to-person basis to insure maximum benefit to our country and to cost only a fraction of our foreign-aid program. It is my sincere hope that this program will be endorsed by the American people and soon become a reality. It has been publicized in a recent series of articles carried by Life magazine.

STATES RIGHTS

House Republicans joined with southern Democrats to pass the States rights bill, titled H.R. 3, for the second year in succession. The brief but far-ranging bill is designed to prevent Federal laws from striking down State laws in the same field where there is no irreconcilable conflict. It would do this by limiting the power of Federal courts to interpret Federal law. I again registered my opposition to the bill, as the effect of the proposed legislation could be to subordinate Federal legislation to State laws despite the specific constitutional provision that Federal law under the Constitution shall be the supreme law of the land. Passage of the bill in the present form would give rise to serious uncertainties as to its effect on judicial construction of State statutes applicable in the field in which Congress has the power to act, but has not yet acted. The measure would effect an appreciable increase and duplication of effort and result in annoyance occasioned by the necessity of complying with a mutuality of overlapping laws. The Senate killed the bill by one vote last year, and because I believe in the supremacy of Federal law and the Constitution, I hope that it will meet a similar fate in this Congress.

WORLD PEACE AND WORLD LAW

Last month, a committee was formed of Members of both Houses of Congress to promote peace through the advance of the rule of law in international relations. Unhappily for our time, communications and weaponry have so outdistanced the law and so shrunk and imperiled the earth that unless there is a broad and peaceful extension of the rule of law over the earth, there may be no one left to be ruled. The committee that was formed vigorously endorsed House Concurrent Resolution 211 calling for a revision of the U.N. Charter so as to develop and guarantee the rule of international law. Similar committees have already been formed within the Parliaments of the United Kingdom, France, West Germany, Italy, and Japan. To my way of thinking, this resolution and the formation of our committee, reflects thinking in a direction that is inevitable. Disputes between nations must be settled by the rule of law, not by the rule of war. The question is no longer whether world law is necessary, but how it can be made a reality. Through my periodic reports from Congress, you will be kept advised of our progress.

HOUSING LEGISLATION

The last week of Congress was highlighted by the drive for adjournment. Congress, for the third time this session, passed an omnibus housing bill. The President vetoed the first two, and as we adjourned, has not acted upon the third bill. It is my hope that the President signs this bill or many Federal housing projects, including urban renewal, will be eliminated or drastically curtailed for lack of funds. As Congressman RAINS, chairman of the Subcommittee on Housing, said on the floor of the House, the first housing bill was the best bill; the second was a good one, and the third compromise legislation was a fair one.

It was indeed sad to see neither the first nor the second bill receive the President's signature when they were pared down by congressional leaders in order to fit the needs of the country without overtaxing the economy. Representative government is based on the art of compromise, and I feel Congress performed its obligation by reconciling its original request in this field to gain the approval of the administration. In turn, it is my belief that the President failed to meet the Congress half way, and a fair hous-

ing bill is the only legislation that will be enacted this session.

NEW VETERANS PENSION LAW

This year, Congress passed a new pension bill for veterans who are permanently and totally disabled from injuries or disease that are non-service-connected. This new bill provides for an increase in pension payments for many veterans. The most important feature, however, is the granting of pension benefits to thousands of widows and dependent children of veterans of World War II and the Korean conflict. Under the present laws, the widows and children of deceased veterans of World War II and Korean conflict, were eligible for pension benefits only if the veteran was receiving compensation from the Veterans' Administration at the time of his death for a service-incurred disability. The new law grants pension benefits to these widows and children on the same basis as has long been granted to the widows and chairman of deceased World War I veterans.

Under the new law, benefits payable are based on annual income from all sources, including Social Security and Railroad Retirement. Welfare aid is not counted as income. In the case of a veteran and spouse, all income of the spouse over $1,200 must be counted as the veteran's income for pension purposes.

This new law, Public Law 86-211, becomes effective July 1, 1960. Veterans on the pension rolls prior to that date will have the right to retain their present pension or elect to receive the new benefits if they so desire. The Veterans' Administration will shortly advise these veterans as to their rights under both the old and new law.

For assistance in applying for these benefits, I suggest you contact the Veterans' Administration regional office at 2030 West Taylor Street, Chicago 12, Ill.

BOND INTEREST RATES

On September 12 in a special Saturday session, Congress enacted compromise legislation to meet President Eisenhower's request for authority to increase rates on long-term Government bonds. The agreement reached after a long deadlock would allow the Treasury to boost interest rates on series E and H savings bonds to a ceiling of 4½ percent. These bonds, the types held by many individuals now, pay a top of 3.26 percent. The compromise also would give the Treasury authority to encourage big investors in long-range marketable bonds to swap them in advance of maturity for new issues, paying higher interest. Under previous lower rates of interest, the Government has had considerable difficulty in interesting big investors in buying Government bonds because they could receive higher interest rates on private investments.

KHRUSHCHEV VISIT

As I conclude this newsletter and prepare to leave Washington, my departure coincides with the arrival of Premier Khrushchev. I am sure the American public will receive him with courtesy and consideration. This is not because we approve of his acts or trust his motives, but because he is the leader of a powerful nation with whom we must deal wisely and realistically to avoid a nuclear war caused by miscalculation. The great opportunities afforded by the talks far outweigh the dangers which might conceivably exist. I do not think Mr. Khrushchev will change Soviet policy because of what he sees during his visit to this country. What will interest him, it seems to me, is that he will be able to judge for himself, in his official contacts, what are the levers of power and decision in the American Government and in the American society.

The last piece of legislation to pass the House was the mutual aid bill which had been amended by the Senate to include an extension of the Civil Rights Commission scheduled to expire by its terms on November 8, 1959.

During the adjournment, I will be available to discuss and handle any and all inquiries, requests, and matters within the scope of congressional activities. Feel free to call or drop me a note and I'll be happy to arrange a mutually convenient appointment.

Sincerely,

CHARLES A. BOYLE,
Member of Congress.

Tribute to Firefighters

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. McGOVERN. Mr. Speaker, in the hectic rush of our modern life we seldom take the time to remember the facilities that keep our communities functioning. An absolutely essential occupation is that of fireman. A community without the equipment and the men to fight fires could not exist.

Representing a heavily rural district I am aware that many of our towns and villages are serviced wholly or in part by volunteer firemen who besides holding down their regular occupations are also willing to volunteer their services along with their neighbor in community action once danger threatens.

We are aware that fighting fires is dangerous work. Statistics bear out the fact that firefighters suffered more than six times as many one-the-job injuries in 1958 as the average American worker. It is less well known that fighting fires is an occupation that carries a medical disease hazard that adds to the physical danger.

Dr. Herman N. Bundesen underlines this additional problem in an interesting article published by the International Association of Fire Fighters. We can all agree with Dr. Bundesen that "To them, we all owe a deep debt of gratitude." Under unanimous consent to enter my remarks, I insert it in the RECORD.

"HERE'S TO HEALTH"

(By Herman N. Bundesen, M.D.)

ILLNESS FROM OCCUPATIONS

Many occupations have certain obvious drawbacks, such as danger, low pay, or poor working conditions.

Now we know that certain occupations can also have an adverse effect on the heart and blood vessels, or other organs of the body.

OCCUPATIONAL HAZARDS

We know that there is a greater tendency in men such as physicians, to develop heart disease. Men in the field of advertising are supposed to have a greater tendency toward ulcers.

However, certain strenuous occupations, such as firefighting, may have an adverse effect on the heart and blood vessels.

FIREMEN'S DISEASES

High blood pressure is common in firemen. Especially prevalent in firemen are angina, a condition in which the amount of blood going through the blood vessels supplying the heart is limited, and coronary thrombosis, a condition in which a clot forms in the blood vessels supplying the heart.

It is believed that the stress and strains, extremes of temperature, gas and smoke connected with firefighting may increase the tendency toward these diseases in this occupation.

RESULT OF STRESS

High blood pressure, hardening of the arteries, and other such diseases definitely are influenced by conditions of stress. These conditions occur in firefighters.

Emotional and muscular effort may cause great elevation of blood pressure in these individuals. After a blast, the blood has been known to remain elevated for weeks in persons who were in the vicinity of the explosions. Stress can also cause changes to occur in the heart.

WORK CONDITIONS

Firemen must carry on during emergency situations and in extremely hot or cold weather. Heavy work in high temperatures adds to much of the burden of the heart.

Firemen are often exposed to carbon dioxide gas which may diminish the amount of oxygen that reaches their vital organs. This can increase their chances of suffering a heart attack.

These are brave men and everything possible must be done by all of us to protect them from the hazards of their occupation. To them, we all owe a deep debt of gratitude.

Report on Activities of Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the activities of the Committee on Un-American Activities during the 1st session of the 86th Congress. This period covers the period from January 1, 1959, to and including September 1, 1959.

REPORT BY CHAIRMAN FRANCIS E. WALTER ON THE ACTIVITIES OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES DURING THE 1ST SESSION OF THE 86TH CONGRESS

HEARINGS AND INVESTIGATIONS

During the period beginning January 1, 1959, and ending August 27, 1959, the committee interrogated 87 witnesses in public session and 70 witnesses in executive session.

SOVIET ESPIONAGE

Continuing its efforts to develop the fullest possible information on Soviet spy organizations both here and abroad, the committee interrogated Petr S. Deriabin, a former officer of the Soviet Secret Police—KCB. Mr. Deriabin's identity had been kept secret by U.S. security agencies since his defection in 1954. Publication of his testimony by the committee was the first revelation in the free world of the knowledge he had of Soviet espionage operations as a result of his years of service in the secret police.

Mr. Deriabin revealed that the KGB is divided into two major sections, one of

which is charged with protecting the internal security of the Soviet state, and the other with carrying out espionage and various terrorist activities in foreign countries. The internal security section, he said, has approximately 16,000 officers who are charged with maintaining surveillance over and providing protection for the leaders of the Soviet Government. The foreign section of the KGB has about 3,000 officers assigned to its Moscow headquarters, and 15,000 more stationed in other countries of the world. This section, according to Mr. Deriabin, handles not only espionage but "assassinations, kidnaping, blackmail, and similar activities." Deriabin confirmed the testimony of other defectors from the Soviet Secret Police to the effect that Communist exchange delegations always include a number of intelligence or counterintelligence agents. He identified several who had been sent to the United States in recent years in various cultural exchange groups. While Deriabin could not give exact figures on the size of the Soviet Military Intelligence Force—GRU—he stated that it had many more agents than the KGB.

SOUTHERN CALIFORNIA COMMUNIST PARTY

In extensive hearings in Los Angeles in which 65 witnesses testified, the committee thoroughly explored the structure, objectives, and leadership of the southern California district of the Communist Party, a section that ranks second in importance in the U.S. conspiracy only to that of New York. The significance of the booming State of California in Communist plans for subversion of the United States can be gaged by the fact that, whereas this State was formerly combined with Arizona, Nevada, and the former territory of Hawaii to make up the Communist Party's District 13, it was itself divided into two separate districts—the northern California district and the southern California district—in early 1957. A State coordinating committee was established to control and direct the operations of the two districts. Though the great majority of witnesses invoked the fifth amendment the committee with the help of several friendly witnesses was able to uncover a mass of information concerning the party's leadership and its methods of operation.

CURRENT COMMUNIST STRATEGY AND TACTICS

In hearings held in Pittsburgh, Pa., on March 10, 1959, the committee developed additional information on techniques now being used by the U.S. Communist Party aimed at hamstringing the committee's efforts to develop information by planning disruptive and obstructive conduct at its hearings. Information on the party's decentralization techniques and other underground security measures adopted to provide protection for its continuing large-scale operations was also developed.

Mr. and Mrs. Hamp Golden, who had served as FBI undercover operatives in the Communist Party for 12 years, explained how the Communist Party attempts to influence Members of Congress and other Government officials by deluging them with letters and telegrams on pending legislation and other national issues. They also described the operations of a number of Communist fronts in the Pittsburgh area and identified the Communist Party members who manipulated these organizations along the lines ordered by the conspiracy. Both Mr. and Mrs. Golden expressed the conviction that, though its visible members were fewer, the Communist Party is today more dangerous than it was in the past.

SECURITY IN DEFENSE PLANTS

The second day of the Pittsburgh hearings was devoted to the still largely unsolved problem of providing adequate security for industrial establishments holding defense contracts. Government officials testifying on this subject before the committee pointed out that Defense Department contracts do not preclude the employment of Communists within such facilities, or their working on parts of highly classified weapons, so long as they do not have access to classified information. In adition, the Defense Department cannot exclude Communists from communications facilities and powerplants, both of which are vital to our defense effort and production.

A. Tyler Port, Director, Office of Security Policy of the Office of the Assistant Secretary of Defense for Manpower, Personnel and Reserve, testified as follows on this point:

"The potential for bringing defense production to a halt by sabotage of power facilities is enormous, and the repercussions would be, I think, disastrous because if the power itself is cut off defense plants cannot produce and we will thus be denying ourselves the weapons which are so essential to our national defense effort."

The committee also produced evidence in its hearings that five prime contractors for the Department of Defense in the Pittsburgh area have contracts with the Communist-controlled United Electrical Workers Union, which serves as bargaining agent for their employees. Four officials of this union who were subpenaed to testify in the hearing invoked the fifth amendment when asked questions concerning their membership and activity in the Communist Party.

DEPORTATION AND DENATURALIZATION PROBLEMS

The third day of the committee's hearings in Pittsburgh revealed a serious loophole in U.S. security caused by the fact that the Government finds it impossible to deport alien Communists who have been ordered deported in accordance with the law because the Communist nation of their origin refuses to grant them travel documents. It also highlighted the great difficulties the Government encounters in trying to denaturalize active, hard-core Communists who have obtained U.S. citizenship by falsely denying party membership at the time of their naturalization.

Seven persons who were or had been the subjects of deportation or denaturalization proceedings testified before the committee in the course of these hearings. All but one, who was granted a continuance of his appearance on the grounds that deportation proceedings had not been completed, invoked the fifth amendment when asked about their Communist Party affiliations and activities. The deportation of one of these six persons had been frustrated by the refusal of an Iron Curtain country to grant travel documents for him. Deportation proceedings of the other five had been rendered ineffective because of a number of Supreme Court decisions.

In one of these decisions, *Rowaldt* v. *Perfetto*, the Supreme Court held that mere proof of an alien's Communist Party membership was not enough to warrant deportation, and that the Department of Justice would have to prove what the Court called "meaningful association" with the Communist Party. In another, *United States* v. *Witkevich*, the Court ruled that an alien against whom a deportation order had been outstanding for more than 6 months could not be required by the Attorney General to answer questions concerning Communist Party activities. In *Novak* v. *United States* and *Maisenberg* v. *United States*, the Court decided that to denaturalize a person who had obtained citizenship while a member of the Communist Party the Department of Justice not only had to prove that the person had been a member of the party and that the Communist Party advocated violent overthrow at the time, but also that the defendant knew at the time of his naturalization that the Communist Party engaged in such illegal advocacy. In the cases of the witnesses who appeared before the committee, all are now free to continue their Communist activities in this country.

INFILTRATION OF THE MEATPACKING INDUSTRY

In hearings held in Chicago on May 5, 6, and 7, 1959, the committee produced evidence of heavy Communist Party penetration of the meatpacking industry in that area. Ten officials of the United Packinghouse Workers of America, including the editor of the union's newspaper, were identified as party members in the course of the hearings. When they testified, they denied present membership in the conspiracy, but invoked the fifth amendment when asked if they had gone through the motion of a technical resignation so that they could testify they had resigned from the party while continuing their activities in the Communist operation. Three others who were identified as party members denied present membership, but invoked constitutional privileges when asked about membership in recent years.

John R. Hackney, an international representative of the Amalgamated Meatcutters and Butcher Workmen, who had been a member of the Communist Party, stated that the conspiracy had made special efforts to penetrate the meat industry "because the party felt that the meat industry was essential to the national economy, and it was important that they build the party within the meat industry in the event that we had war with other nations, that we could control the meat industry and its various outlets."

Concerning the present state of Communist infiltration of that industry, Mr. Hackney stated:

"From my most current information and my experience and my activities in the party, I would say that the party is stronger now in the meat industry than it ever has been."

PASSPORT SECURITY

In hearings held in Washington, D.C., on April 21–24 and June 5, 1959, the committee highlighted the dangerous situation resulting from the Supreme Court passport decision of June 1958, and pointed up the great need for legislation to grant the Secretary of State the power to deny passports to Communists, and to invalidate passports which had already been issued.

Through the testimony of two State Department security officials, and evidence introduced into the record in the course of the testimony of 14 uncooperative witnesses with Communist and subversive backgrounds who presently hold passports or recently held them, the committee revealed that since the Supreme Court's decision, many leading U.S. Communists had been enabled to travel to the Soviet Union and had done so; that hundreds of persons with subversive backgrounds who had not applied for passports in many years had rushed to obtain them immediately after the Supreme Court decision; that passports have been granted to persons denied them in the past because of their Communist activities, and to persons who, in their appearance before the committee, invoked the fifth amendment to avoid saying whether or not they presently, or at any time in the past, had engaged in espionage against the United States for the benefit of the Soviet Union.

The hearings also revealed that witnesses who had obtained passports subsequent to the Supreme Court decision had traveled to Iron Curtain and non-Communist countries, where they had engaged in various activities designed to further the interests of the Soviet Union and to hamper the policies of the United States.

AMERICAN NATIONAL EXHIBITION, MOSCOW, JULY 1959

The committee chairman, Representative FRANCIS E. WALTER, addressing the House of Representatives on June 3, 1959, stated that,

of the 69 artists whose works had been chosen for display at the American National Exhibition in Moscow in July and August of this year, 34 had records of affiliation with Communist fronts and causes. Twenty-two, or one-third of the total, he said, had significant histories of association with the Communist movement.

In hearings held in Washington, D.C., on July 1, 1959, two artists whose works had been selected for the exhibition testified. One of them, Ben Shahn, invoked the fifth amendment when asked if he had ever been a Communist Party member or had ever contributed his art works for the benefit of Communist enterprises. The other one, Philip Evergood, invoked constitutional privileges when questioned about present as well as past party membership, and also, when interrogated about his numerous activities in behalf of communism in the art field. Several other artists represented in the exhibition concerning whom the committee has evidence of Communist Party membership were not available to testify, having obtained passports and left the country after the Supreme Court passport ruling of June 1958.

Mr. Wheeler Williams, president of the American Artists Professional League, largest organization of artists in the United States, testified extensively on the Communist use of art as a weapon. He expressed the opinion that, in subverting the arts, the Communists had been "successful beyond their wildest hopes," and that the Soviet Union would be delighted with the fact that so large a proportion of artists chosen for the U.S. exhibition in Moscow had Communist Party or front affiliations. Mr. Williams gave the following characterization of the works chosen for the American exhibition in Moscow:

"It includes a number of 'social protest' painting of no aesthetic or artistic importance; at least one revolting satirical lampoon; a heavy load of meaningless doodles in paint and bronze; and a few traditional works, only one or two of which have any outstanding merit. If it is judged on merit alone, it is a dismal and dreary potpourri.

"It fails utterly to give 'a true image of America' as it contains next to nothing to show the wondrous natural beauty with which God has endowed our beloved lands, to portray its glorious history, its heroes or its valiant people of varied races, and nothing to picture the wondrous architecture of our cities or charm and beauty of our villages and towns."

COMMUNIST TRAINING OPERATIONS

In hearings held on July 21 and 22 in Washington, the committee probed the indoctrination techniques used by the Communist movement to turn ordinary American citizens into dedicated hard-core conspirators. The hearing concentrated on the Faculty of Social Science in New York City, which is now the major Communist Party educational institution in this country. Evidence produced in testimony given in the course of the hearing establishes that the Faculty of Social Science is the successor of the Jefferson School of Social Science which had been dissolved by the Communist Party following the order of the Subversive Activities Control Board that it was a Communist front and should therefore register with the Attorney General. Twenty lecturers or officials of the Faculty of Social Science have been connected with the Jefferson school. Ten of them were subpenaed to testify in the hearing and invoked the fifth amendment when questioned concerning Communist Party affiliation and activity. The hearing also produced evidence that the Communist Party is carrying on secret training programs in conspiratorial tactics and strategy in key cities of the Nation.

TESTIMONY OF CLINTON EDWARD JENCKS

Jencks, a former official of the Communist-controlled International Union of Mine, Mill and Smelter Workers, testified before the committee in Washington on July 22. A number of years ago Jencks had been convicted of falsely signing a non-Communist affidavit under the Taft-Hartley Act. The Supreme Court, in the now-famous decision bearing his name, subsequently reversed his conviction on the grounds that the Government had not made available to him confidential reports made to the FBI by a witness who testified against him.

Jencks recently applied for and was awarded by the Woodrow Wilson Memorial Fund in Princeton, N. J., a graduate fellowship to study at the University of California with the purpose of entering the teaching profession. Testifying before the committee, Jencks admitted that in applying for the fellowship he had submitted a statement intended to make foundation officials believe that he had not signed the non-Communist affidavit falsely. Asked if he was telling the truth when he conveyed this impression, he refused to answer, invoking the fifth amendment. In the course of his trial for violating the Taft-Hartley Act, Jencks had been identified as a member of the Communist Party by several witnesses, including one former Communist who had been an official of the International Union of Mine, Mill and Smelter Workers.

REPORTS

Communist legal subversion

This report, though based only on testimony concerning Communists in the legal profession given incidental to the committee's investigation of other phases of Communist activity in the decade 1947–57, revealed that over 100 members of the bar had been identified as members of the Communist conspiracy before this committee. The report unveiled the techniques used by the Communist Party to undermine the United States, its Constitution and laws by party members trained in the law. It also brought up to date previous information published by this committee on the National Lawyers Guild, the major Communist front for lawyers in the United States. It gave information on the manner in which Communist lawyers abuse the courts of this country and attempt to instigate contemptuous behavior on the part of witnesses before congressional committees. On the basis of testimony given before this committee and information contained in the committee's files, it reviewed the various services rendered the Communist Party by members with legal training—the recruiting of fellow lawyers, espionage and subversion of government, service as officials of the Communist Party, assisting the party in circumventing the laws of the United States, taking leadership roles in Communist fronts, running for public office and serving as propagandists for Communist causes. Going to the crux of the problem Communists in the legal profession pose to the bar and citizens of this country, the report asked this question:

"How can a lawyer maintain his oath to uphold and defend the Constitution of the United States when he is an agent of a conspiratorial apparatus designed to destroy the Constitution?"

Report on the southern California district of the Communist Party

This report, based on hearings and intensive investigation outlined the organizational structure of the California district of the Communist Party and the role Communist fronts are playing in party operations in that State. It also summarized the major elements of the program adopted at the April 1957 convention of the southern California District of the Communist Party and developments in special fields that followed the convention: youth recruitment, the new party line on Negroes, and stepped-up labor infiltration efforts. Also reported was detailed information on internal strife within the district, the names of 14 members who had recently resigned from the party, and biographical sketches of 85 Communist leaders and personalities in the district. Sixteen important Communist Party documents were included in the apepndix of the report.

Communist lobbying activities in the Nation's Capital

The stepped-up lobbying operation in Washington designed to influence Members of Congress along lines favored by the Communist Party was described in this report. It revealed that a cited Communist front, the Emergency Civil Liberties Committee, and three major Communist-controlled unions—the United Electrical Workers, the International Longshoremen's and Warehousemen's Union, and the International Union of Mine, Mill, and Smelter Workers—maintain full-time lobbyists in the Capital. The three union lobbyists—Russell Nixon, Jeff Kibre, and Herman Clott—have all been identified as Communist Party members and have invoked the fifth amendment when questioned about party membership by congressional committees. The report pointed out that by concealing their Communist connections and the nature of the organizations they represent, these lobbyists in effect defeat the basic purpose of the Federal Regulation of Lobbying Act of 1946, which is designed to keep Congress fully informed of the interests represented by those attempting to influence it. The report recommends amendment of the act so that it would require lobbyists to state whether they are members of the Communist Party or have been such since 1948, whether the organization they represent has ever been found to be Communist-controlled by a congressional body and whether such finding had ever been rescinded.

CONSULTATIONS

Language as a Communist weapon

The manipulation of language constitutes one of communism's most potent weapons in its drive for world domination, Dr. Stefan T. Possony, authority on psychological warfare and revolutionary techniques and political scientist of Georgetown University, told the committee. Communists, he said, consider words not as a means for communicating truth, as other people do, but as tools for promoting their revolutionary aims.

The key to Communist use of semantics is found, Dr. Possony said, in these two principles:

"Every Communist communication must convey an orthodox, that is, revolutionary activating message to the party and its followers.

"This same communication must convey a different, i.e., soothing, pacifying, and paralyzing message to the opponent of communism."

By utilizing language in this fashion, Communists mislead the non-Communist world as to their true intentions. In his consultation, Dr. Possony explained how Communists deceive many people and even political leaders in the free world by the use of terms such as "peaceful coexistence," "democracy," etc., which have an entirely different meaning to them than they have in normal usage. He also pointed out that negotiations, too, are considered by the Communists to be a conquest technique and are used by them to weaken the will of free people to resist.

Communist persecution of churches in Red China and northern Korea

In this consultation, five Protestant church leaders, natives of China and Korea, de-

scribed the brutal campaign carried out by the Chinese and northern Korean Communists during the past 10 years to destroy all vestiges of Christianity in those countries.

At the present time, as a result of this campaign, no truly Christian churches are operating in Red China or North Korea, they said. The only ones permitted to operate are propaganda churches with ministers "picked by the Government to fill the pulpits and indoctrinate the people in communism." These churches are also used as showcases to hoodwink visitors from foreign lands into believing that freedom of religion exists in Red China.

No religious worship of any kind is permitted in the communes of Red China, and the institution of the commune system has enabled the Government to completely end the operation of churches in all areas where the system is in effect. The five clergymen also described the method used by the Communists in both countries to bring about the closing of the churches. These included the use of horrible tortures of ministers and active Christians to wring false confessions of espionage and similar crimes from them.

Control of the arts in the Communist empire

Ivan P. Bahriany, Ukrainian poet, novelist, and artist, who lived and wrote for years under Communist rule, described how the Soviet Government exercises strict control of all forms of artistic and literary expression so that they become vehicles for the service of the state. Mr. Bahriany, who was sentenced to a slave labor camp in Siberia for refusing to follow the party line in his writings and escaped to the West at the end of World War II, said that numerous writers whose works had not been deemed loyal to the Communist regime have been persecuted, imprisoned, and liquidated in the Soviet Union.

There are very dangerous features for the West in the present cultural exchange program, Mr. Bahriany said. Essentially, these exchanges are being used by the Soviet Union to deceive the non-Communist world by presenting false pictures of conditions in Communist nations—pictures which, for example, create the impression that artistic and literary freedom exist when there is really none behind the Iron Curtain and Moscow has for years carried out a concerted campaign to destroy all national cultures in captive areas under its control.

Who are they?

Continuing its series of biographical sketches prepared by the Library of Congress on leading figures in the history of world communism, the committee published a document on Karl Marx, the founder of communism and the chief theoretician of its early period. Marx was a sour, brooding, truculent man; lonely, unfeeling, friendless, and in constant revolt against society. He was an intellectual fanatic, grossly intolerant, arrogant, and self-assured. Dogmatic and insolent as he was, he treated with scornful contempt everyone who did not agree with him completely on everything. He developed a completely materialistic interpretation of life which proclaimed, as one of its basic truths, unremitting class struggle, the inevitability of continuous clashes between the bourgeois and proletariat until the former class had been liquidated. This sketch of Marx is a glimpse at the mysterious processes of a life which produced the ideological base for the most devilish and menacing force mankind has ever experienced.

WORK IN PROCESS

The committee has a heavy schedule of additional hearings and investigations, reports, and consultations for the remainder of the year 1959.

Summary of Veterans' Legislation, 1st Session, 86th Congress

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. TEAGUE of Texas. Mr. Speaker, during the 1st session of the 86th Congress 16 bills have been enacted into law which originated in the Committee on Veterans' Affairs.

The substance of this legislation is important, and I think that the 1st session of this Congress has indeed been an outstanding one insofar as the subject of veterans' legislation is concerned.

I list below a summary of our activities, showing the 16 laws enacted as well as the bills which have been passed by the House and are pending in the other body, and the bills which have been reported and are awaiting disposition of the House during the second session.

VETERANS' LEGISLATION

The 1st session of the 86th Congress has been most productive insofar as legislation for veterans and their dependents is concerned. Our program for veterans and their dependents is unequaled anywhere else in the world, and the most important veterans' bill considered each session is the Veterans' Administration appropriation bill which finances the operation of our extensive veterans' program.

There are 22,600,000 veterans living in the United States. The Nation's veterans, together with their families, make up about 45 percent of the total population of the United States. The Veterans' Administration is the third largest agency of Government in expenditures. Its operations are exceeded only by the Department of Defense and the Department of Agriculture. Seven percent of the Treasury's income from taxes is spent on veterans' benefits.

The Veterans' Administration operates 170 hospitals and on any average day the Veterans' Administration's patient load exceeds 114,000. The insurance program operated by the Veterans' Administration is the biggest undertaking of its kind on earth. The face value of Government life insurance policies for veterans is valued at nearly $43 billion and there are over 6 million policies in force.

The veterans' housing program is an important phase of the Nation's housing program. We are inclined to think of the Federal Housing Administration as the principal housing agency, but the fact is that in recent years the Veterans' Administration has been responsible for a greater volume of private residential housing than has the Federal Housing Administration. Under the housing programs for veterans of World War II and Korea, a total of $46 billion has been loaned. The Veterans' Administration has guaranteed more than $25 billion of this amount. The Veterans' Administration has had very satisfactory repayment experience and losses on veterans' loans have been less than losses on conventional loans.

More than 10 million veterans have been trained under the education and training programs administered by the Veterans' Administration. One-half of all World War II veterans received some training. Two out of every five Korean veterans have enrolled in training. Total expenditures on educational benefits for World War II and Korean veterans has now exceeded $20 billion.

The compensation and pension programs account for the biggest single area of expenditure in the Veterans' Administration. We spend just over $2 billion annually on compensation for service-connected disabilities and service-connected deaths. We spend about $1,150 million on pensions for veterans and dependents. Our total expenditures for both compensation and pension for next year will be $3,307 million. These payments go to 3 million veterans, widows, and dependent children.

To finance this extensive program for veterans and their families, it is necessary that the Congress appropriate more than $5 billion each year. The appropriations bill for this fiscal year for the Veterans' Administration was $5,042,544,000. The magnitude of this figure certainly makes it obvious that the most important piece of veterans' legislation going through the Congress each year is the VA appropriations bill.

In addition to appropriating funds for the continuance of veterans' programs already in operation, the Congress passed a number of laws which amended and extended existing programs.

VETERANS' HOUSING

Public Law 86–73 makes an additional $100 million available to the Administrator of Veterans' Affairs for immediate use in the direct home loan program. Congress made these additional funds available for the purpose of reducing extensive waiting lists which had developed throughout the country. Under the direct home loan program the Veterans' Administration makes home loans to veterans residing in small towns and rural areas. Private financing has not been available in smaller towns and rural communities and it has been necessary for the Congress to make funds available to the Veterans' Administration for direct loans in these areas. The demand for financing has always exceeded the supply of money. Early in this year the waiting list of applicants had reached 58,000 throughout the United States and the limited amount of money available to the Veterans' Administration was totally inadequate. The additional $100 million was made available for the specific use of the Veterans' Administration in reducing waiting lists.

This same act permitted the Administrator of Veterans' Affairs to raise the interest rate on Veterans' Administration guaranteed and direct loans not to exceed 5½ percent per annum. The provision of law requiring the Veterans'

Administration interest rate be not less than ½ percent below the FHA rate was repealed.

This same legislation authorized the Administrator of Veterans' Affairs to refuse to appraise homes for builders and lenders suspended by FHA.

Public Law 86–239 expends the program of assistance for severely disabled veterans in acquiring homes equipped with special facilities made necessary by the character of their service-connected disabilities. This act brings into this program those with compensable permanent and total disabilities incurred when such disability includes, first, blindness in both eyes, having only light perception; plus, second, loss, or loss of use, of one lower extremity such as to preclude locomotion without the aid of a wheelchair. Also, it removes the limitation that where eligibility is based on loss, or loss of use, of both lower extremities that such loss must have been due to certain specified conditions.

GUARDIANSHIP

Public Law 86–146, commonly known as the guardianship bill, was enacted to establish better controls over the estates and funds of incompetent veterans where the veteran is under a guardianship and does not have close relatives. In the past, some of these individuals have accumulated large estates and upon their death these estates were passed on to distant relatives, who had little or no close connection with the veteran and no legitimate claim to funds paid by the Treasury for the veteran's benefit.

Public Law 86–146 restricts payment upon death of an incompetent veteran of gratuitous veteran benefits deposited in the "personal funds of patients' trust fund" to a wife, child, or dependent parent. If the veteran does not have relatives in these categories, the funds are returned to the Treasury of the United States. This legislation provided a control on the building up of estates by incompetent veterans receiving hospital care at public expense. This step was taken to prevent the accumulation of large estates. Where the veteran is hospitalized in a State institution, his funds can be used to pay for his care.

FORFEITURE

Prior to the passage of Public Law 86–222, the Administrator of Veterans' Affairs had the authority to forfeit the rights of veterans, widows, children, and dependent parents to all gratuitous benefits under laws administered by the Veterans' Administration. Forfeiture was authorized in two categories:

First. Where the Administrator finds the one claiming benefits has been guilty of mutiny, treason, sabotage, or rendering assistance to an enemy;

Second. Where a false or fraudulent statement has been made concerning any claim for benefits.

The forfeiture decision of the Administrator was final and not subject to review in the courts. Forfeiture, if adjudged, forfeits all benefits and continues for the lifetime of the forfeited individual, unless pardoned by the President.

This law continues the authority of the Administrator to forfeit in all cases where the guilty person resides, or is domiciled, outside the jurisdiction of the U.S. courts.

Where the accused resides, or is domiciled, within the United States at the time of the offense, the new law eliminates the authority of the Administrator to impose a forfeiture based upon false or fraudulent statements. Forfeitures previously imposed are not affected. This law also provides for automatic forfeiture of rights to gratuitous veterans' benefits in all cases of conviction of certain specified offenses involving loyalty or security. A Presidential pardon restores the right to benefits.

Authority of the Administrator of Veterans' Affairs to make an apportionment award of disability compensation to dependents of veterans in cases of administrative forfeiture for fraud or forfeiture for offenses involving loyalty or security is terminated.

COMPENSATION

Public Law 86–187 increases the presumptive period for service connection for the disease of multiple sclerosis from the present 2-year period to 3 years.

Public Law 86–188 provides that Hansen's disease—leprosy—developing to a degree of 10 percent within 3 years from the date of a veteran's separation from service shall be considered to be service connected.

Several other bills relating to compensation were being processed by the Congress when it adjourned. This legislation carries over to the second session.

The House had passed and sent to the Senate H.R. 268 which provides a statutory award of $47 a month for deafness in both ears, having absence of air and bone conduction.

H.R. 283, pending in the Senate, provides that if a veteran, as a result of a service-connected disability, has suffered the anatomical loss or loss of use of one foot, or one hand, or one or more creative organs, or both buttocks, or blindness of one eye, having only light perception, the rate of compensation therefor shall be $47 per month for each such loss, or loss of use of, independent of any other compensation provided. Present law limits payment to one statutory award of $47 per month for all such losses, except where the losses are in addition to other combinations of disabilities specified in the law. Under this bill, the total payment in any case may not exceed $309 unless the loss or loss of use is in addition to certain combinations of disabilities specified in the law, in which event the total payment may not exceed $450. The loss of more than one creative organ would, for this purpose, be considered a single "loss." In peacetime cases the rates are 80 percent of the above-mentioned rates.

H.R. 5996, pending in the Senate, authorizes payment of a lump sum of the total amount of compensation, representing the statutory awards of $47 monthly for the anatomical loss, or loss of use of, a creative organ and $67 monthly for arrested tuberculosis, which would have been payable for the period August 1, 1952, to date of bill's enactment had claim therefor been filed on August 1, 1952. This bill applies to cases in which condition was determined to be service connected before August 1, 1952, and would require reduction of amount payable by any such statutory awards paid during that period.

H.R. 7211 has been reported by the House Veterans' Affairs Committee and was pending on the House Calendar when the Congress adjourned. This is a very important bill which establishes a new statutory rate of disability compensation for certain service-connected seriously disabled veterans. A monthly rate of $265 would be authorized for a veteran who has a service-connected disability rated as total and, one, has additional service-connected disability or disabilities independently ratable at 60 percent or more; or, two, by reason of his service-connected disability or disabilities is permanently housebound.

PENSIONS

The non-service-connected pension legislation enacted this session of Congress for veterans and widows is the most important veterans' legislation of this session. The new pension act, Public Law 86–211, modifies the non-service-connected pension program for veterans of World Wars I, II, and the Korean conflict and for their widows and children. This bill will provide $308 million in additional benefits during its first year of operation. It will provide more than $1 billion in additional benefits during its first 5 years of operation. Seventy percent of all pensioners, married and single veterans, widows, and orphans, or 838,000 cases, will get substantial raises in pensions under the new act. Seventy-two thousand veterans and widows will be added to the pension rolls because the income limits are being raised from $1,400 to $1,800 for the single person and from $2,700 to $3,000 for the married person. Two hundred and six thousand widows of veterans of World War II and Korea will be added to the rolls as a result of the equalization feature which makes widows of veterans of World War II and Korea eligible for a pension on the same basis as widows of World War I veterans. This extremely important provision will provide $22 billion in benefits to widows and dependent children in the next 40 years.

The new pension act will help a total of 1,116,000 veterans, widows, and children during its first year of operation. The new act will become effective July 1, 1960. Any person on the rolls on that date will have the privilege of remaining under the old program, with no change in pension rate, or eligibility status. If a person can benefit under the new act and, as has been pointed out, 838,000 cases on the rolls will benefit under the new act and may choose to elect the higher benefits of the new program.

The new pension act brings into existence several new concepts. The non-service-connected pension programs for veterans and widows of World Wars I, II, and Korea have been based on the concept of need. However, the needs test operated unfairly in some instances and were ineffective in others. The new pension legislation creates the sliding scale concept of need. In other words, the veteran or widow with very little other income or resources receives more, while

the veteran with substantial outside income and other means receives correspondingly less.

The new law and the Veterans' Administration regulations regarding counting income are approximately the same with one or two important exceptions. Under the new program all income from private and public retirement systems, annuities, endowments, and the Social Security program are counted as income after the individual has received payments back from those programs equal to his contributions. The income of the spouse, if not estranged, is counted as income except that $1,200 of the spouse's income is exempt. The new pension act grants discretionary authority to the Veterans' Administration for finding the net worth of the veteran, or widow, or child, which could lead to a determination that the applicant is not eligible for a pension because of high net worth. This provision has operated in the past in the case of dependent parents. It has been applied generously by the Veterans' Administration and has served to exclude only those individuals with very substantial net worth, who are not actually in need of help.

The new pension act does not change the basic eligibility requirements which now exist. A veteran must have served 90 days during a period of war and must have received an honorable discharge and his disability must not be the result of willful misconduct or vicious habits. The Veterans' Administration maintains a schedule of required non-service-connected disabilities in conjunction with age. At age 65 or over, only a 10 percent disability is required. Under 55, a veteran must have a single disability of 60 percent or two or more disabilities, one of which is 40 percent in degree, combined with other disabilities to a total of 70 percent. For the intervening age group of 55 to 60 and 60 to 65, the percentage of disability is reduced. The Veterans' Administration must make a finding that the veteran's disabilities are permanent in nature and as a result of the disability the veteran is unable to secure and follow substantially gainful employment. Upon being determined eligible under these requirements, the veteran is subject to the income limits which I have described. These income limits are being changed by the new legislation to the sliding scale concept. The detailed schedules are available for those who are interested.

The non-service-connected pension programs have been liberally administered by the Veterans' Administration. The non-service-connected pension rolls for living veterans are increasing by more than 10,000 a month. It is estimated that by the end of 1961 half of all living World War I veterans will be on the non-service-connected pension rolls.

EDUCATION AND TRAINING

Congress passed two laws this session relating to education and training programs.

Public Law 82–236 provides war orphans' educational assistance to children of veterans of the Spanish-American War where the veteran dies as a result of a disability incurred in or aggravated during that period of service. The orphans of World Wars I, II, and Korean veterans are now eligible. Many persons were surprised when this legislation was being considered in Congress to learn there are 33 children of Spanish-American War veterans young enough to participate in the program.

Congress passed another law liberalizing the provisions of the education and training program for Korean veterans which relates to changes of program. This amendment provides that a veteran may change from one program to another where the first program is a prerequisite or generally required for entrance into pursuit of the second program. This will not be counted as a change.

There are several important bills for educational benefits which have passed certain stages of the legislative process and which will be before the Congress in the next session.

H.R. 4306 will extend educational assistance for children of persons who die as the direct result of armed conflict or while engaged in the performance of extrahazardous service during peacetime after January 31, 1955, and before the end of compulsory military service. This bill has passed the House and is pending in the Senate.

The Senate has passed and sent to the House S. 1138, known as the peacetime benefits bill. This bill provides for education and vocational training, vocational rehabilitation for those veterans who suffered service-connected disabilities, and guaranteed and direct loan assistance in the purchase of homes, farms, livestock, and machinery to be used in farming operations. This bill is also limited to those veterans who entered service after January 31, 1955, and will be before this committee next session.

MISCELLANEOUS LEGISLATION

Other legislative acts passed by the Congress in the first session are as follows:

Public Law 86–103 extends for 10 years—until June 30, 1970—the present authority of the Administrator of Veterans' Affairs to maintain offices in the Republic of the Philippines.

Public Law 86–109 requires that the Veterans Canteen Service pay reasonable charges for the use of space, buildings, and structures furnished by the Veterans' Administration, the amount of charges to be determined by the Administrator of Veterans' Affairs.

Public Law 86–113 liberalizes statutory bar to benefits available to a veteran discharged during a period of hostilities on his own application or solicitation as an alien by presuming that he was not so discharged in the absence of affirmative evidence establishing the fact.

Public Law 86–116 grants to employees of the Manila, Republic of the Philippines, office of the Veterans' Administration, who are U.S. citizens, certain allowances and benefits similar to those enjoyed by Foreign Service personnel—transportation, home leave, and so forth.

Public Law 86–152 extends authority of the Veterans' Administration to provide hospital and medical care abroad to include U.S. citizens temporarily residing abroad who require hospital care and medical treatment for peacetime service-incurred disabilities.

Public Law 86–195 includes as a "child" for purposes of laws administered by Veterans' Administration, with certain exceptions, one who was a member of the veteran's household at the time of his death and who was adopted by the veteran's spouse within 2 years after the death, unless at the time of the veteran's death the child was receiving regular contributions toward his support from some individual other than the veteran or his spouse, or from any public or private welfare organization furnishing services or assistance to children.

Public Law 86–212 makes applicable to a competent veteran who disappears the provisions of existing law which provide that where an incompetent veteran who is receiving compensation for a service-connected disability disappears, the Veterans' Administration may pay to his wife, children, and parents the compensation otherwise payable to such veteran, amounts payable to each not to exceed the amount payable if the veteran had died from a service-connected disability.

The House has passed and sent to the Senate H.R. 270, which increases the monthly pension payable to holders of the Congressional Medal of Honor from $10—payable to those honorably discharged upon attainment of the age of 65 years—to $100—payable at any age and without regard to whether the holder was discharged or is on active military duty.

West Virginia Has Famous Mule

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BAILEY. Mr. Speaker, down through the years this Nation has built a number of traditions around mules. There is the Missouri mule; the Columbia, Tenn., mule; the Army mule; and there was football's famous "seven mules," playing in front of Notre Dame's storied "four horsemen."

West Virginia, as usual, is not to be outdone. Before the days of mechanization, our great coal industry depended upon mules to haul the wealth out of the ground. It is only natural that such widespread dependency on mules should produce one animal of outstanding talents.

Such a mule was "Bert" whose accomplishments were nearly as remarkable as those of the latter-day, fictional "Francis." The story of Bert has been related by Charles Callaway in the magazine section of the Wheeling News-Register for September 13. Under leave, I include this article as a part of my remarks:

SAGA OF A MULE WITH CHARACTER—"BERT" HAD A FONDNESS FOR BLACKBERRY PIE AND MINERS STILL RECALL HIS ANTICS

(By Charles Callaway)

His name was Bert.

His hair was red, his stature majestic.

His eyes were sad or twinkling with a dash of the Ol' Ned—as the occasion demanded.

Bert was a mule—the likes of which will never be found in West Virginia again.

Bert had character—and he was a character.

He wouldn't go to work until you gave him a chew of tobacco.

He is the only mule who ever upset a coal mine over a piece of blackberry pie.

He is the only mule of record who repeatedly got arrested on disorderly charges after hard work hauling bank cars in a coal mine.

His saga was written in the rich coal fields of southern West Virginia as he moved like a coal loader from one mine to another as a seam worked out. But his fame reached far and wide, even into the northern West Virginia hills where coal miners chuckled, "That ol' Bert—he's the one."

One of the favorite stories about Bert centered around the times when a new mule skinner would be hired at Bert's mine.

There was one fellow who proclaimed his prowess with "bank" mules long and loud as he applied for a driver's job.

He didn't know it, but the "super" was a man of talents, among which was that of leading a boaster to the edge of a cliff and letting him hang there.

The new driver was ordered to report the next morning and use Bert as his lead mule. "Bert will show you the mine," the super said. The new man laughed and opined that he would "show the mule a thing or two."

The word had spread the next morning, and there was darned little work done on the outside of the mine for a time.

Try as he would, the new driver couldn't get the harness over Bert's head. He fumed and cussed, finally lost his temper and kicked Bert in the ribs.

Bert got a hurt look in his eyes as he innocently shied away from such belaboring and in the process stepped on the driver's foot so heavily the man's cry of anguish could be heard half a mile up the holler, according to an ear witness, one Hoss Anderson, who was so startled he spilled a set of mash.

Time and again mine workers passed the spot where the driver was fussing and cussing with Bert and made inquiries as to how things were going. The replies would have drawn admiration at any other mine, but the superintendent had at one time been a first mate on a Mississippi steamboat and his vocabulary made all others sound like that of an errant Sunday school teacher.

Finally, when the perspiration was pouring off the new driver and he was near tears of exasperation the super walked up, patted Bert on the head and unobtrusively slipped him a morning chew of Apple plug.

Bert practically put the harness on himself before the astounded eyes of the new driver.

All went well after that. The driver became known as a good driver who got the coal out of the hole. It was a simple process. He kept his mouth shut and let Bert run things. The driver became known as Silent Sam, a name he kept until his dying day—the day he left this vale of tears with a pair of loaded dice in his right hand.

Bert was loved by every man who knew him, but when the blackberry season was in full swing, even lover could not overcome the wrath of hungry men.

Bert was crazy about sweets, especially pies—but most especially blackberry pie.

Coal miners in those days carried their lunches and coffee in those round metal buckets that came in two sections, the coffee in the top part and the big meat sandwiches and dessert in the bottom part. The blackberry pie was always on the bottom.

Time and again Bert would wander away from his driver while waiting for a loader to top a car and find a dinner bucket or two, no matter how well hidden by their owners.

He would lift off the lid, kick over the bucket and mess up the contents considerably getting to the pie. That pie to Bert was the same as a shot of heroin to a dope addict—he couldn't resist it.

One day a member of an electrician's crew heard some unusual sound coming down an entryway. He investigated and came upon Bert and a Hungarian coal loader not too long off the boat from the old country.

The miner, tears of rage running down his cheeks and cursing the mule in his native language, was beating Bert mightily with a pick handle. The whacks resounded throughout the mine section.

With every blow Bert would shiver and look around with a self-pitying countenance and soulful eyes that asked, "Why am I being misjudged now?"

Bert didn't realize it, but his big mouth was ringed with the unmistakable juice of blackberries. Twice he had made the Hungarian go hungry, but the third time around was too much for the immigrant.

Bert did penance 3 days in the stables for that misdemeanor and America was at peace with Hungary again.

His weekend forays into town were the talk of that town.

One Saturday evening the mineowner was driving through town when a grocery store erupted, a throng of screaming customers, most of them women, running as if their lives depended on it.

Among the stumbling, frightened patrons was a large red mule, jostling people right and left and looking back at the store, his ears straight up in the air with fright.

It was Bert, and he had good reason to be scared.

Chasing him was a stout, howling butcher who owned the store. In one hand he waved a meat cleaver, in the other a butcher's knife the size of a sword from the Dark Ages.

Bert, after knocking down a few more fleeing customers, eluded the butcher bent on mulecide but later was corraled by the law and placed in his special mule cell converted from an unused one-car garage.

Bert had been minding his own business that evening, until the aroma of baked goodies wafted through the door of the grocery store and onto Main Street.

He did the natural thing by walking daintily into the store and up to the shelves where the pies and cakes were so enticingly displayed. It was not until he had chomped through a big angel food cake with white icing on it that the first lady noticed the strange customer pushing against her. She screamed, and the store was wrecked.

The police thought they knew the wanted mule. They were certain when they caught Bert looking over a fence at a pie cooling on the kitchen window sill of an unsuspecting housewife—his jowls spattered with white cake frosting.

On Monday morning, Bert was bailed out of the pokey along with a group of hung-over coal miners and everyone went back to work * * * giving out honest toil until the next payday when the miners would elude their wives and Bert would jump a fence.

Bert's colorful saga came to an end when old age overtook him on a Raleigh County farm where he spent his last days limping on a leg that had been broken by a mine car a second time.

There's a story that followed his death about a group of people who had a picnic on the very spot where Bert was buried.

They suddenly ran screaming from the field. One of the terrified people exclaimed, "The earth shook beneath us."

The owner of the farm is supposed to have investigated the remains of the picnic and remarked with a shake of his head:

"They should never have opened up that blackberry pie they had for dessert."

Syria's Plight

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to insert an article entitled "Syria's Plight," which appeared in the summer 1959 issue, No. 54, of Prevent World War III, published by the Society for the Prevention of World War III, Inc.

This particular article points up the growing deterioration in the Syrian economy since its absorption by Egypt:

SYRIA'S PLIGHT

A "ROSY" FUTURE

In February 1958 the union of Egypt and Syria was proclaimed. The announcement was marked by a profusion of optimistic commentaries and orations by Egyptian politicians and propagandists. Nasser himself described the event as "this immortal and decisive day in our history." During his 21 days' tour of Syria, on which occasion he accorded the Syrians the privilege of seeing him in person, he said: "Our belief in Arab nationalism, on which we establish the unity of Syria and Egypt, compels us to work all the time with the same conviction with which we built up the U.A.R. to achieve the aspired Arab unity of our homeland from the Atlantic Ocean to the Persian Gulf."

The establishment of the United Arab Republic may have been regarded by Nasser as the harbinger of Pan-Arabic unity, but to neighboring Arab states it appeared as a dark cloud that threatened to engulf the entire Middle East. This was undoubtedly the major motive for the creation of a counterbalance which took the form of a federation between Iraq and Jordan. Thus, there came into being alongside the United Arab Republic the so-called Arab Federation headed by the late King Faisal of Iraq.

It was not long before the mills of the Cairo propaganda machine began to grind out a steady barrage of abuse against this rival Arab state. It was depicted as a tool of Western imperialism and devoid of any future. Nasser himself denounced the Arab Federation as not only contrary to the wishes of the people but "directed by imperialist plans to disunite the Arabs." (Radio Cairo carried this commentary on the Arab Federation: "The agreement reached in Amman, which produced what they call the 'Arab Federation,' is something artificial and confused. It is not destined to survive, because it does not reflect the will of the peoples in Iraq and Jordan and their aspiration to a free Arab unity. It has been established for purely negative reasons, namely, to distract the Arab peoples in Jordan and Iraq from the attempt to get rid of the regimes there and join the United Arab Republic,

the pure and natural nucleus for total Arab unity." The very bitter attacks against the Arab Federation confirmed the fears of other Arab states that the appearance of the United Arab Republic was not a cause for rejoicing but for eternal vigilance.

It is true that the theatrical performances of Cairo's strong man greatly impressed many Syrians, but as the months rolled by, the mood began to change. Today, Cairo is profoundly disturbed lest the doubts and fears which swept the Arab world when the U.A.R. was established, may undo his handiwork in Syria. Whether Nasser sincerely believes that the U.A.R. is a viable setup, is impossible to determine. Tis public statements, of course, are imbued with optimism. During his visit to Syria commemorating the first anniversary of the U.A.R., he assured his listeners that the unity between Syria and Egypt "would continue to score victories. * * * Today after 1 year of unity between Syria and Egypt, 1 year after the establishment of the U.A.R., we feel more determined and more confident of our course toward the future."

PROTEST AND UNREST

A few days after Nasser made this optimistic forecast, several thousand citizens of the Syrian city of Homs came flocking into the streets shouting such slogans as "Down with dictators" and "Down with one man rule" (Christian Science Monitor, March 18, 1959). These highly political slogans grew out of a protest by the people of this city over the fact that on the day before a Syrian youth had been beaten to death by Nasser's security police, because he had criticized the U.A.R. leader. It is noteworthy that this incident was sufficient to generate a mass protest challenging the very power of Nasser's rule. Obviously, action of this character was not merely the result of a sudden surge of emotion. Its deeper roots will be found in Syria's sharp decline, both in wealth and in prestige, since the day that Nasser laid hands on that country. Syria's disenchantment became evident within a few months after Nasser took over. On May 1, 1958, the New York Times reported:

"The fruits of economic union with Egypt are developing a bitter taste in Syria.

"Damascus newspapers reaching Beirut record a growing protest by industrialists, business men, farmers, and labor union leaders against the attempted imposition on the former free economy in Syria of the strict controls imposed by the revolutionary council in Egypt since 1954.

"That is only the latest of a series of measures taken by the new United Arab Republic to integrate the economies of Egypt and Syria, the two regions of the new union. Syrians say privately it is an attempt by Cairo to drag Syria down to the same low standards as Egypt. * * *

"The Damascus press has not been completely indoctrinated, it would seem, although six newspapers have had to go out of business because of the withdrawal of subsidies. Syrian papers dutifully denounce the protesters as enemies of the state. But they print the protests so that all literate Syrians can read—and literacy is much higher in Syria than in Egypt—the complaints made by these enemies against restrictive state controls they had not known before."

POLITICAL CLAMPDOWN

Facts have come to light which underline the growing crisis implicit in the Times report, although the Cairo regime has tried in every possible way to conceal the truth. When the unity of both states was achieved, it was assumed that there would be political equality. However, this hope was destroyed almost at once when the key spot in the new government was given to Nasser himself. Then, Cairo became the capital of the U.A.R. at the expense of Damascus and its proud traditions. Politically, the Syrians were put into a straitjacket. Their parliament and political parties were dissolved. The top echelons in the army were purged. This was also true of the Syrian civil service. The Government of the U.A.R. became topheavy with Nasser's faithful henchmen. The very ruthlessness of the purge was in itself indicative of the fact that the Nasserites did not trust the Syrians. For this matter, it can also be said that the Syrians were not at all wedded to the idea that Cairo was especially ordained to rule over their fate. Consequently, from the political standpoint Syria has become a nonentity within the U.A.R.

Every Syrian newspaper which dared to voice an independent thought, has been closed down. Public opinion has been effectively gagged. More and more Syria looks like an occupied country.

ECONOMIC DISTRESS

The oppressive hand of Cairo has not only been felt in the political sphere, it has also weighed heavily on the economic and living standards of the Syrian people. In the first place, the union of Syria and Egypt was hardly a "natural" from the economic standpoint. The economies of both countries are to a large extent mutually competitive. The standard of living in Syria has always been higher than that of Egypt. The Egyptian economy is authoritarian while Syria's has always been based on private enterprise and freedom of commercial intercourse. In contrast to weaknesses of the Egyptian pound, Syrian money has always been "hard." From the standpoint of geography the union is an economic freak since there is no common frontier. Historically, Syrian nationalism has always had more sympathetic relations with Iraq than with Egypt. These factors have now made their impact, and the net result is that the Syrian economy is in serious trouble. The difficulties have been complicated by the fact that the Egyptians, installing themselves as the political overlords of Syria, have promulgated laws and regulations which are diametrically opposed to the needs of Syrian economy.

The dangers of Egypt's economic policies have been reflected in the declining value of the Syrian pound. Always a sensitive barometer, money exchange values are most revealing. Thus, when Cairo let it be known that the Egyptian and Syrian currencies would be unified by the summer of 1959, the Syrian pound fell form 3.60 to the dollar to 4 to the dollar. The swift reaction caused consternation in Cairo. As a result the Cairo regime tried to assuage the fears of Syrian commercial circles, but to no avail. The Syrian pound has never recovered its former strength and unemployment has increased. Indeed, it has been reported that when the union was first established, the wavering of the Syrian pound induced a substantial withdrawal of capital from Syria. It has been obvious to experts that fusion between the two currencies will inevitably result in a marked depreciation of the Syrian pound. The Wall Street Journal quoted a Damascus economist on this subject: "If and when the currencies are united, any holder of Syrian capital will be about 30 percent poorer unless things change greatly."

Syria's trade with the outside world has also been hard hit. Unlike most Arab countries, the Syrian economy is closely linked with her exports and imports. Therefore, any damage to commercial prospects must necessarily have wide economic and political repercussions. As the year 1959 ushered in, the London Financial Times, reporting from Syria, noted: "Commerce in Aleppo—Syria's largest trading center—is extremely depressed. Overshadowing the country's economic troubles is the nervousness of the business community regarding the possible consequences of the union with Egypt."

The growing stagnation in commerce was intensified by the serious drought which reduced Syria's cereal crops by 40 percent as against 1957. Indeed, instead of exporting cereals which Syria has done in the past, she was forced to import grain. However, this serious situation was aggravated by the imposition of stringent import regulations which increased prices and encouraged speculation on a grand scale. Furthermore, these import restrictions paralyzed commercial activity and tightened credit. In short, Nasser tried to solve the crisis by imposing upon the free Syrian economy the same authoritarian regulations which govern Egypt.

TRADE CRISIS

The Lebanese crisis of last year was also a powerful blow to Syria's commercial fortunes. It is generally admitted that the Nasserites played an important role in instigating outbreaks of violence against the Lebanese Government of Camille Chamoun. Lebanon has always been one of Syria's important markets and served as a vital commercial link between Syria and other parts of the world. These links were seriously disorganized during the Lebanese rebellion. The Syrian-Lebanese border was sealed, thereby impeding normal commercial exchange between the two countries.

To make matters worse, the troubles in Lebanon cut off Syria's oil supply. This provided Egypt with the opportunity to take over. With the Lebanese oil refineries no longer available, Cairo filled the breach by delivering oil to Syria by sea. This was supposed to be a temporary arrangement in view of the fact that it was highly uneconomical for Syria. However, even after peace was restored in Lebanon, Egypt continued to exercise a stranglehold on Syria's oil supplies and there is no prospect that she will ever relinquish her grip. The Lebanese newspaper Le Commerce du Levant-Beyrouth Express summed up the burdens which Syria is forced to shoulder thanks to Egypt's high-handed tactics in matters of trade: "The imposition, on Syrian trade, of the same legislation that has been applied in Egypt has struck at the very heart of Syrian commerce, namely the freedom of trade with foreign countries. The results of the import restrictions have been—

"(a) To stifle Syria's trade with foreign nations, especially with the neighboring countries, with whom Syria has always maintained regular commercial ties, since their economies are mutually complementary;

"(b) To do away wtih the competition that has always had a beneficial effect on the Syrian economy.

"Hence the current limitation of Syrian commercial activity and the decline of its purchasing power on foreign markets."

CAIRO'S EXPLOITING HAND

Cairo propaganda has tried very hard to depict Egypt as a country which opposes imperialism and exploitation. Its treatment of Syria belies these claims, for in a very real sense Syria has become the stamping ground of Cairo speculators and get-rich-quick businessmen. They have followed Nasser into Syria and are taking full advantage of his control over this country. The manner by which Egypt took advantage of Syria's need for oil during the Lebanese crisis is a case in point, but this is by no means the entire picture.

Egypt's economic difficulties have been mounting ever since Nasser came to power. This has been a decisive factor in Nasser's moves to expand his influence throughout the Middle East. Prof. Charles Issawi, an authority on the Middle East, wrote: "Nevertheless, Egypt's economic difficulties remain very acute, and an increasing number of Egyptians are looking to other Arab countries for help in solving them; their hopes are centered on finding outlets for surplus population and markets for manufactured goods and on sharing the vast oil resources accruing to other Arab countries" (Current History, February 1959).

In a similar vein John Law, writing in the U.S. News & World Report refers to the efforts of the Egyptians to exploit the economic resources of other Middle Eastern States. "Nasser," he writes, "is said to be counting on the spirit of Arab brotherhood to prompt his neighbors to buy Egyptian. If they don't, he'll be in trouble." It is against this compelling need that one can understand Nasser's drive in Syria.

To what extent Nasser can solve Egypt's problems at the expense of Syria remains to be seen. In any event, he will leave no stone unturned. He has partially abolished customs duties on Egyptian-Syrian trade. This measure, coupled with increasing prohibitions of imports from large portions of the Western World, serves two purposes: (1) it channels Syrian foreign trade to the countries of the Eastern bloc with whom Nasser is very chummy; (2) it opens up the Syrian market to Egyptian goods without the fear of outside competition. Since Syrian industry was not depending on government handouts and subsidies of one kind or another, the Egyptian industrialists have a far greater advantage. The important Syrian cotton industry was also hit hard by a discriminatory export tax. Egyptian banks and insurance companies took advantage of the union to establish themselves in the "northern region." Consequently, the total Syrian economy has come more and more under the thumb of their Egyptian "brothers."

The Lebanese newspaper referred to above, had the following to say with respect to Egypt's economic activities in Syria: "The Syrian industrialists have given expression to their fears concerning the future of their concerns in the face of Egyptian competition. It is a fact that since the tariff barriers between the two regions have been removed, the Syrian market has been swamped with Egyptian goods, to the detriment of domestic products. * * * Syrian industry cannot stand up to this competition with Egyptian industry, and it is liable to go under, in the face of this competition under unequal conditions."

It should also be noted that the Egyptian sector of the U.A.R. has grabbed the lions share of foreign aid for economic development. It has been reported that Egypt is accelerating its major scheme for economic development while Syria's 5-year plan (1956–61) has, for all intents and purposes, been placed on ice. Syria's development plans are now to be stretched over a much longer period. The respective budgets of both, Syria and Egypt, also emphasize the growing disparity between the two countries. For example, whereas military expenditures for Egypt showed a rise of about 9 percent in 1958, the Syrian increase was 67 percent. The growing military burden for Syria is reflected in the tax situation. Thus, direct taxes in Syria jumped by 43.5 percent while the level of taxes in Egypt remained unchanged.

Naturally, the Egyptians are aware that Syrians of all classes and interests are growing more resentful. Consequently, Nasser recently promised that around $84 million would be made available from Egyptian industrialization funds to help Syrian development. Commenting on these promises, an unnamed European diplomat in Cairo told the Wall Street Journal: "There certainly aren't any funds in the present U.A.R. budget for Syrian development. They may put in some figures, but that doesn't make much sense when Egypt hasn't any funds to spare."

AGRICULTURE IN A MESS

As mentioned previously, the agricultural situation in Syria borders on crisis. The agrarian reforms trumpeted by Cairo have not led to satisfactory results. On the contrary, they have created severe unrest which, in turn, has adversely affected other sectors of the Syrian economy. Chracteristic of Egypt's steamroller tactics in other fields, the land reforms instituted by Nasser disregard conditions in Syria and were patterned along Egyptian lines and requirements. The very nature of the Syrian land is such that it requires much more extensive land cultivation rather than intensive farming as practiced in Egypt. By arbitrarily breaking up the land into small parcels, Nasser has actually endangered the food supply of Syria and threatens one of Syria's most valuable exports, i.e., agricultural supluses.

OIL

The picture would not be complete without a word about oil. For Nasser oil means power and through power, empire. He has said as much in his book "Philosophy of Revolution." In an interview with the Christian Science Monitor in February 1959, Nasser discussed the strategic importance of oil "in our land." He did not define "our land" but on the basis of his other statements and writings it is safe to assume that he refers to all of the Middle East. He told the Christian Science Monitor interviewer "that the geographic position and abundance of oil has elements of strength which will be a source for our own strength."

This outlook with its threatening overtones to the West is also an important factor in his program for Syria. It is interesting to note that two separate sources thousands of miles apart have come to the same conclusion in this respect. Thus, the New York Times oil expert, J. H. Carmichael wrote: "The union of Egypt and Syria generally is considered a step aimed at consolidating the Arab world in a single political unit which would control the vast oil resources stretching from the Persian Gulf through north Africa to the Atlantic."

The well known Lebanese newspaper L'Orient declared: "Nasser's objectives are very clear: by dominating Syria he can control the Iraqi oil pipelines and through Yemen he will gradually control all the means of oil transportation, and constitute a direct threat to King Saud."

Needless to say, Nasser has lost no time in developing measures vis-a-vis Syria which would strengthen Cairo's control in the oilfield. In September 1958, the so-called General Petroleum Authority was set up, its headquarters naturally located in Cairo. Its powers are far-reaching in scope and significance. All negotiations concerning oil pipelines passing through Syria will now come within the province of G.P.A. which will also control oil imports and exports and the pricing of petroleum products. It will be the deciding factor with respect to prospecting activities, whether through the state or private concerns. It will have the right to inspect petroleum company accounts "to guarantee a state's right in respect of amounts due to it from these companies." Its word will be final and decisive on all future oil activities within the U.A.R.

In October 1958, Cairo proceeded to acquire "full control over the development of the oil resources of the Syrian region" (London Financial Times). This move means simply that the oil resources and facilities within Syria are now within the grip of President Nasser. It should be borne in mind, however, that so far as Nasser is concerned his grab of Syrian oil is but the beginning.

FUTURE PROSPECTS

From this brief survey it is clear that Nasser has managed to antagonize practically all of the classes in Syria who are now experiencing in a most concrete way his concept of "Arabdom." The plight of the Syrians has become a topic of great concern in the Middle East. The Jordanian newspaper Hawl al-Aalam wrote: "Akram al-Hourani, leader of the Socialist Renascence Party (in Syria) and UAR vice president, has shown signs of remorse recently over his part in bringing about the Syrian-Egyptian merger. He indicated, it is reported, that he would not remain silent about the intolerable state of affairs that has developed: there is no freedom, no political activity, only a police-state terror regime. It is inconceivable that Syria should pass over this situation in silence." The same newspaper reported on December 18, 1958: "Leaflets sharply attacking President Abdul Nasser were distributed on the streets of Damascus during the night. The leaflets also severely criticized the establishment of the Syrian-Egyptian union. * * * The situation in Damascus is growing tenser from day to day, because of the high cost of living as a result of the drop in the value of the Syrian pound."

Even Radio Damascus, despite the Nasser terror, was forced to admit the rumbling sounds of the volcano: "A number of skeptics have asked what have we accomplished in this first year of the union? And they demand an answer and ask you to point out the miracles that have been performed. We explain to them that in the process of unification there are no miracles, no higher power. And still they come back, with doubtful faces, and they ask: Oh, brothers of the Republic, what has union done for you?" The Lebanese newspaper L'Orient wrote:

"This union is artificial because these two countries do not have a common border. There, one is faced with an unnatural act. The Syrian economy has shown immediate signs of disintegration while the Syrian region has become a heavy burden on the Egyptian Province of the UAR. * * *The political consequences of the union are even graver than the economic ones."

Unfortunately, the growing unrest and resentment has not been presented to the Western public as fully as it might be. From time to time reports do appear. The Associated Press reported:

"Baleful signs for Gamal Abdel Nasser are beginning to appear on the troubled horizon of the Middle East but U.S. officials are taking no comfort from them.

"But Nasser is now confronted with a disenchanted and restive Syria within his own camp and a strong new Arab force outside it. * * *

"Reports are that some in Syria, unhappy over playing second fiddle in the UAR, would like to break away and join up with Iraq."

The Manchester Guardian carried a report by its Damascus correspondent dealing with the "celebrations" over the first anniversary of the establishment of the UAR. Discussing the severe economic plight of the Syrians, the Guardian correspondent wrote: "There is a certain irony in the fact that Syrians are not sure whether today is a public holiday or not. * * *

"The principal problem is how to achieve this amalgamation without bringing the Syrian standard of living down to the Egyptian."

When the UAR was established, Nasser proudly pointed to this example of unity for the whole Arab world to heed and to follow. But did Nasser marry Syria for love—or for money? From the evidence on hand it would seem that under cover of his professions of deep attachment he sought to gain Syria's resources so as to help solve Egypt's own problems of poverty. The occupation is now complete. In every department of government, even in the schools, the Egyptianizing process continues relentlessly. Historical comparisons can be misleading, but when we view the fate of Syria at the hands of Nasser, we cannot help but think of Bismarck's Prussianization of Germany.

No one can tell how long the Syrians will tolerate their present status. Certainly, they have a long and proud history of their own. They may regard the Egyptians as their brothers, but it is doubtful that they will accept indefinitely the role of vassal to Nasser. The story of Syria can have a positive ending if it is taken to heart by other Arab States which have been tempted at times to join hands with Cairo.

Baron von Steuben Day, September 17

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, many men of great fame and illustrious name, born and brought up in other lands, took active part in our War of Independence and have thus endeared themselves to our people.

Names like Lafayette, Pulaski, Kosciusko, and others have become virtually household words throughout the country. The name Steuben has also attained similar well-deserved prominence. On the 229th anniversary of the birth of that gallant, gifted, and intelligent German who bore that famous name, we will pay our tribute to his blessed memory.

Baron Friedrich Wilhelm von Steuben, professional soldier, distinguished military expert, and able inspector general of our Continental Army, was born near the city of Magdeburg in central Germany on September 17, 1730. He served in the Prussian Army first as regimental officer and then as staff officer. In 1761 he was promoted to the rank of captain, and 2 years later he was cited in a personal letter from Frederick the Great for his services. Thereafter he served as general staff officer at the royal headquarters and as one of the aides-de-camp to the King. It was this specific training as staff officer that later qualified Steuben to the highest post as staff officer in the Continental Army.

When he joined Washington's staff in late 1777 he brought a technical training that was unknown in either the French or the British armies at that time.

His coming to America was almost accidental. In the spring of 1777 he met a friend of Benjamin Franklin in Germany who drew his attention to our War of Independence. At once his imagination was fired; in the summer he set out for Paris with letters to Franklin and Silas Deane. When Steuben met them, he told them of his accomplishments and his rank as captain.

But to Franklin and Deane that rank did not carry sufficient prestige; it was decided to "clothe" him with a high rank. Accordingly he was given letters by Franklin, Deane, and others in which he was introduced as a lieutenant general. Armed with these letters, and accompanied by an aide-de-camp, he arrived at Portsmouth on December 1, 1777.

In February of the following year he went to York, Pa., the temporary seat of the Government. He was received there with honors by the Continental Congress. When a special committee waited upon him to ascertain his aims, he waived all claim to rank or pay and asked only for his expenses as a volunteer in the Army. Then in keeping with his lofty ideals and perfect fairness, he stated his aims and terms. If his services were to contribute to the success of the American cause, he would expect compensation for his sacrifices in leaving Europe, but if his services should not prove beneficial, he would make no claim. His services were accepted at once, and he was directed to report to Washington at Valley Forge.

From then on the career of Steuben throughout the course of the War of Independence is well known. The profound impression he made upon Washington, his immediate appointment as acting inspector general of the Army, then 2 months later to the full rank of inspector generalship with the rank of major general, his miraculous performance in the rapid military training of our forces, his distinguished role as general staff officer of Washington on the battlefield of Monmouth, and at the successful conclusion of the war his preparation, with Washington, of a plan for the future defense of this country are fully chronicled in our annals. After his honorable discharge in 1784, he became a citizen of this country. He died in New York City on November 28, 1794.

On the 229th anniversary of the birth of this great soldier of freedom we pay our tribute in honoring his noble service to our country.

Peace With Justice

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which appeared in the Catholic Standard of Friday, September 11, 1959, written by His Excellency Patrick A. O'Boyle, archbishop of Washington. I consider Archbishop O'Boyle's communication to the parishioners of the diocese of Washington of the greatest importance and significance to the peace of this troubled world.

The letter follows:

PEACE WITH JUSTICE

DEARLY BELOVED IN CHRIST: You are well aware of the tremendous issues involved in the exchange of visits between the leaders of the two most powerful nations on earth. Ever since the close of the Second World War, the survival of mankind has been threatened by frightening weapons of war and by tension or open conflict.

As Catholics and Americans, we have an obligation to beg God's help for those seeking to bring about better relations between nations. Yet we would be unfaithful to our Saviour's commandment of fraternal charity if we were to accept a tenuous peace for ourselves while millions of our fellowmen are deprived of basic freedoms.

The fundamental issue in the cold war is simply this. We believe in God. We believe that every man has God-given rights. We believe that the state exists for the good of the individual. We do not believe that any individual should become a mere tool in the hands of an autocratic dictator. Believing this, we cannot and we must not forget that the present struggle between East and West concerns the personal dignity, the personal worth and the personal destiny of vast numbers of people who are now voiceless and defenseless in state-dominated servitude.

May all of us, therefore, turn in this critical hour to Our Father in Heaven and ask Him to grant us peace—but a peace based on justice for every human being. We pray for this just peace not only for America but for the enslaved millions in Hungary, Poland, Czechoslovakia, Estonia, Lithuania, Latvia, Bulgaria, Rumania, Albania, East Germany, Yugoslavia, North Korea, North Vietnam, China, Tibet, and in Russia. This is a long litany—but it represents untold sufferings, and we should be frequently mindful of it.

I am asking our faithful people to attend holy mass and to receive holy communion Monday, Tuesday, and Wednesday. Tuesday is the Feast of Our Sorrowful Mother, and on that evening mass will be celebrated in every church of the archdiocese. I ask all who can to attend this special mass, and I urge all to recite the prayer for peace and freedom after these masses and every day thereafter until God deigns to grant our prayer.

During these 3 days, we shall pray that God may enlighten our own leaders and those of other nations so that we may have an enduring peace with justice for all, true and full freedom for the captive nations and the conversion of the Russian people.

May God bless you and keep you.

Faithfully yours in Christ,

PATRICK A. O'BOYLE,
Archbishop of Washington.

Historical Values

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GEORGE. Mr. Speaker, the real significance of historical sites has been recognized by one of the most progressive and forward looking civic organizations in this country, the Kansas City, Kans., Chamber of Commerce.

All too seldom do businessmen take time out of their busy lives to give consideration to the historical values and the beneficial effect upon future generations of the preservation of important reminders of days long past.

In Kansas City, Kans., Mr. Speaker, is the Huron Indian Cemetery, which is steeped in historical lore of the Indian of long ago. The city of Fort Scott has within its limits the site of the old fort named for Gen. Winfield Scott. The prairie or grassland in Pottawatomie County, northeast of Manhattan, is ideal for the preservation of the frontier plains viewed by early pioneers.

Mr. Speaker, included in my remarks is the resolution adopted on August 25, 1959, by the Kansas City, Kans., Chamber of Commerce, of which I am proud to be a member. This resolution had the full endorsement of the historical committee of the chamber, of which Clayton Dial is the chairman.

The resolution follows:

"Whereas it is proposed to establish two national parks in Kansas—one an historic park at Fort Scott, the other a prairie or grasslands park in Pottawatomie County, northeast of Manhattan; and

"Whereas the parks would be the first national ones in Kansas—neighboring States already having one or more; and

"Whereas the Fort Scott site for the proposed historic park would preserve old structures, including a military bridge constructed in the Civil War; headquarters house erected in 1842, and now used as a museum; an original soldiers' barracks; Fort Blair, one of three original blockhouses in the State, and national cemetery No. 1; and

"Whereas the prairie or grasslands park would preserve in its natural state the flora and fauna of the virgin Kansas prairie and provide present and future generations with the priceless privilege of seeing and knowing the unique beauty of a plains area typical of that which existed in the historic and colorful days when they were seen by the first white men: Now, therefore, be it

"Resolved by the board of directors of the Kansas City, Kans., Chamber of Commerce, That it endorses these endeavors."

Adopted by the board of directors of the Kansas City, Kans., Chamber of Commerce at its regular meeting held August 25, 1959.

F. J. NASH, M.D.,
President, Kansas City, Kans., Chamber of Commerce.

Attest:

ELLSWORTH GREEN, Jr.,
Executive Manager.

Castro Regime in Cuba

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the following article by my friend, the Reverend Father Joseph F. Thorning, Ph. D., D.D., honorary professor of international relations in the Catholic University of Chile, a pontifical institution, and an associate editor of World Affairs, Washington, D.C.

It may be borne in mind in connection with ex-President Lázaro Cárdenas of Mexico, that this individual, who was awarded the Stalin peace prize 5 years ago, has a wife who owns numerous properties, and a brother, Mr. Dámaso Cárdenas, who has also grown wealthy at the expense of the small farmers and businessmen in Mexico. In this context, one can understand the facts recorded by an eminent historian, Bishop Joseph H. L. Schlarman, who for many years studied conditions in Mexico and served as president of the National Catholic Rural Life Conference:

It is commonly known in Mexico that certain politicos like Abelard Rodriques, Lázaro Cárdenas * * * and others are owners of landholdings far in excess of the 150 hectares allowed by law.

How does this take place? Bishop Schlarman answers that—

A number of maximum landholdings are recorded in the names of relatives, or that even fictitious names are used.

The author of "Mexico: A Land of Volcanoes"—Milwaukee, the Bruce Publishing Co., 1950—on page 575, calls this technique "circumventing the law."

Bishop Schlarman continues:

Thus they can register one 150-hectare holding (known as a lote) in the name of the husband, one in the name of the wife, others in the names of the sons, etc., and by proper personal and financial influence with the Governor of the State or in Mexico City it can be arranged that these holdings are adjoining. Then, too, it is the common practice for politicos to invest their money in city property, hotels, etc. They become millionaire bankers and hotel magnates.

Obviously, this explains the popularity of so-called agrarian reform in Soviet China, Fidel Castro's Cuba, and other regimes influenced by the teachings of Karl Marx and V. I. Lenin.

The article follows:

[From the New York Times, Aug. 18, 1959]

CASTRO REGIME CONDEMNED—COMMUNIST FELLOW TRAVELERS AND SYMPATHIZERS SEEN IN KEY JOBS

(The writer of the following letter is associate editor of World Affairs and honorary professor of international relations in the Catholic University of Chile, a Pontifical institution.)

To the EDITOR OF THE NEW YORK TIMES:

Buried in Herbert L. Matthews' whitewash of Fidel Castro's Cuban revolution (July 16) is an admission that calls for diligent research and straightforward reporting. After denying that there are any Marxist-Leninist operators in key positions in Cuba, Mr. Matthews mentions "the much less clearly defined zone of fellow travelers, Communist sympathizers and those who are tolerant of known Communists and communism."

Is this not the very area in which the most notable damage has been done to the vital interests of the free world? It must be known to Mr. Matthews that card-carrying Communists are the least dangerous members of the international conspiracy directed by the Kremlin.

Vicente Lombardo Toledano, who recently was invited both to Moscow and Havana as a guest of honor, has given yoeman service to many Soviet policies. Although specialists on inter-American affairs do not claim that Señor Lombardo Toleando is a "Red," they recognize, with fairly complete unanimity, that his activities, "aims" and "loyalties" are those of an intelligent "fellow traveler."

A similar description may fit ex-President Lázaro Cárdenas of Mexico, who, according to the Times, is probably "the outstanding example of the radical but non-Communist public figure in Latin America" (July 28). Prior to the triumphant embrace between Premier Castro and General Cárdenas, the latter had been "guest of honor" in the U.S.S.R., in several captive nations and in Red China. Nevertheless, the Times rejoices that General Cárdenas should "openly give his blessing to the Cuban revolution."

VIEW ON COMMUNES

Readers of the Times have a right to know that, on January 30, 1959, the Mexican ex-President, an intimate friend of Lombardo Toledano, gave his "blessing" to the brutal system of "communes" in Soviet China. Only the most complacent fellow traveler would have been prepared to broadcast the following praise:

"In China there are favorable conditions for the success of the People's Comunes. Their organization, labor distribution and the distribution of goods and benefits are the result of direct decisions of the peasants and the artisans without any bureaucratic interference."

This may illustrate how "interesting and important" it was that Lázaro Cárdenas should have been a "guest of honor" in the new military dictatorship of Fidel Castro in Cuba. His "blessing" for what goes on in our good neighbor Republic should be considered in the light of his public benediction for bloody collectivization in Mao Tse-tung's Chinese Empire.

It may be noted that General Cárdenas, a "winner of the Stalin Peace Prize," undertook his travels as a vice president of the "World Peace Council." The latter organization would have little trouble in qualifying as a Soviet-front group. One wonders why good reporters in Havana did not ask Cárdenas about the "peaceful mission" of the Red Chinese in Tibet.

LAND DISTRIBUTION

It is true, as the Times emphasizes (July 28), that the work of Señor Cárdenas "in the field of land reform and his expropriation of foreign oil interests in 1938 are historic." Nevertheless, Cárdenas (Jan. 21, 1959) complained that many Mexican farmers "lacked lands."

The explanation is simple. The "same leaders who pioneered the radical distribution of lands," including former Presidents Lázaro Cárdenas and Abelardo Rodríguez, are "now among the biggest farmers in Mexico." (P. 141, "Look Southward, Uncle," by Edward Tomlinson, 1959.)

The record suggests that the editors and some correspondents of the Times can dig a little deeper for the facts and present them "without fear or favor."

President's Veto Threatens West Virginia

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BAILEY. Mr. Speaker, when President Eisenhower stuck the coal research bill in his pocket and let it die he was saying in effect that he intended to let West Virginia, and all other States, where coal plays a principal part in the economy "wither on the vine."

This was how the late Frank Knox described Navy strategy in the Pacific during World War II. It was successful. Unless and until we have someone in the White House who understands this problem, West Virginia will continue to "wither on the vine."

Mr. Speaker, I include as a part of my remarks the following joint statement released to the press by my very able and esteemed colleague, the Honorable JOHN M. SLACK, and me.

VETO OF THE COAL RESEARCH AND DEVELOPMENT BILL

(Statement by Representative C. M. BAILEY and Representative J. M. SLACK)

In the hands of the President, the veto has become a knife in the back of every West Virginian. There are no valid reasons for the President's veto action. This subject has been discussed for more than 10 years, the bill was heard extensively in committee and was fully debated in both Houses. The President's so-called reasons are foggy, generalities designed to obscure the real causes of this veto, of which there are two.

First, it would set up an independent commission, to act independently, and thereby cut into the prerogatives of an existing department which is presently doing nothing about coal problems, and probably never will. The Eisenhower administration is more inter-

ested in a system of built-in bureaucracy than in establishing a method to counteract a major economic problem. This is noticeable throughout the White House approach to much of the legislation of this Congress, such as the vetoes of the public works, housing, and rural electrification bills. Yes, this is not the first veto designed to protect bureaucrats.

Second, it shows again the whip of the monopolistic, competitive fuel industries that can be cracked over the White House. During the past months, these lobbyists have been stating openly that the coal-research bill would be killed. They boasted it would never come out of conference. However, they failed in that move. Yes; the oily tentacles extend right into the President's study at 1600 Pennsylvania Avenue.

The veto method is worth noting, and we hope that all West Virginians will remember it. This bill passed the House by an overwhelming 251 to 54 vote, more than enough to override a veto. It had powerful bipartisan support. A veto would undoubtedly have been overridden if the Congress were still in session. This is a typically sneaky approach of the Dewey way of the GOP. It was repudiated in 1958, and will be driven from public office in 1960.

The coal industry represents the best American example of free enterprise standing alone without favor or special privilege. It asks no special favors now, only a chance to grow with the country on the basis of sound research. We will be charitable to this extent—we doubt that Mr. Eisenhower reads the bills he vetoes, or if he does, understands them. Before attempting to lecture his Soviet visitor on the virtues of representative democracy, it might be wise for General Eisenhower to learn the full responsibility of the job he now holds, and he might begin by studying the affairs of the Congress instead of listening to a few pet advisers whose loyalty is confined to special pressure groups.

We intend to reintroduce a new coal-research bill in the first minute of the first day of the second session of the 86th Congress, and to press for immediate action.

Citizenship Day, September 17, 1959

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, if any single day in our history may be considered of premier significance, that day is September 17, 1787. It was on this date that the greatest political document ever penned by man was signed.

But the Constitution was so much more than a legal charter. It was, and forever remains, both a testament to inalienable human rights and a challenge to civic maturity. It guarantees basic freedoms and demands fulfillment of equally basic responsibilities. It is, in short, the ultimate arbiter of every American's rights and duties as a citizen.

That the Constitution is our primer of citizenship is officially manifest not only by the designation of September 17 as Citizenship Day, but also in the establishment of Constitution Week, which has been observed every year since 1955 during the period September 17 through September 23. The significance of Citizenship Day, however, has in no sense been lessened. It is still celebrated for its own intrinsic importance; but it also heralds a full week of commemoration of a heritage that is unique in all recorded history.

Although the objective student must admit that our fundamental body of law—the Constitution—is not a perfect instrument, he must at the same time treat with contempt the detractors of the men who labored far better than they knew that hot summer in Philadelphia so long ago. Despite fantastic developments in every field of human endeavor, as well as in social relationships, the Constitution, with its incredible elasticity, promises to serve so long as the United States exists as the greatest bulwark of our people's liberty and welfare. One of the more impressive testimonials to the wonderous wisdom and foresight of the Fathers is the fact that the Constitution contains only 22 amendments. True, it does not lend itself readily to amendment; but the fact remains that the people could have forced the adoption of innumerable amendments had they not been convinced through the years of the essential worth and permanence of the work performed by the delegates to the Philadelphia convention.

By setting up a Government of limited powers the Constitution recognizes the natural rights of the individual. All rights that he retains and does not delegate to Government, either State or National, constitute his natural, God-given rights; these are the liberties that a man must enjoy if he is to be a responsible human being. The Constitution recognizes the citizen's right to such freedoms, but it did not create them. They are part of every man's nature and can neither be given nor taken away by any government. The Constitution adds security to these rights by proscribing any infringement upon them by either the Congress or the States. This is the glory of the Constitution.

But if government by the people is to remain the world's most startling success story, more is required than a legal system that guarantees citizens the right to act with responsibility and wisdom. The people must forever exercise that right. They must forever recognize that the term "right" and "duty" cannot be separated in any context of citizenship; that one term suggests the other; and that for every right there is a corresponding duty. Our freedoms were not cheaply won; and they cannot be cheaply preserved.

The Late Honorable Thomas A. Burke

SPEECH
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. KEARNS. Mr. Speaker, I join other Members of the House of Representatives in paying tribute to our former colleague, the Honorable Thomas A. Burke, who represented the Ninth Ohio District in the 81st Congress.

I had the privilege and pleasure of serving with Tom Burke on the House Committee on Education and Labor. No matter what the political affiliation of the men with whom he came in contact, he respected their opinions and their right to full expression of their views. He was a kindly and courteous man, and Members on both sides of the aisle were sorry when he was not returned to the 82d Congress.

To his family and many friends I extend my deepest sympathy in their great loss.

The Things Which Divide Us Are Very Small and Unimportant

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the Record, I include an article by Miss Sally Sue Witten entitled "The Things Which Divide Us Are Very Small and Unimportant," which will be published in the Pilot Log for October 1959.

Miss Witten was a member of the American delegation to the Atlantic Congress and her article is an interesting summary of the background and proceedings of the Congress.

The article follows:

THE THINGS WHICH DIVIDE US ARE VERY SMALL AND UNIMPORTANT

The Atlantic Congress held in London, England, June 5 to 10, 1959, was a gathering of 650 representatives of the 15 countries which belong to the North Atlantic Treaty Organization. Queen Elizabeth effectively enunciated the broad scope of the Congress by saying in her address at the opening session: "The Atlantic Community is not an exclusive club, but itself belongs to that wider brotherhood which comprises all men of good will. * * * Two elements have long been the main principles of enlightened European thought and action: respect for the freedom of the individual and the dignity of human nature and a simple faith in God. These principles show more clearly than anything else that the things which divide us are very small and unimportant compared to the things which unite us."

The proposal to hold the Atlantic Congress as a major event during the 10th anniversary of the North Atlantic Treaty Organization was made by the Parliamentarians Conference of NATO. The Parliamentarians decided that delegates invited to attend should include not only members of parliaments and legislative bodies but a preponderance of private leading citizens broadly representative of labor, industry, education, science, the military and other walks of life.

The United Kingdom's Hospitality Committee's pleasant plans for social activities eradicated whatever remained of the myth of British "reserve." The Lord Mayor of London entertained us at Guildhall. Although Mr. Selwyn Lloyd was not able to come home from Greece to attend, the Foreign Secretary was host, in absentia, to a reception at Lancaster House. There was a thrilling special midnight performance of

"My Fair Lady" at Theater Royal, Drury Lane. Ambassador and Mrs. Jock Whitney graciously entertained American delegates at their home.

With dedication to the principles of freedom and dignity for all peoples, delegates to the Atlantic Congress set to work to discuss what NATO might do during the next 10 years to further the application of these principles to the problems of facing the NATO countries in their relations with each other, with other free and uncommitted countries, and with the Soviet bloc. Communist news agencies, as usual, could not comprehend that Allied countries which differ on comparatively minor issues (e.g., the difference between the United States and France on the control of atomic warheads) can unite and work together in the ultimate objective of freedom for the entire world.

The American delegation had 130 members because it is the largest country of the alliance in population. Nineteen American delegates were women. The American delegation was chaired by Eric Johnston, president of the Motion Picture Association of America. Cochairmen were Senator ESTES KEFAUVER, Senator JACOB JAVITS, and Congressman WAYNE L. HAYS.

Delegates took note of the fact that NATO as a military alliance has preserved peace in Europe. Not 1 inch of European soil has come under Soviet domination in the 10 years of NATO's existence. While continued emphasis must be placed upon military strength as a deterrent to Soviet aggression, the Congress declared that the time is ripe for NATO countries to build an Atlantic Community with responsibilities extending to political, economic, social, and scientific fields. Considerable emphasis was placed upon the need to help the less developed countries help themselves.

One of the threads which wove through all discussions was the fact that free nations must profess and practice with fervor and enthusiasm the high ideals to which they are dedicated. It is so easy to be complacently lulled by the ideological concepts of communism, and to forget that it is only by totalitarian efforts and the cruelest forms of human indignities that they have been able to make the advances that they have made. Are we more dedicated to materialism than to freedom?

Dr. Mordecai Johnson, president of Howard University in Washington, D.C., in an eloquent address to the Congress focused attention on our need to be motivated in our decisions in international politics by the highest standards of justice, decency, and dignity. With respect to foreign-aid programs, he said we have got to go to underdeveloped countries and say, "We have come to you not to offer you aid for the sake of your military helpfulness, not to offer you economic assistance as people put a halter on a bag of oats before a mule's mouth in order that, while you are eating the oats, we may lead you upon a pathway to take up a load which otherwise, of your own free will, you would not take, but to offer men this program purely in order that they may be free in the same sense that we are free."

The Atlantic Congress was not an "action" body. It was a forum. It could not legislate and it could not order anything to be done. Its reports recommend such action as more frequent consultation among member states; improved military structure; closer economic integration; establishment of a Studies Center for the Atlantic Community to serve as a clearinghouse and an intellectual focus; and specific measures for the purpose of diffusing throughout the world basic information which will help people assess and understand more clearly the ideological aggression of totalitarian communism and to better appreciate the true value of liberty. Its reports will receive consideration by the Parliamentarian's Conference and other NATO bodies.

The major results of the Atlantic Congress will come because its delegates returned home with increased understanding and renewed enthusiasm for achieving solutions to world problems which are just and righteous. "The things which divide us are very small and unimportant." In spite of differences among the free NATO nations on amounts of appropriations, control of atomic arms, location of military bases and other matters, the uniting force of belief in freedom and faith in God is strong indeed.

The great force, which Pilot Clubs and individual Pilots have, can play an important role in preserving the basic concepts of freedom. We recognize the importance of keeping ourselves informed and participating actively in the many ways that informed citizens can use to assure our governmental bodies that public opinion wants their decisions here and abroad to be made in view of the highest principles of freedom and human dignity. Possibly even more important, Pilot Clubs in every community can give support to organizations and institutions dedicated to educating the youth of America in the traditions and concepts of freedom and liberty in order to be assured that tomorrow's leaders will be guided by the best standards of justice and belief in the worth of the individual.

An Indian Shrine

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GEORGE. Mr. Speaker, for years citizens of Kansas City, Kans., and the entire Midwest have striven to preserve a little plot of ground in which numerous members of the Wyandot Indian Tribe are buried. Not only is Huron Indian Cemetery of great historic value for this reason but the many fights and legal encounters which have prevented its destruction add to its historical significance.

In the center of Kansas City, Kans., this ancient burial ground is situated between the famous Truman Library and the Agricultural Hall of Fame, and if assurance can once be given that the graves will not be disturbed the city of Kansas City, Kans., would beautify and improve the site.

One of the leaders in the civic effort to have the cemetery designated a national shrine is a Kansas author, Mrs. Wilma Himes Kollman. In the Quindaro Query of August 28, 1959, an article written by Mrs. Kollman appears. Under leave to extend my remarks, I include the article, as follows:

HURON CEMETERY

(By Wilma Himes Kollman)

Fate, in her avarice, is having a wonderful time with the Huron Cemetery issue; for over 60 years she has laughingly played one side against the other. Chuckling with glee, when a hardy soul masters her for a short time, she turns her tricks against her masters as she did the Conley sisters.

Undoubtedly she was somewhat taken aback when, in the latest melee, the entire city responded led by two capable leaders, elected of the people: Mayor Paul F. Mitchum and Representative NEWELL A. GEORGE.

Representative GEORGE inherited this complicated problem created by his predecessor, Errett Scrivner. One of his first acts in office was to introduce bills nullifying the 1956 congressional actions that legalized the sale of the only historical heritage we have.

The Interior Department recommended that Mr. GEORGE's bills not be considered.

Countering this blow, Mr. GEORGE asked for a committee hearing to determine the worthiness of his bills and cited the unkept promise of the Interior Department to hold a hearing for this purpose within Kansas City, Kans.

The hearing was granted, and a subcommittee of five men was appointed for this purpose. The joker fate laughingly slipped into the action at this point was that one of the committeemen appointed was ED EDMONDSON, Congressman from Oklahoma, representing the very district whose people are urging the sale of this property.

A 2-hour hearing was set for May 18 in Washington, D.C. A delegation of 12 people from Kansas City, Kans., led by Mayor Mitchum went to Washington to testify for the preservation of this historic ground. Mrs. Ferner from Pennsylvania, one of the descendents, also went. Nine of us were not allowed to testify due to the intervention of Mr. Scrivner who took up our time. These 2 hours were more or less a farce as far as ascertaining the historical value of this land was concerned.

Mr. GEORGE arranged for a continuation of the hearing to be held here on June 27.

Four of the five committeemen arrived and all testified who wished to do so at the hearing. Mr. EDMONDSON of Oklahoma did not come, but sent a letter stating he was opposed to Mr. GEORGE'S bills.

No decision has been released by this committee and when the latter part of July arrived, and the sale was apparently proceeding as though there was not to be either a decision or congressional action upon this issue. Bids were asked for and received on both the grounds and for the removal of the bodies.

Two law suits were instituted against the Interior Department, and the Oklahomans known as the Wyandotte Tribe asking for a restraint against the transfer of property and removal of bodies. The suits were filed by the city and five of the descendents of those buried there. The restraining order was granted.

August 1, the deadline as far as the 1956 law was concerned, and fate laughed aloud—all bids received for the property proved beyond doubt the people of Oklahoma had been misled as to the monetary value of the land; it was far below what was expected. While the bids for the removal of the graves was far higher than anticipated. The Interior Department acting on behalf of the Oklahomans refused all bids.

It was interesting to note that not one bid for either of these projects was submitted from a Kansan.

Reliable information from the Capitol states that the reason no decision was handed down by the committee, was that all four who held the hearing were in favor of the preservation, while Mr. EDMONDSON, from Oklahoma, who did not come is against. The law requires a unanimous decision from these committees; therefore further legislation on Mr. GEORGE'S bill is impossible.

A trusteeship is now being prepared, to which the Interior Department will turn over the property and end all negotiations with the so-called "Wyandottes" of Oklahoma.

On August 10 Representative GEORGE introduced another bill to have the Wyandot Burial Ground declared a national historic site. If he is successful, we will have more time to figure how to preserve this permanently. We wish him luck.

Distributing the Loss

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gerald W. Johnson which appeared in the New Republic magazine of September 7, 1959.

DISTRIBUTING THE LOSS
(By Gerald W. Johnson)

You can't buy a war on credit. This harsh fact of life is distasteful not only to politicians of all parties, but to financial manipulators, promoters, and advertising men of all sorts. Nevertheless it is a fact that in war the food is consumed, the fuels are burned, the steel is splintered or sunk in the ocean, and the men are killed then and there, not at some future date. All the so-called borrowing is simply a bookkeeping arrangement that may, or may not assist the more or less equitable distribution of the loss.

So much is apparent even to a superficial observer. What escapes him is the logic of pretending that evidences of indebtedness created by war are real wealth, or anything but phony money whose existence operates, under Gresham's law, to drive out the good.

Of the total national debt of the United States, now approaching $300 billion, fully five-sixths were contracted for the purpose of waging two major wars and one minor one. Possibly one-sixth was spent for schools, housing, roads, dams and other tangible values, and is therefore the kind of debt that an industry incurs for plant expansion. To the extent that it is wisely spent, such borrowing increases, rather than diminishes, the debtor's wealth. But borrowed money spent for war is gone forever, and the Nation is poorer, not richer.

Yet if that is true all the gabble that fills the air about preventing inflation, whether by the President, by Congress, by the steel companies or by the unions, is about as relevant to our present predicament as would be eloquent promises to prevent the battle of Gettysburg. The thing has happened, and you can't prevent what has already happened.

It must be admitted that it is poor politics to assert that the United States emerged from the latest war poorer than it went in. It is poor politics because the issue then becomes one of distributing the loss with some approximation of equity, and the politician whose policy is chefly concerned with distributing losses is a gone gander. It is unreasonable to expect it of Mr. Eisenhower. It is equally unreasonable to expect it of the Democratic Congress. And to expect both to agree on the adoption of such a policy would be sheer lunacy.

For the only means of distributing a national loss with some semblance of justice is ruthless taxation continued until the liquidation of the phony wealth represented by securities resting on no tangible value. In 1946 we adopted that policy and in 3 years reduced the national debt from $252 billion to $216 billion; but then Korea exploded and by the time that was settled Eisenhower was in, with his dream of balancing the budget and reducing taxes at the same time. He did reduce taxes by some $7 billion a year; but what happened to the budget is too painful to contemplate.

When the cost of living stands at the highest point in history and creeps up a bit month by month, inflation is already here, and the pertinent question is how to reduce it. One sure method is to let it go until the strain becomes intolerable and a buyers' strike inaugurates a depression that will wring the water out of the bloated economy. We went through that after 1929 and the idea of a repeat performance is too appalling to entertain.

But what alternative is offered? Mr. Eisenhower's program of cutting off all expenditures, even those that promise a handsome return on investment, is simply warmed-over Hooverism, and we know what that led to. As for the opposition, its titular leaders are too deeply involved with oil and segregation to command any great confidence; and no other voice can speak with authority.

The national debt of the United States is excessive, not because of its size, which is less than a single year's national income, but because so great a proportion of it rests upon no tangible value, but is a historical accident in the sense of Gibbon's definition of history—"the crimes, follies, and misfortunes of mankind."

This century's three wars have been paid for, but a rational distribution of the loss has not been seriously attempted—or not since Truman's abortive effort. As long as that state of affairs continues the economy lies under a constant threat; but it will continue until our leaders summon up the desperate courage to face the fact and apply the harsh remedy.

Perhaps it is too much to hope; but surely it is not too much to ask them to refrain from statements that are no more than rehash of the utterances of Hoover and Mellon in 1928, when we had reached a permanent level of prosperity and were within sight of the day when poverty shall be banished from this Nation. Wisdom they may be unable to supply; but surely they can refrain from again crooning to us the lullabies of Sweet-singer Coolidge.

Address of Petras Dauzvardis, Consul of Lithuania, at Lithuanian Youth Center, Chicago, Ill., September 13, 1959

EXTENSION OF REMARKS
OF
HON. WILLIAM T. MURPHY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MURPHY. Mr. Speaker, I wish to bring to the attention of my colleagues the following address delivered by the Honorable Petras Dauzvardis, consul of Lithuania, a resident of my congressional district, given before the Lithuanian Freedom Rally at the Lithuanian Youth Center in Chicago, Ill., on Sunday, September 13, 1959:

ADDRESS OF PETRAS DAUZVARDIS, CONSUL OF LITHUANIA, AT FREEDOM RALLY SPONSORED BY THE CHICAGO LITHUANIAN COUNCIL, SEPTEMBER 13, 1959

My duty at this meeting of the Chicago Lithuanian Council is to present the case of Lithuania which contradicts and vitiates the allegations and claims of the Soviet Premier Nikita S. Khrushchev, chief of the occupational regime of Lithuania, made in an article in the October issue of Foreign Affairs.

In explaining the slogan of "peaceful coexistence," among other things, Mr. Khrushchev states the following:

"The policy of peaceful coexistence in its simplest expression signifies the repudiation of war as a means of solving controversial issues. It presupposes an obligation on the part of all states to desist from violating each other's territorial integrity and sovereignty in any form and under any pretext whatsoever.

"The principle of peaceful coexistence signifies a renunciation of interference in the internal affairs of other countries with the object of altering their system of government or mode of life or for any other motives.

"We always have stood and we stand today for noninterference in the internal affairs of other countries."

Is it so? Let us look at the record, as Al Smith used to say:

Lithuania and Soviet Russia concluded a treaty of peace on July 12, 1920, whereby Russia recognized without any reservation the sovereignty and independence of the State of Lithuania and renounced for all time all sovereign rights over Lithuania's people and territory.

The peace treaty was followed by a nonaggression pact, signed on September 28, 1926, which stated: "The Republic of Lithuania and the U.S.S.R. mutually undertake to respect in all circumstances the sovereignty and territorial integrity and inviolability of each other. Each of the contracting parties undertake to refrain from any aggressive action whatsoever against the other party."

In addition to this nonaggression pact, on July 5, 1933, Lithuania and the Soviet Union signed a convention for the definition of aggressor. It defined an aggressor thusly: "An aggressor * * * shall be * * * that state which first commits any one of the following acts:

"1. Declares war against another state.

"2. Invades by its armed forces, even without a declaration of war, the territory of another state.

"3. Attacks by its land, naval, or air forces, even without a declaration of war, the territory of another state.

"4. No considerations of a political, military, economic, or any other nature shall serve as an excuse or justification for aggression as specified in the foregoing articles."

The last bilateral treaty between Lithuania and the Soviet Union was the mutual assistance pact signed on October 10, 1939. This document was and is an example of Soviet duplicity and treachery. The pact solemnly reaffirmed the treaties of peace and nonaggression, reiterated the pledge of peaceful solution of differences, provided for mutual assistance and friendship, denounced participation in any alliance or coalition directed against one another, and stated that "the realization of the treaty must not infringe the sovereign rights of the contracting parties, especially the structure of their state, their economic and social systems, military instruments, and altogether the principle of nonintervention of one state in the internal affairs of the other state."

Presenting this pact to the Supreme Soviet for ratification October 31, 1939, Minister of Foreign Affairs Molotov solemnly and publicly proclaimed: "This treaty stipulates the inviolability of the sovereignty of the signatory states and the principle of nonintervention in each other's internal affairs. * * * We stand for scrupulous observance of treaties and declare that all nonsense about sovietizing the Baltic countries (Lithuania, Latvia, and Estonia) is only to the interest of our enemies and of all anti-Soviet provocateurs."

If we compare the texts of the Soviet-Lithuanian treaties and Molotov's declaration with the text of the quoted excerpts from the article by Soviet Premier Khrushchev, we will find that they are similar in substance and even in the wording. They denounce war and aggression, proclaim respect for sovereign rights and territorial integrity and inviolability of the principle of noninter-

vention in another state's internal affairs; in other words, peaceful coexistence.

Now, how do these words by Soviet leaders compare with their actions?

As we observed before, Lithuania and the Soviet Union had all the treaties and pacts necessary for peaceful and friendly coexistence. Lithuania could not be and never was dangerous to the Soviet Union. She accepted the terms of the Soviet-proposed mutual assistance pact which permitted the U.S.S.R. to establish military bases on Lithuania's territory. The treaty prohibited the contracting parties from entering into an alliance or coalition with any third party directed against one of them. Lithuania abided strictly by the terms of the treaty and her pledges.

The Soviet Union, on the other hand, broke her pledges even while concluding the mutual assistance pact and was acting in bad faith and with malicious intent. This is proven by the fact that 12 days earlier, on September 28, 1939, she had signed a secret agreement with Nazi Germany to divide Lithuania between them, viz:

"SECRET SUPPLEMENTARY PROTOCOL

"The undersigned plenipotentiaries declare the agreement of the Government of the German Reich and the Government of the U.S.S.R. upon the following:

"The secret supplementary protocol signed on August 23, 1939, shall be amended in item 1 to the effect that the territory of the Lithuanian state falls to the sphere of influence of the U.S.S.R., while, on the other hand, the Province of Lublin, and parts of the Province of Warsaw fall to the sphere of influence of Germany (cf. the map attached to the boundary and friendship treaty signed today). As soon as the Government of the U.S.S.R. shall take special measures on Lithuanian territory to protect its interests, the present German-Lithuanian border, for the purpose of a natural and simple boundary delineation, shall be rectified in such a way that the Lithuanian territory situated to the southwest of the line marked on the attached map shall fall to Germany.

"For the Government of the German Third Reich:

"J. v. RIBBENTROP.

"By authority of the Government of the U.S.S.R.:

"V. MOLOTOV.

"Moscow, *September 28, 1939.*"

This dastardly agreement was executed by the Soviet Union in June 1940 by the forcible seizure and occupation of Lithuania, in direct contradiction of Khrushchev's bragging, and in flagrant violation of treaties, sovereign rights, and territorial integrity, and by disruption of Lithuania's political, economic, and social system and military instruments, the inviolability of all which were so eloquently pledged in the mutual assistance pact and the declarations by Premier Stalin and Foreign Minister Molotov.

In view of the fact that Lithuania was forcibly seized and is still occupied by the forces of the Soviet Union, either Stalin and Molotov both told premeditated untruths in 1939 or Khrushchev is telling the same untruth in 1959.

In his article in Foreign Affairs Khrushchev says: "We always have stood and we stand today for noninterference in the internal affairs of other countries." So what have they done, and what are they doing today in Lithuania?

Or again, Khrushchev says: "We always abided, and we shall abide, by these positions." Does Khrushchev mean by this statement that he will follow the policy of Stalin and Molotov: to say one thing and do the opposite? Or does he mean that he will right the wrongs done by Stalin and Molotov, that he will restore sovereign rights and self-government to Lithuania and the other Soviet-enslaved countries and reestablish normal relations with them, based on law and respect for sovereign rights and territorial integrity and inviolability?

As long as the Soviets continue to illegally occupy Lithuania and the other countries forcibly seized by them, they will remain aggressors, violators of treaties and international law, enemies of peace and humanity.

From the day of the Soviet seizure of Lithuania, Lithuanians have demanded, now demand, will not cease demanding that the Soviets withdraw their occupation troops, police, agents, and colonists from Lithuania; that the Soviets return to Lithuania all the Lithuanian deportees and draftees in Soviet military service; and that the Soviets abide by the United Nations declaration and the Soviet-Lithuanian peace treaty, and restore sovereign rights and self-government to Lithuania of which she was forcibly deprived by the Soviet Union.

Iraq—Oil—Egypt

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include herein an article which appeared in the summer issue—No. 54—of Prevent World War III, published by the Society for the Prevention of World War III, Inc.

The article is entitled "Iraq—Oil—Egypt" and deals with Nasser's intrigues and ambitions to lay hands on Iraq and thus acquire strategic oil deposits.

The article follows:

IRAQ—OIL—EGYPT

In analyzing the Iraqi coup of July 1958 we observed that the politics of the Middle East could be compared to a "bucket of worms." Developments since then, particularly as they relate to Iraq's domestic and foreign affairs, serve to reemphasize the bewildering maze of crosscurrents and contradictions.

Iraqi politics is in a state of flux. Some of the contending forces have receded temporarily while other elements have emerged on top. Since the final outcome of these conflicts cannot be predicted at this stage, Western policymakers should proceed with caution. Too often in the past has Western policy been based on an oversimplification of the issues in the Middle East. This has resulted in serious setbacks for the Western cause. Now, Iraq becomes a major test case with respect to our ability to act with maturity.

THE GERMAN FACTOR

In our previous article on Iraq we dwelt at length on the German factor, without minimizing other influences at work including the agents of Moscow and Cairo. We did so because so little had been reported in the Western press with regard to the age-old ambitions of German imperialism in the Middle East and its resurgent activities in the postwar period. Though the remainder of this article will be devoted to the latest turn of events, we should like to recapitulate briefly some of the essential facts concerning German interests in the Middle East.

The crushing of at least several rebellions against the Kassem regime has undermined, for the time being, the pro-German as well as the pro-Nasser elements in Iraq. Whether this simultaneous decline is coincidental remains to be determined. In any event, pro-Germans and the Nasserites no longer possess the influence they had shortly after King Faisal was brutally murdered.

A number of key participants in the revolt of 1958 had close ties with the Germans during World War II. They became prominent members of the Kassem regime. It now appears that practically all of them have been ousted from positions of influence. A rather dramatic example is the case of Rashid Ali Al-Kilani. Rashid Ali was the ringleader of a pro-Nazi revolt in Iraq during the most difficult days in World War II. After the Allied victory, Rashid Ali fled and ultimately wound up as an honored guest of Cairo.

When King Faisal was overthrown, Rashid Ali picked up his bag and proceeded toward home, counting on his former reputation to take over the reins of government. Nasser himself went out of his way to encourage Rashid Ali's return. It is interesting to note that just prior to his arrival in Baghdad, Rashid Ali was given a state dinner by Nasser. On this occasion Rashid Ali was hailed as the natural leader of the Iraqi people and Cairo newspapers freely predicted that he would be elected president of Iraq. Today, Rashid Ali is in jail having been convicted of plotting the overthrow of the Kassem government.

MOSUL OIL

The decline of the German influence should not be regarded as final. It would be naive to believe that German agents, masked as patriots, will not seize the opportunity to reach for power. In March 1958, the revolt in the Mosul area took place under the leadership of Col. Abdel Wahab Shawaf. The Mosul area, of course, contains some of the largest oil deposits in the Middle East. However, it is not generally known that since 1956 the Germans have been making intensive explorations of a 5,800-square-mile petroleum development concession in northeast Syria. One of the chief German geologists for the German oil company, Deutsche Erdöl A.G., bragged that this concession was just across the border from the oilfields in Mosul which were producing 1 million tons of oil annually.

As noted in our previous article, the Germans have had an eye on the Iraqi oilfields since before World War II. They are now very pleased with the concession arrangements in northeast Syria and the cooperation of the United Arab Republic. Thus, the giant Mannesmann tube manufacturing concern has been conducting negotiations with Cairo for the building of a pipeline from the Syrian oilfields to the Mediterranean. Deals of this sort have great promise and would even be more attractive if the Government of Iraq were friendlier to Cairo. Consequently, the establishment of a pro-Nasser government in Irak could open up great possibilities for the Germans in the Mosul area and thus tie in with their concessions just across the Syrian border. It has even been reported that Bonn has been prodding the United States to be nice to Nasser. Whatever the outcome, the fact remains that the Germans and their agents are a force to be reckoned within the complicated struggle now raging in the Middle East.

REDS IN IRAQ

Currently, the Communist influence in Iraq has grown considerably and it is a danger that cannot be ignored. The extent of Communist influence in the Iraqi Government has been widely discussed in the press. There have been some very spectacular claims made to the effect that for all intents and purposes Iraq has become a satellite of Moscow. On the other hand, there are those who say that the new Iraqi Government wants to be neutral and will gradually develop democratic institutions. As is always

the case, extreme evaluations are wide of the mark.

It is our considered judgment based on a careful evaluation of information available to us, that the Iraqi government is not Communist but that the Communists do wield considerable influence, particularly in mass organizations and in the streets of the large towns. Of course, things can change very rapidly in one direction or another, but at this writing the situation does not warrant the conclusion that all is lost. A New York Times correspondent, writing from the Middle East, points out that many of the reports which tell of alleged Communist domination of the Kassem regime, emanate "first in Cairo and Damascus newspapers, which are not known for reliability when embarked on a major political campaign." The reporter cites a number of instances where the Cairo propaganda machine deliberately falsified information so as to paint the color red on the Kassem government. Needless to say, Cairo has been furious over Kassem's defiance and especially his success in beating down efforts to overturn his government. Having been thwarted in the field of coups and assassination plots (specialties of the Nasserites), the Cairo government has launched a massive campaign to prove to the world and in particular to the United States, that Kassem is a Moscow stooge.

We hold no brief for the Kassem regime which came to power through a bloody coup. However, prudence dictates that Western policymakers stay clear of Nasser's maneuverings. Nasser's campaign against the Iraqi government may be embellished with anti-Communist slogans, but there is more to it. The New York Times diplomatic correspondent, Dana Adams Schmidt, wrote: "The U.A.R. leaders have raised the cry of 'Communist' in Iraq partly as cover for the fulfillment of their own ambitions. They seem to want to create a situation similar to the one that preceded Egypt's takeover in Syria—a situation in which President Nasser would save Iraq from the Communists."

On May 2, 1958, the prominent Egyptian writer, Fikri Ebadha, wrote in the newspaper Al-Musawar: "Cairo in the international political dictionary means that it is the capital of an Arab nation which sooner or later will include 80 million people. Cairo is the capital of oil, right, left, east, and west." The former Foreign Minister of Iraq, Mohammed Fadhel Jamali (now in jail under the Kassem regime), warned the U.N. Security Council in June 1958 that Egypt was out to dominate all the Arab lands and "to control Middle East oil." Oil ranks high in Nasser's calculations and is a decisive motivating force in his present campaign to do away with Kassem.

OIL HUNGRY EGYPT

The drive to dominate the oil of the Middle East is an intrinsic part of Nasser's dream as outlined in his book "The Philosophy of Revolution." As the country which aspires to become the center of the Arab world, Egypt has few natural resources. It is precisely this contradiction which Nasser has sworn to solve by hook or by crook. Thus, he has been working with all his might to grab the oil of Kuwait. This valuable area produces an income of $300 million per year from oil. Nasser would like to lay his hands on these riches. By the same token he has sought to grab control of all of the oil pipelines in the Middle East. If these pipelines were in his hands, another source of important reveneus would be available to him. Nasser's desperate efforts to grab the oil revenues of the Middle East is indicated by the following episode which also sheds light on his present feud with Kassem:

In December 1958 Nasser wrote a letter to Kassem asking him for a loan of 10 million dinars from Iraqi oil revenues. Kassem refused. He notified Nasser that all of the oil revenues were allocated to improve and develop the Iraqi economy. Having failed in his bid to get funds from Iraq, Nasser turned to the ruler of Kuwait. He sent a sharp letter to Sheikh as-Sabah threatening to bring about a coup in Kuwait if the sheikh refused to aid Egypt by giving 10 million pounds from Kuwait's oil revenues. The threats worked. The sheikh hastened to Egypt where he met Nasser and agreed to loan him the money.

In a sense one must give credit to Nasser's ingenuity. Although Egypt has hardly any oil of its own, Nasser acts as though it were the biggest oil producer in the Middle East. It is astonishing how he has been able to get away with it. Thus, it was Cairo which recently organized the so-called Arab oil conference. Oil producing countries were invited to participate and to discuss ways and means of improving their position so far as oil revenues were concerned. The conference was not only organized by Egypt, it was held in Cairo under the chairmanship of an Egyptian.

The Egyptians have also set up the so-called oil studies institute where they plan to train Arabs to run the oil industry. It has been estimated by a noted American economist after visiting Egypt "that within 5 years the Egyptians would be technically capable of taking over all the oil installations in the Middle East and running them themselves" (the New Statesman). While some may regard this as exaggerated, the fact to bear in mind is that the Egyptions are building up a huge oil apparatus althought their indigenous oil supplies are meager. Obviously, the Egyptians must be preparing for the future. This is made clear by the Middle East Economist, published in Cairo. Discussing the significance of the Cairo sponsored oil conference, this publication calls for a refining revolution in the Arab world before the market is completely taken up as a result of more and more refineries built in Europe. Observing that some western companies are reluctant to invest in oil refineries in the Middle East because of unstable political conditions, the magazine warns: "But it should be realized that the question of refining cannot make any difference from the political viewpoint. The crude oil is already in Arab hands and political factors could stop its export at source" (London Financial Times). Obviously, this threat requires little elucidation and is an accurate reflection of the ultimate aims of the Nasser regime.

NASSER'S PET PROJECTS

Cairo efforts to grab the oil resources of the Middle East under the banner of all for one and one for all is part of Nasser's overall plan to exploit the Middle East. Cairo has cooked up a number of schemes to accomplish this objective. One of Nasser's pet projects is the creation of a so-called development fund which would be dedicated to the improvement of the economic conditions of all of the Arab countries. As conceived by Cairo, the organization of this fund would be located in the Egyptian capital and the UAR would garner 50 percent voting control over the fund's use. There is nothing altruistic in this plan. As observed by the Christian Science Monitor specialist on the Middle East, "the UAR would stand to benefit most from the use of the funds." The fund idea has had tough going because of the reluctance of Iraq to participate. However Cairo has succeeded in establishing what is now called the Arab Development Bank. This bank is supposed to help members of the Arab League and its capital will consist of contributions from the Arab countries. Here again Cairo dominates the setup. Most of the key personnel of the bank will be Egyptian and the headquarters will be located in Cairo. Moreover, the United Arab Republic will be the controlling shareholder of the institution. It is even contemplated that the World Bank will participate with the Arab Bank in certain development schemes. Should this materialize, then we will have the rather ironical spectacle of the Western democracies, including the United States of America, subsidizing the Nasser government which is dedicated to the destruction of Western interests in the Middle East.

A third project dreamt up by Cairo is the creation of a so-called Arab common market. Egyptian Undersecretary of State Youssef Barsoum contends that the common market has come to be a vital necessity for the preservation of Arab economic interests. This noble sentiment was reduced to its real terms in a report published in the New York Times: "The principal exponent of the common market is the United Arab Republic. It now is in the early stages of an industrial revolution and would stand to profit most from the elimination of customs and other barriers to unrestricted movements of capital goods and services." The common market idea, the Arab Bank and the Arab Fund have a common denominator, i.e., the exploitation of the resources of the Middle East in order to build up an empire under Nasser's domination."

IRAQ WON'T COOPERATE

It is precisely at this juncture that Nasser is confronted by the resistance of the Iraqis. By refusing to cooperate in any of these projects, Iraq has put a damper on Nasser's ambitions. Needless to say, this has infuriated Egypt's strong man, since it slows down his timetable of conquest and indeed endangers the whole structure upon which he hopes to build his power. Thus, the clash between Iraq and Cairo goes much deeper than indicated by newspaper headlines. It is a conflict which stems from Nasser's unabated drive to absorb all of the Middle Eastern States. When he speaks to Western audiences he is careful to deny such ambitions. For example, in an interview over the BBC Nasser said that the unity of the Arab states "should be formed with the will and approval of the peoples of these countries, unanimous will and approval and not majority will and approval." On the other hand, when he talks to his own supporters, the language is more blunt. In a speech in Damascus, Nasser declared that the U.A.R. had a special role which "is the mission of the entire Arab nation." The following day he repeated this theme. "It is the United Arab Republic," he shouted, "which has taken upon itself the mission of carrying Arab nationalism."

The idea of uniting all of the Arabs by the free consent of all of the people is Nasser's way of lulling the West into believing that he is at heart a man of peace and good will. However, in a special circular to the officers of the Egyptian Army, Nasser did not mince his words: "Brethren, we meet today to review the plans which Egypt should follow in the future to realize our great objectives from the gulf to the Atlantic Ocean. The aircraft which can reach Tel Aviv within an hour can also reach Tripoli, Khartoum, and Riadh. I hope that we will not be compelled to resort to such action. But, as you know, we built our armed forces and equipped them in order that they might serve as an instrument for the achievement of Arab unity under Egypt's leadership. We did not build our armed forces merely to hold annual military parades in Cairo. He who deceives himself by believing that union can be achieved by sweet talk must only open his eyes wide to see the present Egyptian Army. We are confident that the Arab States and their leaders will get accustomed to seeing our armed forces as a means of achieving Arab unity. Thus our armed forces can impose their protection on territories beyond our borders." (The exact occasion when this document was issued is not known although it was published for the first time in the Jordanian press on July 3, 1957.)

Obviously, every Arab country which takes pride in its sovereignty and independence must reject this "blood and iron" method of unity. Of course, Arab leaders who dare to stand up, are immediately branded as "traitors." At one time it was the King of Saudi Arabia, at another time the King of Jordan, another time the Prime Minister of Tunisia, and another time the former Prime Minister of Sudan. All of them, at one time or another, have been vilified. Yet, Nasser calls the Arabs of other countries his brethren. The pattern is clear. Nasser brooks no rivals. Nor will he tolerate any one who questions his right to speak for all of the Arabs. Arab nationalism, that very elusive concept, has become his private property. There can be no genuine Arab nationalism unless it bears his imprimatur. Wherever Arab nationalism has triumphed, Nasser claims credit. Thus, in the case of the Iraqi revolution of last year, Radio Cairo broadcast to the entire Arab world that it was "Nasser who more than anyone else shouldered all the burdens of defending the Iraqi revolution—military and political."

ANOTHER ASPECT

There is another significant aspect of the raging Iraqi-Egyptian conflict which is most instructive. Ever since the State of Israel came into being, people the world over have been told by Arab propagandists that all would be quiet and serene in the Middle East were it not for that "bridgehead of Western imperialism"—Israel. Unquestionably, many people have been taken in by this explanation of the Middle East crisis. Indeed, we must admit that even some of our own top experts in the State Department have been attracted by this line.

But Israel has had nothing to do with the hair-pulling match now going on between Nasser and Kassem. Nor did Israel have anything to do with Nasser's attempt to subvert the Jordanian and Lebanese Governments last year. As one Middle East authority observed, the real source of tension in the Middle East is not the relationship between the Arab peoples and Israel, but "rather derives from the nonpopular, nondemocratic and nonindependent character of the Arab regimes." It has been precisely the policies pursued by these Arab States which has turned the Middle East into a caldron of hate and instability. It is the Arab masses above all who must suffer from these blood feuds and from the insatiable ambitions of dictators.

Fight Against Obscene Literature Must Have Public Support

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SAYLOR. Mr. Speaker, laws against sending obscene literature through the mail must have the working support of the general public to be effective. Only then will we be able to determine whether the legislation enacted by Congress is adequate.

The tremendous militant interest of many people have been evident in hearings to block mailing of lascivious material and to punish offenders. As one Member of Congress, I am impressed and grateful that witnesses included our Protestant, Catholic, and Jewish clergymen.

In view of this interest and the religious community's perennial attacks on lewd printed materials, I would like to suggest that ministers, priests, and rabbis set a common date for a weekend in which the laws would be explained and cooperation encouraged from the pulpit. Such action would be most helpful.

Saga of Personal Valor

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article of historical importance which first appeared in serial form in the Pittston Sunday Dispatch, and written by Mr. Charles McCarthy, of Pittston, Pa., a leading writer of the history of northeastern Pennsylvania. The first installment of this fine story appeared in the Dispatch on Sunday, September 13, 1959, and will be concluded in about 2 more weeks. The Dispatch is to be congratulated for its high degree of selectivity of human interest stories, and Mr. McCarthy is to be congratulated, also, for his painstaking work in putting this story together.

The aforementioned article follows:

TWENTY-SEVEN FROM PITTSTON REGION GET CARNEGIE MEDALS FOR UNSELFISH ACTS OF HEROISM

(The story of the personal valor of some of Greater Pittston's citizens, which clearly indicates the high caliber of the character of those who settled and developed this area. Data compiled and prepared by Charles A. McCarthy, who maintains continuing research into the background and history of northeastern Pennsylvania.)

From time to time, this newspaper receives queries about Carnegie Medal awards, and the queries have increased recently since the many heroic incidents associated with the Knox mine disaster.

Naturally, for factual data on such things, one turns to Greater Pittston's virtually official historian, Charles A. McCarthy, of Butler Street, Pittston, Pa.

McCarthy dug into records and maintained heavy correspondence with the Carnegie Fund, to obtain full, factual data on the Greater Pittston recipients of the Carnegie Medal.

In the Pittston region a grand total of 27 medals have been awarded, 21 on account of mining accidents and 6 in a nonmining category. A total of 14 was awarded as the aftermath of a single mine accident.

One medal awarded in this accident was a silver medal and went to John T. Brown. Two silver medals awarded for heroism in other than mine accidents went to Luther J. Heal and Jesse A. Wilson.

A close scrutiny of the complete list of winners of Carnegie Hero Medals indicates that no similar size section of the United States has as many holders of this distinguished award to civilians as has the Greater Pittston region.

FOUNDED IN 1904

The Carnegie Hero Fund Commission was founded in 1904. It bears the name of Andrew Carnegie, canny Scotsman, who migrated to this country and became one of the Nation's leading producers of steel. Mr. Carnegie gave the money to establish the commission.

It was the purpose of Mr. Carnegie in setting up this organization to have some means of duly recognizing civilians who performed spontaneous feats of heroism in behalf of their fellow man. Since the fund was founded the commission has awarded medals and various sums of cash to those who qualified.

This week and for the next several weeks the Dispatch will carry a list of all those who received Carnegie Hero medals in Pittston and a brief synoposis of the incidents for which the hero medal was granted.

COMPLETE LISTING

The running story on the medal winners will begin with the first medal awarded up to the present day.

Today's story covers the following medal winners:

Patrick F. Walsh

Patrick F. Walsh, aged 29, a miner, helped to rescue John R. Eustice, aged 52, a timberman, from a cave-in at No. 14 Drifts, in Jenkins Township, on August 22, 1907. While the roof was working, the walls squeezing and small stuff falling at intervals, Walsh crawled over a fall for a distance of 25 feet to Eustice who with four others had been caught by the caving roof. With the assistance of three others, Walsh dug Eustice from under the coal and debris wher he lay injured, and carried him to safety. Eustice recovered. Walsh was awarded a bronze medal, No. 389, and $1,000 for a worthy cause, as needed.

George R. Jopling

George R. Jopling, aged 55, a miner, helped rescue John R. Eustice. He was helping to prop up the dangerous roof preparatory to the rescue of the men when he heard Eustice call for help. He crawled over the fall, found Eustice and summoned help. Jopling was awarded a bronze medal, No. 390, and $1,000 for a worthy cause, as needed.

John Merrick

John Merrick, aged 50, a miner, helped to rescue John R. Eustice. Merrick was awarded a bronze medal, No. 391, and $1,000 for a worthy purpose, as needed.

Benjamin R. George

Benjamin R. George, aged 26, a miner, helped to rescue John R. Eustice. George was awarded a bronze medal, No. 392, and $1,000 for a worthy cause, as needed.

Thomas Huntley

Thomas Huntley, aged 40, an outside mine foreman, helped to rescue John R. Eustice. Huntley was awarded a bronze medal, No. 393, and $1,000 for a worthy cause as needed.

James M. Flanigan

James M. Flanigan, aged 20, a mine car tender, rescued William Derrig, aged 19, a laborer, and John W. Mullery, aged 21, a mine-car tender, in a mine in Inkerman section of Jenkins Township, after an explosion, on May 7, 1909. Flanigan went into an abandoned drift, immediately following an explosion of gas and brought out Derrig. He returned, others refusing to go with him, and got Mullery. Both Derrig and Mullery were severely injured, the former dying 1 week later. Flanigan's hands were burned from beating out fire in the men's clothing. Flanigan was awarded a bronze medal, No. 388, and $1,000 for a worthy purpose, as needed. A resident of 340 South Main Street, Flanigan later moved to Somerville, Mass.

John T. Brown

John T. Brown, aged 46, a mine foreman, helped to save Joseph Lucas, aged 33, James E. Dougher, aged 27, and Anthony Gowrey, aged 43, and saved Frank Kleish, aged 21, from suffocation at Hoyt Shaft of Ewen Col-

liery, in the Port Griffith section of Jenkins Township, on January 10, 1911. Brown led four men into the heading of the coal mine, one-half mile from the shaft, immediately following an explosion which had defected the air current, and filled that and other headings with afterdamp. They found Lucas, unconscious, and carried him to fresh air. Returning, Brown and four others found Dougher, whom they also carried out. All had been somewhat affected by the afterdamp. Brown and three of the men went through another heading into the gangway where the explosion occurred, where they found Gowrey. A second explosion seemed imminent, but Brown stayed alone with Gowrey until the others brought in a stretcher. While the men carried Gowrey out, Brown continued through the gangway until he found Kleish, delirious, and carried him out. Brown was completely exhausted, but after going to the surface he soon recovered. Lucas and Dougher were revived. Gowrey was badly burned. Kleish died from his burns. Brown was awarded a silver medal, No. 524, and $1,000 toward the purchase of a home.

James L. Conlon

James L. Conlon, aged 36, an assistant mine foreman, helped to save Joseph Lucas and Anthony Gowrey. Conlon was awarded a bronze medal, No. 525, and $1,000 for a worthy purpose, as needed.

Martin F. Mangan

Martin F. Mangan, aged 26, a mine footman, helped to save Joseph Lucas, James E. Dougher, and Anthony Gowrey. Mangan was awarded a bronze medal, No. 526, and $1,000 for a worthy purpose, as needed.

Andrew J. Devers

Andrew J. Devers, aged 54, a miner, helped to save James E. Dougher. Devers was awarded a bronze medal, No. 527, and $1,000 for a worth purpose, as needed.

Jacob Modlo

Jacob Modlo, aged 22, a mine driver, helped to save Joseph Lucas and James E. Dougher. Modlo was awarded a bronze medal, No. 528, and $1,000 toward the purchase of a new home.

Andrew J. Horan

Andrew J. Horan, aged 44, a miner, helped to save James E. Dougher. Horan was awarded a bronze medal, No. 529, and $1,000 for a worthy purpose, as needed.

Michael J. Madden

Michael J. Madden, aged 37, an assistant mine foreman, helped to save Anthony Gowrey. Madden was awarded a bronze medal, No. 530, and $1,000 for a worthy purpose, as needed.

Thomas F. Gallagher

Thomas F. Gallagher, aged 25, a car runner, helped to save Joseph Lucas, James E. Dougher, and Anthony Gowrey. Gallagher was awarded a bronze medal, No. 593, and $1,000 for a worth purpose, as needed. The son of Mr. and Mrs. William Gallagher, of Chestnut Street, in the Inkerman section of Jenkins Township, he later moved to Cedar Rapids, Iowa.

Patrick J. Gallagher

Patrick J. Gallagher, aged 43, a mine tracklayer, of 155 East Oak Street, in the Browntown section of Pittston Township, helped to save Robert E. Fear, aged 18, of 157 Swallow Street, Browntown section of Pittston Township, from a cave-in at a bootleg mine hole, located in the rear of 175 East Oak Street, in the Browntown section of Pittston Township, on May 8, 1917.

Robert Fear and Sylvester W. McKeon, aged 12, of 43 Lincoln Street, in the Browntown section of Pittston Township, descended the slope of a hole that had caved in the ground and entered the chamber of an old mine of the Pennsylvania Coal Co. to gather coal. They were caught by a fall of earth overhanging the entrance to the chamber, and Fear was buried to his chest, and McKeon was buried to his hips. Cracks at the top of the hole and the dropping of clay earth overhanging the chamber indicated another cave-in was imminent. Gallagher descended the hole to Fear and began extricating him by clawing away the earth with his hands. Later he used a shovel. After removing a six-inch thickness of earth from around Fear, a small mass fell from the overhang and filled the depression. Gallagher continued working; and after he removed the earth to Fear's hips, a man who had descended the hole and aided McKeon assisted Gallagher in extricating Fear, whom they then took to the top of the hole. During the night there was another fall of earth which filled the entrance to the chamber. Patrick J. Gallagher was awarded a bronze medal, No. 1487, and $1,000 for a worthy purpose, as needed.

Edward F. Norton

Edward F. Norton, aged 33, a mine laborer, of 164 East Oak Street, in the Browntown section of Pittston Township, helped to save Sylvester McKeon, on May 8, 1917.

Norton descended the hole to McKeon and began clawing away the earth from him with his hands. After he removed the earth to McKeon's knees, a man descended the hole and assisted him in extricating McKeon, using a shovel. Norton then carried McKeon to the top of the hole. Norton was awarded a bronze medal, No. 1488, and $1,000 for a worthy cause, as needed.

Michael J. Franklin

Michael J. Franklin, aged 37, a mine tracklayer, of 97 East Oak Street, in the Browntown section of Pittston Township, helped to save Sylvester W. McKeon and Robert E. Fear, on May 8, 1917.

Franklin was the man who assisted Norton in extricating McKeon and then assisted Gallagher in extricating Fear.

Franklin was awarded a bronze medal, No. 1489, and $1,000 for a worthy purpose, as needed.

Awards to Gallagher, Norton and Franklin were made on October 31, 1919.

Robert Hughes

Robert Hughes, aged 50, a miner, helped to rescue Thomas A. Coleman, aged 37, a miner, and Louis J. Doran, aged 45, a mine laborer, from a cave-in near Hillside breaker in Avoca Borough, on November 8, 1932.

While Coleman and Doran were digging coal in an abandoned entry that connected with a new shaft, which was narrow and 43 feet deep, a collapse occurred in the entry, Coleman was buried under shale as he stood at the bottom of the shaft. Doran was knocked to the floor of the entry and lay under shale 4 feet deep, 18 feet from the shaft. No one offered to aid Coleman and Doran, except Hughes and Joseph P. Tigue, who descended by means of a windlass-rope. They stood within the entry and with their hands removed the shale from Coleman. Occasionally shale sloughed off the sides and dropped from overhead. Hughes and Tigue removed the shale to Coleman's hips in 3 hours, and Coleman was then pulled out on the rope. Hughes and Tigue worked all afternoon and far into the night in efforts to make a trench through the shale to Doran. They had planned to remove all debris as they proceeded but they gave up that plan in order to reach Doran as soon as possible. They erected posts on the shale and piled the shale behind boards that rested against the posts and finally reached Doran. While they were removing debris from over him, the sides of the entry caved; and Hughes and Tigue ran to the shaft. Shale and slate fell, blocking the middle of the entry. Slightly injured by falling material, Hughes and Tigue were hoisted on the rope. During the remainder of the night and the next morning all of the shale and other debris was removed by men under safe conditions, adequate braces having been placed; and Doran was taken out. He sustained injuries from which he died 7 hours later.

Hughes was awarded a bronze medal, No. 2753, and $1,000 for a worthy purpose, as needed.

Joseph P. Tigue

Joseph P. Tigue, aged 43, a miner, helped to rescue Thomas A. Coleman and Louis J. Doran. He was awarded a bronze medal, No. 2754, and $1,000 for a worthy purpose, as needed.

An interesting sidelight to the daring rescue of Coleman and Doran concerns the entry into the mine by Rev. Edmund J. Langan, Ph. D., who at the time was a curate at St. Mary's Church in Avoca Borough and who is currently serving as pastor of the Church of St. John the Evangelist of Pittston, to bring the last rites of the church to the beleaguered men. Against the sound advice of experienced mining men and at the peril of his life, Dr. Langan had himself lowered into the mine where he brought solace to the hapless victims.

Henry R. Skibitski

Henry R. Skibitski, aged 32, a miner, helped to rescue Frank Chas, aged 44, a mine laborer, from a cave-in at No. 6 Colliery of Jermyn, Green Coal Co., in Jenkins Township, on March 30, 1943. Two runaway mine cars were derailed in an air course of the mine, causing the roof to collapse for 17 feet in the air course and in a crosscut that extended 6 feet off the air course at one end of the cave-in. Chas, who was in the crosscut, was pinned by a timber on which rock rested. While the debris moved and settled somewhat and a few rocks fell, Skibitski, followed by John Kuchinsky, from the end of the cave-in crawled 12 feet in a narrow passageway at one side of the cave-in under debris and reached Chas. They placed blocks under the timber; and with bars Kuchinsky and then Skibitski dug at rocks under Chas, freeing him. They dragged Chas into the air course, lifted him across one of the cars, and lowered him to the floor beyond the inner end of the cave-in. Chas had sustained a cut on his head, and his legs were numb. After 20 minutes, the debris having fairly well settled, Kuchinsky aided Chas over the car; and all crawled through the passageway into a safe section of the mine. Chas recovered. Skibitski was awarded a bronze medal, No. 3336, and $500 for a worthy purpose, as needed.

John Kuchinsky

John Kuchinsky, aged 37, a miner, helped to rescue Frank Chas. He was awarded a bronze medal, No. 3337, and $500 for a worthy purpose, as needed.

NONMINING AWARDS

John C. Scureman

John C. Scureman, aged 55, a salesmen rescued Karl A. Keller, aged 11, from electric shock which occurred as the aftermath of a fire in Joseph Langford's barn, on Luzerne Avenue, in West Pittston Borough, on March 24, 1907.

Heedless of warnings of others, Scureman grasped the ankle of the boy, who lay unconscious holding a live wire, and pulled him free from the wire, but was himself knocked down by another wire coming in contact with his neck. He was disabled 18 days.

Scureman was awarded a bronze medal, No. 249, and $2,150 to be applied to the liquidation of his debts.

Luther J. Heal

Luther J. Heal, aged 27, a blacksmith, saved Joseph Collins, aged 7, from a mad dog, at Pittston, on May 6, 1907.

Heal saw the dog bite his son and then start toward Collins. Not stopping to re-

move his son to the house, he pursued the dog and attracted the animal to himself. It snapped his hand as he attempted to grab it, but he held it, under both knees, until it was shot.

Heal was awarded a silver medal, No. 164, and $250 to reimburse him for pecuniary loss sustained on account of injuries.

Jesse A. Wilson

Jesse A. Wilson, aged 23, a stationary engine fireman, of 150 Tompkins Street, Pittston, and later a resident of West Pittston, risked his life to save Joseph A. Duffy, aged 3, of 151 Tompkins Street, Pittston, from a fire which occurred at the Patrick Egan home, at 154 Tompkins Street, on July 16, 1909.

Wilson rescued Duffy from burning by breaking a first floor window and scrambling into a smoke and heat filled room and going into an adjoining room, one end of which was in flames, picking up the child, whose clothing was ablaze, and carrying it to a window and dropping it outside. Dazed, Wilson staggered backward, but quickly recovered and tumbled out of the window. His hands were badly burned and his hair was singed. The child died 2 hours later.

Wilson was awarded a silver medal, No. 400, and $1,000 to be applied toward the purchase of a new home. Wilson married Lavina Heal, a sister of Arthur Heal, who was previously mentioned as a medal winner.

Robert W. Jacques

Robert W. Jacques, aged 14, a mechanic's helper, of Fourth Street, West Pittston, saved Harold R. Eder, aged 16, a mechanic's helper, from drowning at Harvey's Lake, on July 27, 1919.

Eder fell from a raft at Harvey's Lake, in Laketon, 175 feet from shore, where the water was 12 feet deep. The raft drifted away from him and Eder swam a short distance toward a boat but was tired from swimming and lost control of himself. Jacques, fully dressed, dived from the boat and swam 50 feet to Eder, who was thrashing wildly. As Jacques reached Eder he put his hand under Eder's arm to support him; but Eder grasped his shoulders and climbed upon him. Both sank and Jacques squirmed and pushed Eder from him under water and swam to the surface. When Eder arose, Jacques again supported him; and he and another youth who reached them then swam 8 or 10 feet with Eder to the boat, which had been rowed toward them by a man after having been taken near the shore by two girls.

On November 3, 1922, Jacques was awarded a bronze medal, No. 1734, and $500 for a worthy cause, as needed.

Patrick J. Judge

Patrick J. Judge, aged 39, a toolroom attendant, who moved to 1071 Exeter Avenue, in Slucum Patch section of Exeter Borough, in March 1937, rescued Selma A. Zeck, aged 10, from electric shock, on August 12, 1936. The incident occurred on the Lackawanna and Wyoming Valley Railroad (Laurel Line), near the Stafford Avenue bridge in Scranton. While crossing the railway track, Selma tripped and fell on the third rail charged with a current of 650 volts of electricity.

Judge hurried to the site and saw the young, unconscious girl. Without any consideration of his own safety, he stood astride the rail and took hold of the youngster under her armpits. He received a severe shock which sent him reeling backward 9 feet. Returning, he stood on the ties, took hold of her clothing at the back, lifted her 2 feet up from the rail, and carried her from the track. He received no further shock. Selma was revived but sustained serious burns on her chest, neck, arms and legs.

Judge, who had an artificial leg of wood, was awarded a bronze medal, No. 2994, and $1,000 toward the purchase of a home.

Nazareth Tomasetti

Nazareth Tomasetti, aged 42, an employee of the Scranton-Spring Brook Water Co., a resident of 238 Broad Street, Pittston, was honored for his heroic rescue of a fellow worker, Howard Shannon.

The incident occurred on September 9, 1952, on Market Street, near the intersection of South Main Street, in Pittston. Tomasetti and Shannon were working in a trench preparatory to making repairs to a water main when the side of soft, sliding sand gave way and buried Shannon up to his shoulders. Tomasetti cleared the sand from the upper part of Shannon and held his back to the side of the trench to prevent further caving. Adam Hudak, a third water company employee summoned aid. Following an hour and one-half of fervid work, Tomasetti and other workers freed Shannon. Shannon survived the ordeal.

Tomasetti was awarded a bronze medal, No. 3810, and $500 for a worthy purpose, as needed.

The suggestion for the award to Tomasetti was initially made by Charles A. McCarthy, then serving as executive secretary of the Greater Pittston Chamber of Commerce, to the Junior Chamber of Commerce. The Jaycees, through its secretary, Edward J. Burke, filed the reports which led to the award to Tomasetti. At a dinner honoring Tomasetti, held at Fox Hill Country Club, the principal speaker was Congressman DANIEL J. FLOOD.

ITALIAN GOVERNMENT AWARD

Lombardo Francesco, of 120 South Main Street, who died on January 26, 1920, was the holder of a medal presented to him by the Italian Government for his heroism in a mine disaster which occurred in Italy.

A Comment on the Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JAVITS. Mr. President, Dr. Lev E. Dobriansky, associate professor of economics at Georgetown University, Washington, D.C., and the father of the Captive Nations Week, made comments of interest regarding the visit of Soviet Premier Nikita Khrushchev to this country. I ask unanimous consent to have printed in the Appendix of the RECORD the press announcement from the Georgetown University News Service covering Dr. Dobriansky's observations.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Russian Premier Khrushchev is ignorant of the American ideas of freedom and democratic processes, and his visit here will be futile in this and other respects, Dr. Lev E. Dobriansky, associated professor of economics at Georgetown University, said today (Monday).

Speaking on the "In Our Town" TV program over WRC, the author of the Captive Nations Week resolution cited as evidence of this the Russian Premier's reference to the resolution in this article on coexistence. He quote the Premier as saying:

"It would be interesting to see incidentally how the authors of the resolution would have reacted if the parliament of Mexico for instance, had passed a resolution demanding that Texas, Arizona, and California "be liberated from American slavery.' * * * Sometimes comparisons help to understand the essence of the matter."

Answering Khrushchev on this, Dr. Dobriansky pointed out that "the people of those States vote regularly and often for the kind of freedom they enjoy and their fathers enjoyed." He added that if a free, secret ballot vote on the American order were held in Lithuania, Ukraine, and other captive non-Russian nations in the U.S.S.R., they would vote overwhelmingly for liberation from Russian domination.

He said that Khrushchev will put on the same "patent medicine act as the 10 Soviet writers here last month. They complained and denounced the resolution," he said, "and then pointed to several of their members who were non-Russians from the Lithuanian and Georgian republics. Mr. Khrushchev will seek to denounce the resolution by exhibiting certain contented non-Russian captives in his entourage.

"That's why he invited the Don Cossack writer, Sholokov, to join him on his tour. Other names like Shevchenko, non-Russian sounding, are on the official party list. He will use these to try to show that there are no captives among the non-Russian nations in the U.S.S.R."

Mutual Security Appropriation Bill, 1960

SPEECH
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. GRANT. Mr. Speaker, when the Civil Rights Commission was set up at the last session of Congress, I stated that once having gotten its foot in the door, it would at this session be back for an extension and for additional money. Here in the early morning, or should I say late morning for it is after 4 o'clock, we find the supporters of this notorious Commission bringing it from the Senate where it has been attached to the mutual security appropriation bill. I would willingly stay here the rest of this year in order to defeat this legislation; however, I know that the die is cast and that it will be pushed through because both major political parties want to claim it as their child.

The Commission has just made its report with a separate volume styled as an abridgment of the report. I note that two of the Senators who supported the establishment of this Commission state that the report is not a very satisfactory one and that they hope the Commission will get out of some of the fields into which it has wandered and that there is really no excuse for either careless staff work or half-baked proposals and that the report shows the results of both. The Civil Rights Commission in its report said, "The Constitution as interpreted by the Supreme Court is the supreme law of the land." We can all agree that the Constitution is the supreme law of the land, but when the Supreme Court makes an interpretation that is erroneous, may I respectfully submit that the supreme law of the land is still the Constitution and not the interpretation made by the Supreme Court.

While time will not permit any extensive debate on this issue, I do promise here and now that there will be plenty of debate if and when this Congress attempts to place the recommendations of this Commission into effect. The Commission recommends Congress turning over to the Federal Government the process of registering voters in various States for Federal elections. It would deliberately have this body change entirely our system of government and take over the functions of the States. This Commission by the very nature of its report has served notice that it will, if at all possible, tear down the Federal and State systems as they now exist and have the Federal Government take over.

You may by your vote here this morning give the Commission another one-half million dollars to squander and bring forth another report. As for me, I want in no way to associate myself with it. The show put on in my State by this outfit had the appearance of a four-ring circus. The advance agents made it that way regardless of the good intentions of some of the members of the Commission. The members of the Commission could not themselves make detailed plans for the show on the road.

The continued efforts to make colored people live and go to school with the white race is doing more to hurt the cause of education and good will among the races than any other one thing that has ever happened in America.

I believe that a study of the hearings and the report of the Commission will convince any fair-minded, unbiased person that he can agree with the statement of the former Governor of Virginia, John S. Battle, a member of the Commission, who, in characterizing the report, stated:

> I must strongly disagree with the nature and tenor of the report. In my judgment it is not an impartial factual statement, such as I believe to have been the intent of the Congress, but rather, in large part, an argument in advocacy of preconceived ideas in the field of race relations.

Mr. Speaker, an aroused citizenry will one day bring this Congress to its senses and stop this continued meddling by the Federal Government and then, and not until then, will conditions change for the better—when people of all races may live in peace, good will, and harmony.

The Raid on Northern Industries

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

The SPEAKER. Under previous order of the House, the gentleman from Illinois [Mr. O'HARA] is recognized for 20 minutes.

Mr. O'HARA of Illinois. Mr. Speaker, I have asked for this time that I may bring to the attention of the House and to the Nation a matter that will have vast repercussions on the future of our country and to which all of the Members of the Congress from the North, as well as those from the South, the East, and the West should be alerted.

I feel that I would be remiss in my duty to my constituents and to Chicago and to Illinois if before the sine die adjournment of this session of the 86th Congress I did not do all in my power to rouse the section of the country from which I come to a greater sense of awareness.

If the people of the section from which I come are not sufficiently aroused to the present industrial trend, I can foresee the possibility of the industries of the North being relocated in the South and the cities of the North, especially those in the Middle West, declining to the status of trading centers for an agricultural region.

I wish to make it clear that I am not standing out against the development of a natural trend. I wish every section of our country to develop, and I wish each section to have its share of the industries. All of that will be good for our country. Anything less will be harmful. We cannot have a country, one section backward and underprivileged, and another section having a monopoly on the sources of prosperity. Nothing could be more disastrous to us all. A country where the workers in one section are paid less for the same work as the workers in another section is a divided country. A country so divided cannot meet the challenge of our world destiny.

What I do object to, and what will not be healthy for our country, is the injection of unfair stimulus to build up the industries of one section of our country by tearing down the industry of another section. Boxers in a contest are governed by the rules that forbid hitting below the belt and other practices that violate the spirit of fairness. So is it in all of our sports, baseball, football, and in racing in which giving a stimulus to a horse prior to a race is subject to the severest penalties.

INDUSTRIAL FUTURE OF THE SOUTH

The industrial future of the South is bright. It will create new industries because of its many advantages. It will build up new and expanding industries because they will find a local market and will find a market in foreign lands easily accessible because of geographical position.

These industries, developed through normal processes, will give the South an industrial position advantageous to both the South and the North. While new industries in the South are developing that section of our country, thus adding to the purchasing power of the entire Nation, the industries of the North will continue to expand and new industries will be established in the North to add to the general prosperity of our Nation.

That, Mr. Speaker, is a future to which I confidently look forward.

MULTI-BILLION-DOLLAR LURE

But what we are witnessing now is something of an entirely different nature. It is not a normal development of a trend. Newsweek describes it as a multi-billion-dollar effort on the part of the South, not to establish new industries, but to raid the industries of the North. It takes the form of subsidies given to northern industries to relocate their plants in Southern States, of tax exemptions in some States running for a period of 99 years, and the promise of lower wage scales. I have seen some of the communications to northern industrialists in which great emphasis is given to the savings that can be made in wages, and in most of these communications the explanation is given that wages are lower because labor is not organized.

Now, Mr. Speaker, this is unfair competition. Moreover, it is a representation unfair to northern industrialists. Everyone knows that as the South gains industries so will grow the demand on the part of the workers in those industries for wages and working conditions comparable to those in the North. This is as it should be. American workers should receive the same pay for the same work regardless of the geographical location of the plant.

There will be labor organizations wherever industry locates because American workers are going to demand and get a fair share of the profits of enterprises in which they are partners with management. Despite the roadblocks that many States and communities in the South are building, it is as certain as the following of day the night that labor in the South will attain the same full benefit from collective bargaining as has been attained by labor in the North. It may be in some communities a hard and a bitter struggle, but it will be much briefer than held out in the promises to northern industrialists to relocate in the South.

BUYING POWER OF WORKERS

We are one country. We have the same traditions. Inherently, Mr. Speaker, we have the same sense of fairness. I might add the same amount of commonsense. And commonsense will tell anyone that you cannot have a continuing prosperity unless you have buying power to move from factory to consumer the production of the joint partnership of labor and management. This buying power, commonsense tells us, does not come from excessive profits to a relatively few deposited in banks and put out in investment. The fact that the North today has such buying power comes in a very large measure from the wages paid to our workers as a result of the efforts of organized labor.

I can conceive of nothing more harmful in the long run to the South and nothing more unfair to other sections of the country than the raid on Northern industry with the lure of lower nonunion wages.

SOUTHEAST BUSINESS EXHIBIT

Mr. Speaker, I had not intended on this final day of this session again to go into a matter which I had so thoroughly covered with a recital of statistics at an earlier period of the session. The reason that I am speaking today is that just prior to my leaving my office to come to this Chamber I read a letter written under the date of September 8, 1959, by Adm. John S. McCain, Jr., Chief of Legislative Affairs for the U.S. Navy. I presume the letter received by me was

similar to that sent to all Members of the House.

In this letter Admiral McCain calls attention to the Southeast Exhibit of Business Opportunities at Birmingham, Ala., under the cosponsorship of Florida, Georgia, Mississippi, North Carolina, South Carolina, and Tennessee. The letter states that the purpose of the exhibit is to encourage wide participation of both big and small business in the many business facets of national defense, and that the U.S. Navy has been named the coordinator for the Department of Defense for this exhibition. The letter further states that a similar letter with its accompanying enclosure was being sent by the U.S. Navy to businessmen throughout the United States.

With that, Mr. Speaker, I can find no fault. Indeed, I would think it commendable of our Government and of the Navy to give encouragement to regional exhibitions that would bring together the industrial producers of the respective regions in order that they could be made better acquainted with the opportunities for participation in our defense program. I presume, although I have not had time to check on it, that similar exhibitions had been held in other regions of our country, or if not already held are in the planning stage.

I noticed in Admiral McCain's letter the announcement that a similar letter with accompanying enclosure was being sent to businessmen throughout the United States. There probably is a good reason for that, although I would think that the main interest would be among the businessmen in the region where the exhibit was located. But if that has been the practice in the case of all other regional exhibits I will not criticize.

NATURE OF THE ENCLOSURE

Now, Mr. Speaker, I get down to the matter which concerns me. The accompanying enclosure referred to in Admiral McCain's letter is an 8-page brochure. Page 1 is a letter by Rear Adm. R. L. Swart inviting participation in the Southeast Exhibit of Business Opportunities. It bears the seal of the Department of Defense, United States of America. Pages 2 and 8 of the brochure are blank. Page 3 contains some data concerning the exhibit and on pages 4, 5, and 6 is an explanation of the exhibit in detail and page 7 is a blank application for participation. I presume that pages 4, 5, 6, and 7 were furnished by the promoters of the exhibit, and with that in the main I have no objection.

What I do object to, and very seriously object to, is this which appears on page 3:

> Further, all business firms who are contemplating new plant sites, new locations for their business or the utilization of idle facilities in place should send their industrial planning people to the Southeast Exhibit. Site locations and the industrial complex of the seven sponsoring States will be exhibited and qualified people from industrial development commissions will be present to discuss these locations privately with your staff in conference rooms adjacent to the exhibits.

This is addressed to "all business firms who are contemplating new plant sites, new locations for their business." They are promised that if they come to this exhibit they can have private conversations on the matter of cite locations and the "industrial complex of the seven sponsoring States."

I acquit Admiral McCain of any intention to be a party to the raid on northern factories. In sending his letter with the accompanying enclosure to businessmen throughout the United States I think he had in mind only the rendering of a public service but the fact remains that his letter with the accompanying enclosure, with the implied invitation to relocate plants has put our Government and our Navy in the position of inviting businessmen from Illinois as well as from other States to a place where they can have private audiences on available locations in the South for the removal of their plants from Illinois and on "the industrial complex of the seven sponsoring States."

Mr. Speaker, I would not wish my Government, the government of all our country, to be put in the position of inviting businessmen from any other section of the country to come to Chicago for the purpose of giving Chicago an opportunity of inducing them to leave some other State, to come to our State. We are not going to build up our country into ever expanding strength if our Government, even inadvertently, seeks to build up one section by tearing down another.

THREAT TO CHICAGO FACTORIES

I know perfectly well what is meant by business firms who are contemplating new plants sites, new locations for their business. During this session of the Congress on three occasions delegations have come from Chicago to meet with our Congressmen from our area. My colleague from other districts in the North must have had similar experiences. In each of the three instances that I have mentioned the facts were about the same; a plant needing modernizing and considering meeting the expenses of that needed modernization with subsidies offered by some Southern States, enjoying tax exemption for a long period of years and a great reduction of the labor item by reason of labor for the large part being unorganized, and the employer dealing as to wages and working conditions individually with each of his employees.

So I know perfectly well what is means to invite business firms who contemplate new plant sites to come for private discussions as to available site locations and the industrial complex of the seven sponsoring States. I can make a pretty good guess as to what will be said at these private discussions on what the letter states to be "the industrial complex."

Why the discussion should be private I have no way of knowing, but I can make a pretty good guess. And as long as I am a Member of the Congress I shall continue to alert to the best of my ability the people of the section of our great country from which I come.

I have no quarrel with my colleagues from the South. I give to them commendation for their loyalty to what they believe the best interest of the section from which they come. A great change is taking place in our country, and of that change our southern colleagues are alert. I marvel often at the degree of unalertness of many of my Republican colleagues from the North. When I see them on so many occasions, when the legitimate interests of the North are at stake, march up the aisle to vote against the section from which they come, I wonder at their unawareness.

RAID ON NORTHERN INDUSTRIES

Mr. Speaker, healthy competition is good for all of us. There is so much that we can accomplish if we work together. There is room for industrial expansion in all regions of our country, but it must be a competition governed by the rules of fairplay. A raid on northern industries, with a lure of subsidies, tax-exemptions, and low wages will end in nothing good either for North or South, neither for management nor for labor.

Every time an industry moves from the North to the South some measure of the impact of a closed factory falls on every northern home. To the workers in the factory, and their families, it means unemployment with little likelihood of relief. They cannot follow the factory to the South because among the South's lures in the seduction of our industry is lower nonunion wages, and northern workers, accustomed to the dignity of labor in our region, are not wanted. To the local merchant a closed factory, lured away by subsidies, tax exemptions, and low wages, means fewer customers with money to buy his wares. In some measure no segment of our economy is unaffected.

The South, I repeat, will attain a period of prosperity greater than any she has ever known. The South will learn what we have learned in the North that in equality is both the strength of organized society and the contentment of its individual members. Time marches on and with the dethronement of the status quo there is a temporary bewilderment, and then from the dethroned status quo comes a march on to higher peaks and broadening horizons.

I close with one sentence from a southern industrialist of far vision. In a speech before a meeting of the American Management Association in the fall of 1955, John C. Whitaker, chairman of the board of R. J. Reynolds Tobacco Co., in North Carolina, condemned some southern communities for trying to lure plants from the North with promises of cheap labor and tax exemptions.

The New York Times of September 20, 1955, quoted Mr. Whitaker as saying:

> Such companies do not make good employers or first-class neighbors, no matter where they are located.

Mr. STRATTON. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I am happy to yield to my good and distinguished friend from New York, the former mayor of Schenectady and the first Democrat from his district in 42 years.

Mr. STRATTON. I want to commend the gentleman from Illinois for his interest in keeping industry in the Northern States rather than in the South. I share that with him fully. But in order to keep the record straight, Mr. Speaker, is it not true that this information to which the gentleman refers, which was sent out by the Navy, is similar to an

invitation which has gone out at other times in many other sections of the country? I believe that this is similar to an industrial exhibit which was held, for example, in New York State about a year ago, and one that I think was held either in Ohio or Indiana some months after that. Is this not, Mr. Speaker, one of a series of industrial exhibits designed to encourage the cooperation between individual producers and the Navy Department rather than as the gentleman implies something directly and specifically dealing with attraction of business to the Southern States at the expense of us in the North?

Mr. O'HARA of Illinois. I would hope that the gentleman is correct in that and that similar letters were sent out on other regional exhibits. I can assure the gentleman that, although my small service was with the Army, I share his pride in the Navy with which he served with such outstanding courage and distinction in the execution of most important missions. I am sure that there was no intent on the part of the Navy to do anything except its usual good job for all the regional exhibits. It was unfortunate that the promoters of the southeast exhibit inserted in the copy they furnished the Navy for distribution among businessmen nationwide, this invitation to private conferences on advantages to runaway northern plants. That is what I object to.

Mr. STRATTON. If the gentleman will yield further, I agree that the Navy should not pit one section of the country against another, and I do not think they have done so. What the gentleman refers to is that during the past year and a half or 2 years the Navy has been engaged in conducting a series of industrial exhibits of similar nature in other parts of the country. One took place in my State. The entire purpose of it was to make it easier for businessmen doing business with the Government to get their fair share of defense contracts. That I think is the legitimate function of the Navy or any department of Government in its procurement functions, but certainly if it goes beyond that I would agree with the gentleman that it was entirely out of line and improper.

Mr. O'HARA of Illinois. I thank the gentleman for his clarifying contribution.

Mr. BONNER. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. As soon as I have replied to the comment by my friend from New York. This administration paid the price of the Presidency in the first year of the administration by giving to Southern States the tidelands oil, potentially worth in value twice the entire national debt and which three times the Supreme Court of the United States said belonged to all the people.

Mr. BONNER. Will the gentleman yield now?

Mr. O'HARA of Illinois. I yield to my very dear friend from North Carolina, the able chairman of the Committee on Merchant Marine and Fisheries.

Mr. BONNER. I would like to allay the gentleman's fears with respect to the State of North Carolina. In the press recently great play was given to the fact that the Governor of North Carolina is heading a delegation abroad, not in the North, but to Europe and the Continent; and with him will go the director of the department of conservation and development, and businessmen throughout the State, to interest foreigners in coming to North Carolina and investing their money, to use North Carolina as a base of commercial operations.

There is a peculiar significance in this situation, for here today this Congress will vote to give these very nations foreign aid, nations that the Governor of North Carolina is going to visit and invite to come to North Carolina and invest their money, put up their capital, and open business establishments and manufacturing plants.

I want the gentleman to know that the State of North Carolina gives no tax exemption to anyone, and we offer no special inducements. We offer a beautiful climate, a peaceful people, and an area with an atmosphere in which all can prosper and enjoy life alike. It makes no difference who you are or what you are, you are treated equally and you are treated justly under the laws of the State.

We are not trying to take away business from any State.

I am sorry the gentleman is disturbed, if some industrialists in his State finds a favorable atmosphere in the State of North Carolina to do business.

I wonder if there is any objection to the Governor of North Carolina going abroad and trying to bring back home to America some of the money we have given away in Europe? Is there any objection to that?

Mr. O'HARA of Illinois. No one has a higher regard for the State of North Carolina than the gentleman from Illinois who now addresses you.

Mr. BONNER. I am sure that is so.

Mr. O'HARA of Illinois. I might say that association in this body with Members from the great State of North Carolina has deepened the gentleman's affection and regard for North Carolina.

The gentleman will agree with me, I think, that North Carolina in seeking on its merits to attract industries should not face competition from States that use the lures of subsidies and tax exemptions?

Mr. BONNER. No, we do not. We are going abroad to bring back some of this foreign aid money.

Mr. O'HARA of Illinois. The gentleman is getting a little bit away from base. The gentleman in presenting so eloquently and convincingly the virtues of North Carolina said that North Carolina is attracting only with its natural advantages, its fine climate, and nice people, and that North Carolina does not resort to subsidies and does not give tax exemptions.

Mr. BONNER. No, we do not give tax exemptions. We have a minimum wage law, we have a fair area of labor management and labor relations in my district. There is one of the largest labor organizations in the State in my district and they get along peacefully and wholesomely. We get along fine down there. I wish the Central Government would be in as good financial condition as is the State of North Carolina, and could have as good leadership as we have in the State of North Carolina.

Mr. O'HARA of Illinois. I am glad that the great son of North Carolina seems to agree in the main with what I have said. It is to the interest of all our States, and to our country that industrial locations should be determined by natural trends, and not those artificially created for a temporary advantage by the use of subsidies, tax exemptions, and lower wage scales.

Mr. DORN of South Carolina. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from South Carolina, who at 24 was one of the youngest men ever to sit in the State Senate of South Carolina and came to this body in the 80th Congress as one of its youngest Members.

Mr. DORN of South Carolina. I would like to say to my distinguished and able colleague from Illinois we are more worried about plants going overseas. If the gentleman will recall, during the debate last year on the so-called reciprocal trade program, we read into the RECORD a letter from the ICA to the Textile Manufacturers Association of the United States telling them: "If you will close your plant in America, fire your employees, under this foreign aid program we will give you water, electricity; oh, yes, we will give you cheap labor at 9 and 10 cents an hour. We will guarantee you a profit. We will insure you against war."

I am worried about that. If I am not mistaken, the gentleman from Illinois voted for that program and voted to send our plants overseas and deprive millions of Americans of jobs. I understand the whole automobile industry in a few years under this program will be overseas using cheap labor, using labor with no social security, no unemployment insurance. And I might say to the gentleman from Illinois that in his great State he has people unemployed today by this fallacious foreign aid and bogus reciprocal trade program.

The SPEAKER. The time of the gentleman from Illinois has expired.

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to proceed for an additional 5 minutes.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, according to my friend, if I understood him correctly, he would justify low wages in some sections of our country in order to furnish competition with low wages abroad. With that I cannot go along. I would sooner have the United States of America with industry everywhere on the same footing and paying the same wages for the same work, regardless of the State in which the industry is located, than to be diverted from this objective by our concern over foreign countries. I am sure as a nation we can and will meet the competitive challenge of foreign nations. In the United States of America there are many horsepowers be-

hind every worker. Even in Europe there is less than one horsepower behind each worker. Under such conditions I think we can meet the challenge of foreign lands, but we cannot in the North meet the challenge of one section of our country where they pay a wage lower than ours and use that as a lure in raiding our industry. If pursued, and not effectively combated, this inevitably would result in undermining our national economy by making us a nation of low wages and inadequate buying power.

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from West Virginia.

Mr. BAILEY. Mr. Speaker, I should like to remind the distinguished gentleman from Illinois that we are dealing not with horsepower today, we are dealing with jobs, of which we are getting darned short in America.

Mr. O'HARA of Illinois. I appreciate as always, the observations of my good friend from West Virginia. I can imagine my sage friend's amazement when the President of the United States vetoed a bill as being pork barrel, when the projects that were covered in that bill were for the development of the resources of our own country and were the very projects in nature of those he demanded for foreign countries and persistently demanded more and more money.

Mr. O'HARA of Michigan. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the distinguished gentleman from Michigan.

Mr. O'HARA of Michigan. Mr. Speaker, I want to say that I think the gentleman from Illinois has, as usual, put his finger on a trend which, if carried to its ultimate conclusion, could be very harmful to the people of the North and of the entire United States. I wish to associate myself with him in the remarks he has made and to say in addition, as a freshman Member of Congress, that I have received a great deal of guidance and assistance from the distinguished gentleman from Illinois and wish to express my appreciation of the help and guidance he has given me during this first session of the 86th Congress.

Mr. O'HARA of Illinois. I thank the gentleman. May I say that my friend from Michigan has added new luster and glory to the name of O'HARA.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Illinois [Mr. MASON].

Mr. MASON. Mr. Speaker, does the gentleman from Illinois, now in the well of the House, know that $17 billion of American money has been invested abroad to build factories, to use the most modern machinery that we have, but to use the cheap labor abroad instead of our labor, to produce goods to ship into this country; and that they have in the last 10 years developed jobs for over 1 million foreigners, and taken that many jobs away from our own working people. That, in my estimation, is the really critical situation that we are facing.

Mr. O'HARA of Illinois. I hope my friend from Illinois, who served with such distinction in our State senate and who has served with outstanding distinction in the Congress, will agree with me that whether it be cheap labor in one section of our country or in a foreign land, we do not want that cheap labor adversely affecting our sons and daughters, the people in Illinois. The future of the South is in wage and working conditions comparable to those in the North. There will be no future for the North of the sort we envision if we start taking backward steps to meet either foreign competition or raids on our plants from other sections of our own country.

Mr. COLMER. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. Mr. Speaker, I have to yield to my dear friend from Mississippi because he has such power in the Rules Committee, and we are such close friends even though we so widely disagree in our philosophy.

Mr. COLMER. Mr. Speaker, may I say in response to that triple threat that I particularly appreciate one part of it, that the gentleman regards me as his friend. I might say that I am not unhappy that we disagree in our philosophy.

I am a little surprised at my very genial and gracious friend, the poet of the House, the man of good will, getting up here this morning and taking advantage of this little vacuum in the hours preceding adjournment, to raise the sectional flag.

I might suggest to the gentleman that if he waited until a little later in the day, he might find a more appropriate occasion for that, because I know the gentleman will be in the forefront when that occasion arises.

The SPEAKER. The time of the gentleman from Illinois [Mr. O'HARA] has expired.

Mr. COLMER. Mr. Speaker, I ask unanimous consent that the gentleman may proceed for 2 minutes additional.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. COLMER. Mr. Speaker, the gentleman is complaining about the South.

Mr. O'HARA of Illinois. No, I commend the South and the loyalty of its members to their constituents. I merely said that they outsmarted us, because they are better horse traders.

Mr. COLMER. I would not even accept that. The gentleman must recognize certain facts. One is that the section from which he comes, a great section of this country, had considerable advantage over the section that I have the privilege of serving in this House. I am sure he remembers, great historian that he is, that it has been only a few generations ago that that beautiful section of our great, common country, was laid waste. We had to start from the very bottom. That, plus the fact that the gentleman's section had advantages of water power, the only power that existed in those days, which meant that his part of the country grew and prospered. But now we are coming into our own. There are considerations of our climate and our labor. And, by the way, the gentleman might come down there sometime and take advantage of the situation and do a little of the same thing that Mr. Khrushchev is going to do when he comes over here—learn something about that section of our common country. He will find that labor is organized, that labor is paid a decent wage. But industry, recognizing the advantages of the great supply of labor that has been converted from agricultural pursuits to industrial pursuits, along with the climate and all of the other elements has found it attractive to go down there. That is what is making the South grow and prosper. And I think my friend should be proud of that rather than to complain about it on this occasion.

The SPEAKER. The time of the gentleman from Illinois [Mr. O'HARA] has again expired.

The Honorable Wendell E. Green

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. O'HARA of Illinois. Mr. Speaker, on the last Thursday in August the circuit and superior courts of Chicago in Cook County, with the necessary exception of an emergency court, were closed. That day one of the most respected jurists on the circuit bench, the Honorable Wendell E. Green, was being buried, and his fellow jurists were gathered in mourning at the funeral services at St. Thomas Episcopal Church, where Judge Green had been a vestryman.

Judge Green was the first Negro ever to sit on the circuit bench of Cook County. It was in 1950 that he was appointed by Gov. Adlai E. Stevenson to fill a vacancy in this high court of record. He was elected in 1951 and reelected in 1957. So highly was he esteemed by the lawyers of Chicago for his integrity, his legal learning and his judicial demeanor that he stood first in the poll conducted by the Chicago Bar Association.

He was born in Topeka, Kans., the son of an Episcopal minister. He was graduated from the University of Chicago and admitted to the Illinois bar in 1920. He quickly took his place among the ablest of defense counsel who practiced in the old criminal court building just north of the river. I saw him frequently in the years that followed in an era of great and renowned defense counsel. I always placed Wendell Green in the very top flight. He was masterful in examination, eloquent and convincing when addressing a jury.

In 1942 he was elected to the municipal bench, reelected in 1948. Thus four times, twice when a candidate for municipal judge and twice when a candidate for circuit judge, the people placed their stamp of approval on a man who was a good citizen, a great lawyer and a learned

and just judge. Chicago has lost a son she ill can afford to lose. He left to his city, his State, his country and his profession a heritage of high standards.

My deepest sympathy goes to the widow, Lorraine, a member of the Chicago Board of Education, and to his brother.

U.S. Army Commended for Decision To Make Wider Use of Air Transportation

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LANKFORD. Mr. Speaker, as a member of the House Armed Services Committee, charged with the responsibility of making certain our defense dollars are spent wisely and prudently, it always is a welcome opportunity to be able to commend one of our armed services for taking steps to reduce expenses.

In this case, I want to call attention to a recent memorandum issued by the Army Chief of Transportation, Maj. Gen. F. S. Besson, Jr., in which General Besson points out that "air transportation as the primary mode of transportation to and from overseas for Army passenger movements in peactime is under active consideration."

On September 8, 1959, I sent General Besson a letter in which I commended him for recognizing the economies in money and manpower gained from use of air transportation in the movement of Army passengers. In my letter I expressed the feeling that the Army's transportation bill could be reduced further through wider use of air transportation for troop movements between stations in this country. I told General Besson of my concern that the Army has not been taking advantage of the tremendous economies to be realized from sending more of its passengers in groups by charter air transport which is the most economical air transportation available since its cost approximates one-half the cost of sending passengers on an individually ticketed basis via first-class air service. I was happy to receive a reply signed by Brig. Gen. F. T. Voorhees, Acting Chief of Transportation, Department of the Army, informing me that the Army has this matter under active consideration.

In addition to increasing the savings in money, wider use of charter air transport service is called for on the basis of national defense. The majority of the charter air transport carriers are supplemental air carriers who represent an important weapon in the Nation's arsenal, because they occupy a significant role in our mobilization planning. In any future military emergency these carriers will unquestionably be needed to fill the military airlift gap just as they were called upon to do in the Berlin crisis of 1948 and 1949 and the Korean conflict of 1950. The Congress, the Civil Aeronautics Board, and the Defense Department all agree that the continued existence of these air carriers is of real value in the terms of national security.

Restricted as they are in the amount of civilian air transportation service they can perform, these carriers must look to Government business for the additional source of revenue needed to enable them to modernize and expand their fleets. So we see that wider us of their services by the military represents a sound investment in national defense with a savings in manpower and payroll as a clear byproduct.

Increasing Air Traffic and the Noise Problem

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BOSCH. Mr. Speaker, one of the biggest problems in the Fifth Congressional District is the noise nuisance and danger from low-flying airplanes. New York International Airport—Idlewild—is located wholly within my district. This is a problem that has been with us for a goodly number of years but has become more acute with the advent of the commercial jet airliners. Commercial jet operations commenced at Idlewild in October 1958.

While the situation in my congressional district is probably the worst in the United States today, I know that the problem is not confined to the New York area. Therefore, for the information of all, I think it well to review here what we in Queens have found to be the problem, because I know many Members of Congress who have large airports in their districts have a problem and theirs will become more acute as air traffic grows and more and more jets are put into operation.

In July 1955 I called a meeting at the Federal Building, Idlewild Airport, to which was invited civic leaders in our area, officials of the Civil Aeronautics Administration, representatives, and other Long Island Congressmen. It was my thought that we could get together, discuss our problem and possibly work out a solution which would make Federal legislation unnecessary. This did not prove to be the case.

Because of the fact that those who had control over the operation of the airports and air traffic took no action, I found it necessary early in 1956 to introduce legislation which I felt, if enacted, would go a long way toward alleviation of the problem. The three bills I introduced, briefly, would, first mandatorily lift the minimum ceilings for operation of commercial airliners; second, evoke criminal penalties for the violation of regulations governing the flight of airplanes; third, ban the operation of jet airliners from airports located in cities or counties having a population of 1 million. These bills were referred to the Committee on Interstate and Foreign Commerce. In July 1956 the Subcommittee on Transportation held hearings on these three bills. No future action was taken.

These same bills were introduced in the 85th Congress, but no action was taken by the committee.

During all this time, I continued to correspond with the Civil Aeronautics Administration, the Port of New York Authority, and the National Air Transport Coordinating Committee, seeking their cooperation in working out regulations which would bring about a manner of operating air traffic so that the noise therefrom would be reduced to a level that the airport neighbors could tolerate. I must say that very little was accomplished. The Port of New York Authority, which operates the airports in the New York area, namely, Newark, N.J.; Teterboro, N.J.; La Guardia, N.Y.; and New York International did ban jet operations until such time as they were tested and it was thought that the noise level was such that the airport neighbors could endure same. In October 1958 permission was granted by the New York Port Authority for the operation to and from Idlewild of the Boeing 707 and the Comet IV, under specified conditions without subjecting neighboring communities to intolerable noise.

The conditions under which the Port Authority permits jets to operate at Idlewild include a mandatory runway use procedure that requires that jet aircraft use overwater takeoffs whenever wind and other conditions permit. When these conditions do not permit, the planes are supposed to conduct their flight so as not to create a noise level to exceed 112 perceived noise decibels. Also takeoffs at night are to be permitted only over water from 10 p.m. to 7 a.m.

These conditions sound good, but it has not worked out so well in practice—weather conditions and other alleged reasons seem much too often to prevent "overwater" takeoffs and exceptions are continuously made to the rule regarding night flights. Also, you will note these regulations all affect takeoffs, not landings.

Due to the fact that jet operations were an accomplished fact in January, I reintroduced my bills on minimum ceilings and criminal penalties. Failure to get action on previously introduced legislation and feeling a new approach was warranted, I also introduced House Resolution 162 to create a select committee to conduct an investigation and study of the powers and functions of agencies over the operation of aircraft. I think it appropriate here to review some of the reasons I felt it necessary to introduce this legislation.

Prior to the enactment of the Federal Aviation Act and the establishment, under this act, of the Federal Aviation Agency, there was no regulation, backed up by law, which gave anyone jurisdiction over the noise problem of the aviation industry. In the New York area, as previously stated, the New York Port Authority specified certain criteria for the operation of jets. When these were announced it was reported in the press

that Gen. E. R. Quesada stated that he would do everything he could to eliminate these restrictions on jet operations—this in October 1958 before he assumed office in January 1959 as Administrator of the Federal Aviation Agency. In addition to the regulations of the New York Port Authority, we have now the Federal Aviation Agency and the National Air Transport Coordinating Committee, a voluntary intraindustry committee to coordinate civil air transport operations in the metropolitan New York-New Jersey air terminal area. My experience proved that each time I tried to pinpoint responsibility for noise nuisance there was "buck passing" from one agency to another. To me, it seemed necessary that we go into this question of responsibility and determine who was responsible in each given instance for a particular problem and then, if there was no specified area of responsibility, by legislation fix same and give the proper organization the power to enforce it. For these reasons, House Resolution 162 was introduced.

House Resolution 162 was referred to the Committee on Rules. On July 29, 1959, I appeared before this committee in support of same. The committee realized the problem and was most sympathetic. However, because of a possible conflict in interest with the Committee on Interstate and Foreign Commerce, action was deferred so that consultation could be had with the chairman of that committee. On August 18, 1959, Hon. Oren Harris appeared before the Committee on Rules in opposition to House Resolution 162. It was his contention that the subject matter properly belonged before his committee. During his appearance before the Committee on Rules he, at the request of the chairman, agreed to call a meeting of his committee to go into the problem.

I might say here, that I had not been idle in the time that no committee action was in progress. I was corresponding with and meeting in person with those who I felt could be of assistance in finding a solution to this problem of noise. At a conference in my office on August 13, 1959, with Gen. E. R. Quesada and other Member of Congress from Long Island, I specifically requested General Quesada to give me the legal views of the Federal Aviation Agency on the authority to deal with the aircraft noise problem. Under date of August 24, 1959, I received a letter from General Quesada in which he stated:

> Thus, while I feel I have the basic legal authority to issue air traffic control regulations to suppress jet aircraft noise for the protection of people and property on the ground, I am, of course, not in a sound position to issue any such regulations until appropriate technical and legal studies are completed.

Mr. Speaker, this was the first time I had had anyone come out and state that authority existed for controlling noise. So, the Federal Aviation Agency says they have the power, under law, but they are not in a position to exercise it.

On August 26 and 27, 1959, the chairman of the Committee on Interstate and Foreign Commerce called an executive session of the Subcommittees on Transportation and Aeronautics and Health and Safety to consider House Resolution 162. Appearing before the subcommittees, in addition to myself, were Gen. E. R. Quesada, Administrator, Federal Aviation Agency; Hon. James R. Durfee, Chairman, Civil Aeronautics Board; and Mr. Stuart G. Tipton, president, Air Transportation of America. On request, representatives of the Port of New York Authority were allowed to sit in. At the conclusion of the meeting on August 27, the chairman announced that he intended to hold an open hearing in New York at New York International Airport at which time public testimony would be taken from the agencies involved with the air traffic problem, civic groups and private citizens. This meeting was held on September 7, 1959, Labor Day.

At the September 7 meeting the Port Authority testified as to their efforts to curtail noise, Mr. James C. Pyle, Assistant Administrator, Federal Aviation Agency, reiterated that the Federal Aviation Agency has "the authority to step into this picture and do something," and Adm. Charles E. Rosendahl, executive director, National Air Transport Coordinating Committee, reviewed the aims and purposes of his committee in this field.

Supposedly, all of us had one objective in mind—the abatement of noise without sacrificing safety. However, before the committee, the spokesman for the National Air Transport Coordinating Committee made the following statement:

> Responsibility for rules and regulations which govern the flight operation of aircraft lies with the Federal Government, and not with any other agency. You gentlemen, having been in on the drafting of the legislation of the act, I am sure appreciate that as much as anybody.
>
> It is, in our opinion, not appropriate that the airport operator seek to enforce flying regulations which are appropriately the responsibility of the Federal Government. Safety in air transportation will not be gained by a duplication in flying regulation.
>
> While the airlines and National Air Transport Coordinating Committee are wholeheartedly in favor of working with the airport operator for the reduction of noise, as they have done and will continue to do, there would be less confusion and there might be more result if the airport operator would not endeavor to form and enforce rules in an area which has logically been reserved to Federal jurisdiction.

From my work with the agencies, I have found that the Port of New York Authority has been earnestly concerned with the noise problem as it affects the airport neighbors and here we have an example of one agency which is supposed to be working on the same problem publicly belittling the other. It is important to know also that the Port of New York Authority was a member, to the extent of contribution to the finacial support, of the National Air Transport Coordinating Committee. As a result of the testimony of the National Air Transport Coordinating Committee spokesman, the Port of New York Authority on September 10, 1959, announced its resignation from the National Air Transport Coordinating Committee.

I believe that it has been conclusively proved that my constituents and I have not exaggerated the existing problem. Something must be done so that those living in the vicinity of large airports may enjoy their homes in relative peace and comfort, worship in their churches without undue disturbances, have their children educated without continued cessation of classroom work while planes pass over, and secure a good night's sleep without being awakened time and time again throughout the night.

Mr. Speaker, as I said before, this is a problem that is going to get worse unless action is taken now to meet it. The FAA states that it has authority under the Federal Aviation Act to issue regulations curbing noise, but it has not chosen to use this authority.

Mr. Speaker, I cannot urge too strongly that the Committee on Interstate and Foreign Commerce take affirmative action by recommending passage of effective Federal legislation prescribing mandatory regulations in this field.

Ambassador of Good Will to People of Laos

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 12, 1959

Mr. O'HARA of Illinois. Mr. Speaker, we have been much concerned over the news from Laos, and have been asking ourselves what we have received in return for the millions we have poured into that country. At such a time it was heartening to receive from a constituent the article from Our Sunday Visitor that I am extending my remarks to include. This is the story of a young American who gave himself to Laos, and, as Our Sunday Visitor states, became by his service and sacrifice one of our country's greatest ambassadors of good will. Now at 32 he is dying, but long after the millions we have tunneled into Laos are forgotten, Tom Dooley and his work will be remembered by the primitive peoples of that land.

The article from Our Sunday Visitor follows:

A PRAYER FOR TOM DOOLEY

(By Dale Francis)

The very least any of us should do for Tom Dooley is to say a prayer for him. But Dr. Tom Dooley, being the man he is, would probably ask you to say a prayer for Medico instead.

Chances are you've already heard of this valiant American. A graduate of Notre Dame, a medical doctor, a man with a mission, Tom Dooley is one of the great heroes of our times.

A handsome young man with professional skill, he could have been a great success in private practice in some American city. He could have belonged to the best clubs, mixed with the very best people. Instead he chose to give his life to the poorest of the poor. He

went into the most primitive of areas to try to heal the sick.

Laos lies between Vietnam and Thailand, bordering on the north on Communist China. Tom Dooley works in the jungles of Laos, a dedicated man who has convinced the people he serves that Americans are good people, that Americans not only send material goods, they come themselves to sweat, to suffer, to struggle against the hardships of primitive life.

Dr. Tom Dooley has been one of the greatest ambassadors of good will this Nation has ever had and the good he has done has spread. He formed Medico, an organization designed to bring help to primitive peoples everywhere through the labors of sacrificing men and women.

Medico has grown until now its work has spread into eight countries and it will grow more as others learn about it, as young doctors volunteer to work in primitive countries, as young technicians make sacrifices to help the least of those in the world.

A few weeks ago Tom Dooley was working in the jungles only 25 miles from the border of China. He was too busy to pay much attention to the growth on his chest, but when the time came he had a few hours, he asked another doctor to remove it. He did. A biopsy was made. Tom Dooley has a melonoma, one of the deadliest of all cancers.

He is only 32 years old. He has crowded many worthwhile achievements into these short years, but he hopes that before his life is ended he will have accomplished even more. He hopes to finish another book and he hopes to get Medico on a sound financial basis.

As I said, the very least any of us can do for Tom Dooley is to pray for him but there are millions of people of all faiths in the United States who should do more, who should help him get Medico on a sound basis so that it will continue even if Dr. Tom Dooley is not there to guide it. There must be many young men who believe as Tom Dooley believes in the importance of helping those who are in greatest need, certainly there will be more volunteers willing to go into primitive lands.

This is a nonsectarian organization, it is supported not by people of any one faith, its workers include people of many faiths. They teach no religion except that which they teach by example, showing their love for even the least among us.

Public Law 86–211: The Veterans' Pension Act of 1959

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. SAYLOR. Mr. Speaker, the President has approved H.R. 7650, the Veterans' Pension Act of 1959, and it has been designated Public Law 86–211. The President signed this bill at Chequers in England on Saturday, August 29, 1959.

This is an event of tremendous significance. It is fair to say that this is the first basic sweeping, far-reaching provision of the pension structure of the Nation since the time of the Revolution. Up to now we have made a liberalization here, increased the rates there, and made generally minor changes. The bill which was reported unanimously by the Veterans' Affairs Committee represents several years of study, thought, and serious consideration by the committee and its staff. On this project, of course, we have had the full cooperation of the Veterans' Administration and for that we are extremely grateful.

It would not have been possible to enact this measure into law had it not been for the leadership of the chairman, the gentleman from Texas, the Honorable OLIN E. TEAGUE. He has displayed rare tact, judgment, and legislative skill in successfully piloting this measure into its final stage. I am sure that I speak for all other members of the Committee on Veterans' Affairs and most of the Members of the House of Representatives when I express these sentiments.

The bill was passed by the House on June 15, 1959, by a division vote—226 yeas to 34 nays. The Senate followed suit on August 13 by a record vote—86 yeas to 6 nays.

Basically, this legislation which is effective July 1, 1960, emphasizes and strengthens the principle of paying pension on the basis of need and disability. Today we have three rates of pension payable to our veterans—$66.15 monthly if the veteran is less than 65 years of age and has been on the pension rolls for less than 10 years; $78.75 if he is 65 years of age and has been on the rolls for 10 or more years; $135.45 if he is in need of aid and attendance or if he is so helpless or blind so as to require the constant aid of another person.. Income limits of $1,400 if single and $2,700 if with dependents must be met.

The determination of permanent total disability is made on a liberal basis. Such rating is granted—where the requirement of permanence is met—when there is a single disability of 60 percent, or two or more disabilities one of which is 40 percent in degree, combined with other disability or disabilities to a total of 70 percent, and unemployability attributed thereto.

Although age alone is not a basis for entitlement to pension, it is considered in association with disability and unemployability in determining permanent and total disability. The aforementioned percentage requirements are reduced on the attainment of age 55 to a 60-percent rating for one or more disabilities, with no percentage requirement for any one disability; at age 60 to a 50-percent rating for one or more disabilities; and at age 65 to one disability ratable at 10 percent or more. When these reduced percentage requirements are met and the disability or disabilities involved are of a permanent nature, a permanent and total disability rating will be assigned, if the veteran is determined to be unable to secure and follow substantially gainful employment by reason of such disability.

Public Law 86–211 retains the age, and disability requirements listed above provides for a pension of $85 monthly for a veteran with less than $600 annual income; $70 if his income is between $600 and $1,200; $40 monthly if his income is between $1,200 and $1,800. For a veteran with one dependent and having less than $1,000 annual income the pension is $90; it is increased to $95 if he has two dependents, and to $100 if he has three or more dependents. These rates are increased by $70 for the veteran who needs regular aid and attendance. For the first time the Administrator is authorized to furnish an invalid lift to this latter classification of veterans. This will be a real benefit since many of them are bedridden.

In connection with the rates of pension I think that Members of the House will be interested to know that nearly 200,000 veterans who are presently on the pension rolls have less than $100 annual income. Thus it is readily apparent the economic impact which this bill will have and the very practical effect it will have in helping this group meet its daily living problems.

The bill also provides substantial increases for widows and children. The rate today for a widow is $50.40 monthly. This is increased to $60 if she has less than $600 a year income. If she has one child, the present rate is $63 and that has been increased to $75 for a widow with less than $1,000 annual income.

The most costly feature of this Public Law 211 is the so-called widows' equalization or parity. Up until now the widows of veterans of World War II and Korea have had to show at the time of their husband's death that he had some service-connected disability, however slight, in order to qualify for a non-service-connected pension. The widows of World War I veterans do not have to meet such a qualification and one of the provisions of Public Law 86-211 removes this disparity and places the widows of these three conflicts on an equal footing. This is of the greatest significance and in my judgment marks a real step forward.

It cannot be emphasized too strongly that the savings provisions which are a part of Public Law 86-211 give the fullest protection to the group of veterans who are presently on the pension rolls or who will come on the rolls prior to July 1, 1960. If it is to their advantage or to the advantage of a widow to elect to remain under the present rates, he or she may do so and be protected in that right so long as they may live. In other words, each veteran will have the choice of deciding whether he can receive a higher pension under the new law or under the old law. In either event his rights will be protected.

Now a word as to cost. The first-year cost of this proposal will be $309 million and it will drop each succeeding year for the first five years, when in the fifth year it will be $165 million. By the turn of the century, the year 2000, the total cost will be $9,319 million. Of this amount, $22 billion may be attributed to the widows equalization provision. Savings in excess of $13 billion are possible under the veterans' rates, to make the net cost approximately $9 billion as I have indicated earlier.

I want to close by saying, Mr. Speaker, that I think we have gone a long way toward solving our pension problem. The bill is a positive and constructive step forward.

Atomic Energy and Our U.S. Shrimp Industry

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CRAMER. Mr. Speaker, just last month the very able gentleman from Georgia [Mr. PRESTON] presented to this body some of his views on our domestic shrimp market. He indicated actions necessary to alleviate the severe slump in the domestic shrimp market and pointed out very vividly that the shrimp industry in the United States is presently undergoing its greatest struggle for survival, due to a combination of factors.

Mr. Speaker, I have been studying the problem of our shrimp industry, which is a matter of very great concern to me, because the shrimping industry is of the greatest importance to thousands of my constituents in Florida. I am sure that all of you know that the shrimp ranks first in dollar value among all commercial fish in the United States today, yet the small amount of research conducted in the past years by the Federal and State agencies, while it has yielded some very valuable information, has merely scratched the surface of what can be a great and continuing boon to the shrimp industry in the United States today—indeed its very salvation.

Great strides are being taken by our U.S. industry through steadily increasing uses of radioactive isotopes and radiation methods made possible under the U.S. Atomic Energy Commission atoms-for-peace program.

All indications to date reveal that, despite the relatively small amount of research and development moneys expended by our Government thus far in this most important field, our standard of living—in spite of inflationary trends—and our national economy can be improved a hundredfold through the development and application of radioactive isotopes and radiation to industry of their very many proven uses in the fields of rubber, paper, steel, chemicals, electronics, and so forth, and their potential application to our fishing industry. My learned colleague from Georgia indicated his concern, and rightly so, over the tremendously increased imports of shrimp into the United States from foreign countries. I believe that he said some 40 countries ship at least some shrimp imports to the United States. This concern was very ably demonstrated in his quote of the figures from the U.S. Bureau of Fisheries. According to that Bureau the shrimp imports for the month of March 1959 totaled 8,492,000 pounds, or almost double the 4,986,000 pounds imported during the same month in 1958. I need not tell you, Mr. Speaker, what effect this has upon our own shrimp industry and its thousands of employees.

In view of the current status of radiation preservation of fish and other seafood products as I have learned of it, I can say that I am indeed encouraged with the great possibilities offered the U.S. fishing industry and urge that we fully support that portion of the atoms-for-peace program having to do with radioisotopes application to the preservation of food, including fish and other seafood products. Vast amounts of money can be saved, production can be increased, prices reduced, yet profits increased if we are able successfuly to preserve these very popular, very nourishing, yet highly fragile seafood products, thus eliminating the necessity for refrigeration, storage, and other costly aspects of the industry. If we are the first country to perfect this method, and we certainly should be the first, then I believe we would not need to be concerned about the amount of imports by other countries because we could then compete with them completely successfully, to such an extent that these imports would decrease and perhaps in time disapear.

The American fishing industry has approximately 160 separate species of fish and shellfish which are sold in several thousand different market forms. Data should be made available to enable the processor to evaluate the relative economics of radiation preservation against those of icing, freezing, canning, and curing. There is no question but that in many cases slight increases in processing costs could be absorbed to make available fishery products in much more acceptable form. We are not the only country experimenting in the methods and techniques of using radioisotope irradiation for the preservation of fish. For example, a Prof. B. S. Swighart at Harwell, England, said in an address last month that the possibilities of low-level irradiation doses prolonging the shelf life of poultry and fish are equally promising. Fish appear to be more sensitive to the development of rancidity and color changes because of their greater susceptibility of fish oils to oxidation. Codfish cakes show a rather high acceptability even after treatment with sterilization doses. This is also true for other seafood products such as cooked crabmeat and oysters. Many other seafood products such as crabmeat, lobster meat, kippered herring, finan haddie, and so forth, have shown promise. Further articles on irradiation processing of foods in Britain indicate that nonfatty fish, cod and lemon sole, prove more suitable for radiation treatment, but even with these, however, flavor changes limit the maximum acceptable radiation dosage. A substantial increase in storage life of the order of three times under refrigeration was obtained when the radiation treatment was combined with an antibiotic dip. Conclusions to be drawn from these are that preliminary work strongly indicates that there will be commercial application for the radiation preservation of fish and other seafood products to extend storage life. Much experimental work remains to be done, however. Irradiation facilities located at dockside or on board ship will be required for future operations. Commercial application of radiation to extend the storage life of fish products will be contingent upon securing wholesomeness approval by the Food and Drug Administration.

The Atomic Energy Commission recently stated that its studies on the radiation preservation of foods have shown that the preservation of fish by ionizing radiations stand, perhaps, the closest toward being technically feasible of all the foods studied to date. The Commission recently authorized a small research contract with MIT for the purpose of determining the requirements for making fish preservation by irradiation an economic and industrial feasibility.

Mr. Speaker, I understand under this contract at MIT it is proposed to evaluate on a national level the possible uses of ionizing radiation for the preservation of fish. This study is to encompass the following points and provide answers to the following questions:

First. What is known regarding the technical status of the preservation of fish today?

Second. What are the more promising species and which are those less suitable for these purposes? What research work and what developmental work is necessary to provide radiation-preserved products on the market? This work may be arbitrarily broken down into the following areas: (a) Technological requirements, (b) economic considerations, (c) packaging requirements, (d) storage requirements, (e) radiation sources, (f) preferred method of irradiation geometry, (g) wholesomeness and toxicity testing.

This study will further show where the research and development should be undertaken nationally, who the people are, who might best do the work in each of its various aspects, how the work should be phased out in terms of time and in terms of money, what the other methods of sterilization of preservation of fish are, which may be competitive—such as antibiotics—when the Atomic Energy Commission should lend, diminish or cease its support entirely and when private industry should take over this work. Finally, how much money should such a program cost? All of this will be phased out in detail.

Mr. Speaker, I am most encouraged to know of research of this type being conducted by the Atomic Energy Commission and, from some knowledge of many of its past successes, I have every reason to be encouraged that the Commission will be successful in accomplishing this most important objective of preservation of fish and other types of seafood. I need not point out the importance of the U.S. fishing industry to our national economy, nor will I reiterate the many problems facing that industry today. Since the beginning of time when man first learned that fish are edible, the industry as such has almost been taken for granted. It has lagged far behind in the application of modern techniques, research, and development, and in Federal Government support. Speaking from firsthand knowledge of the U.S. shrimp industry, I know that very limited amounts of research moneys of Federal and State agencies have been allocated in the past years for carrying out essential research on shrimp in the

Gulf of Mexico. The amount of funds is certainly not commensurate with the present value and the future importance of this resource.

The taxpayers of the United States have made a justifiable yet an enormous investment in the atom—some $10 billion in all. If dividends—tangible, direct money returns to the Government—can be earned on this huge investment, then in fairness to the U.S. taxpayer they should be earned. I submit that dividends are now being earned on the Government's modest investment in the AEC isotope program and that this program is now the only segment of the atoms-for-peace program where the Government is receiving direct money returns on its investment—these returns taking the form of greater amounts of taxes paid on profits earned through the application of radioisotopes to their industry. With the increased use of isotopes in our industry will naturally come increased benefits to the national economy in the direct form of savings reflected and increased taxes willingly paid to the Government. The Government benefits; the user of the isotopes benefits through more profits; and the whole economy improves.

Mr. Speaker, I am certain that this body will agree that the AEC isotopes development program with its many, many possible applications toward the improvement of our national economy through increased efficiency in our industry is one of the best bargains ever bought by the U.S. taxpayers. Yet, Mr. Speaker, this particular aspect of the atomic energy program is but an infant in comparison with the atomic power development program or the weapons program. It has barely begun its research into all of the many potential uses which will improve the lot of all mankind. I believe that this program in the Atomic Energy Commission will, in the not too distant future, repay tenfold the total cost of our vast U.S. atomic energy industry. I, therefore, urge that we at all times encourage and support the speedy development within the Atomic Energy Commission of its research and development program to promote the wide use of radioactive isotopes by both our Government and private industry.

The Descendants of the Adam Wolf Family of Blair County, Pa., Have Preserved Their Noble Heritage by Over a Century of Honest and Wholesome Living

---

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. VAN ZANDT. Mr. Speaker, there are countless examples of business success achieved under the incomparable American free enterprise system yet none of them exceed in impressiveness the story of the Wolf family of Altoona, Blair County, Pa.

It was over a century ago that Adam Wolf a German immigrant landed in Hollidaysburg, Pa., and combining his talents as a cabinetmaker and undertaker, as was the custom at the turn of the century, he opened a store that was to prove the forerunner of the largest chain of independent furniture stores in Pennsylvania.

In the year 1902 Charles E. Wolf, a son of Adam Wolf, opened the City Furniture Store in Altoona which marked the beginning of the first store in the present chain of 17 modern furniture stores, 15 of which are located in central Pennsylvania while the other 2 stores are in Cumberland, Md., and Keyser, W. Va.

George A. Wolf and Herbert T. Wolf, sons of the late Charles E. and Annie C. Wolf, head the organization, with George A. Wolf as president and his brother Herbert T. Wolf as general manager. Their mother Mrs. Annie C. Wolf was president of the firm at the time of her death.

George and Herbert Wolf inherited the keen business acumen of their parents and their high regard for moral values in life with the result the Wolf firm has enjoyed remarkable success. The 17 modern stores were developed under the direction of George and Herbert Wolf who have employed modern methods of merchandising that are in the best traditions of American business life in the retail furniture field.

The Altoona store, which is headquarters for the Wolf chain, occupies an entire city block in depth, is six stories high and contains over an acre of actual display area.

A typical family organization the officers of Wolf Furniture Co. are sons and grandson of the founder, Charles E. Wolf, and are as follows: George A. Wolf, president; Herbert T. Wolf, general manager; Herbert T. Wolf, Jr., buyer; and Gerald P. Wolf, treasurer. The firm is fortunate in having a large staff of competent employees many of them having from 10 to over 30 years of loyal and efficient service.

This year marks the 57th anniversary of the founding by Charles E. Wolf of the Altoona store. From the founding of the Hollidaysburg store by his father, Adam Wolf, over 100 years ago, four generations of the Wolf family have held the reins of what has become a flourishing business venture that has developed into a virtual furniture empire. Thus the theme of the 57th anniversary celegration—"A proud past, a promising future"—is not only meaningful but an accurate description of the experience and outlook of the Wolf family in the business realm.

Through the long and successful history of the Wolf family its members have not allowed their progress in the business field to outshadow their interest in their community, State or Nation.

A member of the family Ensign George Anderson Wolf, U.S. Navy, son of Mr. and Mrs. George A. Wolf made the supreme sacrifice in defense of his country when the Japanese perpetrated the sneak attack on Pearl Harbor. Ensign Wolf was among the 1,103 officers and enlisted men who went down with their ship the U.S.S. *Arizona* which still lies submerged in the waters of Pearl Harbor.

The present officers of the Wolf Furniture Co. are all active in civic and church affairs giving unstintingly of their time, money, and efforts in advancing the best interests of the community. Thus it is a pleasure to salute such a fine American family on the 57th anniversary of the founding of the first store in the present chain of 17 modern furniture stores.

In conclusion the Altoona, Pa., Mirror in the September 5, 1959, issue paid tribute to the Wolf family in an editorial entitled "It's Grand Family," which I wish to include at this point in my remarks, together with an article in the September 4, 1959, issue regarding the anniversary dinner honoring Wolf Furniture Co. employees:

[From the Altoona Mirror, Sept. 5, 1959]

IT'S GRAND FAMILY

When families get together a grand good time is enjoyed by all, and when the store family of the Wolf Furniture Co., comprising 17 units, held an appreciation dinner at the Penn-Alto Hotel this week, tributes were numerous, gayety prevailed, and every member of the family was lauded.

The dinner was the occasion for awarding service insignia to firm members and employees with 30-, 20-, and 10-year records, and the group is large.

Previously, 11 won 30-year, 6 20-year, and 25 the 10-year awards. This year the Altoona stores added 2 30-year workers, 4 with 20 years' service, and 12 with 10 years, while the 16 branch stores turned up 1 30-year employee, 5 with 20 years, and 19 with 10-year records.

The Wolf Furniture Co. name is a household one throughout 17 communities in the State and in West Virginia and Maryland communities, too, for the firm has shown a tremendous growth, thanks to fine leadership and excellent employee and supervising groups. The employees, however, are given full credit for this progress, and the appreciation dinner most heartily lauded the men and women in the organization.

The founder, Charles E. Wolf, and his wife, Mrs. Annie C. Wolf, president at the time of her death, were recalled, along with John J. Wolf, merchandising manager, all giving the business its first start, and each building up the business for the sons of the founding family to carry on. Grandsons today add to the tradition as operating directors.

The Wolf Furniture Co. family is a happy one, as was demonstrated at the elaborate appreciation dinner, and everyone shared in the praises and in the display of loyalty to a firm that has been a leader in advancing Altoona, as well as all the communities where stores now are operating.

The evening was climaxed with an excellent talk by Howard W. Lindaman, music man, former councilman, and champion pepper-upper in the Altoona community. His address drew rounds of applause as he recalled the courtesies, the business ability, and the fine accomplishments of the Wolf family over the years.

The Wolf Furniture Co. family is certainly one to be pround of. It's one of pep and enthusiasm and loyalty.

[From the Altoona Mirror, Sept. 4, 1959]

WOLF FURNITURE EMPLOYEES FETED AT DINNER EVENT

The second appreciation dinner in honor of Wolf Furniture Co. employees of the Altoona and 16 branch stores was held in the

Logan room of the Penn-Alto Hotel Thursday evening.

In his opening remarks, Gerald P. Wolf, toastmaster, said that the dinner was to honor the firm employees. He introduced a number of guests, including business and professional leaders.

Greetings were by John Wolf, son of Herbert T. Wolf, and a June graduate of Notre Dame University, where he majored in business administration; Herbert T. Wolf, Jr., and James Dilling, new supervisor of the 16 branch stores.

Growth of the Wolf stores was praised by the main speaker, Howard W. Lindaman, who recalled his 6 years of experience as a salesman. Mr. Lindaman, a longtime customer, traced his store association.

George A. Wolf, president, presented the service awards to the Altoona personnel, while Herbert T. Wolf, Sr., made the awards to the branch employees and also talked about his recent European trip. Awards were made to employees with 30, 20, and 10 years of service.

Introduced were Miss Zelia Reynolds, a retired employee, and Mrs. Marian Stoltz, who has 34 years service with the firm and was presented a bouquet.

P. Edmund Riley, introduced as "Mr. Wolf Furniture," with 37 years' service, presented gifts to George A. Wolf and to Herbert T. Wolf, Sr.

The invocation was by Raymond Higgins, of Tyrone; the benediction by Raymond Kerns. Song conductor was E. E. Rudisill and music was by the Alleghenyaires, while Karl F. Irvin presented dinner music.

The Altoona response when the awards were made was by James E. Potter, while the branch response was by Wilford Fisher, of Bellefonte.

Recipient of the gold and diamond-studded pins included:

ALTOONA STORE

Thirty-year award: Raymond C. Kerns, James E. Potter.

Twenty-year award: Harold Brubaker, James A. Goss, Marthella D. Mays, Donald A. Wertz.

Ten-year award: Donald Baird, Robert Beasom, James Dilling, Reta Glunt, Edna Kimlin, James Knisely, Richard Koch, Charles McConahy, Rose Marie Marasco, Oscar Schmidhammer, Gerald P. Wolf, Anthony Zsifkov.

BRANCH STORES

Thirty-year award: Raymond Higgins, Tyrone.

Twenty-year award: Eugene Beckwith, Lewistown; William Clemens, Hollidaysburg; Wilford Fisher, Bellefonte; Louis E. Patton, Lewistown; Arch Rounsley, Lock Haven.

Ten-year award: Eugene Baker, Huntingdon; Robert Conrad, Lewistown; Alma Frahn, Williamsport; Walter Goody, Barnesboro; Augustus Hussleton, Lock Haven; Leo Isner, Cumberland; Charles Keefe, Barnesboro; James McNeish, Philipsburg; Ronald Olear, Barnesboro; Anna Palm, Lewistown; Joseph Parsons, Tyrone; Frank Pavelko, Barnesboro; Catherine Rattenni, Cumberland; Wallace Riley, Clearfield; William Senson, Tyrone; Mary Shoemaker, Bellefonte; Mary Signorino, Lock Haven; Frank Simpkins, Lewiston; Blanche Wilks, Barnesboro.

A Tribute

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. THOMPSON of Texas. Mr. Speaker, truckdrivers all over the United States are noted for their helpfulness to motorists who are in trouble on the highways. They take a great and justifiable pride in the innumerable reports which come in from people who have been helped, frequently out of serious trouble, by the efforts of some passing truckdriver.

My attention has just been directed to a courageous act by a truckdriver—one which in this case saved the lives of some Galveston neighbors and constituents of mine. The truckdriver involved here went far beyond the traditional helping to change a tire, or pulling a car out of the ditch. He plunged into the water and saved some members of the Galveston family from drowning. The man's name is William Mount. He drives for the Associated Transport Co., and is a member of the International Brotherhood of Teamsters, Local No. 515, of Chattanooga, Tenn. I am indebted to the Washington office of this organization for the information which it is now my privilege to insert into the CONGRESSIONAL RECORD. A letter of commendation from one of the beneficiaries, Mrs. H. D. Dixon, of my home city of Galveston, tells the story in an unusually effective way. The letter follows:

GALVESTON, TEX., *July 14, 1959.*

Mr. MAYOR,
Rossville, Ga.

DEAR MR. MAYOR: I tried to call you at your office when we first returned home from Florida but I was unable to reach you by phone, then the long holiday so I am taking the liberty of writing to you as I feel that you should know about one of your citizens as he is truly a man that any city or community will be proud of.

During the last days of June we stopped off in Panama City on our way home from Florida and on the morning of June 27 we went bathing at the beach there across from Reid's Trailer Courts and Cabins. There were four of us, my daughter, Betty Jo, Mrs. Albert Vassallo, Cathy Vassallo, and myself. After only a few minutes in the water we were caught in the undertow and were in serious trouble. There was only one lifeguard on the beach and he had more than his hands full with the four of us. Mr. Mount, from your city, who lives at 709 East Circle Drive, with no thought of himself or the danger grabbed the tow rope that the life guard had been unable to bring with him and swam out to my daughter and myself who was battling the undertow thus saving our lives, the lifeguard had gone farther out to the aid of the other members of our party and together they brought us all in to safety. I have had a pretty rough time of it having swallowed a lot of salt water and have become completely exhausted but other than that with the help of Mr. Mount whose bravery and courage will be forever in our hearts and by the grace of God we are all safe and sound. I feel very strongly that Mr. Mount should get recognition there in your hometown paper and also to his church for his very worthy deed, and the Florida papers play down any things that might be harmful to their tourist trade. Mr. Mount is employed by a trucking firm but in the excitement we did not learn the name of it. He has a lovely wife and three darling children. I will truly appreciate any help that you might give us on this matter.

I will close thanking you again for helping in any way that you can to bring this matter to Mr. Mount's friends and neighbors. The world is a better place for having people like him in it.

Respectfully,

Mrs. H. D. DIXON.

Mrs. Vassallo resides at 2505 Oak here in Galveston. Our daughters are 11 years old.

H. H. D.

Protest on Award of Contract to Foreign Producer

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MILLIKEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MILLIKEN. Mr. Speaker, for the information of Members of Congress, I should like to insert in the RECORD a copy of the letter which I wrote on September 9 to the Comptroller General of the United States with reference to the award by the U.S. Corps of Engineers of a contract for hydraulic turbines for the Big Bend Reservoir in South Dakota. I have particular interest in this matter since the low American bidder, Baldwin-Lima-Hamilton Corp., is in my congressional district:

SEPTEMBER 9, 1959.

The Honorable JOSEPH CAMPBELL,
Comptroller General of the United States, General Accounting Office, Washington, D.C.

DEAR MR. CAMPBELL: I wish to protest the award by the U.S. Corps of Engineers of a contract to a foreign producer of the hydraulic turbines for the Big Bend Reservoir in South Dakota. The low American bidder, Baldwin-Lima-Hamilton Corp., has supplied the letters of protest which they have sent to you. I refer to file B-139912. Your decision in this matter will have long term impact on companies throughout the Nation which are selling to our Federal Government.

Aside from any Buy-American Act consideration, it is in the interest of the Federal Government and of national defense for the Government to limit its purchases of hydraulic turbines to American suppliers. These are the prime movers which are supplying hydroelectric energy for national health, safety, welfare, and defense. These turbines are designed to perform over a period of 50 years or more. Therefore, the original equipment should be purchased in this country so that replacement parts will be quickly available in time of war or peace.

The Baldwin-Lima-Hamilton Corp. has stated in its several letters that it has offered to supply these hydraulic turbines to the Federal Government at a fair and reasonable price. Its bid is based upon work to be performed by American labor in American shops, and equipment to be produced from American parts, materials, and supplies. Its bid was 100 percent in conformity with the intent and objectives of the Buy-American Act and in support of American enterprise, labor, laws, and standard of living. But it lost the contract.

In its next proposal to the Federal Government to supply hydraulic turbines to the Tennessee Valley Authority for the Wheeler Dam, the corporation figured its price on the basis of the maximum amount of materials and labor that could be purchased from overseas and still have the bid called an American bid under current interpretations of the Buy American Act. The company offered hydraulic turbines which will contain 49-plus percent foreign-made components and materials. These will be made by foreign workmen in foreign plants, and will contribute nothing to the American economy. Through this extreme measure, the Baldwin-Lima-Hamilton Corp. was able to be the low bidder, and at least save a crumb for the American workman.

Thus, current interpretations of the Buy American Act have forced this company to purchase from foreign producers fully finished castings and other parts, which for years they had been purchasing from American suppliers in support of American wage earners, American enterprise, and in conformity with the letter, spirit, and intent of the Buy American Act. It is clear that current interpretations of the Buy American Act are forcing American producers to obtain parts and materials from foreign producers in order to compete for sales to our own Federal Government, under a statute which in the first instance requires the Federal Government to limit its purchase of supplies to those produced in the United States, made from supplies also produced in the United States.

It is your duty, under the Buy American Act, to make certain that the contract for the hydraulic turbines for the Big Bend Reservoir, referred to in file B-139912, be awarded to the low American bidder. Failure to repect the foreign bid in this instance will set a precedent which will shatter the Buy American Act.

Very sincerely yours,

WILLIAM H. MILLIKEN, Jr.
Member of Congress.

Record of the Committee on Post Office and Civil Service During the 1st Session of the 86th Congress

EXTENSION OF REMARKS
OF

HON. TOM MURRAY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MURRAY. Mr. Speaker, the House Post Office and Civil Service Committee in the 1st session of the 86th Congress has established a remarkable record of continuing progress with respect to Federal employee and postal legislation.

The committee record in behalf of Federal employees is especially noteworthy in the light of the major employee benefits granted in the closing session of the 85th Congress, including a 10-percent retroactive salary increase for over 500,000 postal employees and nearly 1 million classified employees, a 10-percent cost-of-living annuity increase for 260,000 retirees and 80,000 survivors, and a number of fringe benefits. The additional employee benefits granted in the present Congress are particularly significant when viewed against this backdrop of liberal salary increases and other benefits to which they will be added.

The record of the committee also is a tribute to the diligence, interest, and fine cooperation of every member of the Post Office and Civil Service Committee. Both personally and as chairman of the committee I welcome this opportunity to express to each member my deep appreciation for a job well done. The members have been most loyal and conscientious in their attendance at committee meetings and in the close attention they have given to committee legislation and special studies. In my judgment, we have never had a committee membership more able, more informed, and more devoted to carrying out our complex—and often controversial—responsibilities.

This summary is provided with the thought that it will be helpful to all Members during the recess as a convenient reference to committee actions during the 1st session of the 86th Congress.

FEDERAL EMPLOYEE BENEFITS

HEALTH INSURANCE

The Federal employees health benefits program (S. 2162), sent to the President by the House September 14, 1959, is one of the most beneficial employee measures approved in any recent Congress. There is no finer example of able and constructive legislative deliberations than demonstrated by our committee in taking this extremely complex and controversial legislation and working out a bill that has the unanimous support of every committee member, the wholehearted agreement of employees' organizations and of private enterprise that will provide the services, and the approval of the administration.

This legislation establishes a health program, with the Government sharing the cost, to protect Federal employees and their dependents against the high, unbudgetable, and financially burdensome costs of medical services. Employees will be able to purchas protection, at very low cost, from the oppressive expenses of normal medical care and often crushing expense of major or catastrophic illness or injury. The program also improves the competitive position of the Government in the recruitment and retention of competent civilian personnel.

Addition of the health program to the existing fringe benefits package for Government employees—which already includes retirement and survivor annuities, group life insurance, annual and sick leave, pay for job-connected injury or death, uniform allowances, and other benefits—places the Government on a substantially equal level with progressive private enterprise in respect to employee fringe benefits.

Basic and extended health protection is made available to 2 million employees and their dependents—some 4.5 million individuals. There will be free choice among four separate health plans, including a service benefits plan, such as the Blue Cross-Blue Shield organizations offer; an indemnity plan, such as now offered by certain insurance companies; any one of several Federal employee organization plans; and a comprehensive medical plan on either a group-practice or individual-practice prepayment basis. The plans will provide a wide range of hospital, surgical, medical, and related benefits. Both the service and the indemnity plan will include at least two levels of benefits. Thus, each employee will be able to select the plan best suited to his own needs.

The Government's contribution generally is 50 percent of the cost, but not less than $1.25 or more than $1.75 biweekly for an individual employee and not less than $3 or more than $4.25 biweekly for an employee and family, subject to certain special exceptions. Employees need not pass any physical examination and, in the event of separation from Government service, may convert their coverage to a private plan without physical examination. No person may be excluded because of race, sex, health status, or—at time of first opportunity to enroll—age.

This legislation enriches the Federal employees' fringe benefits package by a minimum $222 million annual health program, with the Government and the employees sharing the cost. It is widely regarded among employees as the equivalent in value of another liberal pay increase, on top of the 10-percent raise granted just last year.

OBSERVANCE OF LEGAL HOLIDAYS

The committee developed and approved H.R. 5752, now on the President's desk, to correct inequities in existing laws which deprive certain Federal employees of the right to a workday off when a holiday falls on Saturday or an employee's day off in lieu of Saturday. The bill requires that every employee receive a workday off for each one of the eight legal holidays every year, regardless of the day of the week on which any holiday may fall.

OVERSEA TEACHERS

Public Law 86-91 provides an up-to-date system of personnel administration, for teachers in schools conducted by the Department of Defense for dependents of the Department's personnel in oversea areas, which is comparable to the school systems in most public primary and secondary school jurisdictions in the United States. This legislation was developed through the Civil Service Subcommittee studies in cooperation with the Department of Defense and places in effect an Executive recommendation. It is also a direct implementation of a unanimous committee recommendation contained in House Report No. 2109, 84th Congress.

This act eliminates serious problems in the compensation and employment conditions of oversea teachers which stem primarily from the fact that they have been employed under civil service laws and rules designed for full-time classified employees—not for the teaching profession. For example, although the school year lasts only 9 or 10 months, oversea teachers' salaries have been on an annual basis, as in the case of the usual classified employees, so that they were being paid only nine- or ten-twelfths of the annual salary. They have been subject to the Annual and Sick Leave Act, which is entirely unsuitable in view of the school recess periods at Christmas and Easter and in the summer months. They have been receiving no pay or any of the usual oversea differentials and allowances during these recess periods.

Public Law 86-91 removes these teachers from the Classification Act of 1949, the Federal Employees Pay Act of 1945, the Annual and Sick Leave Act of 1951, and other unsuitable laws and regulations. They will have a separate salary and allowance system adapted to the requirements of the school program and consistent with that followed in the school system in the District of Columbia. No oversea teacher's salary will

be higher than the salary for a comparable position in the District of Columbia school system.

This new law will contribute greatly to maintaining instructional and scholastic levels in schools for dependents of oversea personnel comparable to the levels which would be available were such personnel on duty in the United States.

OVERSEAS DIFFERENTIALS AND ALLOWANCES

Another important employee measure, developed by the committee through its Civil Service Subcommittee studies over the past several years, is contained in H.R. 7758, passed by the House September 7, 1959. This bill will improve and strengthen administration of overseas activities of the Government by establishing a coordinated and reasonably uniform system to compensate American citizens employed abroad by the Government for additional costs, hardships and inconveniences incident to their working assignments abroad. There will be uniform treatment for all oversea employees, to the extent practicable.

The bill embodies the principle that the Government should provide equal treatment for its oversea employees in respect to the additional expenses they incur because of their assignments abroad, over and above expenses of Government employees in the United States, and the hardships, inconveniences, and other differences in environment or conditions of employment which justify additional compensation or allowances.

The bill consolidates a wide variety of existing provisions of law granting allowances and differentials for the several categories of Federal employees in oversea areas. Provision is made for a temporary lodging allowance after arrival at a new oversea post and before final departure from the post; reasonable repairs to make substandard living quarters habitable; the inclusion of water as a utility covered by quarters allowances; advance payment of quarters allowances; allowances for maintenance of dependents where a separate establishment is necessary for them away from the post of duty; a post allowance to compensate for living costs higher than in Washington, D.C.; a transfer allowance upon assignment to a foreign post or at a post in the United States between foreign assignments; transportation of children—one round trip to the United States and back—for secondary or college education; a hardship post differential not exceeding 25 percent of basic pay for foreign conditions of environment warranting additional compensation; payment for packing and unpacking, transporting to and from storage, and storing furniture and household and personal effects of employees assigned to foreign posts; payment of unusual expenses incident to the operation of official residences suitable for chief representatives of the United States, and other senior officials designated by the President, at foreign posts; and transportation of the motor vehicle of an employee to his oversea post subject to a general limitation that only one such vehicle may be shipped during each 4 years of oversea service.

Home leave, such as now provided for the Foreign Service, is authorized for other employees who complete 24 months of continuous service abroad, in addition to the usual annual leave. Authority to accumulate up to 45 days of annual leave, now available to classified civilian employees abroad, is extended to employees of agencies operating under the Foreign Service Act or related law. Existing income tax exemptions for foreign areas allowances—but not post differentials—are continued in effect for the foreign areas allowances contained in the bill.

The value of the additional employee benefits provided by this legislation is estimated at $3 million annually.

FORFEITURE OF FEDERAL RETIREMENT BENEFITS

H.R. 4601, developed in a special committee study after adjournement of the 85th Congress and passed by the House April 14, 1959, will correct certain harsh inequities caused by Public Law 769, 83d Congress, which prohibits Federal retirement benefits based on service of an individual who has committed any one of a great many types of minor as well as serious offenses. The committee bill continues and strengthens the existing prohibition against any Federal annuity or retired pay in the case of an offense involving the national security of the United States but restores other annuities—including survivor benefits—previously denied because of comparatively minor offenses having no relationship whatever to the national security. In many instances the offenses were so trivial there was no penalty and the individual continued in, or returned to, work and rendered long and faithful service until retirement. In these cases, there is no doubt of the individuals' complete loyalty or any semblance of an offense against the national security.

EARLIER COMMENCING DATES FOR RETIREMENT ANNUITIES

Under H.R. 8289, passed by the House September 14, civil service retirement annuities will commence the first day after separation from the service if immediate benefits are payable or, in the case of deferred benefits payable at a certain age, the first day after the prescribed age is reached. Benefits of surviving widows and children will begin the day after the death of the employee or annuitant on whose service they are based. Under present law, annuities and survivor benefits commence the first of the month following separation from the service or death, as the case may be. The bill is particularly helpful for widows and children, since their survivor benefits will become payable immediately after death of the employee or annuitant whereas under existing law the benefits are not payable for periods of as much as 30 days after death.

EXECUTIVE, ADMINISTRATIVE, AND SCIENTIFIC RESEARCH POSITIONS

The committee approved three bills authorizing new top management and scientific research positions necessary for the effective conduct of vital defense functions and other essential Government programs.

S. 1845 authorizes pay adjustments for Patent Office Examiner in Chief and designated Examiners in Chief from the present $12,770–$13,970 level to maximums of $17,500 and $15,150, respectively; an increase from 146 to 260 in the number of supergrade positions—$14,190 to $17,500—in the Treasury Department; and a net increase of 94 in supergrade positions available to the Civil Service Commission for allocation to other departments and agencies against a considerable backlog of requests—of which 20 are earmarked for the Department of Health, Education, and Welfare, 4 for the Bureau of Prisons, 3 for the Immigration and Naturalization Service, 1 for the Department of Labor, 15 for the Small Business Administration, and 1 for the U.S. Court of Military Appeals, upon justification by these departments and agencies. Pay of executive positions is adjusted as follows: Commissioner of Social Security from $17,500 to $20,000; and Deputy Commissioner and Chief Counsel of the Internal Revenue Service, Administrative Assistant Attorney General, and Administrative Assistant Secretaries of Agriculture, Labor, and Treasury from $17,500 to $19,000. The Administrator, Agricultural Research Service, presently paid $17,500 under the Federal Executive Pay Act, is transferred to one of the scientific research positions provided by the bill. The Departments of Agriculture, and Health, Education, and Welfare, respectively are granted 10 and 5 additional scientific research positions in the salary range $12,500 to $19,000.

Public Law 86–36 removes National Security Agency personnel from the Classification Act since the Agency security functions make it impossible to give the Civil Service Commission normal position classification and duty data; reestablishes the 50 existing Agency scientific research positions under the new act; and authorizes the Agency Director to fix salaries of other employees, as justified by levels of responsibilities, in relation to Classification Act salary rates, with not more than 50 supergrade positions in the $14,190–$17,500 range.

H.R. 6059 increases from 303 to 372 the number of supergrade positions—salary range $14,190–$17,500—and from 292 to 450 the number of scientific research positions—salary range $12,500–$19,000—in the Defense Department to perform necessary duties resulting from the greatly increased complexity and tempo of our defense effort.

POSTAL LEGISLATION

"CLEAN MAIL" LAW

Unanimous House approval of H.R. 7379 completed one of the finest public-interest actions ever undertaken and brought to fruition by a legislative subcommittee in a single session of the Congress. The bill will greatly strengthen the hand of the Postmaster General in carrying out his lawful responsibility to exclude from U.S. mails matter which is so repugnant to public policy as not to warrant the privilege of the postal service.

This legislation is the first, and it is believed the strongest, step in this Congress in an all-out committee effort to knock "pornography for profit" out of the mails in response to rising public

anger at the veritable flood of vile matter that is bombarding homes, schools, children, men, and women throughout the Nation.

The bill also is a tribute to the unflagging zeal and the two-fisted attack of our Postal Operations Subcommittee on the insidious traffic in writings, pictures, movies, and the like—now flowing through all avenues of commerce—which has become a public scandal. The subcommittee, under the able chairmanship of the distinguished gentlewoman from Pennsylvania, Representative KATHRYN E. GRANAHAN, has developed and placed in effect a two-phase campaign to protect the public, as explained in the later discussion of the subcommittee studies.

H.R. 7379 makes two important changes in the law. It extends from 20 days to 45 days the time in which the Postmaster General may detain mail addressed to any individual or firm which he finds sending obscene or fraudulent matter through the mails. The existing 20-day period is entirely inadequate. The only way to stop purveyors of filth is to cut off the incoming flow from their illicit ventures, as will be done under the bill. The second change authorizes detention of mail when "the public interest" is affected due to the obscene or fraudulent nature of the matter giving rise to the detention order, in lieu of the existing authority to detain mail when necessary "for enforcement" of the statute excluding obscenity from the mails. This "public interest" standard is a tried and proved one, under which responsibilities for the enforcement of other public protection laws, such as the Securities and Exchange Act, have been carried out successfully in the public interest.

POSTAGE RATES FOR BOOKS AND LIBRARY BOOKS

H.R. 4595, pending in the Senate, revises and clarifies postage rate provisions under which books, library books, and related materials are mailed at special low rates. Either the third- or fourth-class rate or the book rate, whichever is cheaper, will apply to mailings of books and certain other educational matter. The book rates are extended to "sound recordings" in lieu of the existing application to "phonograph recordings." Periodicals may be mailed at the book rates in either bound or unbound form. Guides or scripts may be mailed with films and filmstrips at the book rates. Certain meaningless language is removed from the book and the library book postal rate provisions.

MINIMUM CHARGE ON THIRD-CLASS MAILINGS OF ODD SIZES AND SHAPES

Public Law 86-56 revises the minimum per piece charge for third-class mail of odd size or shape from 6 cents to 3½ cents. This revision eliminates serious hardship imposed by the 6-cent rate on churches, church organizations, nurserymen, and other small businesses and also removes difficult operating problems arising in the Postal Establishment because of the 6-cent charge.

OTHER LEGISLATION

H.R. 163, sent to the White House September 9, credits service—for retirement purposes—of U.S. commissioners, who are compensated by fees, on the same basis used to credit such service of other Government employees who are compensated by fees.

H.R. 8241 eliminates certain inequities which have operated to deprive former Members of Congress reemployed in appointive positions of their earned retirement annuities. Conditions affecting reemployment of former Members of Congress are placed on substantially the same basis now provided by law for other retired Government employees.

H.R. 6830, pending in the Senate, clarifies the law relating to sworn statements by publishers having second-class mail permits and extends to magazines the requirement—now applied to most newspapers—that the sworn statements show average number of copies of each issue sold or distributed to paid subscribers. The publishers support the bill, which will facilitate postal operations.

H.R. 5571, pending in the Senate, makes career postal employees with 3 years of service eligible for postmasterships at their offices, if otherwise qualified, even though they reside outside the town or the office delivery limits.

Public Law 86-169 authorizes credit to postal revenues of commissions on toll telephones in post offices; amounts received by employees for witness fees, travel expenses, and subsistence when subpenaed to apepar officially in private litigation; and collections for loss of first-class registered matter not restored to the original owner.

Public Law 86-33 facilitates the training of postmasters by specifically authorizing such training under the Government Employees Training Act—Public Law 85-507.

Public Law 86-122 eliminates from Government salary laws an obsolete provision which is contradictory to existing budget and appropriation procedures. The provision elimnated purported to authorize salary costs, incurred in part in one fiscal year and in part in the following fiscal year, to be charged to the following year appropriations.

SPECIAL STUDIES AND INVESTIGATIONS

MANPOWER UTILIZATION SUBCOMMITTEE

The Subcommittee on Manpower Utilization has continued its study, begun in the 85th Congress, of the contracting out of Government responsibilities for administrative and management services, especially in the research and development of guided missiles. A preliminary report issued by the subcommittee in April points out several improvements made by the departments and agencies since the subcommittee began its investigation in November 1957. For example, the report shows that a recent Navy reorganization has corrected overlapping and duplication found within the Department of the Navy missile program at the time of the initial investigation.

Subcommittee hearings last December pointed up areas of possible conflict of interest in the Air Force ballistic missile program. The Secretary of the Air Force subsequently issued policy statements setting forth guidelines for research and development contractors dealing with hardware-producing contractors.

Among several other needed improvements, Department of Defense rotation policies for military officers have been revised so as to be more flexible and thereby reduce personnel turnover. Turnover in several key job areas in the military departments having primary responsibility for missiles was found by the subcommittee to be excessive.

As a continuation of the subcommittee's analysis of the missile program, the subcommittee chairman on February 10 requested the General Accounting Office to conduct an investigation and furnish answers to several basic questions raised by the subcommittee in its study of the utilization of scientists and engineers in the missile programs of the Defense Department. Close liaison has been maintained with the General Accounting Office in the development of this information and, when it is received, the subcommittee plans to issue a final report on the utilization of manpower in the missile programs.

Public hearings were held in February extending the scope of the study, and supplementing the preliminary report, on the utilization of manpower in the missile program. The hearings, which resulted in House Report 688, 86th Congress, related primarily to the Government's policy of contracting out the training of military personnel.

This report indicates a policy trend in the field of Government contracting which if uncorrected may well lead to avoidance of primary responsibility imposed on Government departments and agencies. The growing habit of responsible Federal officials to fall back on the contracting device whenever faced with a difficult or unpleasant task is a radical departure from fundamental principles relating to the performance of duties and responsibilities of our Government. This tends to create waste and extravagance and undermines the morale of the career Government employees.

The report recommends that the Defense Department operate its own training program for personnel assigned to military assistance and advisory duties and reappraise its policies relating to contracting for management or personnel services and for the performance of functions historically performed by the Department.

Working with representatives of the Department of Defense, several civilian departments, and the General Accounting Office, the subcommittee developed a new procedure, in the form of a manpower questionnaire, for determining employment trends and for evaluating manpower programs and policies at local field activities. The General Accounting Office will use the manpower questionnaire in the course of its regular audits of the activities. This manpower questionnaire should provide considerable basic information that previously has been lost through editorial processes in the chain of command. Currently the manpower audit is being conducted by the General Accounting Office in three military installations and two civilian field activities.

During July the subcommittee held public hearings as a further continuation

of its investigation of the effect on utilization of Federal employees of the Government's policies on the contracting out of functions historically performed by the Government. Representatives of the General Services Administration, the Office of Civil and Defense Mobilization, and the International Cooperation Administration appeared and testified. As a result of these hearings, the subcommittee set for further consideration certain matters, such as the Government's policy of contracting out custodial services, the Department of Defense practice of allowing defense contractors to inspect their own work, and the allowances and benefits currently being paid personnel sent overseas by the International Cooperation Administration.

The subcommittee has increasingly noted the tendency in the executive branch to administer programs by committees, often with outside consultants. To provide initial data on this aspect of Government procedure, the Departments of Defense and Commerce have been requested to furnish the subcommittee information concerning their use of committees, including, among other matters, the number of committees which they now have, the composition of such committees, and the degree of overlap and duplication of these committees with other organizations in such Departments. The material is due November 1, 1959.

The subcommittee program for the recess period includes the following:

First. Analysis of new grade GS–15 positions created in the past year, as a followup on House Report 2706, 85th Congress, entitled "Legislative Control of Federal Positions and Salaries," which showed that in recent years the entire Classification Act compensation structure has been rewritten and revised upward by administrative action.

Second. Hearings in the late fall, in accordance with past subcommittee policy, at which the military departments, other selected departments and agencies, the Bureau of the Budget, and the Civil Service Commission will report on progress in improved manpower utilization. Among other matters for these hearings, the Department of Defense has been requested to collect information regarding the use by the military departments of U.S. citizens employed overseas. The information will include the number of employees by major geographic areas, types of work performed, and the benefits and allowances authorized for these employees.

Third. Onsite reviews of the results of the General Accounting Office use of the manpower questionnaire referred to above. It is expected that these reviews not only will point up local personnel and management problems at the activity level, but also will indicate broader manpower areas of interest for the consideration of top management in the departments.

POSTAL OPERATION SUBCOMMITTEE

The Postal Operations Subcommittee devoted primary attention, during the 1st session of the 86th Congress, to the growing problem of use of the U.S. mails for the dissemination of obscenity and pornography.

The subcommittee conducted an intensive study directed toward corrective measures and held a number of hearings and conferences to obtain necessary information and recommendations from recognized authorized and from leaders at all governmental levels and in private life.

The subcommittee study and hearings have demonstrated that the circulation of obscenity and pornography, and its effect on the youth of America, by no means are confined to material moving through the mails. Lewd and lascivious writings, movies, photographs, pictorial representations, and other unfit matter finds its way into the hands of men, women, and children indiscriminately from every conceivable source. Although the subcommittee's basic jurisdiction relates to the postal service, there is an equally compelling need to keep this filth off the untold thousands of newsstands, drugstore counters, comic book displays, and other sales devices that are so attractive to youngsters. Its ready accessibility in these blatant sales offerings naturally seems to an adolescent to indicate its general acceptability and thereby builds a false impression in their young minds of the true moral standards of our society.

The truth of the matter is, young people in every city, town, and hamlet are being literally bombarded from all sides with a loose portrayal of sex that cannot help but weaken the moral fiber of these future leaders of our Nation. Nor does the damage end there. We have positive proof, in fact, of a direct and very dangerous connection between the reading and viewing of sordid literature and pictures and the frightening increase in juvenile crime and misbehavior.

Use of the U.S. mails is part of what appears to be a master plan for the wholesale promotion and condut of commerce for profit in obscenity and pornography. The problem has reached such serious proportions as to be of grave concern to every decent man and woman in America. This traffic in vileness is all the more vicious because its product is being aimed more and more to the young people and children—those known by the purveyors of filth to be the most susceptible and, therefore, the most likely source of ready income.

Thousands of fathers, mothers, teachers, ministers, priests, and laymen have asked intervention by the Congress to put a stop to unbridled dealing in smut. Many conscientious citizens have written to the subcommittee and to individual Members of Congress indicating their extreme concern and inquiring as to how they might unite with other right-thinking people in their communities to combat this menace to our society. The subcommittee plans to work in cooperation with these volunteers and with organized governmental, community, and civic groups which share our objective. The subcommittee report entitled "Obscene Matter Sent Through the Mail," containing findings and recommendations as well as a suggested program for community action, will be issued in the near future. The report is intended, and should serve, to bring the full power of public indignation to bear in this crusade and to encourage communities and civic groups to take effective action against the unscrupulous fringe of thoughtless people who deal for profit in filth and smut with no thought of the public welfare.

The subcommittee held public hearings in Washington during April and May to receive the testimony of the Postmaster General and other postal officials regarding the problem of enforcing existing law which declares obscene matter to be nonmailable. Supporting testimony was received from the legislative chairman of the Churchmen's Commission for Decent Publications; the president of the National Council of Catholic Men; the executive secretary of the Board of Christian Social Action, American Lutheran Church; the secretary of public affairs of the National Association of Evangelicals; the director of legislation, General Federation of Women's Clubs; and other leading authorities. Further valuable information was developed at hearings held in Philadelphia, Pa., during July, where the subcommittee was privileged to receive the testimony of a great American authority on the subject, Hon. Michael A. Musmanno, justice of the Supreme Court of Pennsylvania; the U.S. district attorney; the chief psychiatrist of the Municipal Court of Philadelphia; the executive director of the Youth Study Center of Philadelphia; and many other law enforcement officials and civic leaders.

On the basis of the results of its study and hearings, the subcommittee wrote the bill, H.R. 7379, to strengthen the law which declares obscene material to be nonmailable and to make it a more useful and effective instrument for the protection of the public. This bill, which has passed the House unanimously, is discussed more fully above.

CIVIL SERVICE SUBCOMMITTEE

The 1st session of the 86th Congress was highlighted by virtual completion of the Civil Service Subcommittee program, instituted in the 84th Congress, to improve and strengthen civilian personnel administration in the oversea activities of the Government. The subcommittee report, unanimously approved by the Post Office and Civil Service Committee and printed as House Report 2109, 84th Congress, contains a broad range of major recommendations relating to employment and working conditions of U.S. citizens employed by the Government abroad. These recommendations deal with four primary areas wherein corrective measures were found desirable as a result of a number of hearings and conferences held by the subcommittee in eight foreign nations in which the majority of Americans employed overseas are assigned to duty.

The first such primary area of recommendation—that the competitive civil service be extended to American citizens employed overseas—was placed in effect by executive action in the 84th Congress in accordance with the subcommittee recommendation.

The second, for the establishment of an effective and suitable compensation and employment system for teachers and

other personnel in schools conducted by the Department of Defense for dependents of the Department's oversea personnel, was placed in effect by Public Law 86-91, discussed earlier. This act provides an up-to-date school system for these oversea teachers and other school personnel, along the lines of the District of Columbia primary and secondary school system, and is expected to greatly facilitate and improve oversea school activities while at the same time reducing personnel turnover and recruitment problems to a minimum.

The third, for clarification and coordination of the then widely varied policies with respect to allowances and differentials for the several categories of oversea civilian employees of the Government, is embodied in H.R. 7758, approved by the House September 8, 1959, as noted earlier. This bill will improve the operation of critical defense and other oversea activities of the Government through the establishment of a coordinated and reasonably uniform system of compensating American citizens for extra expenses and for hardships and inconveniences incident to their oversea assignments.

The fourth primary area of recommendation, for the establishment of a badly needed medical and health program for American citizens employed by the Government abroad, is embodied in H.R. 5178 and several companion bills on which final hearings were completed during the 1st session of the 86th Congress. Since this bill, like the other committee recommendations, is approved by the administration, early action is expected in the second session to place the proposed medical and health program for oversea employees in effect so that these employees will have appropriate health services and facilities on a reasonably uniform basis.

The subcommittee report and recommendations were highly commended in a letter from the White House, in these words:

I would like to say first that this was an excellent report, carefully prepared and reflecting a comprehensive review of the facts, both in the overseas hearings and in the staff research. I believe that the liaison between your office and both my White House office and the Civil Service Commission has been a fine example of cooperative effort between legislative and executive branches of Government in developing sound legislation in this field of personnel administration.

CENSUS AND GOVERNMENT STATISTICS SUBCOMMITTEE

The Subcommittee on Census and Government Statistics held hearings concerning the 1960 census, and the new techniques developed by the Bureau of the Census, to utilize modern, high-speed electronic data-processing equipment to obtain a faster publication of the 1960 census of statistics at lower cost. It is anticipated that the bulk of the reports will be issued at dates 12 to 18 months ahead of those corresponding reports 10 years earlier.

The Director of the Census Bureau described an auxiliary electronic device called the FOSDIC, standing for the initial letters of film optical sensing device for imput to computers. This piece of equipment will be used to microfilm copies of appropriately designed census questionnaires, read the positioned marks entered by the enumerators, and transcribe the information to tape in the form of magnetic spots, ready to be read by the electronic computer. The FOSDIC tape will then be placed in the electronic computer, where the results will be reviewed, tabulated, and finally transferred to other tapes for use on high-speed printing equipment.

Hearings were also held on the use of electronic data-processing equipment in other Government departments and agencies. The subcommittee hearings disclosed that there will be an increase of more than 300 percent in the number of Government employees engaged in office automation in the next 4 years. The present 4,000 employees engaged directly in the use of electronic data-processing equipment will increase to 13,000 by 1963.

Officials of the Bureau of the Budget and the General Accounting Office testified that they saw no danger that the growing trend to office automation will mean large-scale layoffs for Federal workers who have no experience or training in automation. They indicated that more often office automation has been adopted as a matter of necessity in order to get tasks done that could not be accomplished otherwise, rather than to get current work done by fewer employees.

It is contemplated that public hearings will be held at a later date, at which time representatives of business and leaders of industry and labor will be given the opportunity to testify with respect to the impact of Government reporting requirements. The subcommittee's approach to this inquiry will be with a view to reducing the cost to Government of obtaining and processing information and minimizing the burden upon business enterprises and the general public.

Representatives of the Bureau of the Budget, Bureau of the Census, and other Government agencies will be called upon to explain the part their agency plays in the Government's statistics operation.

It is also contemplated that further hearings will be held regarding the use of electronic data-processing equipment by Government departments and agencies. Inquiry will be made as to the position taken by the Bureau of the Budget on the findings and recommendations developed for the Bureau by the private management firm in its study of personnel problems of the U.S. Government in the adoption and use of electronic data-processing systems.

The subcommittee undertook a study of all statistical activities in the Federal Government. Inquiry is being made as to how many different agencies are asking the same people for identical or similar information. Information will also be developed to indicate the number and types of reports that businesses are required to submit to the various Government agencies.

Special attention will be given to eliminating outdated reports which may at one time have served a useful purpose but which are no longer of use. The study will include development of information as to the number of employees, and the cost involved, of all departments and agencies in the collection, compilation, preparation, and publication or other reporting of statistical data. The study will include not only those statistical activities which the department or agency conducts directly, but also those conducted by firms or organizations outside the Government under contractual arrangements.

The Federal statistical system is distinguished by decentralization and complexity. Although the Bureau of the Census is a large, well-equipped organization with a variety of statistical functions, it has by no means a monopoly on data collection and compilation. Over 60 bureaus, services, commissions, administrations, boards, and other agencies have important statistical functions. In addition, other agencies, while not considering their activities as statistical, collect or compile data for administrative, regulatory, or operating purposes.

Any serious critic of the public burden of Government reporting requirements upon business must recognize that a middle ground is to be sought. It must be conceded that the Government and the public, including business itself, need detailed and timely statistical information, and that at least some of it can be collected efficiently only by the Federal Government. However, unremitting attention must be devoted to limiting the burden to the least amount consistent with the needs and benefits. In this connection the subcommittee is in the process of drafting a report entitled, "Business Reporting Requirements of the Federal Government."

A Year of Progress

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in a recent issue of the National News, official newspaper of the Veterans of World War I of the U.S.A., Inc.:

A YEAR OF PROGRESS

The official year for National Commander Fred J. Hollenbeck, of the Veterans of World War I, comes to an end in approximately 2 weeks. During the 12 months that have elapsed since the national convention in Springfield, Ill., last year, the organization has taken on new stature.

As of August 31, the membership of the Veterans of World War I stood at 144,000, a gain of nearly 50,000 members. During the same period of time, the number of barracks amounted to 1,972, an increase of 514 over the 1958 total. Three new departments were instituted bringing to 43 the State departments now functioning.

True, the group did not fare too well on the legislative front. The passage of H.R. 7650 was strenuously opposed by the veter-

ans of World War I. But in this instance, the cards were stacked against the organization from the very beginning. The measure was rammed through the House of Representatives under a special rule which virtually cut off debate. When the bill came to the Senate, only Senator WAYNE MORSE, of Oregon, put up a determined fight against the proposal. He could enlist but 13 other Senators to go along with his amendment which would have granted veterans of World War I a pension of $90 per month at age 65 subject to income limitations.

This action points up most effectively the drastic need for additional members. Only by increased membership can the veterans of World War I impress the Congress on matters of legislation. An auspicious start has been made by Commander Hollenbeck and his national Chief of Staff M. George Deutsch, ably assisted by other national officers and the entire membership of the group.

Many persons, skilled in organization work, feel that what is needed is a professional organizer who can go out at the barracks level and stimulate a grassroots recruiting drive. An activity of this nature costs money but if successful, would return bountiful benefits for the cost of the promotion. Undoubtedly, a variety of proposals will be offered at the Louisville meeting and will be considered seriously by the delegates to the convention.

Congratulations to the national commander and his national officers for a banner year.

The Tight Money Policy—Who Loses and Who Gains

EXTENSION OF REMARKS
OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, the Eisenhower administration's fiscal and debt management policies have been extremely costly to the American people. Tight money, high interest rate policies have picked the pockets of the average citizen and the small businessman and resulted in windfall profits to large banks and other financial interests. These administration policies have produced a topheavy economy, spurred inflation, curtailed our economic growth, and brought recession, unemployment, and unnecessary human suffering.

Under leave to extend my remarks, I include the following analysis of the losers and gainers from the administration's tight money policy, prepared by the National Farmers Union and appearing in their Washington newsletter for September 11, 1959:

THE TIGHT MONEY POLICY—WHO LOSES AND WHO GAINS

Congressional debate about raising interest rates on Government bonds is highlighting a critical economic policy which affects nearly everyone in the country. Farmers, who always need credit to carry on operations, have been hit directly by higher interest rates. They have also been hit indirectly, along with a great many other people.

And the administration's tight money policy is getting even tighter, not looser.

Here are the essential facts on this complicated subject. Some of the figures are so big that they are almost incomprehensible, but they will show how you and your neighbors fit into the picture.

HOW DID IT ALL START?

Nine days after President Eisenhower took office, his Secretary of the Treasury offered Government securities at 2¼ or 2½ percent to replace the previous rate of 1⅞ percent. This is how the Government regularly borrows money to meet expenses, but the increased rate added more than $30 million to the U.S. taxpayers' bill for repaying the public debt. It was to be followed by a series of many similar increases which have not yet stopped (although suspended for a while a few years ago).

Why was it done? The explanation was that higher interest rates would dampen the economy, preventing any further inflation.

WHO DIRECTED THE POLICY?

The new Secretary of the Treasury was George Humphrey, industrialist and financier. His new deputy, who handles monetary policy, was W. Randolph Burgess, who had been board chairman of National City Bank, one of New York's largest, and long an advocate of higher interest rates.

Tight money is now a definite part of the administration's policy and is supported also by the independent Federal Reserve Board, which can help any President keep interest rates low if it wants to.

WHAT WAS THE IMPACT?

As soon as Treasury borrowings started paying more in interest rates, other rates were naturally raised to make them equally attractive to investors. A vicious circle was created which still prevails, because the U.S. Treasury is the pacemaker.

In quick succession, rates were increased on private bank loans, farm price support loans, FHA loans to home buyers, GI housing loans, installment credit, municipal bonds and nearly everything involving an interest charge.

WHO BENEFITED?

Persons and institutions with money to lend received a windfall almost immediately because they could lend their money for a higher return.

The total benefits to banks, for instance were estimated by Seymour Harris, noted Harvard economist, to be $600 million a year from every 1 percent the Treasury succeeded in raising interest rates and ultimately $1 billion a year by virtue of the general increase in total bank assets. (Nearly one-third of the public debt is loaned by commercial banks.)

This windfall was all the sweeter because it came at a time when bank profits were booming. U.S. bank income the year before (1952) reached a record high of more than $5 billion.

Net profits, after taxes, also hit a new high—$990 million, according to the Federal Deposit Insurance Corporation's official report. FDIC pointed out that the most striking earnings development was growth of income from loans (interest payments), which was 15 percent above the previous year and double what it had been 5 years before. This trend has continued.

WHO LOSES FROM TIGHT MONEY?

Anyone who is a debtor automatically loses from having to pay more for borrowed money—and some will have to continue to pay it for 25 years or so, even if rates on new loans go down. There are also other losers.

Taxpayers: This is the biggest group of losers.

In 1952, before the tight money policy, it cost taxpayers $5.8 billion every year to pay interest on the national public debt. Eisenhower estimates it will cost $8.6 billion in 1960—an increase of nearly one-half

This is more than the entire cost of the Federal Government in any New Deal year before World War II.

Between now and the end of 1960, the Treasury plans to borrow about $100 billion (mostly to pay off maturing bonds which were isued at the old, much lower rates). Each boost of one-fourth of 1 percent would add $250 million to the cost of carrying the debt each year. In 20 years it would add up to $5 billion.

An increase of 1 percent on the $100 billion borrowing would add $1 billion a year, or $20 billion in 20 years, to taxpayers' burdens.

None of this increased cost gives the taxpayer any additional service. In fact, it eventually increases the cost of whatever other services he must buy.

Effect on other debts: The Federal debt is only about one-third of all debts in the country—State, local, business, consumer, etc. The rest of the debt in the United States—over $700 billion—is also affected.

The economy is paying $8 to $10 billion more this year for the use of money than it would have paid at 1952 rates, before the tight-money policy started.

About $100 billion of personal, corporate, State, and local debt will be negotiated between now and the end of 1960. An increase of only one-quarter of 1 percent on this will add $250 million to the cost of this debt in the first year alone. A 1 percent increase would add $1 billion the first year. (This hits businessmen, particularly the smaller ones who cannot issue securities or sell stock to raise capital.)

It also hits community services by raising the cost of bonds for public improvements such as schools, highways, and sewers.

Effect on individuals: Every person who has borrowed money since 1952 or does so in the near future has been hit personally by higher interest rates. This group includes:

Home buyers: Interest rates on FHA financed homes have been raised several times. In 1952, a $10,000 FHA loan at 4 percent for 25 years would cost a total of $15,840 to repay (including $5,840 interest). In 1959, the same loan—now cost 5¼ percent at least—will cost a total of $18,000 (of which $8,000 is interest).

This increased cost of $2,160 is roughly equivalent to one bedroom and a bath.

Corresponding increases have been ordered on GI home loans and have taken place in private home financing.

Installment credit: About 60 percent of all auto and major household appliances are bought on installment credit, especially by low-income families, of course.

A mere one-half of 1 percent increase, for example, on a $2,000 balance on the purchase price of a car financed over 24 months would boost total interest payments from $220 to $240, or more than 9 percent higher.

Farmers: The USDA index of interest payable on an acre of real estate has risen from 104 in January of 1953 to 189 at the present time—a boost of four-fifths.

Loans available from the Farmers Home Administration (only when private credit is not vailable) have been boosted from 4 to 5 percent—one-fourth.

Cooperative credit institutions such as PCA's have had to follow the Government's lead and increase rates substantially.

Rural electrification loans are still fixed by law at 2 percent, but the administration is fighting for an inerease which would double interest costs, pointing to the increased cost of Government borrowing as its reason.

NATIONAL POLICY

These are some of the hard facts involved in the current reluctance, if not refusal, of Congress to give President Eisenhower authority to boost the interest rates on most Government bonds even higher. (Meanwhile, Congress has felt it necessary to let him increase the rate on ordinary savings bonds so that people will not continue to cash them in large quantities in order to

obtain higher yields elsewhere on their savings.)

A famous economist, J. K. Galbraith, of Harvard, has expressed himself forcefully against the administration on this issue. "Few things are such a proven failure," says Galbraith, "as the tight-money policy."

One reason that long-term Treasury bonds cannot be sold at rates below the present congressional ceiling, he says, "is that the administration has created the expectation of higher interest rates. This has caused investors and the banks to hold off buying lest rates do rise and they suffer a capital loss."

Professor Galbraith declares that the administration's request for still higher rates "is thus the result of its own mistaken policy. It is a remedy neither for past error nor present inadequacy. It presages a further rise in all rates. It would in the end be damaging to every homeowner, farmer, smaller businessman, and other borrower to whom interest is a charge he cannot pass on."

Congressman John D. Dingell Reports to the People of the 15th District of Michigan

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DINGELL. Mr. Speaker, as I do at the conclusion of every session of Congress, I am reporting to my people on the 86th Congress, 1st session.

During this session I served on the Committees on Merchant Marine and Fisheries and on Interstate and Foreign Commerce.

I maintain two offices to serve the people of my district, one in Washington, D.C., and the other in Detroit at 7310 Grand River Avenue.

I. SUMMARY OF BILLS INTRODUCED BY THE HONORABLE JOHN D. DINGELL

SOCIAL SECURITY

H.R. 3851, to reduce the retirement age for men to 60 and for women to 55.

H.R. 3850, to raise the amount which may be earned by social security recipients, without reduction in social security benefits, from $1,200 to $1,800.

H.R. 3897 and H.R. 5923, to provide that social security beneficiaries receive 60 days of hospitalization each calendar year. H.R. 5923 is identical to the Forand bill on which hearings have been held and which a number of us intend to work to enact next session.

H.R. 3853, to liberalize the definition of permanent and total disability to allow many disabled persons now improperly excluded from disability retirement to secure benefits under that section of the Social Security Act.

CIVIL RIGHTS

H.R. 351, an omnibus bill outlawing discrimination in employment, transportation, housing, and voting, and establishing a vigorous Federal Fair Employment Practices Commission and Federal Fair Employment Practices Code. This bill would outlaw lynching and the payment of a poll tax as a prerequisite to voting.

H.R. 352, to authorize the Attorney General of the United States to file civil actions for injunction on behalf of citizens whose civil rights are interfered with or are threatened with interference.

H.R. 353, outlawing lynching and crimes of violence perpetrated because of race, creed, or color of the victim.

H.R. 354, outlawing discrimination in employment because of race, creed, or color and establishing a strong Federal Fair Employment Practices Commission to enforce fair employment practices.

H.R. 4261, to make permanent the Federal Civil Rights Commission and to enable the Commission to continue working for full equality for all under law.

FEDERAL CONTRIBUTORY HEALTH INSURANCE

H.R. 4498, to provide for a program of Federal contributory health insurance sustained by contributions from employer and employee alike to a fund like the social security trust fund. From this fund each citizen would be entitled to full payment of all hospital bills, doctor bills and medication. Thus, for the first time Americans would be offered a full and complete guarantee of effective health protection. No longer would full and adequate medical care be the property of only the well-to-do.

UNEMPLOYMENT COMPENSATION

H.R. 3558, to better provide for the needs of the unemployed by establishing Federal standards for unemployment compensation, so that payments to unemployed covered by State programs would be two-thirds of the weekly wage of the unemployed individual or half the average wage within the State, whichever is less, and to provide that duration of benefits be not less than 39 weeks.

MINIMUM WAGE

H.R. 6239, to increase the minimum wage to $1.25 an hour to raise the wage level in the low wage parts of the country. This bill would reduce the inducement of industry to move from Michigan into low wage areas.

LEGISLATION TO HALT BOMBINGS OF HOMES, SCHOOLS, CHURCHES, TEMPLES, AND OTHER BUILDINGS

H.R. 500, to outlaw transportation of explosives in interstate commerce for the purpose of destroying homes, property, or life of another. This bill was offered to help punish those responsible for bombings because of race, creed, or color and make vigorous Federal action possible in cases of this kind.

When such bombings occurs under this bill it is presumed that it was done with explosives transported in interstate commerce, which would enable vigorous, immediate Federal action.

FOOD STAMP LEGISLATION

H.R. 5191, to provide for issuance by the Secretary of Agriculture of surplus food certificates to the needy and persons on welfare in the several States. Such certificates would be redeemable for surplus commodities through regular channels of distribution. This bill would distribute to the needy many foods not available under present wasteful and inefficient programs. I am happy that in part through my efforts substantially identical legislation has been enacted by this Congress and should shortly become law.

II. LEGISLATIVE RECORD OF THE 86TH CONGRESS, 1ST SESSION

A. BUDGET AND APPROPRIATIONS

Contrary to what the President would have us believe about his desire for economy, his budget requests were cut substantially by the Congress.

In his original budget to the House the President requested $74,077,609,151, providing for appropriations and other new obligational authority. His revised budget request to the Senate for this purpose was $74,859,008,445. The amount approved by the Congress was $72,977,598,352, a cut of $1,881,410,093.

In addition, the President requested $6,400 million to provide funds for lending authority within the Department of the Treasury. The amount approved by the Congress was $5,701 million, a cut of $699 million.

The total of all the President's budget requests to the House was $80,477,609,151, and his revised budget requests to the Senate totaled $81,259,008,445. The Congress cut this to $78,678,598,352, a decrease in the President's budget of $2,580,410,093.

B. IMPORTANT LEGISLATION ENACTED

HAWAII ADMITTED AS THE 50TH STATE

Public Law 86-3 admitted Hawaii as the 50th State.

EXTENSION OF TEMPORARY UNEMPLOYMENT COMPENSATION

Public Law 86-7 extended benefits of the Temporary Unemployment Compensation Act of 1958 for 3 additional months to jobless whose State payments expired before April 1, 1959.

SURPLUS FOOD FOR THE NEEDY

H.R. 8609 extends Public Law 480 for sale, barter, and donation of American surplus foods abroad but includes new provisions similar to H.R. 5191, my bill to establish a food stamp plan for distribution of surplus foods to needy through certificates issued by the Secretary of Agriculture and authorizes $250 million to carry out this program. I vigorously supported the floor amendment which accomplished this.

VETERANS

Public Law 86-73 authorizes $100 million for direct housing loans to veterans and raises interest rates on veterans' loans from 4¾ to 5¼ percent, which will again make such loans available.

Public Law 86-211 increases non-service-conected pensions to veterans of World War II, the Korean conflict, and their survivors, and establishes payments based on need. Under this law no veteran now pensioned will receive a benefit cut. It offers a substantial increase in benefits to widows and dependent children.

RAILROAD RETIREMENT AND UNEMPLOYMENT COMPENSATION ACT

Public Law 86-28 increases the pension of railway employees and liberalizes railroad employees' unemployment compensation.

HEALTH INSURANCE PROGRAM FOR FEDERAL EMPLOYEES

S. 2161 provides that the Government will pay part of the cost of private health

insurance carried by Federal employees after July 1, 1960.

HOUSING, URBAN RENEWAL, HOUSING FOR THE LOW-INCOME GROUPS AND HOUSING FOR THE AGED

This Congress enacted S. 2654 to provide for housing for the aged, substantial funds for urban renewal, low-priced public housing for low-income groups, to extend for 5 years the time during which families of veterans have preference for admission to public housing projects, and to liberalize FHA mortgages to enable more Americans to own their own homes.

CIVIL RIGHTS

The Civil Rights Commission was extended for 2 years on the last day of the session by adding a rider to the mutual security appropriations bill. This was a major triumph in view of the fine report of the Civil Rights Commission.

LABOR REFORM LEGISLATION

The House and Senate after bitter debate and conference enacted a compromise labor bill. Although not in complete accord with my ideas, I did support this compromise labor bill to strike at corruption and to eliminate an issue which had diverted Congress long enough from other areas of important legislative activity.

III. LEGISLATIVE RECORD OF THE HONORABLE JOHN D. DINGELL

I have attempted to carry out a liberal, vigorous legislative program. I have taken particular interest in Federal programs for research into disease and for hospital construction. I have worked to expand the responsibilities and capabilities of the Food and Drug Administration to protect our consumers from filthy, adulterated food, from foods given chemical treatments of unknown safety, and to protect the Food and Drug Administration from constant attacks by special interest groups. I worked hard to secure enactment of food stamp legislation to help all our people have an adequate diet.

I have worked for the liberalization of the social-security program and have testified repeatedly before the Committee on Ways and Means urging liberalization of this program.

I have appeared at every opportunity before the House Committee on the Judiciary testifying for good civil rights legislation and was a sponsor of the discharge petition which brought H.R. 6127, the civil rights bill of the last session, to the floor of Congress for vote to become law. I am presently active in securing signatures on another discharge petition to bring H.R. 8601 to the floor for more progress in this most important field.

This bill provides more effective enforcement of the civil rights of Americans. The bill provides stiff penalties for obstruction of court orders in public school desegregation cases and makes flight in interstate or foreign commerce to avoid prosecution or punishment for damaging or destroying any building or other real or personal property a crime. It requires preservation of Federal election records and authorizes their inspection by the Attorney General. It would enable the Federal Government to provide for the education of all children of members of our Armed Forces, whether or not they are residents on Federal property, when public schools have been closed because of desegregation decisions or orders.

I worked for legislation to raise the minimum wage and to assist the unemployed of the city of Detroit and State of Michigan by enactment of minimum standards for unemployment compensation.

During previous sessions of Congress I supported S. 2888, a stringent reform bill requiring registration, reports and full disclosure of all welfare and pension funds, which became law. During the 85th Congress I supported the Kennedy-Ives bill to reform and clean up corruption in the labor movement. That bill was defeated by Republican Members who wanted an issue and no legislation. This session I supported the Kennedy-Elliott labor reform bill reported by the the House Labor Committee. I opposed the so-called Griffin-Landrum bill because it was an effort by antilabor groups to injure the rights of honest working men and women under the guise of striking at corruption and racketeers.

The Griffin-Landrum bill would have favored sweatshops and low wage nonunion areas to the injury of our Michigan businessmen, industries, and workers. It would have been a major inducement for Michigan industry to move to low wage areas which under that bill could not be organized so that workers could achieve a fair wage.

Multiple Use and the Proposed Wilderness Preservation System

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. ASPINALL. Mr. Speaker, Uncle Sam is a very important landlord. Among other properties, he possesses large areas of lands containing various resource values. Many conflicts arise in the constructive conservation and wise use of these values. Most of them must be conserved, in the general use of the term, by the landlord himself but in the development and harvesting of those which should and must be put to use, private enterprise carries the greatest responsibility. To solve the conflicts and to regulate the private development of the public's lands in the most advantageous manner for the landlord is a continuing and difficult responsibility.

Recently at the mining convention of the American Mining Congress held in Denver, Colo., the Honorable AL ULLMAN, Representative from the Second District of the State of Oregon, delivered a most interesting and constructive paper on the "Multiple Use and the Proposed Wilderness Preservation System." Because of the thoroughness, and yet succinctness, with which Congressman ULLMAN presented his subject, and the value that such address can have for all Members of Congress, I am pleased to insert it in the Appendix of the RECORD:

MULTIPLE USE AND THE PROPOSED WILDERNESS PRESERVATION SYSTEM

(Remarks of Hon. AL ULLMAN, Representative from Oregon, before the 1959 mining convention of the American Mining Congress, Denver, Colo., September 14, 1959)

It is a privilege and a pleasure to join this fine convention of the American Mining Congress and to participate in your deliberations on these matters of important public policy. As a Member of Congress and of the Committee on Interior and Insular Affairs, I feel a keen responsibility for the wise and full use of our vast public resources.

Congress, nearly a century ago, recognized that mining on the public lands should be encouraged to develop mineral resources for the Nation's benefit. Congress has since settled on a policy of multiple uses of public lands on the basis that it is not in the national interest to promote any one use unduly at the expense of other uses.

A reorganized Federal wilderness system is now being sought by some who believe that the wilderness is becoming unduly subordinated to other uses of Federal lands. The proponents of the reorganized system define "wilderness" as "an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain."

My discussion of pending wilderness measures cannot be couched in definite terms since hearings have not been held by the Committee on Interior and Insular Affairs. This, however, does not prevent me from offering definite views on the general principles and policies involved.

My statement will cover the background of the current proposals, some principles of natural resources use, the relationship with the National Outdoor Recreational Resources Review Commission, and an analysis of pending bills, departmental views, and areas of disagreement and agreement.

BACKGROUND OF THE PROPOSED SYSTEM

The wilderness bill, as it is called, first appeared in 1957 in the form of measures introduced by Senator HUMPHREY and others.

Apparently these measures had their beginning on June 4, 1948, when Congressman Raymond H. Burke, of Ohio, then chairman of the Subcommittee on Conservation of Wildlife Resources, Committee on Merchant Marine and Fisheries, asked the Legislation Reference Service of the Library of Congress to study the preservation of wilderness areas. That study was issued in 1949 as a committee print.

In 1955 an address "The Need for Wilderness Areas," was delivered in Washington, D.C., by Howard Zahniser, of the Wilderness Society. This address was inserted in the CONGRESSIONAL RECORD by Senator HUMPHREY in February of 1956.

Senator HUMPHREY's legislative draft was then prepared and it was further developed during a conference of the Federation of Western Outdoor Clubs at Portland, Oreg., in April of 1956.

Senator HUMPHREY explains that his bill assumes that we can preserve an adequate wilderness system without sacrificing other programs, but that there will not for long be any such areas to be preserved unless deliberate steps are taken now to preserve them.

Although it is true that there has been some encroachment on our Federal and private wilderness lands, it is my belief that this threat can be well contained under a sound and balanced land use program.

Wilderness use, I think we should agree, is a valid use among others, and should take its own place in a multiple-use pattern but should not be allowed to violate the basic

principal of the greatest good for the greatest number.

We are all aware of the scientific, educational, scenic, and recreational aspects of wilderness. The fact that such uses are rather intangible ought not to be allowed to reduce their importance as against tangible uses which can be more readily evaluated.

A difficult technical problem in the evaluation of any recreational use is that no economic yardstick is readily available by which to measure it. This is also true of such things as fish, wildlife, and pollution control, which are not competitively priced in the marketplace. This explains the feeling of need among many groups to seek protection in statutes.

Also, certain commercial abuses have aroused these groups, such as those occurring so often when the mining laws are exploited by nonmining interests for nonmining uses.

The Bureau of Land Management informs us that about 9 out of every 10 average mining claims are held for purposes other than mining. Public lands held for multiple uses, including wilderness, and not available under any other law, can be located under the mining laws, with no opportunity for consideration of the importance of mining compared with other uses.

A result like that in the Al Sarena case gives credence to the need for change in our mining laws or their administration.

MULTIPLE USE OF PUBLIC LANDS

The general principle of multiple use is this: Each acre or area should be used for the combination of uses in which its productivity is highest. Only in allocating each acre and area according to its productivity can we expect to reach the highest efficiency in satisfying wants. This is the key to wise use, which is the essence of conservation.

Fortunately, most of our land can contribute in more ways than one to the satisfaction of our wants. This is especially true of Federal lands that are administered under principles of multiple use.

Little of our Federal land is limited to the output of only one commodity, service, or use. Determining which acreages and how intensively to employ and develop them in each use is the basic economic problem associated with Federal lands.

The conflict between the wilderness concept and downstream water use is well known in the West. It was not until recently that emphasis has been given to the nature and extent of these differences.

Sol Resnick, a University of Arizona hydrologist, testified before the Senate Committee on Interior and Insular Affairs that upstream operations to produce added water supplies in his State would be greatly impaired if the high runoff producing areas were to be set aside in a wilderness preservation system.

It is reported that President Theodore Roosevelt, a true conservationist, in each of six annual messages to Congress, referred specifically to the benefits to be derived from reclamation. Speaking of irrigation in his message of December 3, 1906, he said: "The Federal Government should seriously devote itself to this task, realizing that utilization of waterways and water power, forestry, and reclamation of lands are all interdependent parts of the same problem."

In hearings held by the Senate Committee on Interior and Insular Affairs several years ago, Mrs. Gifford Pinchot outlines the role of her distinguished husband in the conservation movement. She said that the first of the three great purposes of Mr. Pinchot was "to wisely use, protect, and renew the natural resources of the earth." She summarized by saying, "In other words, the greatest good, for the greatest number, for the longest time."

It is important that all concerned have a clear understanding of the far-reaching extent of the present Federal wilderness system that has developed under this multiple-use concept. In the national forests, for instance, wilderness as a proper land use has been recognized as national policy for over 30 years. As of 1957, there were nearly 14 million acres in 81 different wilderness-type areas within our national forests.

The national parks are thought by the Department of the Interior to fit comfortably into the wilderness category. I believe that that is a fair conclusion. A new national wilderness system would add little or nothing to wilderness use so far as national parks are concerned.

The multiple-use policy has been extended significantly in the past several Congresses. For example, there is Public Law 585, 83d Congress, providing for mining locations on land covered by mineral leases. There are Public Laws 167 and 359 of the 84th Congress providing for the surface management of unpatented mining claims, and permitting mining locations on land reserved for power development. There is Public Law 337, 85th Congress, providing for the operation of the mining and mineral leasing laws on public lands in military reservations. There is Public Law 66, a measure that I introduced in the present Congress, providing for the recreational leasing of the so-called O. and C. timber lands in Oregon.

The economic problem of proper land use cannot be solved once and for all. The relative productivity of each acre or area for different combinations of uses changes with the changing times—as the population grows, as technology develops, as we change our tastes or desires. We must have solutions to the problem that can be adapted to changing conditions. Our success in doing so depends largely on our accuracy in anticipating the extent of future changes.

NATIONAL OUTDOOR RECREATION RESOURCES REVIEW COMMISSION

There must be carefully considered the relationship of the wilderness bills to the work of the National Outdoor Recreation Resources Review Commission, of which I am a member. The Commission from the beginning has had a mission of reviewing not only public recreational resources but also public wilderness areas, and the need for them. This review is now well on its way.

I am aware that a distinction is drawn between recreation use and wilderness use. I recognize that these two uses are not exact equivalents. However, the overlapping area seems to be broad. The wilderness bills themselves hold out that wilderness areas will be used, among other things, for recreational purposes.

Among those suggesting a delay until the Resources Review Commission's report is made is the Oregon division of the Isaac Walton League. The Oregon division, at a 1958 meeting with 20 chapters represented, did not endorse the wilderness proposal, although substantially agreeing with its objectives.

The Recreation Resources Review Commission's membership includes four Senators, four Members of Congress, and seven public members. It is chairmaned by Laurance Rockefeller, of New York. The members are people who have long been identified with the broad area to be studied.

Mr. Francis Sargent, former Commissioner of Natural Resources of Massachusetts, has entered on duty as Executive Director of the Commission, and a capable staff is at work in the Commission's office in Washington, D.C.

The Commission's evaluations are to be made on a State-by-State, region-by-region, and a national basis. Local and community relationships will play an important part. The act establishing the Commission defines outdoor recreation resources as the land and water areas and associated resources of such areas of the United States and its possessions which provide or may in the future provide opportunities for outdoor recreation, irrespective of ownership.

The Commission expects to serve as a clearinghouse of information and ideas. Its review will cut across all activities dealing with outdoor land use. Its work is already in progress.

It seems desirable as orderly legislative procedure to have available the facts and conclusions developed by the Commission before any far-reaching change is made in our Federal wilderness system.

We are looking to the Commission to recommend reasonable standards for the recreational use of Federal lands, including wilderness. Catastrophe to wilderness use could not occur before September of 1961 when the Commission's conclusions are to be reported.

PENDING LEGISLATION AND DEPARTMENTAL VIEWS

There is no single wilderness bill before the Congress. Actually 11 bills are pending before the Committee on Interior and Insular Affairs. The typical bill reflects modifications based on Senate hearings and discussions in the preceding Congress. The bill's purpose has been editorially described as a "modest innovation."

The typical bill blankets all existing Federal wilderness areas into a National Wilderness Preservation System. The System would serve the public purposes of recreational, scenic, scientific, educational, conservation, and historical use and enjoyment, at the same time leaving the areas unimpaired for future use as wilderness. The national forests would continue to be used for multiple purposes including wilderness.

Contained are procedures for bringing national forest lands, national park system lands, national wildlife lands, Indian lands, and Federal lands of other classes within the system. Public notice and public hearings are provided for. Deadlines are prescribed. Apparently the final decisions in cases of protest would be made by the heads of agencies, reviewable by the courts only under extraordinary circumstancs.

Also provided are procedures to accomplish later adjustments such as area additions and eliminations. Each of these, so far as new authority granted in the bill is concerned, would become effective only after a waiting period during which Congress might adopt an opposing concurrent resolution.

The measures prohibit use by commercial enterprises conflicting with wilderness purposes. Of special interest to miners is a provision that would allow prospecting and mining in a particular national forest area, along with water and related road projects, only if the President determines that such use will serve the public interest.

The bill would establish a new Federal agency—the National Wilderness Preservation Council.

The House Committee on Interior and Insular Affairs has held no hearings but has available the record of Senate hearings and has received the views of several departments.

The Department of the Interior feels that the traditional method of establishing or adding to national parks by act of Congress would be preferable to the procedure offered by the bill. Under the Department's recommendation, the highest and best use of each proposed wilderness unit would be individually examined.

The Department of Agriculture sees no need for the National Wilderness Preservation Council. The Department asked that the bill be amended to allow 15 years in which to determine the wilderness status of present primitive areas, now being restudied and reclassified.

The merit of the departmental conclusions, and that of all other matters associated with the pending bills, remain for the consideration of the committee.

AREAS OF DISAGREEMENT AND AGREEMENT

In conclusion, it seems evident that the discussion and hearings to date have indicated substantial areas of disagreement and agreement.

My own reaction is that the main disagreement to be resolved pertains to the proper organization of governmental control of Federal land use in general.

The users of Federal lands organize themselves into groups to influence Federal land-use policies and decisions and such action is often effective. A persistent question for the land administrator is how much weight to give to the presentation of a given point of view, especially if opposing views are not present or are not organized.

The most tragic blunders in public land administration usually have resulted from listening to only one of the affected sides or groups.

A few years ago the Presidential Advisory Commission on Water Resources Policy concluded that the greatest single weakness in Federal water-resource programs was the lack of coordination between Federal agencies and with State and local interests. I suspect that this is also true in Federal land-use programs affecting wilderness and other uses.

In this respect the statement of Arthur M. Roberts, of the Forestry and Conservation Association, during Senate hearings on wilderness legislation, is significant. He said: "The bill implies a dissatisfaction with the competence of the professional forester and the career land administrator. It would set the precedent of making Federal land-use decisions by a balance of political pressures rather than by the discretion of experienced career administrators as at present."

The point has been made that the quality of wilderness areas to be preserved, and not quantity alone, is important. I was impressed by a statement before the Senate Interior Committee by Keith Petrie, who styled himself as a "devoted believer in wilderness areas," but who wisely asked: "Wouldn't it be more logical to set aside smaller areas and maintain a true wilderness status along with some other areas where horses could be used, and other areas where mechanical transportation can be used?" His question suggests that greater flexibility of land use and control is needed than can be obtained through actions that can be taken only by the Congress or the President.

Concerning the present Federal program, I was particularly impressed by a grassroots statement which was made by Virlis L. Fischer, past president of the Mazamas, the well-known Oregon mountaineer club. Fischer is a man who has visited on foot every wilderness-type area in the States of Oregon and Washington. He stated that "the wilderness is not likely to disappear, because the Forest Service is doing an excellent and thoroughly commendable job of preserving it." I could venture the observation here that some commercial interests think that the preservation job of the Forest Service is a bit too thorough.

Fischer went on to say: "I further believe, and it has been well demonstrated, that public opinion is powerful enough to protect the parks in time of emergency from the vagaries of an undependable Secretary." He added: "It is even good for public opinion to assert itself on occasion."

There is wide agreement, I am sure, as Senator JACKSON has phrased it, that "it is the obligation of this generation to preserve for future generations a quantity of wilderness in its untrammeler, natural state."

The area of difference lies in how to accomplish this, the amount and location of areas to be retained in wilderness-like status, and how to reconcile the wilderness uses with other uses, in small areas and in large, so as best to serve the interests of people, locally, regionally, and nationally, and best to administer the Federal lands as a public trust.

PROCEEDINGS SUBSEQUENT TO SINE DIE ADJOURNMENT

BILLS AND JOINT RESOLUTIONS ENROLLED

Mr. BURLESON, from the Committee on House Administration, reported that on September 17, 1959, that committee had examined and found truly enrolled bills and joint resolutions of the House of the following titles:

H.R. 47. An act to amend the Internal Revenue Code of 1954 to provide a personal exemption for children placed for adoption and to clarify certain provisions relating to the election of small business corporations as to taxable status;

H.R. 3254. An act for the relief of Thomas Forman Screven, Julia Screven Daniels, and May Bond Screven Rhodes;

H.R. 4938. An act to amend the Agricultural Adjustment Act of 1938 to extend for 2 years the definition of "peanuts" which is now in effect;

H.R. 5711. An act granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes;

H.R. 5733. An act for the relief of Park National Bank;

H.R. 6059. An act to provide additional civilian positions for the Department of Defence for purposes of scientific research and development relating to the national defense, to improve the management of the activities of such Department, and for other purposes;

H.R. 6067. An act to amend section 4544 of the Revised Statutes of the United States to provide that, if the money and effects of a deceased seaman paid or delivered to a district court do not exceed in value the sum of $1,500, such court may pay and deliver such money and effects to certain persons other than the legal personal representative of the deceased seaman;

H.R. 6190. An act to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes;

H.R. 6672. An act to authorize longer term leases of Indian lands on the Agua Caliente (Palm Springs) Reservation;

H.R. 7452. An act for the relief of William B. Jackson;

H.R. 7476. An act to extend the duration of the Federal air pollution control law, and for other purposes;

H.R. 8385. An act making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1960, and for other purposes;

H.R. 8392. An act to amend the District of Columbia Stadium Act of 1957 with respect to motor-vehicle parking areas, and for other purposes;

H.R. 8437. An act to provide for the reinstatement and validation of U.S. oil and gas lease BLM 028500;

H.R. 8464. An act to amend the act of October 24, 1951, to provide salary increases for the police for the National Zoological Park;

H.R. 8685. An act to amend the Internal Revenue Code of 1954 to provide for the Presidential appointment of a Chief Counsel for the Internal Revenue Service, and for other purposes; and

H.J. Res. 531. Joint resolution establishing that the second regular session of the 86th Congress convene at noon on Wednesday, January 6, 1960.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Pursuant to the authority granted the Speaker by House Concurrent Resolution 439, 86th Congress, he did on September 17, 1959, sign enrolled bills and a joint resolution of the following titles:

H.R. 47. An act to amend the Internal Revenue Code of 1954 to provide a personal exemption for children placed for adoption and to clarify certain provisions relating to the election of small business corporations as to taxable status;

H.R. 3254. An act for the relief of Thomas Forman Screven, Julia Screven Daniels, and May Bond Screven Rhodes;

H.R. 4938. An act to amend the Agricultural Adjustment Act of 1938 to extend for 2 years the definition of "peanuts" which is now in effect;

H.R. 5711. An act granting the consent and approval of Congress to the Wabash Valley Compact, and for related purposes;

H.R. 5733. An act for the relief of Park National Bank;

H.R. 6059. An act to provide additional civilian positions for the Department of Defense for purposes of scientific research and development relating to the national defense, to improve the management of the activities of such Department, and for other purposes;

H.R. 6067. An act to amend section 4544 of the Revised Statutes of the United States to provide that, if the money and effects of a deceased seaman paid or delivered to a district court do not exceed in value the sum of $1,500, such court may pay and deliver such money and effects to certain persons other than the legal personal representative of the deceased seaman;

H.R. 6190. An act to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes;

H.R. 6672. An act to authorize longer term leases of Indian lands on the Agua Caliente (Palm Springs) Reservation;

H.R. 7452. An act for relief of William B. Jackson;

H.R. 7476. An act to extend the duration of the Federal air pollution control law, and for other purposes;

H.R. 8385. An act making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1960, and for other purposes;

H.R. 8392. An act to amend the District of Columbia Stadium Act of 1957 with respect to motor-vehicle parking areas, and for other purposes;

H.R. 8437. An act to provide for the reinstatement and validation of U.S. oil and gas lease BLM 028500;

H.R. 8464. An act to amend the act of October 24, 1951, to provide salary increases for the police for the National Zoological Park;

H.R. 8685. An act to amend the Internal Revenue Code of 1954 to provide for the Presidential appointment of a Chief Counsel for the Internal Revenue Service, and for other purposes; and

H.J. Res. 531. Joint resolution establishing that the second regular session of the 86th Congress convene at noon on Wednesday, January 6, 1960.

And enrolled bills of the Senate as follows:

S. 1473. An act to repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church of Plymouth, Mass.;

S. 1944. An act to amend the Bankruptcy Act in regard to the verification of pleadings;

S. 2162. An act to provide a health benefits program for Government employees;

S. 2282. An act to amend the act of July 17, 1952;

S. 2319. An act for the relief of Sergiusz Rudczenko;

S. 2362. An act to authorize the Secretary of the Army to credit equipment installation ton, Oreg., certain lands at the John Day lock and dam project; and

S. 2655. An act to authorize the Secretary of the Army to credit equipment installation costs against rental under lease to Union Township of LaPorte County, Ind.

BILLS AND JOINT RESOLUTIONS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, subsequent to the sine die adjournment of the Congress, reported that on the following dates that committee had presented to the President for his approval bills and joint resolutions of the House of the following titles:

On September 17, 1959:

H.R. 47. An act to amend the Internal Revenue Code of 1954 to provide a personal exemption for children placed for adoption and to clarify certain provisions relating to the election of small business corporations as to taxable status;

H.R. 3254. An act for the relief of Thomas Forman Screven, Julia Screven Daniels, and May Bond Screven Rhodes;

H.R. 4938. An act to amend the Agricultural Adjustment Act of 1938 to extend for 2 years the definition of "peanuts" which is now in effect;

H.R. 5711. An act granting the consent and approval of Congress to the Wabash Valley Compact, and for related purposes;

H.R. 5733. An act for the relief of Park National Bank;

H.R. 6059. An act to provide additional civilian positions for the Department of Defense for purposes of scientific research and development relating to the national defense, to improve the management of the activities of such Department, and for other purposes;

H.R. 6067. An act to amend section 4544 of the Revised Statutes of the United States to provide that, if the money and effects of a deceased seaman paid or delivered to a district court do not exceed in value the sum of $1,500, such court may pay and deliver such money and effects to certain persons other than the legal personal representative of the deceased seaman;

H.R. 6190. An act to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes;

H.R. 6672. An act to authorize longer term leases of Indian lands on the Agua Caliente (Palm Springs) Reservation;

H.R. 7452. An act for the relief of William B. Jackson;

H.R. 7476. An act to extend the duration of the Federal air pollution control law, and for other purposes;

H.R. 8385. An act making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1960, and for other purposes;

H.R. 8392. An act to amend the District of Columbia Stadium Act of 1957 with respect to motor-vehicle parking areas, and for other purposes;

H.R. 8437. An act to provide for the reinstatement and validation of U.S. oil and gas lease BLM 028500;

H.R. 8464. An act to amend the act of October 24, 1951, to provide salary increases for the police for the National Zoological Park;

H.R. 8685. An act to amend the Internal Revenue Code of 1954 to provide for the Presidential appointment of a Chief Counsel for the Internal Revenue Service, and for other purposes; and

H.J. Res. 531. Joint resolution establishing that the second regular session of the 86th Congress convene at noon on Wednesday, January 6, 1960.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Housing the Aged: A Lesson From Europe

EXTENSION OF REMARKS
OF
HON. GEORGE A. KASEM
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. KASEM. Mr. Speaker, one of the major problems facing us today, and a problem that will increase to monumental proportions if broad steps are not taken soon, concerns the care of our aged.

While in Europe attending the 14th International Convention of Local Authorities, Mayor Owen Lewis, of La Verne, Calif., kindly consented to extend his trip and make a thorough study for me on how the problems confronting many of the nations of Western Europe regarding the aged are being met.

I am certain that every one of my colleagues will benefit by reading the excellent and comprehensive report Mayor Lewis has made to me. The full text is as follows:

REPORT TO HON. GEORGE KASEM, MEMBER OF CONGRESS, BY OWEN H. LEWIS, MAYOR, CITY OF LAVERNE, CALIF., ON CARE OF THE AGED IN EUROPEAN NATIONS VISITED BY MAYOR LEWIS IN 10 WEEKS' TOUR OF WEST GERMANY, ENGLAND, HOLLAND, DENMARK, NORWAY, SWEDEN, AUSTRIA, SWITZERLAND, ITALY, FRANCE, AND BELGIUM, MAY 21–JULY 27, 1959

My recent tour of Europe permitted me to witness what may be the most epochal change in the history of the Continent. Everywhere I went I was struck by the dynamics of reconstruction after the world's most destructive war. Today, hardly a trace of the global holocaust remains. Even cities like Hamburg and Rotterdam, 80 percent destroyed by allied bombing raids, have almost completely obliterated the scars of conflict. Towering apartment houses, bustling factories and new superhighways are the characteristics of these reborn cities.

No nation in Europe has escaped the modern boom of construction and facelifting. An American, touring the continent in 1959, cannot help but feel the pulsating rythm of progress. Our image of our European neighbors as picturesque, but backward countries, must be cast aside. Instead, we must adopt a new attitude of admiration for their courage and strength in the face of monumental adversity. We must benefit by the lessons to be learned from their reconstruction and study the areas in which older cultures than ours have produced social conditions near the ideal for many segments of their population.

At your request, my attention was directed during my tour to the conditions in which the aged of these nations live. Generally speaking, Europe's over-65 citizens are enjoying a standard of living measurably higher than they had before World War II. As the war-torn countries have swept away the rubble of battle and struggled toward a new destiny in the nuclear age, they have shed many 19th century social concepts in favor of new standards geared to an economy of abundance.

This is particularly true in the field of the aged and aging. Paradoxically, it was the extent of destruction during World War II that fostered some of the great social advances I witnessed. In the area of housing, for instances, this was a notable factor. Square mile after square mile of many cities had been leveled by opposing forces. Reconstruction was an immediate necessity when the shooting had stopped. Thanks to American economic aid, our allies and conquered enemies were enabled to undertake this rebuilding on a scale never before attempted. Broad, long-range planning was not only possible, but imperative. Older citizens have benefitted spectacularly.

In Rome the visitor is impressed by the beehive activity in housing construction. Unlike American cities, Europe's metropolitan centers are vast complexes of apartment buildings. Surburbia, as we know it, is virtually nonexistent. Consequently, huge apartment projects are the rule, under strict governmental supervision and, sometimes, control. A rigid percentage of new housing is earmarked for the elderly. Low rents are the policy, and applicants are strictly screened to make certain that those in the greatest need receive the first available facilities. While Italy is not among the most prosperous of the Continent's recovered nations, it is making huge strides in providing for its senior citizens, so that eventually all may enjoy their declining years in decent dwellings in economic security. In the years to come, it is entirely possible that Italy may rid her teeming cities of the slums in which the elderly and needy were condemned in the prewar years.

My 5 days in Rome were busy ones. However, with the cooperation of the municipal government and our own U.S. consular officials, I was able to visit most of the city's important housing developments. Functional architecture is characteristic of all of these vast projects. At the same time, lines and masses combine to offer a beautiful simplicity of design that will make these monolithic structures impervious to shifting tastes in generations to come.

Of all the European nations, the most breathtaking to an American is West Germany. Bolstered by American aid and spurred on more recently by an unparalleled industrial boom, West Germany is the undisputed leader in European progress. Her cities—West Berlin, Frankfurt, Hamburg, Munich, and others—are gleaming jewels of modern architecture. Here, too, the mushrooming population of elderly men and women is recognized by the planners. Whole blocks of new apartment buildings are given over to older tenants. Because West Germanys' federal retirement system is the most generous in Europe, providing senior citizens with a pension equal to about $220 per month, West Germany's older people enjoy

NOTICE

The last issue of the daily Congressional Record for the first session of the Eighty-sixth Congress will be published not later than Monday, October 5, 1959. It is requested that copy and proofs of speeches withheld for revision, or extensions of remarks as authorized by either House, be submitted to the Government Printing Office or to the Congressional Record Clerk, Statuary Hall, Capitol, before that date.

By order of the Joint Committee on Printing.

CARL HAYDEN, Chairman.

the most abundant retirement in the world today. In recent years, the development of adequate, low-rent housing for the elderly has even further improved their status.

In startling contrast to West Berlin, East Berlin is still a debris-littered city. On a visit into the Communist zone, I was amazed to see women laboring with the most primitive of tools in the wreckage of bombed-out buildings. Some carried stones in baskets. Others swung heavy hammers at still-standing masonry walls.

The most notable architectural achievement in East Berlin is a huge memorial to the Russian soldiers who died battling Hitler's armies. Its magnificence is dimmed by the pervading poverty and lack of progress.

Sweden is another nation in which the American traveler cannot fail to register amazement. Huge apartment buildings are rising everywhere in Stockholm, the capital, where 90 percent of the population are apartment dwellers. The public assistance commission, a separate State agency, has broad authority and many demands for meeting the needs of the country. Socialized medicine and state-owned housing, make their solution for the care of the aged problems quite different from our own.

The social welfare of Sweden covers the care of aged and sick who are able to manage at home. A trial organization, since 1953, has been started and is called home help activity. Efficient and qualified help for the aged through domestic aid for a few hours each day, for example, cooking, cleaning, shopping, and laundry, is given so that they can avoid going to an old age home.

Pensioners' flats are a greatly appreciated form of housing for old people and individuals without means. In these flats pensioners can live considerably more comfortably, safely, and cheaply than in the older houses to which they formerly took recourse. Each pensioner's flat has common rooms which are used for social activities, coffee parties, and other recreational functions suitable for the needs. Each has a single room and there are double rooms for married couples. By 1953 there were 7 blocks, altogether 1,629 flats, for pensioners in Stockholm, the state having granted 25 percent of the construction costs. They were arranged among ordinary family flats to avoid the stamp of category houses. Recently, in order to change the character of the welfare institutions as homes for the poor, as vacancies allowed, they have begun to receive even people who cannot be said to be in real need. There has been strong reason to favor bridging the gap which formerly prevailed in the matter of providing for those with and without means, so charges are being fixed so that pensioners can pay the feed for board and lodging in these homes out of their old age pensions. All rents are controlled by the state. There are old age homes for those who cannot look after themselves or cannot manage with help at home; there are charitable institutions for poor people who are able to work a little but who from various causes—for example bad conduct—who are not considered suitable subjects for assistance in the open welfare; there are welfare homes for such persons as need constant attention; and there is also public assistance in housing for the aged, as described above.

In all of the Scandinavian countries the state operates all hospitals, old folks homes, schools, and also preschool nursery homes. In Oslo, Norway, I found that for an apartment in a building designed for old people, the applicant is required to pay an initial cost of approximately 6,000 Kroner, or $950 down, then about $20 per month as rent. This seemed to be the policy and the prevailing rate in all of the Scandinavian countries. They have an ecclesiastical tax for the maintenance of the state-owned churches and I was informed that, while this tax is not compulsory, about 98 percent do pay it. In general, the taxes were very much greater percentagewise than in our own country, but the States does offer more services in medicine and housing as outlined above.

My tour not only included countless inspection tours of housing developments for elderly people, but it brought me in personal contact with high municipal officials of the various countries I visited. In almost every case, these dignitaries agreed that the care of their aging men and women was one of the most important problems of our time.

Among these officials were Lord Mayor Harold Gillett, of London; Burgermeister Van Hall, of Amsterdam (who lived in the United States for 10 years); Lord Mayor S. Munk, of Copenhagen; Mayor Lorenzo Salvejar, of Florence, Italy; Jean Paul Vichy, President of the Municipal Council, Paris; Mayor Urbano Ciochettie, of Rome; Mayor M. D. Ferrari, of Milan; Mayor S. Speciale, of Venice, and Councilwoman V. Remons, of Stockholm.

In addition, I had conferences with Paul Hertz, Chief American Economic Administrator in West Berlin, U.S. Consul-General James Garrity in Venice, and American consular attachés in many other cities.

My European tour began as part of the mayor's goodwill European tour, which started the day after I visited your office in Washington, D.C., last May 21. In the ensuing 44 days, our group visited London, Amsterdam, Copenhagen, Stockholm, Hamburg, Berlin, Frankfurt, Interlaken, Switzerland, Milan, Venice, Rome, Nice, and Paris.

At the conclusion of the mayor's tour, Mrs. Lewis and I undertook our own European trip, driving more than 2,500 miles in 19 days. During this period we went to Darmstadt, Heidelberg, Munich, Garmisch, Berchteagaden, and Baden-Baden, Germany; Basel, Switzerland; Rotterdam, and The Hague, Holland; several Belgian cities; and Vienna, Salzburg, and Innsbruck, Austria.

In Switzerland, we learned that the care of the elderly is largely a local matter, administered by the various cantons, or states, under Federal supervision. Under this Swiss program, elderly citizens enjoy a very liberal retirement pension, from a fund to which employees, employers, and the government all contribute. Additional funds are allocated by the cantons.

Swiss old age retirement benefits are available to men at age 65 and to women at age 60. The amount is determined by the span of the applicant's working life.

Housing for the elderly is not so great a problem in Switzerland as it is in many other European nations, since much of Switzerland has an agricultural economy. In the villages, the care of the aging remains a family responsibility to a great degree, particularly with respect to housing. However, the cities are moving ahead in this field, with many new apartment buildings reserving a proportion of their facilities for the elderly.

Austria, too, is increasing its benefits for the elderly. Like Switzerland and many other European nations, pensions are similar to our social security system. However, benefits are greater, in proportion to average wages received by the working population. This is due, largely, to the three-way participation in the social security fund. One unusual feature of the Austrian system is their practice of distributing food stamps to pensioners from time to time. This is done for two reasons: to discourage the development of a black market in scarce commodities, and to offer the elderly the benefit of occasional surpluses in other foods.

Holland and Belgium are notable for their efforts in providing housing for their aging citizens. Both nations have stimulated vast building projects in their major cities, primarily for elderly citizens who can no longer compete economically in obtaining housing on the open market.

An interesting sidelight in Holland was our visit to one of The Hague's unique settlements for elderly citizens, dating back more than three centuries. At that time, a custom sprang up among wealthy burghers, who endowed small pensions for older men and women. Selected tenants were permitted to live in these secluded hotels until the end of their days. The custom died out among later generations of rich men, but the original pensions survived. Naturally, they accommodate only a small percentage of Holland's aged, but they have served to make the Dutch aware of the right of the aged to dignity and security. Now this awareness is being translated into action as the nation engages in its 20th century effort to provide decent housing for its elderly.

Another noteworthy fact about Holland was the extreme courtesy shown the aged. On streetcars, in the busy streets, in stores, cafes—everywhere—tradespeople offer special services to the elderly, which other customers defer to them without complaint.

In summary, my report must reach this inescapable conclusion:

European nations, in their heroic effort to erase the scars of a holocaustal war, have not forgotten their wage earners of yesterday. Generous provisions are made for their welfare in many fields, including the areas of economics and housing. Naturally, the benefits offered the aged are limited by the resources of the various countries. The United States could well study the attitude of our European allies toward their elderly. By adopting some of their policies and improving on others, with the limitless wealth enjoyed by this Nation America could establish a standard of living for retired men and women that would be a social milestone for generations.

Latin America: The Hidden Revolution

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most penetrating article by Adolph A. Berle, Jr., recently published in the Reporter magazine. Mr. Berle crystallizes the important economic and political issues which confront U.S. policy in this hemisphere. This is an article based upon Mr. Berle's long study of and diplomatic service in Latin America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATIN AMERICA: THE HIDDEN REVOLUTION

(By A. A. Berle, Jr.)

Latin America is entering a new and possibly crucial phase. At stake is a continent. The issue is whether the southern section of our hemisphere stays with the democratic West. For the first time since the Monroe Doctrine was proclaimed in 1823, the Americas could break in two. This statement is not a rhetorical one. The possibility is, I think, greater than in 1939, when Hitler and his then ally, Franco, tried to achieve this same end. Fidel Castro's revolution in Cuba, and the swift and thus far partially successful, attempts of a small but well-organized Communist minority to seize the reins of power in Cuba are the immediate events that have forced the attention of a lethargic United

States. They are merely the visible phenomena of a deeper crisis.

From 1952 to January 1, 1959, Latin America (or more accurately Spanish America, because Portuguese Brazil ended its dictatorship in 1945 and in any case goes by its own rhythm) was the scene of a vast democratic revolution, comparable in dimension to the Russian revolution of 1917, and the Chinese revolution that culminated in 1950. Because so many countries were involved, it did not have the great impact on world opinion that occurs when a single empire changes control. Further, since the revolution was liberal and friendly to the United States—and since we are overwhelmingly ignorant of our closest neighbors—little note was taken. So the story has to be summarized here.

It began in tiny Costa Rica, just north of Panama, the best-governed and most stanchly democratic of the Central American Republics. There, in 1948, Costa Ricans held their usual constitutional election, choosing as President Otilio Ulate. But outgoing President Rafael Calderón Guardia, already allied to a small Communist minority, sought and secured support from his neighboring Nicaraguan dictator, Anastasio Somoza (father of the present dictator), and in this he was promptly supported by the Communists. At this point enters a major figure in the current struggle—cultivated and capable José (Pepe) Figueres, an accomplished economist and engineer (he had studied at MIT). With a small group of Costa Ricans, he took the field against Calderón Guardia's combination of Communists and Nicaraguan mercenaries. After a campaign of 6 weeks, he defeated them in a pitched battle behind the city of Cartago, reorganized the government, and restored Ulate to the Presidency. When Ulate's term expired in 1953, Figueres ran for President, and was overwhelmingly elected. He undertook the political and social regeneration of Costa Rica. As it turned out, his achievements went far beyond Costa Rica.

At that time most of Latin America was dominated by dictatorships, either of the demagogic or of the military type. Perón ruled Argentina; Rojas Pinilla had taken over Colombia; Pérez Jimónez ruled Venezuela; General Odría governed Peru. The dictatorships of Somoza and Trujillo in Nicaragua and the Dominican Republic were solid, and Fulgencio Batista was holding Cuba. The stanch but militarily impotent liberal governments, led by Costa Rica and Uruguay, seemed in a hopeless position. The dictators, particularly Rojas Pinilla, Pérez Jiménez, and Trujillo, ceaselessly attacked them and their leaders by assassination threats, forged slanders, and intrigues in Washington. Most of the honorable and able leaders in the countries ruled by dictators escaped imprisonment or death only by taking refuge elsewhere. Many found asylum in Costa Rica, while their governments, not always unsuccessfully, tried to have Washington bring pressure on Figueres to throw them out of Costa Rica and out of the hemisphere.

A CONTAGION OF FREEDOM

In 1952 the big change began. In Bolivia a revolution directed by its present President, Hernán Siles Zuazo, one of the great spirits in Spanish America, finally overthrew an ancient, ineffective oligarchy and a social order that had hardly changed since the Spanish conquest. A social revolution followed that is still underway. It is one of the bright spots in American diplomacy that the United States, in this case, speedily moved to support the right side. Argentina in 1955, by the combined efforts of liberals and the military, succeeded in throwing out Perón. A transition government, honorably carried on by Gen. Pedro Aramburú, held a straightforward free election in 1958, bringing to power the present President, Arturo Frondizi. In 1956, Honduras threw out its dictatorship, and recalled its liberal leader, Ramón Villeda Morales, who had been in exile and under heavy threat in the Costa Rican capital of San José, where Figueres had befriended him. He was elected President of Honduras in 1957.

General Odría, the dictator of Peru, with a wisdom not emulated by many of his contemporaries, voluntarily terminated his dictatorship in 1956. The incoming regime recognized and made peace with the popular Aprista Party, which largely represented the Indian and proletarian workers of Peru. It subsequently elected Manuel Prado as President; his government is a coalition between conservatives and Apristas, and has a clear popular mandate.

On May 10, 1957, under the battering of a liberal opposition, Gen. Rojas Pinilla fled Colombia after successfully emptying the treasury. An outstandingly capable man, Alberto Lleras Camargo (he had been Ambassador in Washington and is one of the wisest of South American statesmen), was chosen President a year later. In January 1958, the Venezuelan dictator, Pérez Jiménez, fled the country in the face of a nationwide revolutionary upsurge that engaged the support of students, of the Catholic Church, indeed of practically everyone save a small group of Jiménez hangers-on. Rómulo Betancourt, leader of the largest democratic party, was elected President 9 months later. He also had been in exile in Costa Rica, had been chivvied out at the behest of Washington, and had been granted asylum in Puerto Rico, where he was kindly received by his old friend, Gov. Luis Múñoz Marín. A few months later, the smoldering revolution of Fidel Castro reached Havana, slightly ahead of three or four other movements designed to upset the corrupt dictatorship of Fulgencio Batista. On January 1, 1959, Batista fled. A provisional government of excellent men headed by Manuel Urrutia took office, but it has not yet established its power to govern. The real power lies with Fidel Castro, and with a group around him—and in the streets.

So in the space of about 7 years, most of Spanish America, from Cape Horn to the Florida Strait, changed hands. Of interest is the fact that in their hour of exile and peril many of the men now governing found asylum and comfort through the courage of José Figueres, and the wisdom and broadmindedness of Gov. Múñoz Marín of Puerto Rico.

SHADOW OF THE PAST

So far, so much and so good. The old style caudillo-general or his counterpart, the demagog, and their dictatorships had been proved not only hateful but obsolete. The three remaining—Somoza II in Nicaragua, Trujillo in the Dominican Republic, and Stroessner in Paraguay—are on the defensive. In Nicaragua, the only question is whether the transition can be secured peacefully, as in Peru, or must involve bloody drama, as was the case in Cuba.

A few weeks ago, the second phase of this huge struggle began. It revolves, quite simply, around the Communist issue.

In the previous phase communism had not been a major issue since Pepe Figueres outmaneuvered and outfought it in 1948. True, the dictators, notably Trujillo and Jimenes, had sedulously spread the impression that everyone opposed to their dictatorships and their corruption was Communist—a not unskillful use of the technique of the late Senator McCarthy. Some of them had resources McCarthy did not have, notably some expert counterfeit and forgery shops where documents could be fabricated "proving" their point—until a laboratory as good, say, as the FBI laboratory in Washington, got to work on them. There were apparently quarters in this country where such balderdash was taken seriously.

Following Castro's seizure of Cuba, he or his government invited Figueres, no longer President of Costa Rica, to visit Havana. Figueres went. He had every right to expect friendship. He had helped Castro when Castro had few friends, as he had helped other Cuban exiles. He was worried, for Castro had made a trip uninvited to Venezuela, and had there seen fit to attack Puerto Rico as a colony of American imperialism. By implication, he had attacked Gov. Luis Múñoz Marín, one of Figueres' closest friends. Figueres had been invited to speak at a mass meeting in Havana, but was asked not to discuss Puerto Rico. So, before a vast throng, after congratulating Cubans on becoming free and saluting their revolution, he pointed out that Latin America was part of the Western World and must stand with the West; that, having overthrown one dictatorship, the Cuban revolution and its brother revolutions must not permit dictatorship to rise again either through demagogy (as in the case of Perón) or through Communist seizure such as had been attempted against him in Costa Rica in 1948.

"That speech would have been considered neutralist in Chicago," Figueres commented wryly after the event. But Fidel Castro rose, and in a long tirade—repeated the following evening over television—attacked the United States, attacked the West, attacked Figueres, attacked Betancourt, attacked the democratic leaders in Latin America. They were "agents of American imperialism." Latin America could not stay with the West, and certainly not with the imperialist United States, in any conflict. And so forth. It followed the Communist line from beginning to end—and everyone knew it. The speech, like Figueres', echoed from Cape Horn to the Rio Grande. Its effect was to crystallize Latin American partisanship with breathtaking speed.

It was highly reminiscent of Europe in 1945. All the movements resisting Hitler in each country were then considered as one. But, at a given moment when Stalin so decreed, every resistance movement split. One wing was pro-Communist, blackguarding the United States, Great Britain, and others, following the Moscow line. The other stood with the western allies and for democratic government. Exactly this happened in mid-April of 1959 throughout Latin America. Small but well-organized bands of propagandists entrenched in various quarters unmasked their batteries. Their targets were José Figueres, the recognized continental leader of democratic thinking, and President Rómulo Betancourt in Venezuela, perhaps the ablest politician in South America. Their broader attack was on the entire liberal-democratic movement.

This time they made no bones about it. True, the State Department had treated Figueres and Betancourt with notorious shabbiness, had decorated and flattered their enemies, and had been anything but enthusiastic when they moved into leadership. To accuse them of being agents of Yankee imperialism was the most ironic of big lies. But it seemed the hour had struck for the Communist seizure of power; and the battle is joined.

CASTRO AND THE COMMUNISTS

To the United States, the contest is most noticeable in Cuba. Fidel Castro has just visited us, making sweet noises and, incidentally, saying the exact opposite in New York and Washington of what he previously said in Cuba and Venezuela. The reasons may not be far to seek.

Fidel Castro says he is not, and I think he is not, a Communist. He is merely a guerrilla leader who commands the admiration in Latin America properly due to an in-

dividual of great courage who fought a winning battle against huge odds. Cuban Communists had consistently supported the Batista dictatorship; only in the last few months of Castro's campaign did they change sides. One Cuban Communist central committeeman then moved into Castro's camp in the Sierra Maestra. He has since spent much of his time with Castro.

The Costa Rican Communist leader, Manuel Mora, who is considered an extremely able propagandist, likewise moved into the picture. It is clear that a number of other Communists are assuming positions in various parts of Castro's amorphous regime: Courts-martial, set up to execute perpetrators of atrocities under the Batista government, soon became mere people's courts, murdering inconvenient editors or political figures. Castro has recently announced that the death penalty will no longer be applied except in cases of outright counterrevolutionary activity; it will be interesting to see how far this phrase stretches.

The idea that Cuba ought to elect a President with a popular mandate is repudiated by Castro and his cliqué; some sort of social revolution must first be carried out. It is not specified what this will be, or what it will do, or where it will go. A chief and constant theme is anti-Americanism.

The same tune is sung everywhere by pro-Communist groups in Latin America. The United States is chief target; the liberal democracies presently trying to bring a better economic order to their countries are the secondary targets. The unanimity convincingly suggests that orders were given from the Communist high command in Moscow, presumably through a command post in western Europe. It also suggests that the situation is being used to assist the Soviet Union diplomatically in its current Berlin-Middle Eastern push.

THE UNDERLYING REALITIES

Let us sort out, from the political noise, the underlying realities with which we have to deal. It has been clear to anyone with eyes to see that the dying Latin-American dictatorships would not be able to hold on. They were also the worst possible long-range allies of the United States. Help or cordiality extended in their direction merely meant convincing the oppressed peoples of their countries that the United States was their enemy. Happily, the liberal democratic leaders who now control most of South America are men with education and with experience of the United States. They are quite aware of the difference between the reality of the United States and the ineptitudes of its politics often reflected in the Government of the United States. Most of them have been in close contact with American liberal thinking.

On the other hand, they know that their own countries must go through a social as well as a political reorganization. They are not clear whether the United States understands that fact. The outstanding necessity is to put an end to the division between age-old oligarchic, irresponsible power cliques and a proletariat living out its life in hunger and disease, without hope of improvement. Figueres' first act in Costa Rica was to nationalize the banks, and he was right; no other way would have made credit available to all of Costa Rica.

The Bolivian revolution, like the Mexican revolution against Porfirio Diaz in 1911, marked the end of Spanish feudalism. Social change on a sweeping scale is inevitable in all Latin-American countries, except in democracies like Uruguay or Costa Rica where continuous evolution has been possible. For practical purposes this means, first, assurance that land is reasonably distributed or available. Second, that credit is available to everyone on reasonable terms and not monopolized by private usurers and moneylenders. In short, a popular banking system. Third, that the governments together, and almost necessarily with the United States, work out a system of economic planning so that prices of the principal products will be more or less stabilized, the flow of necessary imports will continue, and the industrialization of these countries will go forward rapidly. Fourth, and perhaps most important, that there will be a vast and solid expansion of popular education.

It also means that the United States will have to assist a continuously expanding Latin American economic system. So far as the United States is concerned, it must stand not merely for private enterprise (who in the world wants to die for that?) but should spearhead a battle for personal, political, and economic freedom, by any method, socialist or private, that seems best adapted to meet local conditions.

In fairness to the United States, which has not been getting much of a break in Latin America, it should be said that Washington has made major moves in this direction. The Eisenhower administration, perhaps without realizing it, sharply changed course in the right direction nearly a year ago when it faced up to the fact that the Latin American economic problem had to be met. It did follow the Brazilian initiative toward continental planning which goes by the name of "Operation Pan-Americana." Governor Meyner, of New Jersey, speaking in Rio de Janeiro and representing the Democratic opposition in the United States, gave powerful support to this view. Washington did give limited approval of the idea of continuous planning, and has taken an active part in the Committee of Twenty-one, established by the Organization of American States, whose report is expected shortly. U.S. Treasury experts supported and have assisted in drawing up a project for an Inter-American bank, a measure long overdue. During the Roosevelt administration such a treaty was drawn but it was blocked in the Senate by one of the New York banks through its private influence with the late Senator Carter Glass. Now the project has been restudied and should come before the Senate before too long.

Limited support has also been given to price-stabilization schemes that should remove at least some of the hazards from Latin American trade. Coordination of public and private investment from the United States in these countries also can and should be attempted. Actually, sustained assistance for 10 years, costing $12 billion—half the size of the Marshall plan—could reorganize the Latin American economy in a decade.

WHAT WE CAN DO AT ONCE

Most urgently the United States should dramatically reverse its position in respect of the new governments. It should, rather dramatically, indicate its solid support of the liberal democrats who are now running most of Latin America. Especially it should make a clear demonstration of good will toward President Romuló Betancourt, presently under Communist fire in Venezuela. It can and should give solid evidence of cordiality to Lleras Camargo in Colombia, Frondizi in Argentina, and Villeda Morales in Honduras (he also needs immediate and direct help: his is a poor country). The United States should establish the principle that it can and will make long-range plans with governments that have held free, honest, and open elections, and must deal with others only on a de facto, day-to-day basis. Incidentally, this means insisting that Cuba hold an honest election, without the terror that stalks there now, before Washington commits itself to long-range plans of economic aid.

Latin America will be setting its direction in the next couple of years—with Washington if it can, without Washington if it must. If it is to be with Washington, we must contribute not only capital but also long-range planning and technical advice, so that the economic development of the southern part of our hemisphere may contribute to the economic and political growth of the free world as a whole. If we let Latin America drift away, it will be to the detriment of the peoples of the hemisphere as a whole. The Marshall plan proved that, with the cooperation of the nations we assist, we can do a lasting job of rehabilitation and improvement abroad. In Latin America, we are facing conditions that cannot be easily compared with those of Western Europe. But in Latin America, too, we can do the job—and now is the time to do it.

Amending Mutual Security Act of 1959

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 16, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7500) to amend further the Mutual Security Act of 1954, and for other purposes.

Mr. O'HARA of Illinois. Mr. Chairman, out of 11 weeks of faithful attendance at the hearings on the mutual security bill and a participation in the discussions in the executive sessions, at which every member not only spoke his or her mind, but was ready and eager to battle, I came away with the conclusion that no one has all the answers.

There are 31 members on our committee, and if any 2 followed the same pattern of thought on any 2 particular matters I did not detect any sign of such soulful compatibility.

Now, we came out of the 11 weeks' huddle with one solution, all of us, that we had to have a mutual security program. It is noteworthy that the four who signed the minority report began the statement very cautiously with six powerful words. Let me quote the exact words: "We assuredly believe in mutual security. Two very able members, in signing a statement of additional views, the gentlewoman from Ohio [Mrs. BOLTON] and the gentleman from Minnesota [Mr. JUDD], said in their very first eight words: "The undersigned support the mutual security program wholeheartedly."

Thus it is plain that the committee of 31 members is in complete agreement that there must be a mutual security program. There is this difference, and this only:

The majority members believe in repairing what we have, tightening up the program, profiting from experience, and meeting the crisis of our generation with the same faith in our own people and the same will to overcome obstacles as shown by earlier generations.

The four on the minority side want to junk what we have, and at this stage, I might say this very critical period in our history, and next year start all over again. Let this year pass by. Forget all about the Berlin crisis. Forget all about

the battle we are having to hold our ground in the minds and the hearts of the people of Africa, the people in the Orient, the people in Latin America, the people all over the world who are seeking the pinnacles of human contentment in a world rebuilding. Forget all about them for a year. Just get on our knees and pray that next year we can come up with a better program.

The majority on the other hand say, "Yes, there have been mistakes made and very, very bad mistakes made in administration, and maybe in some of our legislative thinking, but the Committee on Foreign Affairs has been seeking to correct those mistakes, to tighten up the program, and has provisions in the bill before you to do just that. Either we meet the crisis of today with a mutual security program, improved and tightened, but not abandoned, or we take grave chances of what will happen in the year we take off to think up another program."

Mr. Chairman, I have the warmest affectionate regard for the gentleman from Georgia. I know the tenderness of his heart. I know the sincerity of his convictions. I listened, with a sense of his sincerity and shared with his emotion when he said, as long as there are little children who are hungry and go to bed without food, there will be the danger of communism. Why, certainly, there will be. As long as anywhere in a rich world there is poverty and children go hungry to bed there will be unrest and the seeds of dissension and of wars. And we have got to think of the little children, we have got to base all that we do on the realization that our Government cannot be stable and continue stable if we do not consider the little children and their welfare. But while the objective of the gentleman from Georgia and my own are the same there is a difference in our approach. I would not wait until we have a program, perfect in every detail, and leave the little children of the world to shift for themselves and continue to go hungry until we have come up with what in our human vanity we might think perfection itself.

It is not within human power ever to reach perfection, but if our hearts remain stout and in our mistakes we find lessons, and not discouragement, we will make progress toward the perfection we seek.

The mutual security bill of 1959 is the best mutual security bill ever presented to the Congress. It is a compromise bill. I would have cut more out of the arms progress and put more into the economic program. You do not make friends and promote peace in your own neighborhood by calling the boys and girls into your backyard, giving them the best of revolvers and telling them to go out for a good time but be careful not to hurt anyone. You can do much more in creating a friendly, peaceful neighborhood by improving the environment in which youth is being brought up, and economics does play a large part in creating environment.

Others on our committee thought the other way. But 27 minds got together after argument and debate and the result was a compromise bill for which every member of this body can vote in good conscience.

The Committee on Foreign Affairs is not defending the extravagance and the waste that have marked the administration of the mutual security program in certain areas. It is its own watchdog subcommittee that has unearthed much of this extravagance and waste, its own watchdog subcommittee chaired by the able and dedicated chairman of the full committee, Mr. MORGAN, and working in close cooperation with the subcommittees of Congressman WILLIAM DAWSON'S Committee on Governmental Operations chaired by Mr. HARDY and Mr. FOUNTAIN.

The mutual security bill of 1959 reflects the determination of the Committee on Foreign Affairs that extravagance and waste must end. It contains more provisions and safeguards to that end than ever before were written into legislation.

Later when we are under the 5-minute rule I shall offer an amendment that if adopted will save the taxpayers a possible loss of half a billion dollars. The bill as it now stands authorizes the Investment Guarantee Fund to insure against losses due to civil strifes without any increase in premiums. The investment guarantee program up to date has done a magnificent job. If in the urge to get new business it increases coverage to include losses from civil strifes the entire program easily could blow up with a loss of the half billion dollars the Government already is obligated. I hope my amendment will be adopted.

Mr. Chairman, this year the committee without impairing the program one iota is cutting down the total amount of the authorizations. Next year the cut will be larger, as more and more through the committee's studies the extravagances and the waste are eradicated. As I have said, this is a bill for which every Member can vote in good conscience.

The Light Begins To Dawn

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. THURMOND. Mr. President, during the debate on the provision of the mutual security appropriation bill which extended the life of the Civil Rights Commission for 2 years, I pointed out the arbitrary nature of its findings and recommendations and the fact that many of its allegations of denial of voting rights of Negroes in the South were either grossly exaggerated or completely groundless. Recognition of this fact by persons from all sections of our Nation would emphasize the utter uselessness and, indeed, danger of the very existence of this Commission.

It is encouraging to note that in some northern journalistic quarters there has been delinquent appreciation of the circumstances involved and a recognition of the dangers inherent in attempts to legislate in this area.

In an excellent editorial in the Augusta (Ga.) Chronicle of Monday, September 14, 1959, the inaccuracies of the report of the Commission on Civil Rights have been pointed out. In addition, it is reported that at least some segments of the northern press have undergone a change of attitude toward the problems of the South. The editorial demands the attention of every thoughtful person, and it is for this reason that I ask unanimous consent that it be included in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LIGHT BEGINS TO DAWN

A former Chronicle reporter now residing in upstate New York wrote us over the weekend that newspapers in that area, long choraling an eternal hymn of hate against the South, seem to be altering their tune.

The letter from Esther Young Mewhsen contained an editorial from the New York Daily News which illustrated her point. It concerned itself with the Civil Rights Commission's charge that Negroes in the South have been deprived of their voting rights.

While the Daily News editor seems somewhat guilty of listening to his own propaganda when he used the phrase "widespread Southern practice of keeping Negroes from voting," the conclusions to which he finally came in his editorial indicate the frigidity of attitude by the northern press toward the South may be thawing.

"We believe there is good reason for hoping that the South, given time and some northern understanding of the South," the editor wrote, "will eventually solve all its racial problems as well as they can be solved in an imperfect world."

That realization on the part of a New York editor at this late date points up how low the lines of communication between the South and the North have fallen. We here have long contended that the problem is ours, and ours to solve. Moreover, we have long held that the good people of the South—both white and colored—were reaching a solution when pseudo-sociologists cloaked as justices retarded that effort at attainment. More recently, advocates of force legislation have, by their activities, created an even wider clevage between a heretofore mutually cooperative white and colored citizenry in the South.

Now that that fact is becomining obvious outside the South, the editor of the Daily News writes: "Our own feeling is that Congress had better go easy on trying to make people politically moral by law. That seldom works."

The gentleman of the Daily News evidently has taken a closer look at the horrible situation in his own backyard.

We would suggest, too, that he read in full the report of the Civil Rights Commission to which he alludes in his editorial. He will discover that deprivation of voting rights is not widespread. That it exists at all is deplored by the press of the South, and by the better citizens of the South. But while we reluctantly confess that there are, indeed, violations of Negroes' rights to vote, we would point out to the Daily News that the Commission found it confined virtually to two States, Alabama and Louisiana.

Furthermore, he might find that more than 160,000 Negroes vote in Georgia, have housing opportunities which the chairman of the Civil Rights Commission admitted were better than in "many cities in my section of the country."

And the Daily News editor would discover, too, that of all the complaints lodged with the Commission dealing with voting and other alleged rights violations, a goodly number originated from States well outside the South, that Georgia and South Carolina—two States for which the Chronicle is proud to speak—have records far better than does the State of New York where civil rights complaints are concerned.

Canham Writes on Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. BARTLETT. Mr. President, I take particular pleasure in presenting for, and I ask unanimous consent to have printed in, the Appendix of the RECORD a very excellent article on Alaska written by Mr. Erwin D. Canham, editor of the Christian Science Monitor, when he was in the 49th State in his capacity as president of the United States Chamber of Commerce.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON BERING STRAIT, ALASKA.—Hope springs eternal—and anew—in Alaska.

The thrill and satisfaction of statehood have nourished the feeling that perhaps Alaska's breakthrough into more adequate development of its immense natural resources may be not far ahead. But, at the same time, there is an awareness that statehood has brought new problems. No longer does the paternal hand of Washington intervene and guide, and the decisions taken in Juneau are sometimes bold and expensive.

Meantime, as 1959's short summer ends, the houses and industrial plants and commercial buildings which have not been completed because of a carpenters' strike stare you in the face in every inhabited place. Now they cannot be finished during this brief building season, and before the winter is over the economic effects may be severe.

But Alaska will pull itself together next spring and push forward under the constant, exhiliarating stimulus of the riches of nature which are so grandly apparent. Oil prospecting is taking place all over the State. Valued metals and minerals are being investigated and evaluated. There is always hope—not very well based—that perhaps an increase in the price of gold might give the gold-mining industry a badly needed boost.

ARCTIC ENTHRALLS VISITOR

Military expenditures continue to stimulate the Alaskan economy. The summertime tourist trade is bound to grow. A governmental commission is studying how to build a highway or railroad up along the coast from Puget Sound. The Canadians in British Columbia and the Yukon territory are planning hard toward the development of the immense power and mineral resources which are tied in with Alaska and need to cross Alaska on the way to tidewater. The Peace River project alone is breathtaking, and the Yukon remains a great untamed giant.

For the visitor like myself, Alaska is a magnificent experience.

My introduction was thrilling. Flying from Seattle to just south of Ketchikan, where the long Alaskan panhandle reaches to the British Columbia coast, the skies were overcast. But as we reached Ketchikan, the clouds had broken, and from there to Juneau it was 200 miles of superb beauty. Wooded islands and inlets where an ax or a forest fire had never struck, snow-capped mountains and mighty glaciers, deep inlets and fiords—all were primitive and untouched.

Then, the following day, flying from Fairbanks to Nome and Kotzebue, and spending the night in a little Eskimo village on Bering Strait, was a glimpse of the Arctic which enthralls. Here in Kotzebue we are 100 miles or so from Little and Big Diomede Islands. Big Diomede is in the U.S.S.R., the other side of the international dateline.

I have just been talking with some of the Little Diomede Island Eskimos, who will soon start their trek back home for the winter. I asked one litle boy: "Where would you rather live, here in Kotzebue with all the other people and the coming and going of tourists (perhaps 50 daily) or out on Diomede?" Without an instant's hesitation he replied: "Diomede." And so I concluded that the Eskimos are not being altogether spoiled in their contact with the rest of us.

ESKIMO PARTLY MODERNIZED

They are certainly a delightful people. On Sunday morning, here in Kotzebue, I went to the Friends' Meeting House, because most of the Eskimos went there. The service was largely composed of hymn singing, and there was no sermon. Three Eskimo, two men and a woman, told simply and with feeling what finding the Christ had meant to them.

And all the Eskimos sang with open throats, pouring out the old gospel hymns they have learned to love so well. There was no collection, but we contributed. The Friends have just finished a fine high school building for the Eskimos at Kotzebue. Hitherto, all pupils have gone more than 1,000 miles away to the high school at Mount Edgecomb, Sitka, where they stayed all winter.

The friendliness and cooperation of the Eskimos were very apparent. They need these qualities, for life in the Arctic barrens demands all of man's spiritual resources. But they love it, and find deep beauty in their land and its way of life. They are partly modernized, of course, and buy much the same groceries at the stores that we do—at a markup.

Nome, which is the American town nearest the Soviet Union, lives under the shadow of impending termination of gold-dredging activities. But there is tin a little way down the coast, and possible oilfields not far away, and plenty of gold to be dredged if the price improves. There is no highway into Nome, ships have to be lightered and don't come very often, and defense activities seem largely to have passed Nome by.

AIRBASES DOMINATE CITIES

Citizens remember the days of World War II, when the Japanese had attacked Dutch Harbor, and Nome officials were told they would have to defend themselves. They mounted a small fieldpiece on a truck, and drove round and round the town's one or two streets and waterfront. But the Japanese never came.

The Soviets did come, however, during the long period of the trans-Siberian airlift. Nome's memories of the Soviets seem to be largely favorable. But now the town feels isolated and alone, as its people gaze across Bering Strait and can almost see the Soviet planes lift off their bases on the other side. They know there is abundant U.S. defense, but it is a long way back from their beachhead.

In Anchorage, the atmosphere is all defense, and so it is at Fairbanks, the interior metropolis. Huge airbases dominate these cities. Both are also on major commercial air routes over the pole from the Orient to Europe. They are on the main street of intercontinental travel. Each is growing fast and steadily, but terribly hampered through the carpenters' strike.

Each, incidentally, has fine newspapers with active civic policies. These papers had a great deal to do with the successful fight for statehood. Nome, likewise, has a newspaper: The Nome Nugget, published twice a week under the active editorial and publishing hand of Emily Boucher. It was such a pleasure to talk with her in her two-room shop on Nome's frontier main street. I was reminded of the country weekly in Maine where I first set type and ran a job press.

What a vast, spectacular, challenging land. Timber enough to print all the world's newspapers and build most of its houses. Waterpower enough to provide all the energy a vast indutry could possibly require. Minerals to serve that industry. Petroleum and natural gas, evidently in great abundance. Land still to be homesteaded and raise a fair crop. Beauty and game sports at every doorstep. The wholesome life of the small, struggling, proud, cooperating community. An excellent university. Churches and clubs and civic life. And lot of places, not far away or inaccessible, where perhaps man has never before set foot.

Alaska's breakthrough will come. Meantime, it copes with the problems of statehood after the first exhilaration has worn away. It is America's perpetual physical frontier: A sample of our national past, preserved in 1959. It smells and feels much as Maine must have in 1850, Michigan in 1900, Oregon and Washington in 1925, all modified by the air age. Things move faster nowadays. So they will for Alaska, but we cannot foresee when or just how.

Hon. Thomas H. Burke

SPEECH
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. ROOSEVELT. Mr. Speaker, the passing of Thomas Burke, happening so close on the heels of a wave of disclosures of management-union corruption and the attendant deluge of antilabor hysteria, is a sobering reminder of an enduring truth about the labor movement: from it come men of highest integrity, great devotion to the service of mankind, and outstanding judgment in public affairs. Thomas H. Burke was one of these men.

He came to Congress from the ranks of UAW, his union, where his own gifts of intelligence and concern for his fellow man had been blended with the traditions of this democratic and militant union to make of him a most strong, wise, and serious advocate of the common man in the U.S. Congress. His work as a member in the House Committee on Labor and Education preceded my service on that committee but its imprint remains there.

In the years since I came to Congress, I knew Tom as a reliable spokesman for the labor movement, alert to political motives, probable effects and administrative subtleties of bills relating to labor, education, the national economy, and civil rights—the fields of interest to which he was most ceaselessly devoted. He was a constant help to Members of

Congress who want to understand and serve the interest of the laboring man but who lack the wisdom which comes from years of firsthand knowledge of labor's struggles and the role of unions.

Tom had this wisdom, born of his years as an organizer, officer, and leader of the United Automobile Workers Union in Toledo, and had the gift of sharing it courteously and eloquently with the friends of labor in Congress.

I pay respect to his significant life of service. I join his many friends in Congress and in the labor movement to extend sympathy to his family at this loss of a dear and generous friend of mankind.

Ludicrous Picture: America Floundering in Unshared Food Asked To Pray for Peace

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WOLF. Mr. Speaker, I am sure it is no secret in these Halls that my strongest yearning and most intensive effort in these last 9 months has been to awaken a desire with my colleagues to recognize America's agricultural abundance as our greatest tool for peace.

One of the finest presentations on this subject was just printed in the Des Moines Register, written by Rev. William D. Bair, pastor, First Presbyterian Church, Paullina, Iowa.

I present his cogent comment:

WOULD USE SURPLUS FOR PEACE

To the OPEN FORUM EDITOR:

The one most striking feature of America's agriculture today is the huge stockpile of food and fiber that lies deteriorating in great bins, caves, warehouses, holds of ships, every conceivable bit of storage space across the face of the land. It is ludicrous to picture in our imagination our population floundering and smothering in this great hoard of unused food and fiber while the 1 billion people of the world's population who are living on the perilous edge of starvation look on in anguished need.

MORE FITTING POSTURE

In these days our Nation has been called upon to pray for peace. This calls another ludicrous picture to mind * * *. Our people on their knees praying for peace * * * a posture that ill-becomes us when to be on your knees is to be swallowed up in this vast hoard of food * * *. Again in the background of that picture do you see those 1 billion people * * * sick, hungry, homeless, crying out in their need?

As God hears our prayers for peace, how He must yearn that we would know the ways of peace. How meaningless our prayers when they are unaccompanied by things that can make for peace. How can God give peace to a people who are willing to drown in their own surplus rather than share in an effective manner with their starving neighbors?

How dare we think we can stand before God as His righteous people until we fall on our knees in sheer exhaustion from carrying our surplus to our starving brothers. This would be a much more fitting posture for our prayers.

Immediately the hue and cry is raised how difficult it is to get this food to other countries without disturbing world markets, without making them slaves in their dependence on us. Of course, there are difficulties. What great thing has ever been done without difficulty? Don't be deluded by the prophets of pessimism and indecision into thinking this is an impossible task.

The United Nations study report entitled, "Uses of Agricultural Surpluses to Finance Economic Development in Underdeveloped Countries—Pilot Study in India," shows that agricultural surpluses can be used in a manner that will feed hungry people and at the same time provide for the economic development so sorely needed. The United Nations stands ready to implement this program.

We have a bill presented to the House of Representatives by Iowa Representative LEONARD WOLF to provide for such a program under the United Nations. There is a bill in the Senate presented by Senator HUMPHREY providing for such a program under a U.S. Peace Food Administration. Now we await some imaginative, bold, and decisive action on these bills by our legislators.

WHAT CAN BE DONE

What can we as individuals do in this situation? We know that Congress was moved to action on a labor bill by the great pressure of public opinion as many people wrote to them. Have you made known to your Representatives your feelings in the matter of sharing our food?

We can also help by giving our support to some of the nongovernmental agencies set up to help share our surplus. We can give generously through our local churches, we can support generously the CROP (Christian Rural Overseas Program) drive which is the food-collecting agency of Church World Service, or we can give through one of the many other agencies which are concerned for the well-being of the half of our world population who will go to bed hungry tonight.

It is long passed time for the American people to translate talk of compassion, prayers for peace, and bulging storehouses, into concrete deeds of sharing to create the world economic conditions in which peace can endure.

WILLIAM D. BAIR,
Pastor, First Presbyterian Church, Paullina, Iowa.

What You Can and Cannot Do Under the New Labor Law

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be printed in the Appendix the second part of an interview that the magazine U.S. News & World Report had with Mr. Michael Bernstein, reviewing the recently passed Labor-Management Reporting and Disclosure Act of 1959.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

A RIGHT TO SUE

Question. Are they required to be bonded?

Answer. Oh, that's another, separate provision. Now, under that provision I've been talking about, this high degree of responsibility is imposed on them, and union members are given a right to sue for a violation of that fiduciary obligation.

Question. If they suspect some skulduggery, can they sue?

Answer. Right. And they can get restitution.

Question. Can they do this on their own?

Answer. That's right. All they have to do is make a demand on the union, on its officers, and, if the union doesn't sue, then they may sue. Now, they sue here not on their own behalf, but on behalf of the union.

Question. In this situation the Secretary of Labor is not involved?

Answer. That's correct.

Now, in addition to that, I think we've come to one of the strongest provisions in the bill: Every union officer—agent, representative, employee other than a clerical or custodian employee—who handles any union money, or funds, or property, must be bonded. And he must be bonded under a personal bond—not a position bond. Now, this is the difference between the two:

For instance, a company like Lloyd's of London will give you a position bond. In other words, they don't care who the incumbent of the position is. They'll issue you a bond for the job of say, secretary-treasurer of a union. Now, they charge a high premium which is based upon the average rate of loss for all positions of that kind. You see, it's a statistical risk they take, and the only purpose of such a bond is to provide reimbursement if the individual who occupies that position turns out to be a bad risk. But he himself—the individual who occupies the position, Joe Jones—is not bonded, you see.

Under this bill, Joe Jones has to be bonded. That means the bonding company has to make an investigation of him to determine his financial reliability. If they turn up anything in his record which casts any doubt on his financial reliability, they won't give him a bond.

Question. Shady characters don't have as much chance, then?

Answer. That's right.

Now, the bonding companies, under this bill, have to meet two tests: One, no labor union, no labor-union officer, official, employee or representative can have any interest in any of these authorized bonding companies, direct or in indirect. That's one test. And, two: The bonding companies—and I'll give you the exact language—"Such surety company shall be a corporate surety which holds a grant of authority from the Secretary of the Treasury under the act of July 30, 1947, as an acceptable surety on Federal bonds."

And that eliminates the Lloyd's-of-London type of operation—and I might just add a bit of interesting sidelight information, tell you that a very substantial number of Jimmy Hoffa's officers are bonded by Lloyd's.

Question. If a union official is convicted of any crime, can a union pay his fine?

Answer. There's a specific prohibition against paying the fines of union officials who are convicted of violations of this law.

Question. Just this law, not necessarily other laws?

Answer. That's right. Now, of course, you know there's a prohibition against a criminal's holding office——

Question. What are the restrictions against criminals or ex-convicts holding office?

Answer. Under the present law, the Taft-Hartley law, there's a requirement that, if a union wishes to use the services of the National Labor Relations Board, its officers must file with the Board a non-Communist affidavit, and, simultaneously, the union must file with the Secretary of Labor a financial report. Those two provisions of Taft-Hartley are repealed.

Question. There will be no more non-Communist affidavits?

Answer. That's right.

Now, in place of these two, as you see, we have a complete system of financial reporting, so we don't need the old type of financial report.

And in place of the non-Communist affidavit, we have this prohibition which says that no Communist and no person convicted—there's a long list of felonious crimes—or who has served a prison sentence for any of those crimes may serve as a union officer—and there's a whole list of the various types of officers: Business agents, organizers, shop steward, representative, president, vice president, secretary, treasurer, and so on—if in the preceding 5 years he has been a Communist, or has been convicted of any one of these enumerated crimes, or within the preceding 5 years completed serving a sentence for any of those crimes.

It's a crime, then, for any individual who falls into these two categories—ex-convict or Communist—to hold union office. It is also a crime for the union to permit him to hold office.

Question. By "crime" do you mean a felony or a misdemeanor?

Answer. Misdemeanor.

Question. What's the penalty for violation of this provision?

Answer. Ten thousand dollars and 1 year in jail.

PICKETING: THE CHANGES

Question. Now let's get to picketing. Just what kind of picketing is involved and what will the new law do about it?

Answer. Well, first of all there is what they call extortionate picketing. This is made a crime punishable by $10,000 and imprisonment for not more than 20 years.

Here is what is meant by extortionate picketing: Extortionate picketing is completely phony, phony in this sense: That the purpose of the picket line has absolutely no connection with any labor-union objective, such as wages, working conditions, organizing the employees—nothing like that.

Its simple purpose is exactly the same as that of a man pointing a gun at you and saying, "If you don't give me your money I'll shoot you. Give me the money and I'll remove the gun." That's what the purpose of this picket line is. It's to go to the employer and say, "For $5,000 you can have the picket line removed." That's just one.

Question. They are not demanding that he unionize?

Answer. That's right. They are not interested in that. The purpose of this picket line has nothing to do with any union affair. They are merely using a union device to extort money.

Question. Is that prevalent?

Answer. It has been used. Johnny Dio [convicted labor racketeer] has used that.

BAN ON BLACKMAIL

Question. Doesn't the bill also deal with blackmail picketing? What is that?

Answer. The blackmail-picketing provision is an amendment to the Taft-Hartley Act and deals with labor practices—not crime. And I'll tell you right off the bat: The purpose of this picketing, even though it will now be outlawed, is not extortion. Let me tell you what it is.

Under existing law, employees select a union to act as their bargaining agent or representative. That is under the existing law. Now, the law says that, when a majority of them pick a union to act as their bargaining agent, that bargaining agent so selected becomes the exclusive representative of all the employees, not just those who voted for the union or who belonged to it.

In other words, if there are 100 employees in the plant and 51 want the union to represent them, then that union becomes the representative of all 100 employees. The employer has a legal obligation to bargain with that union and with that union only. He can't bargain individually with the 49 employees who didn't want the union. The union speaks for all. The contract that it reaches with the employer sets the working conditions, the wages, the hours, the fringe benefits for all 100 employees.

The individual employees lose their individual bargaining rights. This is the basic principle of the Taft-Hartley Act as it was and the Wagner Act before it.

Suppose an employer whose employees don't want to join the union—or the majority of whom don't—has a picket line thrown around them, and the union says, "We want you to sign a contract with us." He says, "Well, I can't. I violate the law if I do that. My employees don't want your union, and you don't represent a majority, and, therefore, I am prohibited by law."

Now, what is an employer to do in a situation like that? Under the present law he is between the devil and the deep blue sea. If, on the one hand, he remuses to accede to the union's demand, he is faced with a permanent picket line. If, on the other hand, he does sign a contract with them, he violates the Taft-Hartley Act. This is what is known as "recognition" picketing.

Question. Is this a variation of what is called organization picketing?

Answer. Yes. Again, the union doesn't represent a majority. In fact, frequently it doesn't have a single employee member in the plant. It uses the picket line for the purpose of trying to persuade the employees to join the union. But how does it do it? By throwing a picket line around the employer. The object is to cause the employer economic loss. That, therefore, has the tendency to induce the employer to try to force his employees to join the union so that he can get rid of the picket line, which again is a violation of the picket law. He can't do that.

Or, the alternative is to cause the employer substantial economic loss, with the result that he may have to lay off some of his employees. So this is a threat of economic loss to the employees. It is a form of economic coercion on them to get them to join the union. Economic coercion is prohibited by existing law—to use economic coercion against employees.

However, unfortunately, the National Labor Relations Board has never seen fit to hold these two types of practices to be violations of the law, and that is what the new bill does.

Here is the way it does it: It says, "Where the object of the picketing is recognition or organization," and I have explained the two terms, "then picketing may not be carried on at all if the employer has already signed a bona fide agreement with another union"—the nonpicketing union.

The employer signs an agreement with Union A when the majority of his employees wants it. The contract is for 2 years. So in that 2 years, Union B may not lawfully picket them.

Point 2: A union—any union—petitions the NLRB for an election to determine the bargaining representative. Now, on every NLRB ballot, not only do you have the name of the union or unions which are seeking representation, but you also have another choice for the employees—it is called no union. Now, if in this election no union should win, then the union may not picket for recognition or organizational purposes for 12 months following that unsuccessful election—no union may picket.

The third one: If a union starts picketing for organizational or recognition purposes, it may do so up to 30 days, provided it doesn't fall into one of these other two categories that I have mentioned. At the end of the 30th day, it must stop its picketing unless an election is held by the Board. That gives the employer a chance to get an election at the end of the 30th day, and, if a union loses, then one of the other provisions comes into play—the fact that you can't have picketing for 12 months following an election.

There is one exception to that. If the union makes it clear that it doesn't fall under the first provision, about the employer's having a contract with another union, or if it doesn't fall in the second prohibition, that an election has been held within the preceding 12 months, the union may then picket indefinitely, provided its signs and its literature and its appeals make it plain that all it is seeking to do is to advise the consuming public that the employer does not employ union workers or that he has not got a collective-bargaining agreement with the union. It may not be for organizational or recognition purposes.

And even if they confine their signs to these two very limited areas, if at any time an employee from some other employer, who has come in, say, to make a delivery, or to make a pickup, refuses to cross that picket line, then at that moment the employer can immediately get an election and then the 12-month prohibition comes into play.

AFFECTED: ALL UNIONS

Question. Does this apply to all unions?

Answer. All unions. There are no exceptions.

There is only one defense the union can raise to the charge that they are engaged in this type of picketing illegally. That is, if they can show that when the employer signed the contract with that other union it was a "sweetheart" contract. If they can show that the contract the employer signed with the in-union is a sweetheart contract, then the out-union is not—you can't enjoin it from picketing.

Question. Would you explain what you mean by a "sweetheart" contract?

Answer. A sweetheart contract is a deal between the employer and the union to sell out the employees. It is illegal under existing law. But now it would not only be illegal, but it would be a defense.

In this connection, if the employer can prove that this picketing prohibition which I have just described to you has been violated, then the General Counsel of the National Labor Relations Board must—must go into a Federal district court and ask for an immediate injunction—immediate.

In other words, he can't wait until there is a full-scale hearing before the Board with all the appeals—the final disposition of the case may not take place for 12 months, during all of which time the picketing would go on. He must at the very beginning—he has no discretion, if he finds that there is a prima facie case of violation—he must go to a Federal district court and ask for an injunction. Now the Federal district court doesn't have to grant it, but he must ask for it.

Question. We hear a great deal about secondary boycotts in connection with this legislation. Will you explain what a secondary boycott is?

Answer. Let me illustrate it with a concrete situation: The union has a dispute with Employer A. Employer A is the employer who employs the members of that union. It doesn't make any difference what the dispute is about. It could be wages, working conditions, hours—the employer may refuse to deal with them—it doesn't matter. He has a dispute with the union.

Employer A does business with Employer B. He buys from Employer B—let's say raw material—or he sells to Employer B finished products. It doesn't make any difference. The union, having failed to induce Employer A to accede to their demands, then throws a picket line around Employer B with whom they have no dispute.

The purpose of that picket line around Employer B is to induce the employees of Employer B to stop working, the ultimate objective being to get Employer B to stop doing business with Employer A. That's the classic form.

CLOSING LOOPHOLES

Question. Isn't that prohibited under the Taft-Hartley Act?

Answer. Yes, as I've stated. But let me give you a variation that is not prohibited under the Taft-Hartley Act.

Take the same set of facts. The union has a dispute with Employer A. Employer A does business with Employer B. Instead of throwing a picket line around Employer B, the business agent of the union goes directly to Employer B himself in his office and says, "Unless you stop doing business with Employer A, we will throw a picket line around your plant." That's not illegal under present law, because there the inducement to cease doing business is made directly upon the secondary employer and not through his employees. Now that would be illegal under the new bill.

Question. That was a loophole in the old law?

Answer. Right.

Question. Does the new legislation close any other loopholes?

Answer. The term "employer" as it's defined in the Taft-Hartley Act excludes certain types of employers. Among them, the most important being railroad employers and their employees, because they are covered under the Railway Labor Act.

Suppose you get a situation like this: The union has a disptue with Employer A. A, in order to finish his economic processes to make his profit, has got to ship his goods via railroad to its ultimate destination. So the union throws a picket line around the railroad spur at which Employer A's products would normally be loaded onto the freight car. The purpose of that picket line is to induce the railway employees to refuse to load that stuff or to handle it. The Board has said that, under the present language, that is not a violation because railroad employees and railroad employers are not employees or employers under the Taft-Hartley Act.

Now, under this new bill, instead of using the term, "to cease doing business with another employer," it says "to cease doing business with any other person." Person includes everybody. That closes that loophole.

WHO IS AN EMPLOYER

Question. So railroad workers are covered then in that instance?

Answer. Let me put it this way: Employers are protected against secondary boycotts even though one of the two employers involved is a railroad employer, or an agricultural employer—they're also exempt—or a governmental body—municipality, or a nonprofit hospital. These are all employers who are not included in the definition of employer under Taft-Hartley and that, therefore, you didn't have a violation of secondary boycott if they were one of the parties involved. Now the term "employer" is actually employer in its dictionary sense. So that's the second loophole that's covered.

Question. Are there any others?

Answer. Yes, there's a third one. Suppose, for example, the union having the dispute with Employer A sends a business agent to Employer B, and instead of throwing a picket line around Employer B, or instead of going to Employer B himself and asking him not to do business with A, they pick out a half a dozen key employees—key individual employees of B—and they ask each one of them individually not to work on the goods of Employer A—not to handle them.

Now, the Supreme Court has said that, in order for it to be an unlawful secondary boycott, the inducement on employees not to work must be an inducement upon them to cease working in concert. It has to be a concerted ceasing to work, not a merely individual ceasing of work.

So that—in the hypothetical case I give you—by going to each one of these individuals and asking him not to handle this struck employer's goods, you don't get a violation under existing law, because this is not asking them to concertedly cease working. Well, under the new bill, an individual inducement would be just as much a violation of the law as a concerted inducement. Those are the three major loopholes that have been plugged.

They've plugged one more which is the secondary boycott in futuro, or to put it more plainly, it's the agreement by an employer to permit a secondary boycott to be carried on against him. That's the hot cargo.

Now, the term "cargo" is misleading, because it gives the impression that this only involves transportation activities. But, actually, the term should really be "hot goods." "Hot goods" are goods which come from any enterprise or business or plant or establishment or factory which has a dispute with the union. Those are hot goods.

Question. Does it also apply if there is no union?

Answer. It doesn't make any difference. A union can have a dispute with an employer even if there's no union, and the dispute can be precisely that. What a hot cargo agreement is, is this: The union goes to Employer A and says, "We want you to sign a contract with us which will contain a provision that you will not require your employees to handle any goods or perform any services that come from another employer with whom we have a dispute." In other words, it's an agreement to enter into a secondary boycott.

Question. That form of prohibition is new, then——

Answer. The Supreme Court, under existing law, has held that such an agreement—let's call it "hot cargo" because it's the way everybody knows it—is not illegal "per se." In other words, it isn't null and void. You could, under existing law, make such a contract if the employer lived up to it.

Let's take a concrete case: The union and employer A make an agreement in which employer A says that he will not give any of his business to any other employer that the union designates as unfair under the usual term. He violates that. He does do some business with employer B, who's on the union unfair list. So he violated his "hot cargo" agreement.

The Supreme Court has said that the union still retains the right to go into a court of law and sue the employer for breach of contract for whatever he can get out of that, but that it does not have the right to pull a strike on him or a picket line to make him live up to the contract. And what is left open? Under existing law, nobody knows the answer. Does the union have the right to throw a picket line around an employer or to pull a strike on him to compel him to sign such a "hot cargo" agreement in the first place?

TIGHTENING THE LAW

Question. Are "hot cargo" agreements illegal under the new legislation?

Answer. For all purposes. You can't strike to compel an employer to sign one. You can't strike to compel an employer to live up to one and you can't take it into a court and sue for breach of contract. But, there are two exceptions. The garment industry is exempted.

Question. Would you explain why?

Answer. The reason behind it is this: The garment industry enters into this type of agreement. This is the Amalgamated Clothing Workers and the International Ladies Garment Workers—they're the principal ones. They enter into agreements with their contractors.

You see, a lot of work in the garment industry is done through subcontracting. In other words, the major manufacturer subcontracts out a lot of the subordinate operations—operations which are necessary to get your completed product. For instance, a manufacturer, let us say, of men's suits, might have a subcontractor who is an independent legal enterprise—say, doing the buttonholes. There's a lot of that goes on.

Of course, there was a tremendous amount of sweatshopping in this industry. So the unions many years ago signed contracts with the employers whereby the employers agreed that they would not hand out these subcontracts to nonunion subcontractors. That's the so-called antisweatshop, "hot cargo" agreement. And their lawfulness is now guaranteed in the new law.

BUILDING: AN EXCEPTION

Question. Isn't there an exception to the construction industry, too?

Answer. The exception to the construction industry is only a partial one. They don't get what the garment industry gets. They are left in status quo. They can't engage in secondary boycotts as far as the construction industry is concerned. Those are outlawed completely.

But a building-trades union may enter into a contract with a contractor—building contractor—whereby he agrees that he will not let work to any subcontractor who is nonunion. This is not illegal. Now here's what it may do: The union may go into a court and sue him if he fails to live up to that agreement. But they cannot strike or picket him to make him live up to it, which is the law now, and we left it open as to whether they could strike or picket him to compel him to enter into such an agreement. Whatever the courts decide under existing law on the latter question will be applicable to the building-construction industry.

So that the building-construction industry is left to the law as it is now; the garment industry gets complete exemption from the prohibition and all other industries get a complete prohibition.

There's just one more, actually, important provision. That's the "no man's land."

Question. Yes, what about that?

Answer. What that provision does is this: It says that the Board may do what it has been doing for many years—it may refuse to take all the cases, to handle all the cases, over which it has jurisdiction.

Question. What types of cases does it refuse to take?

Answer. It has set up certain standards. It says, for instance, I think, that hotels—they will not take hotels unless they do a gross business of at least $500,000 a year. That's just an example. They have different monetary standards for different types of enterprise. They have a separate set of standards for retailing, and so on.

And all of those cases which fall below those figures the Board refuses to handle. Now, under existing law the States are prohibited from handling them so you have a "no man's land." In other words, in these small enterprises involved in labor disputes which may entail violations of law, you have a situation where the Board refuses to assert jurisdiction and the States are prohibited from doing so. So you have no legal forum in which the party who has been hurt can get relief.

You have the situation which the lawyers always refer to in such critical terms as a right without a remedy.

Question. They have no place to go——

Answer. No place to go. Now, this new bill says that, in those cases or types of cases in which the Board refuses to assert jurisdiction, the States have carte blanche without any limitation, to apply their State law and to handle them in their own way with

one qualification. That qualification is this. The Board's standards for asserting jurisdiction, which were in effect on August 1, 1959, which means the present one such as for instance, $500,000 for hotels—they represent the limit beyond which the Board may not go in giving up jurisdiction.

I'll give you a concrete example: When this new bill becomes effective, the Board will have before it a standard with respect to hotels which says that the Board will not take cases involving hotels which do less than $500,000. If the Board wishes, it could change that standard and say it will not take hotels which do less than $300,000, because that would mean the Board would be taking more cases. But it cannot say, "We will not take cases of hotels which do less than $600,000," because that would mean the Board would be taking fewer cases.

So that, in other words, the States may act in those situations where the Board refuses to act, but the Board's present standards may not result in the Board's hereafter refusing to take cases which it is taking now.

MILLIONS MORE COVERED

Question. How many businesses would you think would be covered?

Answer. Roughly, you could estimate it at about 2 million enterprises.

Question. And how many people would that include?

Answer. I don't know. They are mostly small, pretty small. I just don't know the figure.

There's one other provision that's attached to that which is nearly as important, but, in order to make the picture complete, I might as well give it to you:

In the "no man's land" we had a problem of no forum. There's also a problem of the time lag in the Board. It takes the Board so long to decide a case because it has such a tremendous docket, a tremendous backlog.

What we've done in the new bill is to say this: The Board has 23 regional offices, each headed by a regional director. Under the present law, the Board has to make the final decision in all election cases—you know, elections in which the employees select these bargaining representatives.

The new bill provides that the Board may—not must, but may—delegate to the 23 regional directors full authority to handle and conduct these election cases, and to make final decisions in them, subject to an appeal to the Board. So there's an attempt, by decentralizing, to cut down some of the Board's caseload and pass it on to these 23 regional directors, taking a lot of the load off the Board and thus enabling it, the Board, to expedite its remaining cases.

Question. All of these provisions will be subject to interpretation by the Labor Relations Board and the courts over the years, is that correct?

Answer. Right. What I've given you was what I myself believe this law does; and, let me say, I think what everybody in the conference committee agreed it was intended to do.

RIGHTS OF STRIKERS

Question. What about a man who is on strike. Does he have any rights he hasn't had before?

Answer. Under existing law, where you have a strike which does not result from a violation of law by the employer, I might point out this: If a union strikes because the employer is violating the Taft-Hartley Act, then his strikers always remain his employees. He can never replace them, if they want their jobs back. They remain his employees for all purposes. If they want to come back, the employer must take them back even if he's got another replacement in their place.

But if the man strikes or the employees strike simply because of disagreement with the employer—what is known as an economic strike in which the employer has not violated the law, and is actually perfectly within his rights in refusing to grant the union's demands—then the law says that he has a right to replace these strikers. And when he replaces them they are not entitled to have their jobs back. Then the question arises: Suppose a situation like that occurs—you have a strike and the employer has replaced with permanent replacements a number of the strikers, and then there's a Board election. Who votes?

The present law says that the replaced striker, the guy who went out on strike and somebody else filled his job, may not vote. His replacement votes. What we did was to amend the law to say that the Board may permit that replaced economic striker to vote under rules and regulations laid down by the Board, but, in any event, not after the first year of the strike.

Question. What about the new law's provisions on prehire contracts?

Answer. They gave the building trades what they have wanted for a long time and what, in fact, they are doing in violation of the law consistently all over the country.

As I think I said earlier in this discussion, the basic principle of the law is that a union becomes the exclusive bargaining agent of employees if it represents a majority of them. That is, it's unlawful for an employer to bargain with a union if it does not represent the majority. And it is unlawful for both the employer and the union to enter into a collective-bargaining agreement, if the union doesn't represent a majority.

What was done in this bill is to give the building-trades unions and their employers in the building and construction industry the right to enter into such agreement without violating the law because of the peculiar needs and problems of the construction industry.

Question. Would you say that this new law will apply more to small businesses than to large?

Answer. Yes, very definitely. I think, if you go down the line of the provisions, as far as internal affairs of the unions are concerned—I would say there is no direct concern to employers as such, except as they are public-spirited citizens and not employers. With respect to the Taft-Hartley amendments on picketing, "no man's land," boycotts, and all of these things—none of these have the slightest significance for General Electric, General Motors, Westinghouse, and so on. None whatsoever.

WHEN LAW IS EFFECTIVE

Question. Does most of the law take effect within 60 days after the President signs it?

Answer. Yes, except for some of the filings—reporting requirements where, because of the difference of the fiscal year and so on, there are some special provisions. But the act as a whole becomes effective 60 days from the day the President signs it.

Report to My Constituents on the 86th Congress, 1st Session

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 12, 1959

Mrs. BOLTON. Mr. Speaker, while the record of the Congress as a whole cannot be fully analyzed until the second session draws to a close next year, we have grappled with many problems during this first session and have seen some very noteworthy achievements take place. At this time I would like to summarize briefly some of the accomplishments as a report to my constituents.

This session will perhaps be best remembered for its passage of a strong labor reform bill. After almost 2 years of extensive investigations and exposures by the McClellan committee in the Senate, an aroused public demanded that Congress take action on legislation to cope with unscrupulous activities in the labor-management field. The result was the passage of the Landrum-Griffin bill in the House and Senate by an overwhelming majority. The first major labor legislation since the Taft-Hartley Act in 1947, this measure, signed by President Eisenhower, is prounion and propublic. It is not an antilabor bill. It guarantees many basic rights to labor-union members. Among these are equal rights to union members in the conduct of union affairs, protection against arbitrary dues increases, protection of the right to sue, free and fair union elections, safeguards against improper disciplinary action, and protection of union funds. The bill's strong ban on secondary boycotts and blackmail picketing protect the public against abuse of union monopoly powers and the provision giving State labor boards jurisdiction over disputes now refused by the National Labor Relations Board will strengthen the hand of small business in labor disputes.

When the 86th Congress convened last January, with the Democrats holding a majority of almost 2 to 1 in both the House and Senate, the trend seemed to indicate that this would be the spendingest Congress in history. Bills estimating a 5-year price tag of $117 billion were introduced in the first few weeks. It took the President several vetoes to make his point that if Congress wanted to spend more money on additional projects, it would have to raise taxes to pay for them or face the twin consequences of deficit spending and continuing inflation. By the end of the session, action or inaction by the spenders had pushed the budget figure up to nearly $79 billion from $77.1 billion submitted by the President. While they trimmed regular appropriations requests, they boosted authorizations for future spending, some of it by the back-door route which bypasses the regular appropriations committees. The so-called decreases do not cover, for example, $231 million in authorization for back-door spending not sought by the President. Fortunately, however, with the strong hand of President Eisenhower, together with the public's demand for economy, we were able to hold some of the line at least on spending. There is a chance that a balanced budget, as sought by the President, may yet be achieved before the close of the fiscal year because of revenue increases. This would indeed be a truly noteworthy achievement for the fiscal integrity of the Nation.

Of major importance to Ohio was the passage of legislation making it possible to continue the Federal aid highway program. In 1956, in response to popular

demand, Congress approved the construction of a 41,000-mile system of interstate highways designed to bring highways up to acceptable standards by 1972. To finance the program Congress established a highway trust fund in which are deposited the proceeds of the Federal gasoline taxes, and certain excise taxes. At the time the highway program was adopted, it was estimated that the $25 billion to be raised for the highway trust fund would complete the system. However, in April 1958, as an antirecession measure, Congress passed an accelerated highway building program but did not provide the necessary means for financing. As a result of this action, the highway trust fund faced a deficit of $1.3 billion by July 1961 if existing commitments to the States were met. To meet this deficit and keep the program on a fiscally sound basis President Eisenhower proposed that the gasoline tax be increased by 1½ cents a gallon. After a delay of many months the Committees on Public Works and Ways and Means finally worked out a compromise calling for a 1-cent per gallon increase over a 22-month period. As a result of this action, Ohio and other States will be able to continue their highway building program without any major curtailment.

Once again this year it was necessary for Ohio Members to appear before the Public Works Committee to oppose the Lake Michigan diversion bill. This bill, if enacted, would permit Chicago to divert more water from Lake Michigan thereby causing a lowering of the level of all the Great Lakes. In spite of a valiant floor fight by Ohio and other Great Lakes congressional delegations, the bill passed the House. However, because of the increased opposition of Canada, when the bill reached the Senate floor, it was killed for the time being by a vote to refer it to the Senate Foreign Relations Committee.

After three trys the Congress finally passed a housing bill acceptable to President Eisenhowever. The President had found it necessary to veto the first two bills because of their inflationary aspects, and also because they contained provisions which he felt had no place in a housing bill, such as loans for the construction of college classrooms. The bill finally enacted provided sufficient FHA housing insurance authority to provide for early 1960 construction planning, a 2-year, $650 million urban renewal program, authorization for 37,000 public housing units, and $50 million in direct loans for housing for the elderly.

For our veterans, the Congress passed a bill making a major overhaul in the system used to determine pensions payable to veterans with non-service-connected disabilities and to their widows and children. The new bill provides a sliding scale of monthly pensions based on the needs of the veterans. Under this measure no veteran now on the rolls will have his pension reduced or taken away; however, if he qualifies for a higher pension under the bill he can elect to come under its provisions. Generally, the bill will provide higher pension rates than those now applicable.

In the field of Foreign Affairs, we sat many weeks in the committee on the mutual security bill. The legislation which finally emerged from the House-Senate conference provided for an authorization of $3,556,200,000 for the fiscal year 1960—a reduction of $353 million from the President's recommendations. The Appropriations Committee, which provides the funds, further reduced the amount to $3,225,813,000—some $704 million less than the administration had requested.

In the Foreign Affairs Committee we added a new section to the Mutual Security Act calling upon the Secretary of State to set up an Office of Inspector General and Comptroller to enforce fiscal responsibility in any and all mutual security programs.

Another matter of vital concern to the committee was legislation dealing with standards for the issuance of passports. On June 16, 1958, the Supreme Court ruled that the regulations of the Secretary of State denying passports to supporters of the world Communist movement were invalid because of a lack of specific legislative authority. The President on July 7, 1958, requested the Congress to enact legislation granting authority necessary to deal with this matter. The bill which finally passed the House this session authorizes the Secretary of State to deny passports to or revoke passports of persons knowingly engaged in activities intended to further the international Communist movement. Such denial or revocation is made contingent upon a finding by the Secretary that the activities or presence abroad of such persons would be harmful to the security of the United States, and any denial or revocation of a passport under this authority is made subject to judicial review.

A great historical achievement of this session was the passage of statehood for Hawaii. The 99th and 100th Senators were seated as well as an additional Member of the House. Now, for the first time in 160 years, there is no Territorial Delegate serving in the House.

As an interesting finale to the long, long session, I went with my subcommittee chairman, the Honorable WAYNE HAYS—Subcommittee on State Department Organization and Foreign Operations—to Moscow. Primarily we went to see the U.S. fair, to see for ourselves the standards set and upheld and to evaluate somewhat its effectiveness. It would be difficult to imagine any combined effort of Government, private industry, and the whole personnel group which could have done a better job. The eagerness of the visitors told the story. The hunger, on the faces of those in the book exhibit especially, in the area where they could pick up and read magazines and books somehow made the whole effort, which was a tremendous one, more than worthwhile. Mr. Harold C. McClellan and all those associated with him, young and old, in and out of Government and industry, deserve their country's grateful thanks.

The 1st session of the 86th Congress is over at last. Sine die adjournment came, as you know, at 6:21 a.m., after a long, long night. Now we have half of September, all of October, November, and December before we come back, on January 6. May we use the time well wherever the days find us.

Did You Read It, Justice (?) Warren?

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. THURMOND. Mr. President, those who advocate so-called civil rights measures in the Congress apparently do so under the mistaken impression that there is an overwhelming demand among the Negro people of the South for integration of the races. While I am not at liberty to speak for other sections of the country, this is certainly not the case in the State of South Carolina, or the South in general. This is best illustrated by a statement of opinion from the Southern Negro Improvement Association, a group of some 5,000 southern Negroes, that the majority of southern Negroes are unalterably opposed to the integration of the races in the South. Legislation which has the integration of the races as its purpose will only tend to destroy the amity and harmony between the races in the South, which has existed for generations. These facts have been piognantly presented in an editorial appearing on Thursday, September 10, 1959, in one of the most outstanding weekly newspapers in the South, the Williston Way, of Williston, S.C.

I ask unanimous consent that it may appear in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DID YOU READ IT, JUSTICE (?) WARREN?

We sincerely hope that Earl Warren, self-appointed dictator over school affairs in this country, reads a copy of the telegram sent recently by Samuel H. Moore, president of a group of some 5,000 southern Negroes called the Southern Negro Improvement Association of Alabama, to President Eisenhower.

Moore told the President that the vast majority of southern Negroes do not want forced integration. This is a statement with which we fully agree as we have long been of the opinion that the majority of neither race wants integration, all of this race hassle having come about through the efforts of a few politicians trying to make political hay, leaders of the NAACP and a handful of misguided "do-gooders."

In his telegram, the Birmingham Negro leader asked for a Government-sponsored poll of southern Negroes to prove his contention. That such a poll would show an overwhelming majority opposing forced integration is beyond doubt.

Moore told the President in his wire:

"I assure you that both races in the South are unalterably opposed to the integration of races in the public schools.

"Racial hate and prejudice that was dead is now reconstructed. Threat of forceful integration has created hate and fear in many of our former white friends.

"Since this is free America, why not put your racial policy upon voluntary action of the citizens, not forceful compulsion? Why

not have the Government take a poll of the majority of southern Negroes?"

Moore said that such a poll should be confined to southern Negroes because our "northern Negro brothers do not live in the South and therefore do not understand our southern bicultural society."

He urged the President not to use force to "integrate the schools and deny our race a major symbol of our progress—all-Negro schools."

If Warren did read this telegram, we can't help but wonder if he scampered off to look at his latest copy of Gunnar Myrdal's communistic mouthings to see if he couldn't find a paragraph on which to hang his answer. Warren, as we have said before, has done nothing but give aid and succor to the Communist Party by his illogical decisions on school integration—decisions that so far have done nothing constructive.

Goals and Hopes, 1959: Some Achieved, Others Remain

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by me on the achievements of the 1st session of the 86th Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

When this 86th Congress assembled last January, the people were told of ambitious programs of legislation which would be enacted and there were predictions that a host of national problems would be attacked vigorously and effectively.

A backward look shows, I deeply regret to say, that in truth one must search painstakingly through the record of the first session to find noteworthy achievements. Though we passed several excellent pieces of legislation, much more remains to be done if we are to discharge our responsibilities to the Nation. Thankfully, a number of measures with unquestioned merit passed one branch or the other, or were put on the calendar ready for early consideration, and can be enacted in the coming year providing a spirit of determined cooperation motivates the second session.

The characterization that some 1959 goals were achieved relates directly to legislation which I have no hesitation in describing as truly significant and constructive and with which I personally had more than a little to do. The Labor-Management Act of 1959 will stand as a monument to the ability of Congress to subordinate selfish interests, to resist intimidatory pressures, to respond to the will of the people, and to approach a pressing national problem from the viewpoint of the overwhelming public interest. The admission of the territory of Hawaii to our Union as the 50th State is a heartwarming and an inspiring demonstration that America not only preaches but in the fullest sense of the word practices democracy in its highest sense.

The labor reform law is without doubt the outstanding legislative accomplishment. This long-overdue statute will protect the public and the members of labor organizations as well against selfish and unprincipled abuses at the hands of some arrogant labor bosses who regrettably have achieved positions of great power. It does not damage or threaten to harm trade unionism. It will put an end to unwholesome conspiracies between a minority of conscienceless employers and labor leaders.

I am gratified that the final version of this legislation contains, with some minor modifications, the compromise bill of rights for union members, which I had the honor of sponsoring in the Senate. As a result, the rank-and-file cardholding laborer in America now is free to speak up in defense of his opinions, to advocate policies and practices in the conduct of union affairs, and to enjoy all of the rights of self-determination within his labor organization which the United States advocates in the field of political government.

In admitting Hawaii to our Union, the 86th Congress has strengthened our Nation and provided encouragement to peoples of many races praying for recognition and greater dignity. I was ranking minority member of the subcommittee which drafted the Statehood Act. Our most distant 50th State will be a meeting place for the ideologies, the religions, the cultures, and the social beliefs of the East and the West. Now enjoying all the benefits of statehood, Hawaii beckons to other polyglot areas of the globe as a beacon showing the way for those with determination and faith. The island State will be a symbol for others working for unconditional acceptance in the family of nations.

The inventory of creditable legislative actions properly should include the measures to resolve the fiscal difficulties which threatened continuance of our Interstate Highway System and to extend the Federal program of investigation into the grave national problem of air pollution. Less satisfaction can be derived from the manner in which there finally came laws extending Federal aid for airport improvements and continuing assistance in the field of housing.

Only partial progress was made toward carrying out President Eisenhower's imaginative and dynamic recommendations for further steps in the international field, moves which would have carried forward U.S. efforts to bolster the prospects of long-lasting peace, through building up less fortunate nations and for countering the Communist threat of economic penetration.

As a convinced supporter of our President in the field of foreign policy, I was happy to have the opportunity to vote for additional moneys for the Development Loan Fund and for establishment of the Inter-American Development Bank. These are meritorious investments in the cause of democracy and peace. I am heartily in accord with the principle of placing greatest possible emphasis on loans in place of grants.

The Inter-American Bank is an especially commendable enterprise. Together with other free republics of the Western Hemisphere, we are sharing in providing the capital for this institution in proportion to our capacities and resources. This is a worthwhile example of international partners putting their shoulders to the wheel in a common interest.

Two years ago, after a thorough review of our mutual-security program, the Development Loan Fund was created. It is to the great credit of Congress that this constructive supplement to our foreign economic policy has been supported with actual appropriations, although not as liberally as circumstances require. This Fund exists to help the economic development of peoples less fortunate than ourselves. It does so by providing long-term repayable loans, instead of grants or gifts, to economically and technically sound projects in a characteristically American fashion.

The question may be asked, Why do we need more such programs and institutions? The answer can be found in recent challenges flung by Soviet Premier Khrushchev. He has emphasized the Communist intention of infiltrating neutral nations and even those siding with Western democracies by economic means. The Soviet leader himself supplied the explanation when he told a group of the Senate: "We value trade least for economic reasons and most for promoting better relations between countries." Stated less diplomatically, this means simply using aid and trade to advance the spread of world communism. The United States cannot afford to lose by default in this field of competition.

In the same way, I felt we were taking constructive action by responding to the President's recommendations in the area of national defense. For myself, I regret some reductions were made in appropriations for certain of the mutual-assistance programs, inasmuch as I am thoroughly persuaded we must continue providing military aid to free peoples.

The negative or debit side of the congressional ledger is a cause for disappointment and, in a sense, stands conspicuously as a shameful blot.

It is deplorable the 86th Congress lacked the fortitude to subscribe entirely to the President's proposals for reinforcing the Treasury's fiscal position by removing an unrealistic interest ceiling which handicaps the sale of Government securities.

Who can enjoy peace of mind in regarding the perpetuation of the farm surplus mess, the refusal to deal realistically with the folly of maintaining a $9 billion accumulation of warehoused agricultural products, and the unwillingness to revise the unworkable price support formulas?

The disgraceful postponement of additional civil rights legislation which the President recommended looms as a painful obstacle in the way of attempts to guarantee minorities of American citizens full enjoyment of the prerogatives and privileges due under our Constitution.

While the Senate in the early days of the session approved a change in rules relating to cloture, my own view is that very little was accomplished in effectively providing for the elimination of the undemocratic filibuster from the Senate. In the closing days of this session, we continued the Civil Rights Commission amid a general commitment that the balance of the President's civil rights proposals will be debated early next year. That will give the country an opportunity to judge whether or not the Senate rules change gives us any more opportunity to proceed, in orderly fashion, toward a final vote on public questions. Let it be clearly understood that the Senate Judiciary Committee has refused to approve any civil rights proposals at all. Thus, if a motion is made to take from the committee any bill on this subject, it is easy to prophesy that an animated talkathon will be launched by way of preventing a vote on the motion. That will be the time to judge whether the rules change is effective. I suggest that if there is to be any civil rights legislation along the Eisenhower lines, it will be the Members of the party of Lincoln who will be required to lead the fight to win.

The slim record of achievement during the recently ended session may be due in large part to the fact that the United States is passing through another one of our occasional cycles of divided governmental responsibility.

With a Chief Executive and Cabinet from one party and with the leadership and the preponderant majority of the Congress representing the opposite political faith, controversy and disagreement were understandably inevitable. To the undeniable credit of the greatly outweighed Republican minority and a segment of Democrats with capacity to rise above partisanship, the brakes were applied successfully to a variety of ill-advised, hastily conceived, freewheeling, spending proposals.

The taxpayers of our Nation should feel grateful that we in the minority thwarted a gigantic would-be boondoggle appealingly put forward under the label of aid to economically distressed cities, and that by upholding two Presidential vetoes we forced abandonment of most objectionable give-away features of the housing bill.

The curse of air pollution, which first was recognized as a real menace as well as an exasperating inconvenience in my own State of California, has been the target of scientific attack by Federal agencies in support of many local, private, State, and other non-Federal groups for a number of years. The Congress which just adjourned gave renewed assurance that resources, know-how, and facilities of the U.S. Public Health Service, the Bureau of Mines, the Bureau of Standards, and other Federal units will be utilized further in the war on smog.

As I pointed out to the Senate several times, this problem is national in scope and significance. There is no denying that while much has been learned regarding causes and character of this phenomenon, our engineers, chemists, physicists, and other technical experts still do not feel they are on the verge of any breakthrough in solving it. Therefore, it would have bordered on the ridiculous to continue the Federal research and investigation program for only 2 years. That was why I insisted the public interest can best be served by a 4-year extension of the 1955 act, which I also had the honor of authoring. Hence, I am heartened the 86th Congress concurred in my urging that this activity be authorized for continuance until at least June 30, 1964.

The threatened breakdown of our highway construction program has been averted, although the way chosen out of our fiscal dilemma is not 100 percent satisfactory. It would have been far wiser and sounder had we raised the gasoline tax 1½ cents for 4 or 5 years, in accord with the recommendations of the President and his advisers. I fear that in these days of ever-mounting demands on the Federal Treasury we will confront another crisis less than 2 years hence.

Writing a promissory note in the form of future diversion of some of the automobile excise taxes in order to pay the Federal share of interstate highway projects is liable to mean only a new necessity of finding a source of replacement revenue to maintain our level of governmental income for general purposes.

It was a matter of pleasure for me that the Congress did see fit to enact some legislation providing limited welfare benefits for our people. In this field, I was happy to be cosponsor of the bill which now is law increasing assistance to retired railroad workers and to have brought about inclusion of California firemen and policemen in the social security system.

Some measures which I had the privilege in cosponsoring moved through the Senate and may next year be approved by the House and thus in time constitute forward progress. Among these are a resolution creating an international medical research institute, to pool the knowledge of many nations in the hope of conquering diseases and ills which know no national boundaries, and another setting up a commission to deal more imaginatively and effectively with recurrent unemployment.

In the next session, I also trust that after years of delay and uncertainty, decisive action will be taken on legislation to provide local governments with limited payments in lieu of taxes which constitutionally cannot be levied on Federal property. The experimental bill, of restricted scope, of which I am a cosponsor, finally received endorsement of the Government Operations Committee and is on the Senate Calendar. This measure, despite its conditional application, would lighten the financial load on many counties in California, where the Federal Government owns almost half of all the land.

The constant hopes of California for Federal assistance in dealing with and overcoming recurrent water problems were borne out to varying degrees in the 1959 session.

A meaningful and reassuring step forward in this field was the decision to provide funds with which the Reclamation Bureau may plan for and proceed with installation of hydroelectric generating facilities at Trinity Dam. This immense new unit of our Central Valley project is progressing ahead of schedule; hence, it would have been foolhardy and undeniably contrary to the national interest to delay longer this decision. In the long run, I am certain the Nation along with California will rejoice that the attempt to emasculate the Trinity law under the guise of a mislabeled "partnership" in power production failed again in the House of Representatives. With this beguiling but unwise proposition buried, the Federal Government now can go ahead at full speed to make certain the Trinity unit will be able to grind out kilowatts as a byproduct to delivering life-sustaining water when the reservoir reaches a working level in 1963.

The first session took commendable action toward satisfying southern California's mounting requirement for added water for domestic, industrial, and municipal purposes and simultaneously meeting central California's acute immediate need for supplemental supplies for agricultural use when the Senate approved the San Luis legislation which I introduced with my colleague, Senator ENGLE, as cosponsor.

Despite heated controversy over the right of Californians to distribute and utilize their own water subject only to limitations in State laws enacted by their own legislature, the measure authorizing joint Federal-State construction of San Luis Dam and Reservoir now is in position for favorable final action early in 1960. As this bill has been reported to the House, I trust that before this time next year Congress will have placed its stamp of approval on the forward-looking plans for building facilities on the west side of San Joaquin Valley essential to rescuing agricultural lands threatened by falling water tables and imperative in bringing into reality intrabasin transfers which will provide added quantities for the thirsty coastal areas from Santa Barbara south through Los Angeles to San Diego.

Similarly, California as a whole can applaud the creation by the Senate of the Select Committee on National Water Resources. With shortages threatening in many areas, new requirements materializing, and pollution uncontrolled, this body of which I am vice chairman will strive to chart a course by which the United States can rectify the shortcomings of nature, profit from the ingenuity of the human mind, adapt new technical and scientific methods, and lay the groundwork for programs carrying the United States into a richer future.

Ever grateful for Federal assistance in conserving and utilizing its water resources, California once more is indebted to the Congress and the executive branch of the Federal Government for continuing aid in protecting its people and their material developments against ravages of nature.

Further participation of the Army Engineers in flood prevention and flood control projects will enrich our State and in turn benefit the entire Nation. With 1960 funds provided for public works, planning and construction will be carried on the length and breadth of our State with such widely separated developments as San Jacinto River-Bautista Creek in Riverside County in our southernmost extremity and the Eel River in the northern Redwood region.

The appropriations will finance continuance of works in the populous Los Angeles metropolitan area, and Black Butte Dam on a tributary of the Upper Sacramento River, and permit a start on New Hogan Dam on the eastern edge of the Central Valley. Funds contained in the 1960 Public Works Appropriation Act will bring near completion badly needed harbors at Playa del Rey and Port Hueneme, and will make possible desperately required improvement at the Port of Redwood City and at Half Moon Bay. Among the long-range flood protection programs which now can be prosecuted with unrelenting vigor are those in the Santa Ana River Basin and on the lower San Joaquin and the Sacramento Rivers.

With our population having passed 15 million and considering our vast area of nearly 160,000 square miles, California requires Federal assistance in these fields. The Congress recognized this by providing $57,082,000 for building and $117,000 for planning flood control works, as well as $13,128,000 for prosecuting improvements of rivers and harbors for navigation.

In addition, because the constant growth and undiminished development of our State mean we must ceaselessly anticipate future needs, the 1960 funds include $575,000 for navigation surveys and examinations and almost $310,000 for flood control investigations.

One highly significant action by the 86th Congress illustrates how the Federal Government can extend a helping hand to local groups who wish to overcome their own problems.

The recent session wisely provided upwards of $10,764,000 for six small water supply and water distribution projects in California which have been planned and engineered by and will be built by local conservation and irrigation districts. These loans under two farsighted laws enacted by the 84th Congress to supplement and complement undertakings by the Federal Government will be repaid by the local groups so that no net expenditure is imposed on the National Treasury, yet Congress contributes toward material progress in overcoming serious water shortages.

By this means, brighter opportunities will be opened for residents of the Chowchilla, Saucelito, Santa Ynez, Pleasant Valley, Georgetown Divide, and Jackson Valley areas of my State.

Forest resources of California are tremendous. Millions of acres of timberland held by our Federal Government are of great present and even greater potential worth to the entire Nation, as well as to the citizens of my State. It is gratifying, therefore, that the 86th Congress made possible a beginning of the comprehensive program for broader utilization and better protection of our national forests. I was happy to have a chance as a member of the Appropriations Committee to support items for fire prevention and suppression, especially in the thickly settled southern California coastal plain, where serious blazes present a subsequent menace of disastrous floods, and for additional access roads so tourists, vacationists, and sportmen, as well as lumbermen, may derive ever-increasing benefit from remote locked-up areas.

The record of the 1st session of the 86th Congress may not be brilliant in comparison with past performance, but the manner in which it was carried on demonstrates the merits and advantages of our traditionally American two-party system.

Our concept of liberty, based on freedom of choice at the ballot box, can be translated into action only through the vigor of our political organizations and the earnestness of the elected representatives of the people. As Senate minority whip, I am devoted, along with my Republican colleagues, to strengthening our party and making it responsive to the needs of the people.

The final decisions reached by majorities of conscientious, patriotic legislators guaran-

tee the permanence of government of the people, by the people, and for the people, in the Lincoln tradition. Our kind of free government would be impossible under patchwork coalitions which guide some Western nations or under the subservient followers of one-party dictatorships that characterize other lands, both inside and outside the Iron Curtain.

Congressman William S. Broomfield Reports to the People of the 18th District of Michigan

EXTENSION OF REMARKS
OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. BROOMFIELD. Mr. Speaker, Congress has completed the first year of what has proved to be so far an extraordinarily busy session. In this report to the people of the 18th District of Michigan I would like to emphasize that it was public opinion, pure and simple, which helped decide many of the issues of the day for us here in Washington.

In almost every instance the legislation passed here in Congress this year was sound and worthwhile. Out of the hundreds of bills enacted into law, only two or three deviated from the principles of a balanced budget and a continuing fight against further inflation which has cost our citizens so dearly in the past.

BALANCED BUDGET

First of all, we were able to achieve a balanced Federal budget, and we have a good chance of even coming out with a surplus by the end of the current fiscal year next June.

Congress appropriated some $73 billion for the multitude of operations of the Federal Government. This amount is $1.9 billion under the amount requested by President Eisenhower, in spite of the fact that a great many Members of Congress were complaining that the President's budget was too stringent in the early months of this session.

It took 10 Presidential vetoes to bring Congress into line with administration policy of maintaining the purchasing power of our dollars, but the President's veto was overriden only once.

Major accomplishments of Congress during the legislative year which just concluded are:

Labor reform: A sound workable program to protect union members, employers, and the general public from violence, extortion, misuse of power, and corruption on the part of some of our labor leaders. This bill, certainly one of the most important enacted by Congress and signed into law by the President, is a direct victory for the people of our Nation, who let their Representatives and Senators know in no uncertain terms that they favored a sound, enforcible labor reform bill.

LABOR BILL OF RIGHTS

In addition to the fund reporting by unions, members are guaranteed the right to attend union meetings, make their views known, nominate candidates for union offices, and vote secretly for these candidates.

A number of unfair labor practices are barred by this new law, in most instances to protect employers and employees of firms who have no active part in a labor dispute.

This bill will permit honest unions to carry on as they have in the past without restriction of their legitimate objectives, but it will serve as a sharp curb against the corrupt elements which have infiltrated into high places in some of our strongest unions.

Statehood for Hawaii: Our first island State was added as a full-fledged member of the Union. Creation of this, our 50th State, carries out a promise made to Hawaii during the last century and means that all territories of our Nation have now achieved statehood.

Gasoline tax: Continuation of our 41,000-mile Interstate Highway System was assured after congressional approval of a 1-cent-a-gallon gasoline-tax increase for a period of 22 months.

DEATH VERSUS DOLLARS

The issue in this matter was death or dollars. If our present traffic accident death rate continues, we will have lost more Americans to traffic accidents by 1975 than our Nation lost in battle in the Civil War, Spanish-American War, World War I, World War II, and Korea combined. This new system of superhighways, while is being built at a rapid rate, has reduced death tolls by as much as 40 percent.

If this extra gasoline tax had not been approved, then a number of States—including Michigan—would have been forced to cut back their construction programs for a 2-year period.

REIMBURSEMENT DEFEATED

Also, I am happy to say that a fight conducted both in my own Public Works Committee and on the floor was successful in defeating a provision which would have reimbursed a handful of States to the tune of $4.2 billion to pay for toll roads which will become a part of the Interstate Highway System. Every cent we can find should go into the construction of these new, safe superhighways. Congress can consider reimbursement of these toll-road States at a later date after the Interstate Highway System is completed. Otherwise, we would have been faced with spending all of our highway funds to pay for roads which are already in existence and none on new construction, which is the purpose of the entire program. The Federal Government pays 90 percent of the cost of these new highways. There is no reason why a few States should be paid 100 percent or better for these roads.

Housing bill: After three tries, Congress approved a housing bill which met with the approval of the administration. Home buyers were given aid to the tune of $8 billion in new authorization for FHA.

GI LOANS INCREASED

Downpayments were reduced, while a new 5¼-percent ceiling on GI home loans was approved to meet current market conditions.

Urban renewal projects will be continued by new authorization included in the housing bill, and colleges will be permitted to obtain loans for dormitories.

Taxes: An additional $175 million a year will be raised through a new system of taxing insurance companies. Current taxes on corporations, cigarettes, liquor, and autos were extended. The power of States to tax corporations in another State was curbed. Hearings and discussions on general revision of income and excise tax laws will start in November, and it is hoped that proposed legislation will be ready to be acted upon by Congress early next year.

Veterans' pensions: A general revision of pension laws was approved by Congress, which, in most instances, increases pensions to veterans to veterans receiving non-service-connected benefits, widows and children of disabled veterans.

NEED STRESSED

Emphasis was placed upon need rather than outright, automatic benefits. Korean veterans were given liberalized educational benefits.

National debt: Because of the budget deficit during the last fiscal year, Congress regretably had to increase the permanent debt limit from $283 billion to $285 billion, while the temporary ceiling was raised to $295 billion. It is hoped that this rise in the national debt, so inflationary in nature, will be stopped by this year's balanced budget and by continuation of sound fiscal policies on the part of Congress.

Health insurance: Federal employees will begin to enjoy medical and hospital insurance at low cost.

GOVERNMENT PAYS HALF

This bill provides that the Government will contribute up to one-half the cost of this insurance, while the employee will pay the remainder. It is expected that this bill will bring health insurance benefits in line with those plans now in effect in many segments of private industry.

Defense: Continued a program of providing funds for missile development, and antimissile missiles to guard our cities against atomic attack; provided extra funds for Army modernization, cut funds for antibomber misile programs, authorized construction of an atomic-powered aircraft carrier, extended military draft for another 4 years. In all, a sound program was enacted to guarantee that our Nation is ever in readiness to cope with Communist aggression in any part of the world.

PUBLIC WORKS "PORK BARREL"

There were two notable failures by Congress. The first was overriding the President's second veto of the public works appropriation bill. This bill contains 67 new projects not authorized by the Bureau of the Budget or the Corps

of Engineers. They are of doubtful value. The danger is that although first-year costs are comparatively low, they will cost our Federal Government some $800 million in future years to complete. In effect, Congress has given authority to dig 67 new basements for buildings which are not necessary. Next year, we can expect that the money to complete these "pork barrel" public works projects will be sought in Congress at a huge, continuing expense to our taxpayers.

As a member of the House Public Works Committee, I consistently opposed this bill to feather the nest of a few Congressmen who want to point with pride at a Federal project in their district.

TVA EXPANSION

Also passed into law was a bill to permit the Tennessee Valley Authority to float bonds to finance new power projects. This bill contains a number of dangers, one of which is expansion of the TVA network of tax-supported facilities at the expense of other areas of our Nation. In Michigan, we have been faced with the situation of State officials from TVA areas coming into our State to lure industry into their home areas. Michigan has contributed a vast amount of tax dollars to help pay for these TVA facilities. In effect, therefore, Michigan workers are being asked to pay taxes so that they can have their jobs taken away from them by cheap, tax-free power provided by TVA.

Other bills passed: Federal aid to States for airport construction and improvement, increased authorizations for the school milk fund program, renegotiation law to recapture excessive profits on defense contracts, new authority for small business loans, rigid enforcement laws to make prosecution of antitrust suits easier, aid to schools in federally impacted areas.

BILLS SPONSORED

Since last January, I have sponsored a number of bills on a great variety of subjects. One of the most important of these is a proposed constitutional change to prevent passage into law of "pork barrel" projects designed to enhance a particular Congressman in the eyes of his constituents by authorizing useless or doubtful Federal projects. This change would permit the President to extract such items from appropriation bills containing otherwise important projects. This is one change which has been requested by Presidents of both political parties for the past half century. So far, Congress has failed to back this very necessary constitutional amendment.

Still another bill I sponsored would do away with our present farm subsidy and price support program. Under the terms of this bill, our present surplus stocks would be "frozen" for a 2-year period while we figured out an orderly plan to dispose of these surpluses which are costing us literally billions of dollars a year in subsidy and storage payments.

COSTLY FARM PROGRAM

Congress failed miserably in dealing with this problem during the current year. Our Agriculture Department budget is the third most costly item for our taxpayers, topped only by defense and interest payments on our national debt.

It seems that some Members of Congress and those who are receiving huge Federal subsidies for storing surplus farm products are the only ones who want to continue the present program. Recent polls of farmers have shown that the majority of them are opposed to our present price support and subsidy programs, and that they feel they should either be curtailed or abolished.

There is a great amount of public funds, dollars collected from the pockets of our citizens, which could be saved by an end to this program of paying farmers for not raising crops, for storing crops which our Nation does not need. We should place these surplus crops on the world market where they belong and permit the price of farm goods to seek their own level. Food, clothing, and products of agricultural goods would be cheaper for all of our citizens if this were permitted to happen.

It is my hope that Congress will take prompt notice of these facts of farm life next year.

SOCIAL SECURITY REVISION

There is a very serious change which needs to be made in our social security laws if our senior citizens are not to continue suffering because of Federal inaction. This change is incorporated in a bill I have introduced to raise the amount permitted to be earned in addition to social security payments. The present limit is $1,800. This should be raised to at least $3,000. The House is expected to consider this proposed change I have introduced early next year when revisions of the social security laws are considered.

Encouragement of the settlement of homesteaders in our new State of Alaska is the reason for another bill I have introduced. It would permit surplus foods to be distributed to these settlers until such time as they obtain title to their land. In my opinion, one of the greatest dangers these settlers face in their first year is lack of food. By distribution of this food from our enormous surplus stocks we would take away much of this fear and thereby encourage more families to settle in this new State. Alaska faces no problems which cannot be licked with the help of more residents. Our Federal Government should take proper action to insure that this State is settled, as it has in former years, to encourage settlement in other States of our Union.

OBSCENE LITERATURE BAN

A bill which I cosponsored to provide the Postmaster General with powers to detain first-class mail in cases dealing with obscene and lascivious literature has passed the House of Representatives and will undoubtedly be acted upon by the Senate early next year. This bill is an effort to further curb the activities of the filth-mongers, who have made a big business out of peddling obscene material to children. This is one kind of racket which must be stopped in its tracks, and I intend to continue to support this bill to the fullest in the hopes that these powers will be granted by Congress so that another weapon can be provided to cut off the huge profits which these dealers in obscenity are making for themselves.

At least a partial victory was won in my efforts to make its mandatory that the cost of overseas congressional junkets be revealed. New rules have been adopted by the House requiring its Members to report their expenses to their respective committee chairman. Not all of these trips abroad are unnecessary or wasteful, by any means. But a Member of Congress should have no difficulty in explaining his reasons for such trips and expenditures of funds to his constituents if he does take them.

BOND ISSUE BACKING

Two other bills I introduced are now in the hands of House committees. The first would provide that the full faith and credit of the Federal Government be placed behind municipal bond issues for sewage treatment and water supply. The reason for this bill is to provide lower interest rates for communities for these very vital projects. At present, our cities and counties are having a difficult time obtaining money at a rate that is not prohibitive, mainly because bond risks are figured on available tax base, not on what will happen in the future. Federal backing of these bond issues would permit communities to construct needed facilities for the future at lower interest rates.

LOCAL REIMBURSEMENTS

In addition, I have introduced a bill which would require the Federal Government to reimburse local communities for local taxes and special assessment payments. At present, the Federal Government is exempt from paying such taxes, and a great number of communities are suffering because of this. Local communities have to provide facilities for Federal installations at no cost or accept whatever the Federal Government decides to contribute as handouts.

Under this new plan, a board would be established which would set up equitable reimbursements to our local communities for the use of these municipal facilities. This would be a much fairer way of doing business.

NEED FOR ACTION

So far, Congress has dodged a number of very important issues, which I hope will come up for final action early next year. We must decide on a broad new program of civil rights so that all our citizens in every corner of our Nation will be able to reap the full benefits of American citizenship and education. We must come up with a farm program which does away with the present topsy-turvy system of paying farmers for not growing crops, which wastes more than a million dollars a day in storage of surplus crops alone, which prices our farm goods out of the reach of our own citizens as well as out of the world markets. We must provide a realistic interest rate policy on our national debt which will not serve to further inflate our economy. We must raise the existing interest rates on long-term bonds just as we have done for savings bonds so that our mam-

moth national debt can be managed on a sound basis.

DISTRICT OF COLUMBIA HOME RULE

We must provide home rule for the District of Columbia. We must give the citizens of this Capital City a right to vote and a right to help in our elective process. We must provide these people with the right of self-determination and stop the practice of using Congress as a mammoth, unwieldly city council.

I have signed discharge petitions to bring the home rule issue to the floor of the House, and I hope that we will at least be permitted to discuss the merits of this matter next year.

OAKLAND COUNTY POLL

Earlier this year, I conducted a poll among 12,000 of my constituents on issues facing Congress. I was careful to send these questionnaires to areas which represented a fair cross section of Oakland County, Mich., the congressional district which I represent. It is revealing at this time to note that a great many of the recommendations of my constituents were in substantial agreement with the action taken by Congress during this first session.

For instance, 63 percent of those who answered the poll indicated that they favored an increase in the gasoline tax to maintain pay-as-you-go financing for our Federal highway program. These citizens said they would be willing to pay the 1½-cent increase requested by the President. Congress approved a 1-cent-a-gallon increase and earmarked a portion of auto excise taxes for this vital program.

HOUSING FUNDS

Some 66 percent were opposed to further increases in funds for housing. Congress held the line on its spending on this program to comply with the President's recommendations. Most of the cuts were in public housing, where the Federal Government has a backlog of better than 100,000 units which have not yet been built although they have been authorized.

Sixty-eight percent opposed added payments under the soil bank plan, while 82 percent opposed our present farm subsidy programs. The soil bank was held at its present levels, but no action was taken to get rid of the subsidy program, mainly because the Agriculture Committee refused to bring any such measure to the floor of the House.

AIRPORT GRANTS

Sixty-seven percent were opposed to increases in grants to airports, and Congress held the line on this program.

A measure which would have permitted the Federal Government to invest its money in cocktail lounges, motels, plush waiting rooms and other luxury facilities was defeated. Federal money will be concentrated on providing vital safety facilities for our Nation's system of airports, safety facilities which are badly needed because of the start of jet passenger service from one end of our Nation to the other at near-sonic speeds.

Those questioned favored a hold-the-line approach on further postal subsidies, and I am happy to say that our Federal Government did not raise the funds available to the Post Office Department for this purpose, nor were new laws passed to increase these subsidies.

UNITED STATES-SOVIET EXCHANGE

Almost 70 percent favored a freer flow of political leaders, students, farmers, businessmen, and so forth, between the United States and the Soviet Union, and we have seen that this matter has been taken care of by a greatly increased number of such visits in both directions during recent months.

It is interesting to note that those who were in favor of greater Federal spending were 64 percent in favor of raising extra revenues necessary through higher taxes, rather than through an increase in our national debt, which has now reached the staggering sum of $290.1 billion. Because we were able to pare costs and trim unessential programs, no tax increase has been necessary and none is foreseen for the coming year. We have proved that a great amount of money can be saved by wise and judicious appropriation and authorization of funds by Congress, and by enlightened and sound administration by our President and his executive branch of the Federal Government.

LABOR REFORM

Although the question of proposed labor reform legislation was not included in the questionnaire—because no labor reform bills had been seriously considered by either the House or the Senate at the time the questions were formulated—no questionnaire was necessary on this issue. The mail into my office and those of most of my colleagues in the House became a deluge. In almost every instance, union members and nonunion members asked for strong labor reform legislation, and they got it.

This was a remarkable example of democracy in action, of the weight of the individual voter making his wishes known on a problem of importance to all of us in the United States. The House Post Office reported that mail has never been so heavy since President Truman relieved General MacArthur of his command in the Far East.

All in all, it demonstrated that the people of our Nation know what they want, and they are not taken in by propaganda schemes and campaigns. It shows that they still can make their views felt on Members of Congress, and that our principles of government are still sound and working in topnotch shape.

SOUND BUDGET

They have voiced similar approval of attempts to run our Federal Government in an orderly fashion with a balance between income and outgo. They have proved that they are more interested in maintaining the value of the dollar at home and abroad than in being lured by the lorelei of free Federal projects for their areas which would surely force our Government even closer to the financial rocks.

VOTERS VICTORIOUS

The voter has proved that he is still king in this country, as he should be, and that we in Congress are but servants of the people, not their masters.

If there is any doubt of the strength of our people, in their belief in freedom and individual expression, in the control which they have over their Government, then they should look to the record of Congress for an indication, as well as to a national income which is rising to record heights, a gross national product which is expected to increase sharply by the end of the year, and a renewed confidence and stability by all segments of our population in our ability to continue to lead the world in achievements in every field of worthwhile endeavor.

One method of making our democracy work is to bring a Congressman close to those he represents, to see that he makes himself available to hear complaints, to answer questions about the Federal Government and its operations, to discuss future policies of Federal agencies as established by the House of Representatives and the Senate.

DEMOCRACY IN ACTION

As I have in the past, I intend to continue my policy of talking things over with my constituents. During the month of October, I intend to visit every community in my district. Also, my district office at 2300 North Woodward, Royal Oak, will be open as well as my office in Washington in room 1422, New House Office Building. If any of the residents of Oakland County would like to discuss any matter with me, I will be most happy to do so.

The record we have achieved so for in Congress in balancing the budget, holding the line on useless and unnecessary Federal expenditures, drafting adequate labor reform legislation, and providing for continuance of our highway construction program, has been excellent in almost every case. We must continue this dedication to duty, in making sure that the hard-earned money collected from our taxpayers is used wisely and well.

CITIZENS' INTERESTS FIRST

Next January, Congress will convene again to debate the problems facing our Nation and the world, and will try to come up with the right answers. It is my hope that next year will be as successful in its attempts as the present one, and that issues will be met head-on and problems solved promptly and efficiently, always keeping the interests of our citizens in mind.

The best method by which this can be accomplished is through close cooperation between the Congressman and his constituents. Letters and personal discussions are invaluable aids in learning all sides of an issue, and I intend to spend my time between now and the reconvening of Congress in finding out the views of those I represent. All are welcome to come in and discuss Federal problems with me.

Hon. Thomas H. Burke

SPEECH

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. HAYS. Mr. Speaker, the death of our fellow Congressman and friend of

many of us, Thomas H. Burke, is a grievous loss to Congress and to the labor movement. Tom Burke will long be remembered here for his integrity and for his diligent work on behalf of social legislation. I am proud that Ohio sent Tom Burke to Congress. His work here on the Education and Labor Committee in the 81st Congress was outstanding, not only because he could draw on his years of experience as a union man, but because he was ever willing to listen to the views of others as well as to express his views to them.

He was a most fundamental and thoroughgoing believer in the democratic process. He loved debate. He loved analysis. He loved the freedom of intellectual exchange on the tough matters that come before the Congress. He had faith that right would prevail if reasonable men would honestly and sincerely meet their legislative challenges. And what was "right" for Tom Burke was the public interest.

Most outstanding about my friend Tom, I think, was the charm with which he could at once advocate strenuously those causes dearest to him and yet exhibit an almost palpable desire to understand his opposition. This quality, the mark of a guileless honest democratic intellect, will sustain him in the memory of colleagues on both sides of the aisle in the House.

He brought much to the Congress both as a Member and as a legislative representative for his union and he leaves us improved for the long hours he spent here with us.

Of Tom's life, the men and women of labor who sent him to us can be most proud. We, his friends in Congress, share with them the appreciation of this exceptional and saintly man. We grieve together with all of them and with his family at his passing.

In Washington With U.S. Senator Hugh Scott

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a summary of activities and comments upon my first session in the U.S. Senate, which I propose to send out as my regular newsletter to the people of Pennsylvania upon adjournment.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

IN WASHINGTON WITH U.S. SENATOR HUGH SCOTT

"It may be laid as a universal rule that a government which attempts more than it ought will perform less." (Lord Macaulay.)

By substituting "Congress" for the word "government" in Lord Macaulay's quotation, you can get a pretty good summary of the 1st session of the 86th Congress.

In January the Democrats came roaring into Washington with 2 to 1 majorities in both Houses of Congress and the mistaken impression that they had a mandate which included the keys to the U.S. Treasury. Before President Eisenhower had an opportunity to deliver his state of the Union message, spokesmen for the many wings of the Democratic Party began issuing manifestoes.

Those spendocrat legislative programs, frequently drafted just before a press conference, varied somewhat in details, but all seemed to agree that each thing wrong with the country could be cured by spending another billion dollars. But they reckoned without the immense power of the Presidency, the militant Republican minority and the outrage of the American public which gives mandates to nobody.

The President offered the Nation a program to preserve prosperity and encourage progress, under a Federal budget of $77.1 billion. He warned that he would oppose Federal expenditures above that sum because they would require either increased taxes or borrowing—that hidden tax which creates inflation and drives up the cost of everything we buy.

In the following 9 months the President was able to stop almost every measure he did not want through the use of the veto or the threat of the veto. I was firmly in support of the President's proposals in every area except housing and public works—two fields where I believe the Nation, and our Commonwealth, need more help than the administration programs offered. I voted for substantial reductions in spending in other areas to compensate for the slight increased spending provided in the housing and public works bills.

Although the President could not get all the legislation he requested of Congress, since the Republicans constituted only one-third of the votes, he did succeed in forcing through several important laws. The most notable of these was labor reform.

Many legislators can claim authorship of the labor reform bills and amendments accepted by either the House or Senate. But the law as finally enacted should be called the "Eisenhower act," because it contains the key reform provisions which he urged upon Congress and which he explained to a nationwide television and radio audience. The public response to the President's broadcast was overwhelming. My office alone received some 9,000 letters and telegrams (all of which were answered, I am proud to say). These reforms will protect equally the public, union members, and honest union officials from the marauding of the minority of embezzlers, thugs, and extortionists in organized labor.

But although the President was able to stop almost everything he opposed, the "Won't Do" Congress balked in many areas very much in need of legislation. Civil rights, area redevelopment, and farm subsidies are three that are worth examining.

In civil rights, the President proposed a reasonable seven-point program. I cosponsored those proposals, plus two more which would have gone further than the President requested. Congress passed only one, to extend the life of the Civil Rights Commission.

For area redevelopment, the President proposed legislation which would provide $53 million for depressed areas like those we have in Pennsylvania. Believing that more money was needed, I sponsored an area redevelopment bill which would provide $203.5 million, and which I am hopeful that the President would sign if enacted. The Democrats sponsored a similar bill providing $389.5 million. The President is certain to veto the last, and for that reason, I voted against it when it reached the Senate floor.

The Democratic area redevelopment measure passed the Senate, but when it went to the House, the House Banking and Currency Committee trimmed it down to $251 million—almost the amount of money which I had proposed. Then it went to the House Rules Committee, whose chairman, Representative HOWARD W. SMITH, Democrat of Virginia, promptly pigeonholed it.

This situation on area redevelopment gives the Democrats the opportunity to tell whichever half of the story they find most palatable to their constituents. The members of the Spendocrat wing can point to the big bill they pushed through the Senate. The members of the conservative wing can point to Mr. SMITH who goes off to his Virginia farm whenever he needs to stop progressive legislation.

This measure is hindered by a further political problem. No Democrat wants to enact a bill, like the one now before Rules, which is similar to one introduced by HUGH SCOTT, a Republican.

Finally, Congress failed miserably on farm legislation. The President urged Congress, in his state of the Union message and in a special message on the wheat bill, to reduce subsidies which are hurting farmers, consumers and taxpayers alike. But the Democratic majority enacted a bill (that I fought at every step) to raise subsidies, which in these times of farm surpluses is like pouring water on a drowning man. The President promptly vetoed the bill and nothing was enacted.

If logic were to prevail, we could say confidently that some farm subsidy relief is likely to be enacted in the next session of Congress. But logic does not prevail among those who are more concerned with the welfare of wealthy farmers and farm corporations than they are with every one else in the Nation.

Also of interest to Pennsylvanians:

I was sponsor and cosponsor of 14 bills and resolutions which became law. They include Hawaii statehood, increased benefits for retired employees under the Railroad Retirement Act and "Captive Nations Week." I supported and voted for the public works appropriations bill which provided funds for flood control, locks, dams and navigational aids to many areas of the Commonwealth. I helped in the Senate with Congressman GAVIN'S bill which authorizes a fish hatchery in northwestern Pennsylvania; also Congressman BUSH'S bill to establish Little League Baseball Week.

Other legislation which passed and which I voted for included: increased veterans pension benefits, Federal employees health insurance, extension of emergency unemployment compensation, two improvements in the immigration laws, mutual security, a bill to clarify taxation of interstate business and the highway financing bill.

Montana Increases Its Share of Federal Funds

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me relative to the State of Montana increasing its share of Federal funds.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MIKE MANSFIELD

MONTANA INCREASES ITS SHARE OF FEDERAL FUNDS

Montana has again increased its share of Federal funds that are distributed throughout the 50 States in the form of grant-in-aid programs, salaries and maintenance for Federal agencies, and construction funds for various federally sponsored projects. A survey of fiscal year 1959 expenditures indicates that Montana received slightly more than twice the amount that the State contributed in the form of income and excise taxes.

In fiscal year 1959, which came to a close on June 30, 1959, Montana and its residents received $286,288,970 in Federal moneys, an increase of $52,165,414 over the previous fiscal year. According to early estimates an additional $11,020,115 will be channeled into the State during the current fiscal year, 1960.

In fiscal year 1958 the Treasury Department collected $138,940,000 in income and excise taxes in the State of Montana. On the basis of these tax collections in our State compared with the amount of money spent by the Federal Government in Montana during the same period, Montanans received $2.06 for every $1 collected in taxes by the U.S. Treasury.

The Department of Agriculture continues to be the largest contributor to the economy of the State. This includes funds expended in its many diverse activities, such as research, the Forest Service, the soil-conservation program, the soil-bank program, the Rural Electrification Administration, and the Farmers' Home Administration, to mention only a few. The second largest contributor is the Department of Defense with the increased Air Force activities at Malmstrom Air Force Base at Great Falls and the Glasgow Air Force Base. The Department is planning new Army National Guard Armory construction at Butte and Plentywood.

The Department of Commerce is also among the top three big spenders in Montana. A large part of their expenditures is centralized in the Bureau of Public Roads and its work on the construction of the Interstate Highway System, which is now well underway in the State. Also, the Bureau of Census activities will increase during the current fiscal year, in view of the preparations and work needed for tabulating the new 1960 census.

On the back of this sheet is a tabulation of the expenditures made by the departments and agencies of the Federal Government that are active in Montana—actual expenditures for fiscal year 1959, estimated expenditures for fiscal year 1960, and a column indicating whether we may anticipate an increase or decrease in the funds to be expended in the current fiscal year. [Printed below in RECORD.]

The 1st session of the 86th Congress has been a busy Congress—we worked hard—and Senator MURRAY, Congressmen LEE METCALF, LEROY ANDERSON, and I were fortunate in obtaining some big items for Montana, but we also actively supported legislation which will benefit Montanans in many different ways. We are in the Nation's Capital to assist and to help, whether it be a major emergency such as the earthquake in southwestern Montana or whether it be a problem of concern to only one individual.

Federal expenditures in Montana, by Federal departments and agencies

Department	Fiscal year 1959 actual	Fiscal year 1960 estimate	Increase (+) or decrease (−)
Agriculture: Agricultural Research Service, Extension Service, Forest Service, Soil Conservation Service, ASCS, Agricultural Marketing Service, soil bank program, Commodity Stabilization Service, CCC, REA, FHA, Federal Crop Insurance Corporation, General Counsel	$101,992,229	$98,845,151	−$3,147,078
Defense: Army, Navy, Air Force	72,817,000	77,419,000	+4,602,000
Commerce: Bureau of Census, Coast and Geodetic Survey, Bureau of Public Roads, Weather Bureau	31,886,615	38,057,106	+6,170,491
Interior: Bonneville Power Administration, Bureaus of Land Management, Indian Affairs, Reclamation, Geological Survey, Mines, Sport Fisheries and Wildlife, National Park Service	29,221,807	34,799,715	+5,577,908
Veterans' Administration	18,527,000	18,527,000	
Health, Education, and Welfare: Printing House for Blind, Office of Education, Office of Vocational Rehabilitation, Public Health Service, Social Security Administration	11,092,394	10,098,751	−993,643
Post Office	9,521,221	9,852,000	+330,779
General Services Administration	6,161,751	4,859,800	−1,301,951
Labor	2,848,398	2,599,871	−248,527
Treasury: Bureau of Customs, Internal Revenue, Savings Bonds Division	1,378,438	1,393,825	+15,387
Justice: Legal activities, Immigration and Naturalization Service	767,574	777,500	+9,926
Interstate Commerce Commission	46,602	51,425	+4,823
Office of Civil and Defense Mobilization	27,941	28,000	
Total	286,288,970	297,309,144	+11,020,115

Raytheon's Modern Flight Facility

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. LANE. Mr. Speaker, Raytheon Manufacturing Co. is one of the industrial giants that is contributing so much to our national defense.

Its research and development programs are among the best.

It was my privilege to be a guest at the dedication of the Raytheon flight facility at Bedford, Mass.

This facility will represent the first military use of this advanced concept in hangar construction, and is a monument to the Navy's "forward look" philosophy.

The list of speakers at the dedication ceremony include G. E. Bottjer, master of ceremonies; T. C. Wisenbaker, manager of Raytheon Missile System Divison; Capt. T. C. Herlihy, district supply officer, First Naval District; Capt. T. J. White, deputy district public works officer, Bureau of Yard and Docks; C. F. Adams, president of Raytheon Co., and Rear Adm. R. E. Dixon, Chief, Bureau of Aeronautics.

Under unanimous consent, I include in the RECORD the following address delivered by Rear Admiral Dixon, which I recommend to all persons who are interested in our Nation's continuing progress in defense:

HANGAR DEDICATION REMARKS BY REAR ADM. R. E. DIXON, CHIEF, BUREAU OF AERONAUTICS, BEDFORD, MASS.

Congressman LANE, Mr. Adams, distinguished guests, ladies and gentlemen, aside from the fact that I am greatly honored to appear here today, it is a real pleasure to visit New England. It is also a real pleasure to meet with old friends here, and to make new ones.

We in the Bureau of Aeronautics think we have a good air-to-air guided missile, and its name is Sparrow III. We take a good deal of pride in Sparrow III for several reasons:

It is the result of a genuine cooperative effort between the Raytheon Co. and the Navy. We in the Navy like to think we have excellent relations with American industry, and the Sparrow III program from the beginning has illustrated this. It was Raytheon who had the initiative to come to us with a superior guidance system for air-to-air missiles which was accepted and made into a superior overall missile system. May industry always feel free to come forward with what it thinks is good, and may we always have the foresight to recognize it when it comes.

Sparrow III is operational in the fleet. This is where it counts; this is the proof of the pudding. There can be no better documentation of its success than to tune in on what fleet pilots who have fired the missile think of it. While I cannot read to you from classified reports from the fleet, I can tell you that Sparrow III's success has been more than noted by Navy all-weather squadrons everywhere. These squadrons now honestly feel that they have in hand a realistic and effective air defense system, in spite of admitted complexities of the all-weather intercept problem.

Although, as we say, Sparrow III is now in the fleet and on McDonnell F3H–2N aircraft, we are also most expectant of similar success when the fastest all-weather fighter in the world, the McDonnell F4H–1, joins the operating forces, also with Sparrow III.

Concerning the Sparrow III-F4H–1 system, I always get a bang out of an incident which happened near St. Louis, and which perhaps dubiously describes F4H plus Sparrow. It seems that an F4H–1 with dummy Sparrows was being ferried to St. Louis from the West when all its radios went out over western Kansas. The F4H pilot saw an Air Force B–47 headed in the direction of St. Louis and got a piece of one radio working to the extent of being able to talk to, but not receive from, the B–47. The F4H pilot would ask questions to which the B–47 people would answer "yes" or "no" by head shaking. On determing that the B–47 was going to St. Louis, the F4H pilot asked to accompany it. He later learned that the B–47's pilot had a conversation with St. Louis that went something like this:

"We have a Navy airplane in tow with radios out; they will come in with us."

"What kind of a Navy airplane is it?" asked St. Louis.

"We don't know what the heck it is, but it looks like the one Buzz Sawyer flies."

Ladies and gentlemen, our purpose here today is to call attention to this fine new hangar you see before you. We have mentioned airplane and missile systems, but it is in this hangar that work will be done to finally bring the elements of such a system together. It is here that the missile, its launcher, and the control apparatus inside the airplane are joined to round out the all-weather air defense weapon. We are talking about the airplane-missile system now being put together for the Navy, but we should also bear in mind that this hangar will serve as a center for many other developments of a research and testing nature.

When we in the Bureau of Aeronautics outlined specification for this hangar, we did not call out much more than the facts that we wanted:

Low construction cost.
Low maintenance cost.
Rapid design and construction.
Flexibility in its use.

What you see here, I think, stands as a tribute to the all who had anything to do with its design and construction. This hangar is a truly versatile facility. So far as I know, it is the only suspended roof type hangar built for the armed services; the cables by which the roof is suspended are prestressed. This type suspension roof, incidentally, is well on the way to becoming a standard type in future Navy hangar construction.

The hangar's modular design gives it flexibility in terms of being readily expandable into a larger installation should the need arise. As you inspect it, you will notice other evidences of the sharp thought that has gone into it, such things as two sizes of doors for different size aircraft; improved fire protection; provision in the large doors for seasonal temperature changes, and so on.

But perhaps the main feature of this hangar is that it is more than an aircraft hangar. It combines hangar, workshop, and laboratories, providing in one spot a self-contained, self-supporting activity, so designed in the interest of economy and efficiency.

If we may turn our attention from hardware to people for a moment, I would like to to say that we in the Navy are aware of the fact that the individuals who will work in this hangar are the ones who will make it come alive. The finest facility ever built is for naught without the spirit, the drive, and the dedication of its inhabitants to the job to be done. Where this hangar is concerned, and where people who will work in it are concerned, we in the Navy have no doubts.

Mr. Adams, it becomes my pleasurable duty and privilege to commission this Bedford hangar and to dedicate it to the work our country is going toward strong defenses for lasting peace in the world.

Thank you.

A New GI Foreign Trial

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BOW. Mr. Speaker, the failure of the United States to protect the rights of servicemen stationed overseas is again arousing the interest and indignation of the American press. Under leave previously granted, I include the following editorial from the Columbus, Ohio, Dispatch of September 10, 1959.

A NEW GI FOREIGN TRIAL

The iniquitous status of forces treaties, by which American service personnel overseas are made subject to the criminal laws and court procedures of some 50-odd countries where our men are stationed, still are in effect.

Not much has been heard of them lately, largely because no conspicuous cases of mistreatment or injustice to GI's have been publicized. Now an instance has appeared which brings the issue again to the fore.

Three American soldiers in Turkey were arrested for alleged black market currency operations.

When they denied the charges the Turkish police struck and tortured them. One sergeant was kicked, beaten, and deprived of water during 18 hours' questioning. Another reported that he was hung upside down from a rafter and belabored with a rubber hose.

Army authorities learned of the mistreatment and finally intervened on the men's behalf. But the U.S. State Department, fearful of offending the Government of an ally, tried unsuccessfully to hush up the story.

It now has found its way into the American press.

The U.S. Supreme Court has ruled that murderers and rapists and other criminals in this country must be hustled before a magistrate for arraignment without delay, otherwise confessions obtained by interrogation are invalid.

But the GI, oftener than not an involuntary draftee, serving his country in a foreign country has nothing resembling this protection.

Not only can he be tortured and mistreated indefinitely, but his case is heard in a foreign court, subject to a judicial code which in many instances is harsh and unfair by American standards.

The Turkish episode is still another reminder of a glaring error which Congress should move to correct in simple justice to every man overseas in an American military uniform.

Address of Hon. Paul H. Douglas, of Illinois, Before Second Annual Convention of the Illinois State Federation of Labor and Congress of Industrial Organizations, September 8, 1959

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the RECORD the speech which I delivered to the convention of the Illinois State Federation of Labor and Congress of Industrial Organizations in Chicago on Tuesday, September 8, 1959, in which I analyzed some of the basic issues before the Congress, the labor movement, and the country in connection with labor legislation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY U.S. SENATOR PAUL H. DOUGLAS BEFORE THE SECOND ANNUAL CONVENTION OF THE ILLINOIS STATE FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS, TUESDAY AFTERNOON, SEPTEMBER 8, 1959

Hon. PAUL H. DOUGLAS (U. S. Senator from Illinois). My old friend Reuben Soderstrom, friends and fellow members of the labor movement of Illinois, I understand that today is politicians' day [laughter] and that you want to get rid of us so that you can get on with the business of the Illinois labor movement.

We meet, good friends and brothers and sisters, at a critical time in the history of our country and in the history of one of its central institutions, the labor movement. We are faced, not only with the question of how we may best resist the threats to freedom posed by communism, but also with the issue as to how we may best eliminate dishonesty and unsavory alliances within the American labor movement itself, at the same time that we encourage honest and progressive unions to fulfill their historic mission of helping the weak and developing democratic institutions which strengthen our national life.

As one who has been a member of the labor movement nearly 40 years, and who has worked with you to enact measures to help the conditions of labor, I think I am entitled to speak frankly to you, and I shall do so this afternoon and make what I am afraid will not be regarded as a political speech.

We need to remember that honest unionism has its internal as well as its external enemies. Both groups have contributed to the legislative crisis with which we have been faced in Congress and in the Nation.

LABOR'S INTERNAL ENEMIES

First, let me speak frankly about the internal enemies of labor. The misdeeds of a substantial group of so-called labor leaders—as revealed in evidence presented to the McClellan and other committees—are both more serious and more widespread than was formerly believed. These men have done more harm to the labor movement than anything that has happened in a long time.

There is no use for us of the labor movement to pretend otherwise, or to try to protect them merely because they carry a union card.

It is true that these wrongful acts are not characteristic of the vast majority of unions. But they are still too many and too serious.

It is true that the responsible leaders of organized labor, such as George Meany, Walter Reuther, Al Hayes and a host of others, have fought these abuses with all the strength they possess and have taken severe disciplinary action against many of the worst offenders. All credit to these men and to the AFL–CIO which has stood behind them. But it is still true that valiantly as these honest leaders have fought, and real as the improvements which they have effected are, there is nevertheless a whole deluge of abuses which they have not been able to cure, but which definitely need to be removed and to be removed as soon as possible.

It is true that unions are not the only places where gross abuses of power and downright corruption occur. It is true that between 600 and 1,000 cases of bank embezzlements by hitherto trusted officials come to light every year, while numerous other cases are hushed up and are never known about. It is true that hundreds of millions of dollars ($300 millions, according to the last figures I heard of) of social security contributions withheld by employers from the payrolls of their workers have never been turned over to the Treasury as should have been the case.

But this does not excuse those union officials who have misappropriated the money contributed by their members.

It is true that there is a good deal of corruption in business circles in the widespread padding of expense accounts, in charging off excessive entertainment costs as business expenses to reduce their taxes, and in the use of gifts generally to purchasing agents as a covert form of bribe.

These are some of the moral sicknesses of American society and of erring human nature. I do not blame labor for resenting the general tendency to headline its failures and to play down or bury the news of comparable business corruption and abuse. But the fact that dishonesty and breaches of trust are practiced by many of the same people who point the finger of scorn at labor does not excuse those few labor leaders who have the same lax standards. The fact that others are doing something wrong does not give anyone a hunting license to go and do likewise.

The very fact that labor is a movement dedicated to helping the individually weak and to aid the relatively more hard-pressed groups in the Nation should make members and officers live according to a higher standard than that of the average of society.

No sane person expects men in the rough and tumble of life to become plaster saints. But, even though as mortals we are not perfect, and at times are even sinful, this does not mean that we should give up the struggle to make ourselves and our institutions better. And we do not have to be granted the credentials of a saint before we have the obligation to help clean up ourselves and the world about us.

After a fairly wide acquaintanceship, I can say that I have known only three saints, of whom at least two (one of them Jane Addams, of this city) were bitterly attacked. If we only permitted the saints to take the lead in the field of reform, there would be far too much work for too few people. So the rest of us erring mortals must struggle on at the task.

WHAT'S RIGHT WITH LABOR

I would like, as I speak about these matters and about some of the things in which some labor leaders have erred, to emphasize, however, what is right in labor as well as what is wrong. For we should not forget, and society should not ignore the fact, that when the labor movement began in this country, we had the 12-hour day and the 6-day week, and in steel the 7-day week; that it has been through the efforts of the labor movement, plus the increase in productivity, that the hours were reduced, first to 10 and then 8, and Saturday became a holiday, so that men could see their families on weekends.

It is true that the labor movement has raised the wages of labor. Formerly common labor was 20 cents an hour, and skilled labor was perhaps 40 or 50 cents an hour. Those days are gone, and the standard of living of the American workers has risen, both because of increased productivity and because of the increased pressure of unions.

As one who has had nearly 30 years of experience in struggling for a better protection for old age and protection against the risks of unemployment, I can say this, that we never would have been able to pass old-age pensions and unemployment insurance if it had not been for the devoted work of the labor movement.

My acquaintanceship with Reuben Soderstrom began in those days, and we owe many a debt of gratitude for the way he has helped in both of these matters.

We could not have passed a minimum wage law had it not been for organized labor seeking to raise the wages of those who were not themselves members of unions, but who because of economic weakness suffered from low wages.

We should struggle on to improve the health and health care of the American people. And I can say that in all these battles, we generally have nearly all of the employer groups in the country against us and nearly all the labor groups with us.

The Nation owes the men and women who struggle for these causes a debt of gratitude, because after they have been put into effect, the bitter opponents begin to concede that these measures should have been adopted before they were. But it is always afterward, never before.

I want to pay tribute also to men like John Fitzpatrick who 50 years ago, when the Chicago Federation of Labor was dominated by the racketeers, with Ed Nockels and others threw out, at the risk of their own lives, some of that early group and made the Chicago Federation of Labor a clean organization.

I want to pay tribute to the men and women who at personal sacrifice have defended the rank and file of their members. Those are innumerable.

So along with the statements of what is wrong with labor, let me emphasize again what is right with labor. But let me make two very simple points, and I ask you to ponder about them.

MISLEADERS SHOULD BE RETIRED

It is intolerable to me that men like Dave Beck should have had such tremendous power in a section of the labor movement. It is intolerable that such men as Eugene C. James of the old Laundry Workers Union, and Jimmy Hoffa and Joey Glimco of the Teamsters should continue as union leaders. It is intolerable that others like them should still be in positions of power. It is the duty of all good union men to see that misleaders of labor like these should be retired from office at the earliest possible opportunity and that rules and procedures be adopted which will prevent any such abuses of trust in the future. This is a crucial duty and upon its adequate performance much depends.

CONSTRUCTIVE GOVERNMENT HELP IS NEEDED

My second observation is likewise very simple. This essential job cannot be adequately performed without affirmative and constructive help from Government. Congressional investigating committees are frequently unfair and often violate the rights of privacy of individuals. But the committees have two powers which are essential in digging out corruption and abuses. They can issue subpenas and compel attendance. They can then put witnesses under oath and subject those who testify falsely to prosecution for perjury.

This has enabled facts to be brought out which the AFL–CIO with all the best intentions in the world, would never have been able to disclose. Responsible labor leaders have freely acknowledged to me that the investigation of welfare and pension funds—which I presided over—gave them facts that were the basis of significant cleanup actions which they took.

I do not believe that we could have exposed the men who disgraced the old laundry workers union, or the wine and distillery workers union, and who were in league with some of the most evil forces in this country, if we had not had these powers.

I took pains however to see to it that labor as a whole was not criticized, and I put in the record the facts about honest pension and welfare funds, such as the Painters Union under Charlie Youngblood, and others, Rand and Tom Burke here [applause], to see that a balanced picture was presented.

Moreover, it became apparent that legislation could also do much to help clean up the abuses which were revealed.

It was quite clear more than a year ago that the McClellan committee—like my investigation which resulted in a law to protect welfare and pension funds—had brought to light enough information to provide a sound basis for legislation.

However, there were those who used the findings of the McClellan committee as an attack not so much on the crooks and on corruption as on the labor union movement itself as a whole and the legitimate and needed functions of unions to organize and bargain collectively. In fact, there were members of the McClellan committee itself who seemed far more anxious to smear Walter Reuther and the clean and effective unions than they were to ferret out corruption and wrongdoing.

SENATE PASSED STRONG ANTICORRUPTION BILLS IN 1958 AND 1959

Nonetheless, the Senate of both the 85th and 86th Congresses passed a good strong cleanup bill without the punitive features which were aimed not at corruption but at the labor movement itself.

The first basic principle of those bills was disclosure. Sunlight is a great disinfectant. Much of the evil in the world comes from the fact that men think they can sin in private and their sins will never come to light. To require that essential facts about union receipts and expenditures (or company receipts and expenditures) be made public is an effective way of seeing that the money of the members is well and honestly spent. This was also the basic requirement in my welfare and pension fund disclosure law which, though weakened in the House, still is a great step forward and furnishes a foundation upon which we can build.

The Kennedy bills had similar sets of requirements and, in addition, provided against a number of unethical practices, which I would like to list:

1. There was to be full publicity to members, the general public, and to Government about union receipts and expenditures.

2. Strict penalties were provided for the embezzlement of union funds, false reporting, destruction of records, rigging elections, etc.

3. Men convicted of criminal offenses were debarred from holding office or positions of trust for 5 years after the termination of their sentence.

4. Blackmail or shakedown picketing was outlawed.

5. Periodic and democratic elections of union officers were required; once every 3 years and by secret ballot in local unions, and once every 5 years in the international unions.

6. Trusteeships of local unions by their internationals were limited to 1 year.

7. There were included requirements for partial reporting of management expenses in the field of industrial relations in order to expose union-busting dealings with men like Nate Shefferman.

The bill which passed the Senate last year by an overwhelming vote was defeated in the House by the familiar coalition of the vast majority of the Republicans and the Southern Dixiecrats. This year, substantially the same bill was reported out of committee, including some "sweeteners" such as legalizing prehire agreements in the building industry and allowing economic strikers to vote.

In 1959, on the floor of the Senate, a so-called bill of rights for union members was added. This prohibited coercion against union members and provided criminal penalties to enforce the right of free speech within unions with orderly hearings and trials in cases of expulsion. One very dangerous requirement—later deleted by the Senate—was that each candidate for office was to be furnished with the mailing list of members. This could have been used by employers who, by putting up dummy candidates, could have obtained possession of these lists and thus put economic pressure upon the members.

There were also added provisions outlawing the hot cargo contracts in the transportation industry, dealing with the no man's land problem, restricting picketing where another union had valid bargaining rights or an election had just been held, etc.

KENNEDY BILL WAS MORE EFFECTIVE CLEANUP BILL THAN LANDRUM-GRIFFIN

Now let me emphasize that the drafters of the Landrum-Griffin bill, which was substituted for the Kennedy bill in the House, incorporated virtually all of these features of the Kennedy bill, but in many cases, imposed weaker penalties and greatly softened the requirement on management reporting. The extraordinary spectacle was therefore presented that the bill which the business community was demanding as a tough bill was actually less severe in correcting crookedness and abuses of power inside the unions than the Kennedy bill, which was derided as a "cream puff," "milk toast," "watered-down" measure.

Jimmy Hoffa quickly sized up the situation and correctly remarked that there was nothing in the Landrum-Griffin bill which would hurt him.

Now I am sure that those in the labor movement know that this is true. But there has been so much misinformation on this subject and so much propaganda from the press, the chamber of commerce, and the National Association of Manufacturers that I think it is worth quoting what Senator GOLDWATER, from the extreme right, had to say on the floor of the Senate on August 18, 1959, and I commend this to the editorial writers of the Chicago newspapers. [Applause.] I now quote from a statement of Senator GOLDWATER:

"There are many significant provisions in S. 1555, the Senate bill, which are far more effective in reaching the evils of racketeering, dishonesty, corruption, and abuse of power than are the provisions of the Landrum-Griffin bill, and, hence, in these respects the Senate bill is actually tougher than the House bill."

That is the end of GOLDWATER, and now I will go on with DOUGLAS. [Laughter.]

Thus, what we did in the Senate was to pass an effective cleanup bill—a bill which was a better bill and which went further than the Landrum-Griffin bill in those areas which needed attention. The Senate bills, in both 1958 and 1959, were properly aimed at the real problems and quite properly avoided, in most cases, provisions aimed at weakening legitimate union activity.

In the Senate we largely prevented the adoption of provisions aimed at making a genuine "cleanup" bill a union "smashup" bill.

Furthermore, notwithstanding all the propaganda to the contrary, the Senate bill included both fair and adequate provisions concerning extortionate picketing (which, incidentally, the Landrum-Griffin bill copied almost word for word), hot-cargo agreements, and the "no man's land" cases.

LANDRUM-GRIFFIN BILL STRUCK AT LEGITIMATE UNION OBJECTIVES

In the House, however, events took a different turn. The chamber of commerce, the National Association of Manufacturers, most of the press, the President, and the Republican Party determined to strike at the fundamental objectives of legitimate unionism in the guise of trying to do something about corruption. Not until July 27, and not until after the House Labor Committee had reported out a good bill embodying, for the most part, the principles of the Kennedy bill, did the Landrum-Griffin bill even see the light of day.

As I have already pointed out, it copied the provisions of the Kennedy bill in many respects, except that it weakened those provisions and penalties having to do with the real abuses which the McClellan committee brought to light. But it added three general provisions which were aimed at breaking the weak and struggling unions which are now so valiantly trying to organize in the South and other nonunion areas.

It was especially severe on the textile workers, the retail clerks' unions, and the furniture workers, and in the three provisions which dealt with the subject of "no man's land" cases, organizational picketing, and secondary boycotts.

There was a lot in it which would have hurt honest and legitimate trade unions. Let me deal with these three areas in turn.

"NO MAN'S LAND"

1. When the National Labor Relations Board had jurisdiction, but, for one reason or another, had declined to exercise it, the Kennedy bill provided that the State agencies were to exercise it, but in doing so were to abide by the Federal decisions and the law in Federal courts. The Landrum-Griffin bill provided that State law or lack of law was to prevail. Since most States do not have labor-relations acts—38 out of the 50 States do not have labor-relations acts—this meant that there would be no basic guarantees of the right to join unions and bargain collectively so far as "no man's land" was concerned.

When these provisions went to the conference committee of the two Houses, the Senate made the great concession of accepting the Landrum-Griffin provision, but providing that the area of this no man's land was not to be enlarged beyond what it now is, namely, primarily in the field of small establishments. The fact that this proposal at first was spurned by the Landrum-Griffin supporters showed that they wanted and expected the Labor Relations Board to give up jurisdiction over a large area to which the Labor Relations Act now applies and, by a future administrative refusal to act, to deprive workers of the legal protections which Congress willed them to have. In other words, the industrial jungle which prevailed prior to the Wagner Act was to be allowed to creep back through failure of the Labor Relations Board to act.

The one true remedy for this problem for which I will work, and have worked, is to provide the Labor Relations Board with sufficient funds and personnel so that the law can prevail for anyone, and every one, and then see that we get men on the Board and on the administration of the Board who believe in enforcing the law, instead of using the law to defeat the organization of labor. [Applause.]

So much for no man's land.

BAN ON ORGANIZATIONAL PICKETING

2. Second, and perhaps most important of all, the Landrum-Griffin bill would have outlawed virtually all forms of peaceful, organizational picketing. I have already pointed out that the Kennedy bill had outlawed blackmail and hot cargo picketing. It had also prohibited picketing by one union after another legitimate union had been recognized—and I emphasize that word "legitimate." It cannot be a fake union—or for 9 months where the workers had by vote rejected collective bargaining.

But the Landrum-Griffin bill shut off virtually all organizational picketing, even when the employer was himself guilty of unfair labor practices. Since under the Labor Board's decisions, an employer can campaign against a union inside the factory and can call the employees together in captive audiences for that purpose, to prevent unions from peacefully trying to persuade workers outside a factory or place of business to join a union is highly unfair.

It was designed, as I have said, to prevent unionism from getting a foothold in unorganized industrial areas. This would have kept the South nonunion territory and would have enabled southern employers to pay lower wages and grant fewer fringe benefits than in the North and Midwest. This would have helped them draw industry away from such States as our own, to the damage of our employers and localities as well as our labor. I wonder if this was fully realized by the employers who wrote demanding that the Landrum-Griffin bill be enacted into law.

Now let me emphasize that I most emphatically do not believe in the use of violence or threats of violence in connection with picketing. Nor do I believe in mass picketing, for this blocks the streets which are the property of the community and down which nonunion workers—like anyone else—are entitled to walk. Such acts as these are already illegal under the common law, and they both can and should be dealt with by the local police and courts.

But I do believe that advocates of unionism have the right under the Constitution to try peacefully to persuade other workers to join a union and to do this by signs and by nonthreatening and nonabusive language. If a sweeping prohibition of these rights had been confirmed by law, then the beginnings of unionism in most unorganized areas would have withered on the vine. It would have been virtually impossible for it to have grown, and its present strength would have been gradually eroded.

SWEEPING SECONDARY BOYCOTT PROVISIONS

3. Finally, the Landrum-Griffin bill would have returned to the old mistaken doctrine laid down over 30 years ago by a reactionary court in the Bedford Stone case. It said that the workers in one plant have no legitimate interest in what happens in another plant and cannot withhold their work or custom because the plant is nonunion or is out on strike. By giving all forms of the secondary boycott a bad name, the Landrum-Griffin bill sought to atomize labor and insulate the workers in a nonunion plant from receiving the help which union men elsewhere in the same or allied trades would give.

I concede that the whole question of secondary boycotts is one of the most tangled in labor law and one of the most difficult to regulate. The Taft-Hartley Act sought to impose a more or less blanket restriction which applied primarily to mass or concerted secondary action by labor.

But the Landrum-Griffin bill sought to go still further by imposing these restrictions on union appeals to "any individual," and by broadening the provisions to apply to any union acts "to threaten, coerce or restrain any person." The bill also extended the narrow Senate provisions so as to cover all so-called hot cargo contracts. It would have prevented virtually all secondary action against a firm regarded as "unfair" by organized labor. This would have prevented the garment trades by agreement with the jobbers from eliminating sweatshop conditions in the shops of subcontractors. It would have prevented all appeals to consumers of "unfair" products. It would have prevented workers in plant X from refusing to work on "struck goods" transferred from plant Y, or building trades workers from refusing to work on nonunion material or side by side with nonunion workers. The legal position of the secondary boycott should not be subjected to any such meat-ax treatment.

OLD GOP-DIXIECRAT COALITION PASSED LANDRUM-GRIFFIN BILL

As we all know, or should know, the Landrum-Griffin bill was put over in the House by the old coalition of northern conservative Republicans and by southern Dixiecrat Democrats. I want you to listen to this account of the vote very carefully, if you will. On the key vote by which the Landrum-Griffin bill was substituted for the House

committee bill by the margin of 229 to 201, all but 17 Republicans voted for the Landrum-Griffin bill as did all but 13 Congressmen from the South. Only 17 out of 153 voted against the Landrum-Griffin bill, and 134, I believe, voted for it. The vote of the Republicans was approximately 8 to 1. And this applied also to the southern Democrats; of the 105 southern Democrats, only 13 voted against the Landrum-Griffin bill, and 91 voted for it, one being absent. So that the South voted almost 7 to 1 for the Landrum-Griffin bill. And this was the coalition.

Now I hope I will not be accused of being partisan if I say that the members of the Democratic Party from the North and West stood almost man to man against the Landrum-Griffin bill with only rare exceptions. [Applause.] Of the 201 votes against the Landrum-Griffin bill, 184 came from the Democratic Party, and of these 184, 171 were from the North and the West. And if we come down to cases, there are 14 Democratic Congressmen from Illinois, and 11 Republican Congressmen. All 11 Republican Congressmen voted for the Landrum-Griffin bill; all of the 14 Democrats from Illinois voted against the Landrum-Griffin bill. [Applause.]

Those figures I think can be put down on cards and you should keep them inside your pocketbook. [Laughter.]

I want to say here, too, that part of the bargain was probably a trade by the Republicans of their votes on effective civil rights measures in return for southern support to get the unions. This is the essence of the bipartisan coalition, in which Mr. HALLECK, our neighbor from Indiana, with the aid of the Illinois Republicans, with the possible exception of one Member, and the southern Democrats, led by HOWARD SMITH, of Virginia, go along together. The two groups killed civil rights. The two groups put in antilabor legislation.

This powerful coalition, therefore, seems to have as its main purpose the stifling of the rights and ambitions of those groups in our society who are at the bottom of the economic and social totem pole. I refer, of course, to the weak and struggling unions of the South and other unorganized areas, and to the Negro in the South and elsewhere whose rights can only be gained when he is guaranteed the equal protection of our laws by civil rights legislation and the right to organize and bargain collectively through the unionization of the South. These 229 Congressmen and the forces behind them must bear a heavy burden, for not only do they in effect support the privileges of the strong and powerful, but they have actively worked against the interests of the weak and the poor.

HEAVY PRESSURES GENERATED BY THOSE HOSTILE TO LEGITIMATE LABOR GOALS

They were able to put this over because many employer groups have used the public indignation aroused by the Hoffas, Becks, and Glimcos to strike a body blow at labor organizations themselves. I received at least 10,000 letters and telegrams demanding that I vote for the Landrum-Griffin bill. Many of them were completely sincere, although those who wrote them were imperfectly informed. Some of the letters—I do not know how many—appear to have been coerced and, to support this belief, I now read from two letters which I have received; one signed by a brave woman whose identity I will not, of course, reveal, and the other which though unsigned gives every indication of being genuine. This is the first letter:

"It was my unfortunate duty as an employee of * * * [the name was given, but I will not read it] to have to type an extremely harsh and abusive letter addressed to you. The letter was largely concerned with the Landrum-Griffin bill and was written by one of the executives in the department in which I work.

"I have very little knowledge of the Landrum-Griffin bill but have every confidence that your opposition to it is prompted by a deep concern for what is best for our country as a whole." [I hope you will forgive me if I read the next sentence.] "My husband and I have always regarded you as one of our most capable and dedicated statesmen and have admired your independent stand on all issues.

"The extremely poor working conditions in this company, which has a long record of strong opposition to the labor movement in every way and which is one of the most profitable in the State, is a strong argument for the good the unions have accomplished in other companies."

This letter for the Landrum-Griffin bill was apparently signed by her, but she wanted to clear her conscience by writing me that she was coerced into writing it.

The second letter is this:

"I dare not sign this letter, but beg you to read it.

"I wonder how many other stenographer-secretaries have spent days and days writing and wiring Senators and Congressmen urging support for the Landrum-Griffin bill—contrary to their personal convictions, but in the names of various firm executives, their friends, relatives, and employees. This is not 'thought-control' as in Russia, but certainly not a wholesome atmosphere.

"Please, in evaluating your mail, consider the availability of secretarial service to management who advocate strong labor control—and the lack of it (in large part) to those supporting labor.

"ONE OF YOUR ARDENT SUPPORTERS."

Perhaps the truth of the whole drive was well summed up by our Chicago philosopher, Mr. Dooley, who from his saloon on Archer Road observed as follows over 30 years ago; when he was discussing the open shop:

"An' so it goes on, Hinnissey. An' who gits the benefit? Thrue, it saves th' boss money, but he don't care no more f'r money thin he does f'r his right eye.

"It's all principle wid him. He hates t'see men robbed av their indipindence. They must have their indipindence, regardless av anything else.

" 'But,' said Mr. Hennessey, 'these open-shop min ye menshun say they are f'r unions iv properly conducted.'

" 'Shure,' said Mr. Dooley, 'iv properly conducted. An' there we are: an' how would they have this conducted? No strikes, no rules, no contracts, no scales, hardly iny wages, an' dam few mimbers.' " [Laughter and applause.]

As a result of the tremendous pressures which were generated by those groups who are hostile to the legitimate goals of organized labor, there was an organized attempt to have the Senate accept the Landrum-Griffin bill without any change at all. And a motion to that effect was made by my distinguished colleague from Illinois, the leader of the Repunblican Party. I am happy to say that we resisted these pressures and instead sent the bill to a conference between the House and Senate. I myself would have voted against the Landrum-Griffin bill had it come to a vote in the Senate, because I believe that its punitive provisions more than outweighed those provisions which were designed to get at genuine abuses. I made my position clear to the Chicago papers which attacked me for it.

I was asked by a Chicago newspaper, immediately after the Landrum-Griffin bill was passed by the House, what my attitude would be. I suppose it would have been possible for me to have hedged and to have said I would consider this when the bill came over. But I felt that would not be proper, and I declared that I would vote against the Landrum-Griffin bill if it were not appreciably modified, and take the consequences.

Immediately thereafter the one Chicago newspaper which in the past has supported me came out with an editorial denouncing me. They were, however, kind enough to publish a copy of my reply. If it will mean, as it probably will mean, the united opposition of the reactionary forces of this State, and all the newspapers of this State, I stand by that position. [Applause and cheers.]

CONFERENCE COMMITTEE ELIMINATED WORST PARTS OF LANDRUM-GRIFFIN BILL

I am happy to report that the conference committee greatly limited and modified the worst parts of the Landrum-Griffin bill which went far beyond any attempt at genuine reform. The conference modifications resulted in the following major changes:

We saved the garment industry from the provisions of the Landrum-Griffin bill which would have outlawed their present contracts with jobbers which provide for wages and working conditions in the shops of third-party contractors who actually produce the clothing. Instead, we were able to write in a proviso so that their practices which have ended sweatshop conditions in that industry could continue. A similar protection was inserted for subcontracting agreements for on-site work in the building construction industry.

We also saved the union movement, and the communities and industries that depend upon its rising standards, from the punitive provisions of Landrum-Griffin which would have virtually outlawed all organizational picketing. While these provisions now are not perfect, they changed the fundamental aim or effect of the Landrum-Griffin bill, which was to almost totally prevent the organization of the South and the nonunion areas.

While picketing at secondary-boycott sites is outlawed, the House bill went further and would even have prevented the passing out of handbills or ads in the newspapers. This provision in the House bill was changed so that handbills, radio programs, advertisements, etc., aimed at the public, including consumers, would at least be permitted in these secondary situations. I think that is proper and an exercise of our constitutional right of free speech.

Under the compromise, we also protected the right of employees of a secondary employer to refuse to cross a picket line in the case of a primary strike. The Landrum-Griffin bill, as written, appeared to take this right away.

The conference took out the restrictions of Landrum-Griffin on the right of employees to refuse to work on struck goods.

The conferees eliminated a section of the Landrum-Griffin bill about which no one was even aware until the very last minute—because it was camouflaged in legal language—which would have permitted damage suits against unions which were picketing for legitimate organizational purposes.

Under the Landrum-Griffin bill, union membership lists could be copied by employer stooges and such lists could have then been used by the employers to campaign against an existing union official, and for a management-dominated candidate for union office. The compromise provided that any member who is a bona fide candidate for union office could inspect such lists, but could not copy them, and that mailings must be made by the union.

The Landrum-Griffin bill provided for reporting by the employer in the case of labor consultants, like the union-undermining Nathan Shefferman, or in the case of expenditures of funds against the unions, but only when such expenditures were illegal under the law. The absurdity of this alleged protection is apparent when we ask ourselves,

"How many employers are going to turn themselves in for illegal activities?" Yet we all know that for almost every union official who has gone wrong, a mangement official has made a payoff. The conference committee largely took the provisions of the Kennedy bill on this issue which provides for the reporting of these expenditures, whether legal or illegal.

We also won the provisions that economic strikers can vote in NLRB elections for at least 12 months after the strike begins. And the Senate sections authorizing prehire agreements in building construction were restored to the bill. These were great improvements over the Landrum-Griffin provisions.

FURTHER MODIFICATIONS NEEDED

I do not want to leave you with the impression that the conference committee came out with a perfect bill. There are still some provisions which should be changed or modified, and I hope that this can be done in the next session of the Congress.

The first has to do with the no man's land provisions of the bill. We modified the worst provisions of the Landrum-Griffin bill in this matter. Under the Landrum-Griffin bill, as I have said, the no man's land cases were to be turned over to State agencies, and were to be settled by State law in State courts. We all know what this would have meant in States like Mississippi, Georgia, South Carolina, and some of the nonunion rural States of the Midwest Great Plains. A further defect was that under the Landrum-Griffin bill, it was possible that the NLRB would in the future actually give to the States jurisdiction over cases which it now itself handles.

We modified these provisions so that the NLRB could not refuse jurisdiction over cases it would now take under the standards which presently prevail. We further gave them authority to delegate some of their decisionmaking to the regional directors in election cases. Thus the net effect was to keep Federal jurisdiction in those areas where it now exists, and also to provide a better opportunity for the Board to handle a greater number of cases through its regional offices.

The bill does provide, however, that State agencies or courts may assume jurisdiction over the cases which the Board declines. Because this opens up the possibilities of serious antiunion restrictions in the States like Mississippi, Georgia, South Carolina and some of the nonunion rural States of the Great Plains, as well as in the right-to-work States, I think this provision should be amended. I hope we may by later legislation provide that when the State agencies handle these cases, Federal law with appeals to Federal courts should apply so that we can have some uniform application of labor law throughout the 50 States, and not let the higher standards and business stability of organized areas be threatened by the competition of union-busting, open shop areas.

In addition to the inadequacy of the no man's land provisions—even though they improved greatly on the Landrum-Griffin bill—there is also the problem of employees in the construction industry whose traditional rights were certainly under attack by the secondary boycott provisions of the Landrum-Griffin bill. It has left serious questions of legality with respect to strikes, picketing and boycotts involving contractors and subcontractors, and whether or not so-called on-site picketing in the construction industry would be legal under the bill. I am joining Senator Kennedy in backing further legislation (S. 2643) to correct these weaknesses.

I feel vindicated in my original position that the Senate should not adopt the Landrum-Griffin bill and that the bills should go to conference between the two Houses. I say this because the final bill modified most of those provisions of the Landrum-Griffin bill which went beyond any attempt to stop crooks and racketeering but which struck at the basic and traditional rights of legitimate trade unions.

Consequently, we now have a bill which I supported in good faith and which, for the most part and with some few exceptions, is aimed at the crooks and corruption and those practices which genuinely needed to be changed. At the same time—again with a few exceptions—the bill does not strike down those legitimate union activities which the Landrum-Griffin bill, as it passed the House, would have done.

POSITIVE ACTIONS BY UNIONS THEMSELVES ARE ALSO ESSENTIAL

Legislation and law enforcement, of course, are not the only answers to what is needed for a strong and clean labor movement.

The honest, responsible and democratic operation of unions by their members and leaders on their own initiative is also essential—now as always.

Legal requirements can be—and I believe will be—of great assistance. But they are no substitute for the constant vigilance and positive actions of thousands of local and international unions and of millions of loyal and honest union members. This voluntary self-control is also a mighty bulwark against corruption, and for members' rights, stable labor-management relations, and the public interest.

The internal moves to keep labor's house clean and to scrape off the barnacles or leeches that seek to use the movement for their own selfish ends are also a major protection against ripper legislation which enemies of labor often propose in the false guise of reform. I shall always oppose such hypocritical drives—as in the so-called right-to-work bills—still being pushed in many States. But labor's own record of voluntary action will be its best assurance to the public of the responsibility and maturity which they expect.

The work of the ethical practices committee under the leadership of Al Hayes has been a major step in this direction. I know of no comparable effort by employer groups to rid their ranks of the less-publicized, but no less-prevalent, abuses on management's side. The activities of the ethical practices committee deserve your full support. And I hope that in the internationals, the State and central bodies, and in the locals, as well as at the top level of the AFL–CIO, labor can use this difficult situation in which it has been placed by a small minority of its people, to show the public the essential honesty and responsibility of a movement which has done and must continue to do so much for the achievement of the best promises of American life.

Now let me say this. I have noticed in talking with some rank-and-file unionists that they will excuse the activities of men like Jimmy Hoffa by saying he brings back good contracts to them, he has improved our wages and working conditions, and therefore we do not care what he does, so long as he brings back the bacon for us.

Well, I want to say if that attitude is persisted in, if the activities of corrupt leaders are excused simply because in Robin Hood fashion some of the largess is distributed to the rank and file, the American labor movement will be discredited.

Frequently in politics when some of us have tried to clean up situations we are told, "Well, so and so may be corrupt, but he gets things for the people in his district." And they will excuse him.

What we need in this country is higher ethical standards amongst voters, amongst citizens, amongst employers, amongst professional men, and yes, amongst unionists as well. [Applause.]

In the days when the commies were infiltrating some of the unions and had leadership in some of the unions, some rank-and-file members would say, "Well they may be commies, but they bring back the bacon for us. Why should we oust them?"

Well, thank God the American labor movement has cleaned house in that matter, and I hope we clean house in this matter just as we did in the commie matter. [Applause.]

I can remember the excuses in the 1920's for Sam Insull. When he was bribing the politicians of both parties, people would say, yes, he is a corruptionist, but he turns the lights on for us, or our stock is going up in value. And it was not until there was a financial collapse that Insull lost his standing before the general public. The evils which Samuel Insull sowed in the field of politics in Illinois and Chicago continue until this very day, and it would have been well for the business community of this city if they had shown some moral sense in dealing with Mr. Insull.

I can remember in the summer of 1929, going up and down LaSalle Street, trying to find some businessmen who would help us try to get the financial practices and rate schedules of Mr. Insull probed, and we could only get one man in the entire city of Chicago who was a businessman or a banker to stay with us.

So when people say that labor should clean house, I say, yes, most certainly labor should clean house; but did you clean house on Insull? Are you cleaning house on the people who practice abuses amongst your members? Are we politicians cleaning house as we should?

The truth is that we are sinful and mortal men; but we should try to be better, and for the sake of the labor movement, we folks have to clean house. I say we folks have to clean house because if the Becks, the Hoffas, the Glimcos continue to dominate certain unions, continue to dominate those unions which they now dominate—I have to be careful in what I say—we are in for even worse times than we have at present. Do not let them wrap the flag of the decent honest labor movements around them and drag you down to destruction. Do not let them do it. [Applause.]

THE STEEL STRIKE

Now let me say a word or two about the steel strike. This strike has gone on too long. There is no question but that it affects the entire labor movement and that your interest in the strike, therefore, is as great—if not as direct—as that of the men who are now on the picket line.

The antiunion forces in the country are now making a drive against unions in general. As I have pointed out, these forces wrote provisions into the Landrum-Griffin bill which were aimed at the weak and struggling unions, and at the legitimate activities of stronger unions, in the guise of fighting corruption. The steel industry is further using the cry of "inflation" not only to prevent any forward step in wages or working conditions, but also in an effort to reduce the hard-won rights which now exist.

Now I have examined very carefully the facts which the Department of Labor published only a few days ago on conditions in the steel industry. While hourly wages in the industry averaged $3.10 per hour, when one looks at the average annual earnings of the wage employees, we find that in 1958 these were only $4,840 and, in fact, averaged $510 less than in 1957. Thus, while the industry points to the $3.10 hourly figures in its full-page ads, you and I know that $4,800 per year is barely enough to provide for even the basic needs of a family of five.

But yet we all know that for industry to pay an adequate wage, production must provide the funds to do so. What are the facts about production and productivity in this industry?

The report does not adequately show the tremendous increase in productivity in the steel industry in the first half of 1959, for the Department of Labor combined the figures for the last half of 1958 with the first half of 1959 so that no firm figure for the first 6 months of 1959—when productivity increases have been very high—could be shown.

I believe that working men and women have a right to share in the increase in productivity and the increase in the efficiency of their work. Even from the facts on productivity increase given in the report—which show a 20 point or 13-percent increase in output per man-hour from fiscal year 1958 to fiscal year 1959—it is clear to me that there can be some improvement in wages and working conditions in the steel industry.

This can be based entirely upon increased productivity and can be done without increasing the price of steel or producing inflationary conditions.

These facts present a firm basis on which bargaining in good faith can take place. I say that it is time for the industry to get on with it and try to work out a solution based on the facts. This will benefit the industry, the employees, and the public as a whole.

As you, my friends in the Illinois AFL–CIO, make your plans for the coming year in this convention, I know you recognize that the challenges to the labor movement are great. Your growing power has brought new responsibilities, and an increasing economic, legislative and political pressure from your opponents.

But your opportunities for service to your members, to the underprivileged of all groups, to the economic growth of our country, and to the defense of freedom everywhere are also great.

Now, good friends, it would have been easy for me to have come here, and to have made a conventional speech, saying that all was well in the house of labor, and denouncing the political reactionaries, but ignoring the true issues. But true friends are not those who conceal truth from their friends. Frank speaking, even at personal cost, is necessary in these matters. So I hope that we can go forward, on a double front; that we can cleanse the movement itself, just as John Fitzpatrick and Ed Nockels cleansed the Chicago Federation of Labor 50 years ago, and that at the same time we can defend labor from the attacks of its enemies, get back some of the rights which have been taken away from us, push forward to protect the unorganized and the unskilled, and defend the human and civil rights of all Americans regardless of their race, their color, or their national origin. Thank you very much.

[The delegates responded with a standing ovation.]

To Bridge the Scholarship Gap

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, on February 5, 1959, I introduced my bill, H.R. 4220, to provide for a college scholarship program. In this connection I commend to the attention of our colleagues the article by Fred M. Hechinger, education editor of the New York Times, which appeared in the New York Times of September 13, 1959. Mr. Hechinger is also author of "The Big Red Schoolhouse."

The article follows:

TO BRIDGE THE SCHOLARSHIP GAP—LACK OF FUNDS PREVENTS THOUSANDS OF TOP-LEVEL HIGH SCHOOL STUDENTS FROM GOING ON TO COLLEGE—IS ENOUGH BEING DONE TO CORRECT THIS CONDITION?

(By Fred M. Hechinger)

"Don't tell me that an able boy or girl can't get a college education if he wants it," said my neighbor at a men's service club luncheon in honor of able high school students. "They don't all have to go to expensive schools. There are plenty of scholarships for the really topnotch students. And for the others there are the inexpensive State or municipal colleges."

This view reflects two widely held popular fallacies. The first is that there are enough scholarships to permit all able students who so desire to go to college. There are not. The second is that students attending the relatively low-cost publicly financed institutions of higher learning are not on scholarship. They are—each and every one of them—with the taxpayers providing the scholarship funds. This means that if more students are to be admitted to such institutions, more scholarship money is needed, exactly as would be needed in any effort to admit more needy students to the Ivy League.

For years, the myth has been perpetuated, fed annually by ill-informed, sensational news reports, that vast amounts of scholarship funds go begging. Inevitably the writers manage to dig up a few scholarships left by egotistic eccentrics, attached to so many strings that it is virtually impossible to get the money and a "qualified" student together. But the total amount of such unused money is insignificant.

Significant is the wide and widening gap between the money truly available and the need. What are the facts?

Every recent authoritative study, including that of the President's Committee on Education Beyond the High School, the report of the National Manpower Council, and the Rockefeller Report on Education, agrees on this central finding: between 100,000 and 200,000 high-school students in the top quarter of their class fail to go to college because they lack the necessary funds.

Consider these basic figures, as published by the Bureau of the Census for the year 1957–58: only 10 percent of the Nation's families had incomes exceeding $10,000 a year; 40 percent were between $5,000 and $10,000; 35 percent between $2,000 and $5,000; the remaining 15 percent below the $2,000 mark.

It is easy to guess from these statistics that the cost of a year at college—including expenses, it may range from $800 to $3,000 in privately financed institutions—places higher education, without scholarship aid, beyond the reach of a substantial number of persons.

Nor has the high cost of learning begun to level off. When colleges open this fall, many of them will have raised their tuition charges again. In 1948 Harvard's tuition was $525; this year it is $1,250. Arthur S. Flemming, Secretary of Health, Education, and Welfare, reports that the cost of a college education has jumped about 33 percent over the past 4 years and will rise at least as much again during the 4 years ahead. While the colleges have tried to increase scholarship aid to keep up with the rise in tuition, costs keep outrunning the aid dollars needed to keep the doors of higher education open to all who might benefit, regardless of their parents' bank accounts.

Even this does not tell the entire story. As the economic barrier seems to get higher, the psychological barrier becomes more forbidding. Children of noncollege families are in danger of being given the impression at home that college is for the sons and daughters of the rich. In an eastern factory city, with a population of 180,000, the local high schools this year sent only 15 to 20 percent of their graduates to college. A residential suburb, only 10 miles away, sent more than 80 percent. The barrier of economic need was undoubtedly serious; but even a generous supply of scholarships would not have done away with the 60 percentage-point difference—unless there had been, at the same time, firm guidance and counseling, both for students and for parents.

The crux of the matter, however, is money. How much financial aid is actually available? During the past academic year, the Nation's colleges and universities themselves offered their more than 3 million students about $225 million. This sum included all categories of financial assistance—loans, scholarships, campus jobs, fellowships, graduate assistantships, etc. Added to this was another $75 million from all other sources—State, Federal, community, corporate, etc.

The actual amount of bona fide undergraduate academic scholarship aid, not including loans or self-employment, is hard to assess. The most reliable estimates by education authorities place it in the neighborhood of $100 million. If we were to try to send to college the 100,000 to 200,000 able young people who now fail to continue their education because of financial barriers, additional annual scholarships totaling $60 million to $160 million (figuring the average tuition cost at $800) would have to be provided. And this estimate does not, of course, take into account the additional cost that such a program would mean to the colleges in terms of additional outlay for facilities and faculty salaries.

The figures sound forbidding, and it is easy—as well as futile—to haggle over the exact amounts. But whatever the ultimate need, the central fact is clear: present scholarship money is far from sufficient to meet the justifiable demand. Thus we continue to waste a most valuable kind of manpower.

And yet it is misleading to think of the problem as simply one of looking for more money. At least as important is a more realistic concept of the ways in which scholarships ought to be granted. Listen, for instance, to this typical conversation, recorded by the admissions office of a good college:

"How much money can I get?" asks the applicant.

"How much do you need?" the financial aid officer wants to know.

The student thinks for a moment. "I'm not sure I need any help, but Dad told me that I should be able to get a fat scholarship since I'm first in my class and have good college board examination scores," he says.

"Conversations of this kind have been fairly common in the past, but seem to be less so this year," reports Theodore S. Bacon, Jr., associate dean at Amherst College. "With some exceptions, there has been a major shift in the use of scholarship funds during the last decade."

What is the direction of that shift?

As the name itself implies—and it is probably unfortunate that the label has survived—scholarships were originally meant to be financial rewards for outstanding scholastic achievement. Whether or not the student needed such aid was of little importance, and it was not at all unusual for well-to-do parents to boast of their children's scholarships. Mr. Bacon recalls an application for a scholarship from a family which held well over a quarter-million dollars in assets; another from a family which still owed $6,000 on a yacht. "At the other end of the spectrum," he says, "are those with no visible assets. These people will frequently offer their last dollar to provide their children with the type of education that they themselves could never afford."

The unreasonableness of granting scholarships to those who can afford to pay—in addition to the inequities such a system works on the student of limited means—becomes clear when one realizes that even today's skyrocketing tuition at a privately financed college usually covers little more than half the cost of the student's education. The balance must be made up from endowment income and gifts. This means that even the nonscholarship student receives a substantial hidden scholarship. Since it is generally agreed that college teachers are underpaid and should be entitled to whatever additional funds may be found, it is not farfetched to say that each and every professor contributes indirectly to the scholarship aid of many students who don't need it. (In the publicly financed institutions the difference between tuition and actual cost of education is even greater.)

In recent years, however, the trend has been toward financial need as the determining factor in awarding scholarships. While there have been some ideological objections to the means test, the overwhelming majority view seems to be that in order to maintain a free and democratic flow of deserving young people through the academic pipeline, students desiring scholarships should be required to demonstrate both their capacity to study and their need for financial aid. Today 39 States have some form of scholarship program and 21 of them use some kind of means test to determine the amount of the award.

Perhaps the most dramatic move to focus public attention on the scholarship problem was the creation of the national merit scholarships in 1955. Established with two original grants of $20 million from the Ford Foundation and $500,000 from the Carnegie Corp. of New York, the scholarship agency now invites private donors to contribute to the permanent pool. This year's sponsors include about 90 corporations, foundations, and professional associations. Each merit scholarship is named for its sponsor and represents a commitment within a range of $4,500 to $6,000.

Here, too, the principle of need has been carefully incorporated. A minimum stipend of $100 annually for 4 years goes to winners who are not in need of aid. But the average grant is about $730 a year, with the maximum set at $1,500. While the total number of grants—850 were given in April—seems insignificant, the impact far exceeds these figures: more than 14,500 high schools entered 480,000 students in the 1958–59 competition; there were 10,000 finalists, and a study of last year's contest showed that several million dollars' worth of other scholarships came to the aid of those remaining finalists who did not win merit scholarships.

From the point of view of dealing realistically with the financial crisis of higher education, not just the scholarship dilemma, the most important aspect of the merit scholarship idea may well be that each grant carries with it an unrestricted gift to the college of the student's choice. This contribution, which relieves the college of the burden of its own "hidden" scholarship, may range up to $500 a year, depending on the institution's tuition charge. (Similar matching grants are now also offered in conjunction with some corporate scholarships.)

On their own, business and industry in recent years have substantially expanded their scholarship programs. General Motors, for example, recently selected 118 winners from a field of 20,000 students competing for awards ranging in value from $200 to $2,000 a year for 4 years, according to need. (More and more scholarships are now given on a 4-year basis, eliminating the traditional problem that arose when students were started on their academic careers without sufficient help to make it possible for them to follow through to graduation.) The list of benefactors is expanding and now includes advertising agencies, publications, manufacturers, and retailers. Local 32–B, Building Service Employees, is only one of a number of labor unions which have joined the scholarship pool.

Efforts are also being made to supply the colleges with fuller information on the financial status of scholarship applicants. A most constructive step in this direction was taken recently by the college entrance examination board through creation of the college scholarship service. Under this program, parents of scholarship applicants file a detailed, confidential statement—an elaborate form that looks more complicated than a Federal income tax blank—giving a complete picture of every aspect of the family's financial obligations. The service then sends copies of this statement to all the colleges listed as possible choices by the parents.

As of this term, according to C.S.S. Director Rexford G. Moon, Jr., about 210 colleges, among them some of the top institutions, will be members of the program. These colleges, he says, control 60 to 65 percent of all dollars currently given by colleges and universities in financial aid.

In addition to direct financial aid, student loan funds are open to many men and women at the college level. The subject of loan funds is a good deal more controversial than that of scholarships. Some persons consider it immoral to burden a student with a debt repayable at the end of his college career. Those in favor reply that installment buying is now a way of life and add that experience has shown that higher education is a safe and productive investment for qualified students. Mr. Moon estimates that a student who contributes earnings from a summer job can probably get by with a loan of about $500 a year. "At this rate," he says, "no student would owe more than $2,000 at graduation, a figure somewhere between 30 and 50 percent of his first year's salary."

A loan program, incidentally, is operated under terms of the National Defense Education Act. Each college that wishes to participate must match every nine Federal dollars with $1 of its own. It is interesting to note that in recent months a number of institutions have refused to accept such funds in protest against the provision that students benefiting from the money must sign loyalty oaths.

Whatever aid is forthcoming from Federal or private student loan programs, most observers believe the key to making higher learning available to more qualified persons, regardless of economic status, is increased scholarship funds. They also agree that the burden of providing such aid cannot continue to be met by the colleges. As it is, the colleges are putting about $43 million of current income a year toward scholarships—and this in addition to the built-in, hidden scholarship aid offered to all tuition-paying students.

Recently some colleges have begun seriously to question the entire present pricing structure of higher learning. Last year, Bennington College became the first institution to rebel against the hidden scholarship tradition. It increased its total charge to $2,650—$1,600 for tuition and $1,050 for room, board and health services. But the charge is adjusted to each student's financial situation and monthly payment plans and low-cost loans are offered.

The scholarship problem is still with us. The best that can be said at this point is that financial need as a criterion for granting aid will more and more become the determining factor. If the Bennington experiment should be the beginning of a trend to charge those who can afford it the full cost of their children's education, then it is likely that even the State universities will have to consider raising their relatively low tuitions.

But whatever the course of the future, the high and still rising cost of college for the great mass of lower income families will have to be met by increasing scholarship aid from a multitude of sources: public-spirited citizens and organizations, business and industry, the States and probably, before too long, the Federal Government. The current trend away from haphazard handouts is encouraging. As this trend leads to a meaningful, comprehensive aid program, there is hope that the needy student and available aid dollars will meet as a matter of course.

This will still cost a great deal, but not nearly as much as the waste of human talent which our country must currently enter each year on the debit side of the manpower ledger.

Rev. Ralph J. Diefenbach

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. YARBOROUGH. Mr. President, the tragic plane-crash death of Rev. Ralph J. Diefenbach saddened thousands of Texans. Few men have crowded such a full and good life into 45 years.

He was truly a man who lived to serve his fellow man, and in so doing became a legendary figure while still in the prime of life.

Mr. President, I ask unanimous consent to have printed in the Appendix to the CONGRESSIONAL RECORD the following material on this outstanding American:

A resolution by the Houston-Harris County Tuberculosis Association.

A story from the June 13 Houston Chronicle entitled "Father Diefenbach's Tragic Death Is Serious Loss to Church and City."

A story from the June 11 Houston Chronicle entitled "Plane Crash That Killed Priest, Three Others Probed."

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE HOUSTON-HARRIS COUNTY TUBERCULOSIS ASSOCIATION

"Whereas the sum total of human progress results from the selfless service to mankind of those to whom humanity is more important than self and human welfare is the purpose of life rather than personal gain, and the service that a man performs is the only measure of his achievement and his worth; and

"Whereas Father Ralph J. Diefenbach, who proudly and humbly identified himself only as a parish priest, yet whose boundless faith and energy always kept him active and conspicuous in innumerable affairs in which the well-being of his fellow men, both within and outside his own Catholic faith, was in his short life and forever after shall be a magnificent symbol of the Christ-centered life and a strengthening inspiration to all men who yearn and strive to do their duty to God and man, who devotedly served his parishioners as the good shepherd of the flock, yet found time also to serve those of other faiths whose needs came to his attention, ever showing sympathy, understanding, enduring patience, and love; and

"Whereas in countless ways and places the mark of this man of God has been left, always lifting those whom it has touched, making Houston a cleaner, better, and more

Christian community, thereby benefiting every citizen; and

"Whereas more especially Father Diefenbach has effectively served and led in the public service program of the association, and has been a servant of God and humankind who can never be replaced, and whose death has left a vacancy that will never be filled: Therefore be it

"*Resolved*, That the Houston-Harris County Tuberculosis Association, jointly as a corporate body and as the individual citizens of whom it consists, express its deepest and most profound gratitude for the incomparable work and example bequeathed the citizenry of Houston and Harris County by Father Diefenbach, and spread across its official records for perpetuation in its permanent archives verbal evidence of this expression in humble gratitude to God for giving the community this Christ bearer."

In witness whereof, the undersigned have caused their signatures to be affixed hereto, this 14th day of September, anno Domini, 1959.

ROBERT V. MOISE,
President.

C. A. NEAL PICKETT,
Secretary.

EMMELINE RENIS,
Executive Director.

G. MAXFIELD TAYLOR,
Vice President.

[From the Houston Chronicle, June 12, 1959]

FATHER DIEFENBACH'S TRAGIC DEATH IS SERIOUS LOSS TO CHURCH AND CITY

The tragic death of Rev. Ralph J. Diefenbach in the crash of his light plane, along with three friends from Dallas, has saddened many thousands of Houstonians who knew the priest as one of the city's outstanding religious and civic leaders.

Father Diefenbach was a man of many talents and boundless energy. First and foremost a parish priest, and one of the most effective in the entire Galveston diocese, he also was indefatigable in a broad range of civic activities. He was a musician and a producer of television programs.

Only 45 years of age, he had packed a vast amount of accomplishment into his two decades as a priest, so much so as to become almost a legendary figure while still in his prime.

After serving as assistant pastor of St. Joseph's Church here, Father Diefenbach became a chaplain in the Army and rose to the rank of major. In 1945 he became internationally known when he returned the hand of St. Stephen to Budapest. Refused permission by the Russians to cross the Iron Curtain, he delivered the Hungarians' prized religious relic to Cardinal Mindszenty anyway.

Returning to Houston, he was assigned to take over the newly created St. Theresa's parish. He built the church, school, and Parish. He built the church, school, and other structures on the church property and remained pastor until his death. His outstanding work in establishing the Diocesan Union of Holy Name Societies won for him the Father Kenna award, highest honor of the Holy Name Society. He was the first priest in the Southwest to receive this honor. He also was active in the Catholic Youth Organization.

In the past 14 years Father Diefenbach had served on a great number of boards of civic, cultural, and philanthropic, as well as religious, organizations. He was widely known and admired. Among his many other activities he had been police chaplain here since 1955.

[From the Houston Chronicle, June 11, 1959]

PLANE CRASH THAT KILLED PRIEST, THREE OTHERS PROBED

A team of Government investigators Thursday combed the wreckage of a private plane, to determine the cause of the crash which killed Rev. Ralph J. Diefenbach and three other persons.

The craft plummeted to earth shortly after taking off from Andrau Air Park Wednesday afternoon.

The victims were: Father Diefenbach, 45, owner of the Cessna four-place plane and pastor of St. Theresa's Catholic Church; Ray J. Lockwood, 48, of Dallas, an Army Quartermaster Corps auditor; Mrs. Katherine Lockwood, 41, Lockwood's wife, and their 13-year-old daughter, Patricia Lockwood.

Charles Finch, of Fort Worth, is heading the Civil Aeronautics Board investigating team.

A preliminary inquiry by Emerson Carpenter, CAA safety agent here, failed to establish the cause.

APPEARED TO STALL

A witness said Father Diefenbach's plane appeared to stall while making a left turn at 300 feet, following takeoff.

A spokesman at Andrau Air Park said the flying priest failed to regain control of the plane as it plunged earthward after flipping over on its back.

He said the plane had been righted just before the impact, then skidded 40 feet along the ground before the left wing tip caught the ground, and wrapped the craft up like a ball.

The four bodies were found badly mangled and crumpled together behind the engine in the plane's cabin. Safety belts still restrained the bodies.

PLANNING VISIT

Carpenter said the plane was en route to Galveston, where Mrs. Lockwood and her daughter planned to visit a relative, Mrs. W. L. Nelson.

Lockwood was to have returned to Houston with Father Diefenbach.

Father Diefenbach, a licensed pilot, had served as police chaplain here since 1955.

He received international attention shortly after the end of World War II, when he returned one of Hungary's most prized religious relics—the hand of St. Stephen—to Josef Cardinal Mindszenty.

The relic was removed from its treasure trove during the war and became lost.

American soldiers found the relic—hand of Hungary's first king—and Father Diefenbach, a chaplain with Gen. George Patton's 3d Army, was assigned the task of returning the prize.

ESTABLISHED PARISH

He established the parish of St. Theresa's at 6622 Haskell in 1946, after being discharged from the Army's Chaplain Corps as a major. He also was spiritual adviser to the Holy Name Union of the Diocese of Galveston.

Under his 13-year leadership, St. Theresa's built a new church, a 17-classroom school, library, cafeteria, and rectory. The parish membership exceeds 1,000 families.

Father Diefenbach was the recipient of the 1956 Father McKerns Award from the Holy Name Society.

The award is the Holy Name Society's highest priestly honor, and is given to only two U.S. priests each year.

Father Diefenbach was the first priest from the Southwest to receive the honor.

He was cited by the society for the "excellence of your work in establishing the Galveston Diocesan Union of Holy Name Societies, and in fostering its gratifying growth since 1952."

CIVIC LEADER

Father Diefenbach was active in numerous civic and welfare organizations, and helped mold Houston's Catholic youth organization.

He was a graduate of St. Thomas High School in Houston, and of St. Mary's Seminary here.

Father Diefenbach served as a lieutenant colonel with the 143d Infantry Regiment of the Texas National Guard's 36th Division.

He was well known as a television director and a musician.

The Lockwoods were personal friends.

They are survived by another daughter, Ann, 19, who did not accompany her parents to Houston.

Rev. Thomas M. Cemon, pastor of St. Michael's Catholic Church, and a personal friend of Father Diefenbach, was summoned to the crash scene to administer last rites over the bodies of the victims.

WITNESSED CRASH

Rico Rodriguez of 4009 Artdale, a maintenance worker at the airfield, witnessed the crash. He told investigators:

"I watched the plane as it left the runway. It headed into the wind and climbed quickly. It must have been a little too quickly, for the plane seemed to stall. Then it nosed over and plunged straight down."

Father Diefenbach, an accomplished pilot for more than 10 years, had purchased his second-hand airplane early this year.

The Vexing Problems of Our Aging Population Demand Affirmative Legislative Action

---

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. VAN ZANDT. Mr. Speaker, although the desperate plight of the aged has been apparent for years, it has been reemphasized by the White House Conference on Aging Act, approved by the 85th Congress, together with recent testimony before a Senate Subcommittee on Problems of the Aged and Aging.

That the problems of our elderly citizens are not to be minimized is clearly revealed by highlights in the testimony given before the special Senate Subcommittee on Problems of the Aged and Aging.

It is disclosed that there are some 15 million Americans 65 years of age or over, which represents an increase of over 400 percent in the number since the turn of the century. It is estimated that by 1975 the number of Americans who have passed 65 years of age will be 20 million.

In his testimony before the special Senate Subcommittee on Problems of the Aged and Aging, it was predicted by Dr. Maurice E. Linden, director of the Philadelphia Mental Health Division, that—

In the year 2000, Americans will enjoy an average longevity of 82 years.

He added:

Physiologists tell us that the human physical and chemical organism is so designed

and engineered by nature as to be capable of living to 125 years providing no impeding disease occurs.

The immensity of the problem of finding a solution to the needs of the aged and aging was admitted by Dr. Howard A. Rusk, Department of Health, Education, and welfare consultant when he told the Senate subcommittee that "the very size and complexity of development of service for our aged makes overall planning for such services difficult."

Meanwhile, over 15 million Americans 65 years or over are struggling for existence on pitifully low incomes. For example, three-fifths of them in 1958 had annual incomes of less than $1,000; one-fifth had incomes between $1,000 and $2,000; while the remaining fifth had incomes of more than $2,000. When you consider the fact that the value of the dollar is about 48 cents, it is not difficult to realize the agonizing plight of over 15 million Americans, whose toil and taxes in their productive years made a major contribution to the future welfare and growth of this Republic.

Another disconcerting fact is that there are millions of our aged who through no fault of their own were denied the opportunity while employable to acquire social-security coverage with the result that now in their declining years, they are forced to rely on the public-assistance programs in the various States, which carry the stigma of charity in the minds of many recipients.

The overall problem of our aged is growing in its intensity when it is remembered that in the United States in 1900 there were only 3 million people over 65 as compared to over 15 million in 1959. When you consider the recent statement by the U.S. Public Health Service that a child born in 1958 could expect to live 69½ years, the lengthening of the life span through the development of miracle drugs and the advancement of medical science presents convincing evidence to support the assertion that the problems of the aged are constant and not diminishing.

Meanwhile, amid the suffering and privation of millions of our elderly citizens, a series of studies, conferences, and congressional hearings have proceeded year after year in an effort to cope with the most compelling social problem facing this Nation. Yet while we grope our way toward a solution to the distressing problems of our aged, they in turn have found the expression "the golden years of retirement" an empty and meaningless phrase.

In the field of legislation, since my election to the 76th Congress 20 years ago, each succeeding Congress has had a variety of legislative measures pending before it designed to provide an adequate and uniform old-age pension law. Unfortunately, we have never been given the opportunity to consider fully old-age pension legislation, with one exception, and that was during the 76th Congress, when the House of Representatives defeated the original Townsend plan, which has since been modified and reintroduced in succeeding Congresses by a host of Members on both sides of the aisle.

During this 1st session of the 86th Congress, the revised version of the Townsend bill is exemplified by H.R. 4000 and H.R. 4001, which are identical bills embodying the Townsend plan for national insurance. Over a score of Members of the House of Representatives, representing both political parties, have gone on record as expressing their willingness to become cosponsors of the legislation.

Briefly, the 1959 Townsend plan as embodied in H.R. 4000 and H.R. 4001 is presented as an amendment to the Social Security Act, repealing or suspending, as the applicable case may be, the various provisions of old-age, survivors, and Federal disability insurance and instituting in place thereof the Townsend plan program under title II of the act.

Sponsors of H.R. 4000 and H.R. 4001 point out that the features of the Townsend plan bill include coverage for all American citizens alike; double the average benefits of the aged and disabled on social security; greatly reduce costs of public assistance on the State and Federal levels; automatically adjust benefits to changes in costs of living; wipe out fear of poverty in old age; and end loss of purchasing power by Americans aged and disabled; thus maintaining high employment.

In view of the fact that this 1st session of the 86th Congress is nearing adjournment, there is no possible chance of securing committee or floor action on H.R. 4000 or H.R. 4001. For that reason and since during my congressional career I have devoted much time and study to the problems of our elderly citizens who as a group are increasing over three times as rapidly as the rest of our adult population, it is my sincere hope that early in the next session of the 86th Congress which will convene in January it will be possible to secure legislative action on H.R. 4000 and H.R. 4001. It is my considered judgment that in view of the mounting seriousness of the plight of the aged that concerted action must be taken on securing hearings on the legislation so that its merits may be presented publicly.

Such action is imperative in view of the compelling need to rescue our elderly citizens from their plight and thereby restore attractiveness and worthwhile meaning to the descriptive pharse, "the golden years of retirement."

The Straightened Record

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. DIRKSEN. Mr. President, some weeks ago I inserted some material in the CONGRESSIONAL RECORD which was in the nature of an answer to certain observations carried in Newsweek magazine with respect to the efficiency of the postal service.

Since that time there has come to my attention an article in the Postmasters Gazette for September 1959, written by Charles E. Puskar, the national secretary of the National Postmasters Association, under the title of "The Straightened Record." I believe this data should also be inserted in the interest of accuracy and in justice to the splendid work being done by the Post Office Department under the very capable and dedicated direction of Arthur Summerfield, the Postmaster General. I therefore ask unanimous consent to submit Mr. Puskar's article as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STRAIGHTENED RECORD

(By Charles E. Puskar)

There have been few items appearing on this page of the Postmasters Gazette which have aroused such a widespread and passionate response as the reproduction of the letter which I wrote, as a national officer of our association, refuting the libels and untruths contained in a recent article in Newsweek magazine, entitled "Why Your Mail Was Late."

Postmasters from all over the country wrote in words of encouragement and approval. Many of them wrote letters themselves to the editor of the erring magazine. Congressmen expressed their agreement in writing. In fact, the response has been so great that I find I must acknowledge it in these columns rather than answering through individual letters. There simply isn't time to do the polite thing in this case, but I want you to know that I appreciate every communication and President Baker and I are extremely gratified that the membership feels the way it does on this most important issue.

Some postmasters have asked permission to have my letter to Newsweek reproduced in their local newspapers. This is not only permitted but recommended, so that our patrons will know that the accusations in the Newsweek article were false.

The only response that has been lacking has been that of Newsweek magazine itself. Not only has it refused to print the official letter from the National Association of Postmasters protesting the slur on our ethics and our efficiency but it has refused to print any of the other letters from aggrieved postmasters refuting their specious and self-interested arguments.

I did receive a letter from a Mr. Dwight W. Norris, signed "For the Editors," but this is in no way a reply. Mr. Norris makes no attempt to answer, or to apologize for, the witless insult which his editors spawned and broadcast against all postmasters, all postal employees, and against the postal service itself. Instead, his three-page letter consists of an attempt to prove that the article was in many ways favorable to the Post Office Department and the service for which it is responsible.

Of course, no apology will ever be forthcoming. The argument that postmasters (and other employees) are little more than political hacks has been used for years by the advocates of continued low rates for magazines, with the inference that the postal deficit is due to our inefficiency and not to the bargain-counter rates which they continue to pay.

Any admission of error on the part of the editors of Newsweek would be like an admission of flagrant heresy on the part of a ranking churchman. It would be something that could not be tolerated. If the publishers ever admitted the truth—that the Postal Establishment is manned by more than half a million sincere and dedicated public serv-

ants who are doing a tremendous job of moving the U.S. mails despite manifest and manifold difficulties and obstacles—they would have to develop a new line of argument, and they have been unable to do this during the last 30 years of organized opposition to postage rate increases. It may even be true that these publishers and editors are beginning to believe their own arguments.

The able columnists of Newsweek continue each week to inveigh against high Government spending and inflation. However, when the case of postage rates comes up, the attitude of the editors is consistent and unalterable. They simply don't care who is holding the Federal cow as long as they can continue to milk it.

Louis Kossuth, Hungarian Patriot (1802–94)

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, Louis Kossuth is undoubtedly the most colorful, the most venerated, and the best-known Hungarian in the modern history of the Hungarian people. He is at the same time one of the great pioneers and brave fighters for national freedom and democratic government in 18th century Europe. In addition, Kossuth may also be considered the greatest patriot of modern Hungary, and quite properly the father of modern Hungarian nationalism.

Lajos, or Louis, Kossuth was born in the small town of Manok in Hungary on September 19, 157 years ago, and was the son of a country lawyer. As the oldest of four children, he was originally destined to follow in his father's footsteps. At 19 he had already completed his studies at the University of Budapest and was back in Manok practicing law with his father. His talents and amiability, and his zeal for doing something good and extraordinary, at once won him great popularity. In 1825 he was appointed a deputy member of the National Diet (Parliament). He held that post first for a 2-year term, and then for another year in 1832. During those years had begun the formation of a Hungarian national party. Soon Kossuth became prominent among the liberal leaders of that party. In the late 1830's he began the circulation of his famous newsletters which included speeches made but not published at the National Diet. This was not to the government's liking, and attempts were made to suppress the newsletters. Then in 1837 he was arrested on a charge of high treason and condemned to 4 years' imprisonment. This imprisonment, it is said, served Kossuth well. There he had time to study the Bible and Shakespeare and acquired a wonderful knowledge of English.

Upon his release he became the editor of a newly founded liberal party paper. Thenceforth Kossuth was not content with reforms alone. By his violent attacks on Austrian authorities he aroused the Hungarian national pride. The government in Vienna was alarmed by his popularity, and attempts were made—by Metternich himself—to quiet him by the offer of a lucrative government post. But Kossuth was not to be bribed. In 1847 he was elected to the Diet in Budapest. There he became the leader of the extreme liberals. His eloquence and his impassioned appeals in dramatic situations made him the national leader of all liberals and nationalists. And in March of 1848, when the news of the Paris revolution reached Budapest, at once he became the leader of the European revolution. Again the government attempted to quiet him down by taking him into the Cabinet as Finance Minister. But Kossuth's soul still yearned for national freedom and liberation from the Austrian yoke. In July he had asked his countrymen to arm in self defense, in defiance of the government in Vienna. Soon the country was fighting the Austrians, and Budapest was under attack. In this struggle Hungarians fought heroically under Kossuth's leadership, and for more than a year they held back their superior foes, until the latter were joined by the Russian forces from the east. Thus caught between two powerful forces, Hungary's spirit of freedom, generated by Kossuth, was crushed in August of 1849, and Kossuth himself barely saved himself by escaping to Turkey.

With his forced departure from Hungary, Kossuth's career as the leader of his people in Hungary was at an end. Eventually he went to England, and there he was given a hero's welcome. In 1851 he came to this country, where he was welcomed with similar honors. He returned to Europe and lived the rest of his life in Italy, where he died on March 24, 1894. His body was taken to Budapest, and there he was buried amid the mourning of the whole nation.

Today freedom-loving and brave Hungarians may not be allowed to observe the birthday anniversary of their great patriot and loving fellow man, but we in the free world join all Hungarians in the free world in honoring the blessed memory of this great fighter for freedom and liberty on the 157th anniversary of his birth.

Lesson of History

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very interesting editorial which appeared in the Lawrence (Mass.) Sunday Sun:

LESSON OF HISTORY

"History repeats itself" is rather a worn-out expression. It is not always so. It is not a rule. But it always is a possibility.

We wonder if, as a nation, we have learned the facts of life. People who stop to think about it are able to recollect with grim clarity the visit of two Japanese diplomats to Washington back in 1941 on a mission of peace.

While they were here, being wined and dined by ever-trustful Americans, the Armed Forces of their country attacked Pearl Harbor, precipitating the bloodiest, most costly war in all history. That we were caught flatfooted is an embarrassing fact.

It took us years, tremendous loss of life and incredible amounts of money to work ourselves out of the mess created by trust and antipathy.

For those who doubt our stage of unpreparedness, there still are available pictures of American soldiers training in the field and equipped with broomsticks for machine guns.

We are considerably better off today than we were then. Roosevelt, the arch politician, was President. Today, we have a dyed-in-the-wool soldier as President—a man who served with distinction in that debacle World War II.

We think Dwight D. Eisenhower has a good grasp of the situation and the possibilities reposing therein. He has kept our muscles functioning militarily. We have a good Army, a superb Navy, and a powerful Air Force. As to the latter and perhaps the most vital factor in our defense, we hope we have more than just a few working models of those superplanes we see on our screens.

Mr. Khrushchev has been a guest in our country during the past week. Maybe his visit is all on the up-and-up. But we don't know why we should trust the Communists, in the light of what happened in the case of the Japanese. The latter were bent on world conquest. Their goal was to dominate and enslave the world. The Communists have the same objective.

This is a terrible age in which we live, with the threat of war surrounding us. But it is no worse than it ever has been. We can recall World War I. We were unprepared then, as we were for World War II. Actually, we were not quite ready for war with Spain in the dying years of the 19th century. But, as in the cases of the subsequent two world wars, we threw all we had into it and won it. It has been the same down through history. We were always off guard, with never enough to go around; but we came out all right in the end.

No one dreamed, in 1898, or in 1917, or in 1941, that in 1959 the worst conflict of them all would be in the making. No one dreamed of the intervening episode of Korea, where we took a bitter beating because Henry Truman so ordained it at a time when our forces in that far-off land had the enemy on the run.

With Khrushchev here on what might be termed a mission of peace, we should keep history in mind. It has a way of repeating itself. The diplomats, the statesmen, do not fight a war. They go into action only when they are in a position to play the cards. Thankfully, we are watchful today against a stacked deck—and we must maintain that watch so long as there are people like Khrushchev stalking the world.

The Republican Record in the 86th Congress, 1st session

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CHIPERFIELD. Mr. Speaker, the Republican Party gave America

three great gifts in the 1st session of the 86th Congress.

A major breakthrough on world peace.

A closely balanced budget.

A law to clean the crooks and power-grabbers out of unions.

Not one of these tremendous attainments would have been given a ghost of a chance last January. And Democrats fought the balanced budget and effective labor reform right down to the wire.

The breakthrough for peace was a personal victory for President Eisenhower. His European visits cemented Western unity in advance of the exchange of visits between himself and Nikita Khrushchev. Coupled with Vice President NIXON's triumphant trips to Russia and Poland, the President's mission erased the myth that America has no friends abroad. America can be proud of them both.

Though no one man, no one party, and no single nation can guarantee a permanent peace, the Republican President has taken the boldest, most imaginative steps toward that goal of any statesman on the globe.

Today the whole world knows—and Khrushchev had the opportunity to learn—that the cold war can be brought to an end. The world already knew that under President Eisenhower's leadership peace has been maintained for 7 years, without appeasement of Russia or Red China.

The nearly balanced budget represents another Republican miracle. And clear proof that voters will respond to a sound, pay-as-you-go principle in Government finance, resisting the "free money" bait which the Democrats attached to nearly the whole of their vast spending programs.

The 1st session of the 86th Congress once again established the Republican Party as the party which stands for a sound, honest dollar.

The first session also reestablished the Democrat Party as the spending party. The session had scarcely begun before the spenders had introduced bills carrying an estimated 5-year price tag of more than $117 billion, most of it in addition to the carefully trimmed $77.1 billion budget submitted by the President.

Democrats advanced budget-busting airport, housing, and community facilities measures, but no plan for financing these projects. The delicately balanced budget depended upon additional revenues before new programs could be undertaken.

By the end of the session, action or inaction by the spenders had pushed the budget figure up to nearly $79 billion. While they trimmed regular appropriations requests, they boosted authorizations for future spending, some of it by the "back door" route which bypasses the regular appropriations committees. The so-called decreases do not cover, for example, $231 million in authorizations for "back door" spending not sought by the President.

Nevertheless, a near miracle occurred. The pace of the spenders slowed. Repeated warnings by the President and the Republican leadership brought carloads of mail demanding economy. The Democrats' wasteful housing bill, after a series of setbacks, including two Presidential vetoes, was revamped to the administration's position and passed. The spenders' bills seeking wildly extravagant funds for depressed area relief and aid to education failed to emerge. The spenders' wasteful proposals for airport construction were abandoned in conference, and a less costly measure substituted.

It is clear that but for Republican leadership, backed by strong public demand for economy, 1960 Federal spending would have been far more than the total finally approved. There is a chance that a balanced budget as sought by the President, may yet be achieved before the close of the fiscal year because of revenue increases.

Strong and constructive labor reform legislation was another Republican achievement which seemed impossible last January. Efforts to strengthen the Taft-Hartley Act failed last year. Few thought a good bill could survive this year.

And here the Democrats presented a curious spectacle. On the one hand, a special Senate committee had produced the evidence of union abuses which clearly showed a strong bill was necessary. Yet somehow the Democrats sponsored only weak bills in which they had considerable help by union bosses.

The turnaround came after President Eisenhower's televised address to the Nation which crystallized the whole picture of union corruption and the need for a cleanup law. Again a courageous band of Republicans in Congress followed through on the public demand for reform which the President's address created.

The Landrum-Griffin bill, as finally signed by President Eisenhower, is not an antilabor bill. It is prounion and propublic.

It guarantees many basic rights to labor union members. Among these are equal rights to union members in the conduct of union affairs; protection against arbitrary dues increases; protection of the right to sue; free and fair union elections; safeguards against improper disciplinary action and protection of union funds.

At the same time, Democrats themselves admit that the bill will destroy no basic union rights.

The bill's strong ban on secondary boycotts and blackmail picketing protects the public against abuse of union monopoly powers, and the provision giving State labor boards jurisdiction over disputes now refused by the National Labor Relations Board will strengthen the hand of small business in labor disputes.

Before leaving this labor reform issue, it is interesting to recall that while some union leaders can be expected to attack the Republican Party for legislation which would curb their abuse of power, their complaints go far beyond the labor issue. Republican efforts to curb extravagance in public housing and farm programs, for example, also bring attacks by the so-called union leaders, although these issues have nothing to do with labor.

But if improved hopes for peace, less Federal spending, and real labor reform were the main Republican achievements in this session of Congress, there are many others which fall closely behind these measures.

During the whole session, the President and the Republican Members fought to refinance the growing costs of the vital 41,000 mile Interstate Highway System. The Highway Trust Fund, set up 3 years ago to receive special revenues for highway building, was nearly exhausted. Over $2 billion was needed to keep the program going in fiscal 1960. There were two ways to get this money. One was through an additional Federal tax on gasoline. The other was through transfer of the $2 billion-plus from the general fund of the Treasury. This last step would only have meant postponing a tax increase.

The President believed that the wiser course was to face up to the tax increase this year, and a 1 cent per gallon tax on gasoline finally was agreed upon. This increase will be applied only until July 1, 1961. Thereafter, about half of the present excise taxes on autos and parts and accessories will be transferred from the general fund to the highway fund. These steps will permit work on the Intersate System to continue, though at a slightly reduced rate.

Though Democrats took the "easy way" of cutting the President's foreign aid requests, Republicans in the House pushed through a bill—H.R. 7500—calling upon the Secretary of State to set up an Office of Inspector General and Comptroller to enforce fiscal responsibility in any and all mutual security programs.

Statehood for Hawaii, a Republican platform pledge, succeeded with the personal backing of the President and strong bipartisan support. The new State will raise the Senate membership to 100 and House membership temporarily to 437.

SUMMARY

The basic Republican achievement in the first session was to demonstrate that, despite the Democratic majorities elected in 1958, public opinion still supports government in the public interest. The session also showed that President Eisenhower and Republican Members in Congress were capable of recognizing their opportunity for leadership and forcefully carrying through. At the close of the session, the Nation's confidence still rests with President Eisenhower and the Republicans in Congress.

Visit of Nikita Khrushchev

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. DULSKI. Mr. Speaker, I was shocked when I read in the press about the Department of State's preparations for the welcoming ceremonies for Mr. Nikita Khrushchev. His visit to the

United States is an insult to all of the subjugated nations for whom America is the ideal of democracy and a beacon of hope. It blasts the hopes of captive people everywhere and strengthens the hand that holds them down.

Moral principle alone should dissuade us from conferring respectability and legitimacy to our enemy. Passage of time does not outlaw the murder of an individual or a nation, and Mr. Khrushchev is the ruthless dictator who ordered Russian tanks to smash the Hungarian freedom movement, rose to prominence as the hangman of the Ukraine, and maintains himself in power as the butcher of Budapest.

May I remind you of some of Mr. Khrushchev's statements such as, "We shall bury you" and "Your grandchildren will live under socialism," and I charge that he has no interest in peace and never intends to make any contribution toward it.

I characterize this visit as a 1959 Pearl Harbor by the Premier of the most brutal government and political philosophy of all history. I warn that we must not become infected by the Communist virus being brought here by Nikita as a representative of a system of atheistic tyranny.

While the Premier is here, church bells should ring on behalf of the people slaughtered behind the Iron Curtain, and prayers should be said over and over again for the enslaved people of the world and true peace on earth.

Let us not overlook the fact that the President of the United States is the head of a state and is entitled to a higher degree of courtesy than Mr. Khrushchev who, technically and legally, is not the head of a state.

Resettlement of Arab Refugees—A Significant Start

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gideon Weigert as it appeared in the American Zionist, September 1959 issue:

RESETTLEMENT OF ARAB REFUGEES—A SIGNIFICANT START

(By Gideon Weigert)

JERUSALEM.—On July 1 was inaugurated International Refugee Year, and once again the attention of the world has become focused on the situation of these distressed people, among them the 700,000 Palestine Arab refugees. These since 1948 have been living in several Arab host countries, where UNRWA is looking after their minimum wants in the way of food, children's education, vocational training, health, and social welfare.

But after all is said and done, what has been achieved in making a start in actually solving the problem, and what practical steps exist to bring about a solution in the not too distant future?

Up-to-date projects have been initiated both in Jordan and Israel. Though limited in scale, these have the target of attempting to make a start in breaking the ice and to resettle such refugees on the land. This article will deal with some of the merits of these two schemes, their failures and achievements.

In December 1955 the Jordan Government enforced emergency defense regulations as renewed waves of violence broke out against the 4-year-old Majali government in Amman, which had intended to negotiate adherence of the country to the Baghdad Pact.

Objects attacked by the Egyptian-incited masses included the Arab development project for refugees, financed mainly by Iraq and operated by Mussa Alami. Serious damage was caused to the project. Its farm near Jericho's Allenby Bridge over the Jordan River suffered huge financial damages.

Several months passed before the man who had initiated this unique project could weather the shock. But soon Mussa Alami began his activities anew as if nothing had happened. The refugee workers who had dispersed all over the Hashemite kingdom during the blood riots returned. Alami then proceeded to the United States to collect funds for his project. Contributions came from various sources, and today the traveler going through the Jordan Valley near Alami's farm near Jericho will again find the desert in bloom, an oasis nestling in the wilderness.

What is this Arab development project, the first and only constructive Arab scheme of its kind to resettle the Palestine Arab refugees ever to be carried out? And who is Mussa Alami, its director?

For decades, the name of Mussa Alami had been associated with the politics of Palestine Arabs. His last post, toward the termination of the British mandate in Palestine, was director general of the Arab propaganda offices in Washington and London. When in 1946 Mussa Bey, as he is generally known, left the political stage, he turned to a field of activities hitherto completely unknown in the Arab world: an Arab development project for Palestine Arabs.

The idea had sprung up as early as 1945 at the foundation convention in Alexandria, Egypt, of the six-member Arab League. Early in 1946 the league's Council decided that a project should be established which would enable the Palestine Arab farmer to develop his land in such a way as to obviate his being in a state of chronic indebtedness, a situation which inevitably forced him to sell his land.

That meant development, intensification of cultivation, and modern methods of irrigation being introduced. The Council decided that the sum of £1 million should be raised by the member states toward this project. However, as with so many other plans decided upon by the league, this one too, remained mere ink on paper. Internal disputes, intrigue, and rivalry, all these made it certain that the decision would never be implemented.

The only Arab state which gave the plan serious consideration was Iraq, which early in 1946 allocated £250,000 to help put it into effect. This actually represented Alami's sole capital in launching the project. Singlehanded, he set out in 1947 to purchase a tract of desert land, comprising 8,000 dunams (2,000 acres) in the Wadi Araba Valley near Allenby Bridge. At a later stage, he bought an additional area of 12,000 dunams (3,000 acres).

With the outbreak of the Arab-Jewish hostilities at the end of 1947, Alami's activities came to a temporary standstill, and were not resumed until the beginning of 1949. He then proclaimed that the most immediate aim of his project was to gather together refugees and farmers, and to raise their morale by bringing them back to the land, and to create from them a new nation.

The beginning took the familiar pattern of all resettlement schemes in this part of the world—a desperate search for fresh water sources in the desert. More than 10 of the first drillings proved failures. Finally, in 1950, water was struck and for the first time the foundation for the first resettlement project for Palestine Arab refugees was laid.

Since then, 25 additional wells have been drilled, more than 3,500 dunams have been prepared for intensive cultivation, and more than 400 refugees have found a new and permanent home.

Through the years the project operated 24 different crafts and agricultural branches. By the middle of this year Alami had expected to have 8,000 dunams under full cultivation. The annual income from the project's agricultural yield reached the £5,000 mark, and its director became convinced that he would soon be able to cover all his running expenses.

Most of the income came from vineyards, banana and date groves, and citrus fruit, but the workshops for carpentry, shoemaking, tailoring, and mechanical work were also beginning to show a profit.

An interesting aspect of the situation is that the Jordan Government, in whose territory the Alami project existed all this time, had never contributed a penny toward the maintenance of this unique Arab endeavor. No one knows better than the Jews of Israel that there is no more difficult task to achieve than to conquer the desert. There is no doubt that Alami and his handful of assistants have shown commendable stubbornness and patience in seeing their project through the series of setbacks and difficulties which were its fate for over a decade.

But above all, the Arab development project in the Jordan Valley, in its second decade of existence, shows what can be done once there is the will and determination to do constructive things.

It is for this reason, perhaps, that the Arab States including Jordan seduiously choose to ignore the project and refrain from providing assistance, morally or financially, lest the world look upon it as a model for what can be achieved in the sphere of the resettlement of Arab refugees.

And it is clear beyond doubt that were the Alami development project not the only Arab one in existence, and had there been, for instance, a score of others similar to it, the authorities in Damascus, Cairo, Baghdad, Amman, Beirut, and Gaza undoubtedly would have dropped their pernicious policy of regarding the Arab refugees as so many political pawns, and the lot of these unfortunate people would today be happier and they would have been well on the road to a constructive and final solution.

Alami recently launched a new project, a branch of the Jericho farm in the form of a model village for some 100 Bedouin refugee families in the Hebron hills. This time the Jordan Government is actively supporting the scheme by providing equipment for constructing the approach road to the village site. There will be communal buildings, a mosque, a school, and other facilities.

In Israel recently, a group of displaced Arabs who, ever since the War of Independence, had lived in Umm el Fahm in the northern tip of the "Little Triangle" area, moved into brandnew homes—each of two rooms with all conveniences, measuring 50 square meters, situated just outside the village in a new housing development scheme.

This group, headed by Abdul Kader, consisted of villages displaced during the fighting in 1948 from their native village in Lajjoun and represents the first of 3,000 families (totalling close to 20,000 persons) who have been uprooted from some 25 Arab villages in Galilee and the "Triangle." They became refugees, either voluntarily or unwillingly, and since then were dispersed

throughout Arab villages in Galilee, in Nazareth, and other places.

They had lived in rented rooms, in huts, in sheds. Ever since 1950 when the care for them was handed over to the U.N. Refugee and Relief Works Administration (UNRWA) they represented one of the toughest problems facing Israel in the matter of the minorities. Their resettlement remained a major headache for the authorities not so much because of a lack of funds as for their psychological attitude, with their misery forming a fertile source of activity for Communist propaganda.

The problem of these Arab D.P.'s was their refusal to accept repeated offers for the payment of compensation or resettlement—that is, until the outbreak of the Sinai hostilities. Until then, these Arabs were always haunted by the fear of taking up offers to resettle on the lands offered by the Government because these were largely composed of abandoned Arab property and would be reacquired by their absentee owners if and when there would be an Arab comeback after a second round with Israel. An additional fear was that in such a case they would also be branded as collaborators.

The first radical change in this Arab attitude was felt by the authorities directly following Israel's victory in Sinai, when it became clear to the Arabs in Israel that the general Arab ambition of wiping the Jewish state off the map was a mere dream. Early last year the Israel Government decided to allocate I£10.5 million for the resettlement of these displaced persons. This was the first serious move to solve the problem and took the wind out of Communist sails.

Of this sum, I£8 million were earmarked for housing projects, and the balance for rehabilitation loans. Another I£10 million were allotted from the Development Budget for cash compensation for land requisitioned from these persons and other Arab farmers and now returned in the form of new agricultural units, each averaging from 35 to 60 dunams.

The 20 Umm el Fahm families are to be followed by the settlement of another 12 at Kafr Misr, close by Nazareth, where, under Father P. Gauttier, a new housing project is in the last stage of completion on a hill with a breathtaking view, just overlooking the "capital of Galilee."

There are over 100 housing units being completed, with the promise of another 140 to be built by the end of this year. Each displaced-person tenant gets an easy-payment long-term loan of I£2,500 from the Government and provides I£3,000 out of his means. The 3,000 inhabitants of six villages forcibly abandoned on the order of the authorities (these include Ikrith and Bir'am on the Lebanese border and two other villages, Bakkara and Gha'ama, in the demilitarized zone next to Syria) will receive a special I£2,500 grant.

Another 1,000 families live in permanent places of residence, and they will receive about I£1,000 each to effect necessary repairs to their dwellings. Under the guidance of Sheikh Saleh Salim, member of Knesset, 18 families from Saffuria village have moved into new houses at Umm K'bei, just outside Nazareth.

It is true that there remains among some Arab circles in Israel a feeling that the neighboring Arab countries might still get control over Israel, or at least Galilee, and that the acceptance of any alternative place to their former farms would amount to treason. This seems to be the case of the displaced persons from Bi'ram, for whom 45 new housing units had been completed at Jish without any of them moving in.

So far, all efforts to persuade these persons, all Maronites, have failed, including those made by the Bishop of Tyre, M. Dumat. There may, of course, emerge other similar cases, but there is the definite feeling prevailing now that the backbone of this problem has been broken.

Most of the 150 displaced-person families are impatiently waiting to move into their new housing projects at Sha'ab, Jaljulia, and Masra, and recently there has been a flood of applications for more houses which exceeds the abilities of the Housing Division of the Ministry of Labor to erect them within a short space of time.

There is no illusion that the problem of the 20,000 uprooted Arabs in Israel has finally been solved. There are still many obstacles to overcome. On the other hand, the very fact that by the end of 1959 some 1,200 displaced Arab families will have moved into new permanent housing, or will have had their dwellings properly repaired, means that a fine beginning has been made by Israel in settling a most delicate issue.

Negro Opportunities Are Cited

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. ABBITT. Mr. Speaker, history is being made in Prince Edward County, Va. Many of our people pretend not to understand the true situation. It has been said that the officials of Prince Edward County are denying educational opportunities to the Negro children. The officials of Prince Edward County are making no distinction between the white and colored children. They are not denying educational opportunities to anyone. They simply are exercising their constitutional right not to tax the people of Prince Edward County for the operation of integrated schools.

On September 12 there appeared an editorial in each of the Richmond newspapers, to wit, the Richmond Times-Dispatch and the Richmond News Leader, pointing out very cogently the true situation in Prince Edward County. A day or two before this, a letter from Mr. J. Barrye Wall, editor of the Farmville Herald, appeared in the Lynchburg News answering an editorial appearing in the Lynchburg News of September 2. So that the people might know the issues involved and have a clear picture of the Prince Edward situation, I am including with my remarks the editorial from the Richmond Times-Dispatch of September 12, 1959, the editorial in the Richmond News Leader of September 12, 1959, and the letter from Mr. J. Barrye Wall to the editor of the Lynchburg News which are as follows:

[From the Richmond News Leader, Sept. 12, 1959]

AFTERWORD ON PRINCE EDWARD

For the past few days charges have been flying about that Prince Edward County has "denied" its Negro children an education and "deprived them of their right to free schools." Welfare Secretary Flemming has assailed the county's treatment of the Negroes as "indefensible." Liberal commentators on television are doing their Ivy League worst to make it appear that the county has defied the law and scandalously trampled upon the poor colored children.

Let us set the record straight.

Prince Edward County has not defied any order of any court anywhere, from the Supreme Court on down. The county was put under orders by the courts to do one thing, and one thing only. The county was directed not to deny any colored student admission to the county's public schools solely by reason of the student's race. Prince Edward County stands today in a position of absolute obedience to that order. The county is not denying any Negro child any right or facility or benefit offered any white child.

When the county, through its established government, decided to abandon public schools, all citizens of the county became equally free to go their own way.

This decision was announced in May. At any time during the past 4 months the Negro people of Prince Edward could have done precisely what the white people have done: They could have exhibited some gumption, some leadership, some initiative, some pride in seeing their children educated, some get up and hustle. They could have organized an educational corporation (white neighbors in Farmville sincerely offered their help in such a venture). They could have hired teachers (there were more than 70 Negro teachers available in the county for employment). They could have arranged the use of church facilities (the county has at least a dozen well-established Negro churches).

More than anything, they could have applied for State tuition grants that would have assured them the necessary funds—up to about $350,000—to maintain a private educational program. And if this had seemed insufficient, they could have solicited financial help from rich and powerful sympathizers.

They did none of these things. On one recent Saturday afternoon, the white people of Farmville were out in the rain laying cinder blocks for a four-room addition to a church Sunday school; the white people were carrying in books for a library; the white people were making desks and tables for an elementary school. And their colored brethren were loafing on Main Street, taking their ease in Zion.

Let us have plain talk: The white parents of Prince Edward County have worked hard to solve the problem of educating their own children. And the Negro parents, facing the same problem, have not worked at all. If the Negro people are unwilling to make an effort, this is no fault of the Prince Edward Educational Foundation.

We do not presume to understand why Prince Edward Negroes have neglected a responsibility the white parents have assumed. The explanation given in the county is that every time two or three Negroes have so much as ventured a gesture toward obtaining a tuition grant or organizing a private school, the National Association for the Advancement of Colored People, through its local leadership, has put a foot down. It is said that the NAACP would rather see these 1,700 Negro children have no education, than to see them educated in private schools established by members of their own race. They make better martyrs that way. If this be true, then the blame for the plight of these colored children falls not on the courts, and not on the county government, and not on the white parents, but squarely on the NAACP.

Perhaps Roy Wilkins would like to comment on this. We would be happy to have a letter from him explaining what his national association has done for the advancement of the colored children of Prince Edward County this fall. If the NAACP has encouraged the Negro parents to show some initiative, apply for nondiscriminatory tuition grants, and educate their own sons and daughters, Mr. Wilkins surely will want to say so.

[From the Richmond Times-Dispatch, Sept. 12, 1959]

THE NAACP HAS BEEN SHOWN

The shutting down of all the public schools in Prince Edward County could have been avoided if the National Association for the Advancement of Colored People had pursued the same policy there that it has pursued in Clarendon County, S.C. In the South Carolina county the NAACP has not pressed its case, although it filed suit there years ago, and won in the U.S. courts, just as it did in Prince Edward.

The organization seems to have realized that if integration was forced in Clarendon County, the public schools would close. It seems not to have believed that this would occur in Prince Edward. It proceeded to press for court orders in Prince Edward, and got them. The results are now obvious to all.

The white citizens of Prince Edward are approximately 100 percent determined not to have compulsory mixed schooling in their county. The NAACP must have known this. Yet it bulled ahead, despite the urgings of some of its best friends and most ardent supporters.

Who are the primary sufferers in this situation?

The answer is not debatable. The primary sufferers are Prince Edward's more than 1,700 Negro children. They have no schools.

There is genuine good will toward them in the county and State, and a desire on the part of many whites to help them.

Blanton Hanbury, president of the Prince Edward School Foundation, said yesterday that schools will somehow have to be provided for them, even if this has to be done by the county's white citizens.

It seems safe to say, however, that if the whites are to make a real effort in this direction, the Negroes themselves will have to show a positive interest in getting privately financed schools set up. As of now, they are merely collecting small sums in an effort to send a limited number of colored boys and girls to schools elsewhere.

There is reason to believe that many Negroes in Prince Edward would welcome an opportunity to take part in financing their own system of education, if the NAACP would stop pressuring them not to do so. Lawyers in that organization have led the Prince Edward Negroes to believe that legal tricks are in the offing which will open their public schools. As of now, these attorneys have merely talked about what they are going to do in this regard. Meanwhile the Negro children of Prince Edward sit in idleness, their fine new high school and all their other schools closed tight.

In shutting its schools, Prince Edward County has been forced to take a step which nobody in the county wanted to take. But the fact that the white people of Prince Edward did not flinch, when the showdown came, should be a lesson to the NAACP. That organization may have thought they were bluffing. It knows differently now.

The NAACP knows, furthermore, what to expect in other Virginia counties with heavy colored populations if it prevails on the Federal courts to order compulsory school mixing there. The schools in those counties will shut down, just as they have in Prince Edward.

[From the Lynchburg News]

NEGRO OPPORTUNITIES ARE CITED

To the EDITOR OF THE NEWS.

Sir: In your editorial of September 2 you discussed a report of the findings of two Emory University professors prepared for the Southern Regional Council regarding the operations of private and public schools. You refer to the situation in Prince Edward County.

In the course of your discussion you ask this question: "For how long will the courts and the Federal Government permit the (Prince Edward) County to deny educational opportunities to the Negro children?"

The following short excerpt from an editorial in the Farmville Herald of September 4 may throw some light on the question:

"The county of Prince Edward does not deny educational opportunities to the Negro now or at any time in the past.

"The Perrow plan provides for all children. A grant of at least $21 is available to every child in Prince Edward County, for use in private nonsectarian schools, or in public schools outside the county.

"The colored people can provide education for their children by two or three easy steps.

"1. Form a corporation or an association under the laws of Virginia to operate a private school, either segregated or integrated.

"2. Establish a school accredited by the Virginia Department of Education, which can be done.

"3. Apply for scholarship grants offered by the State of Virginia through the Perrow plan of freedom of choice.

"4. Acquire buildings for school use. These may be buildings privately owned or built, or surplus schools owned by the county. They even may be rented in the discretion of the school board.

"The county of Prince Edward has not denied the Negro children any rights they possess, any more than it has denied the white children of their rights. If any rights have been denied by anyone we suggest that the NAACP-pressured Federal courts have denied both the white and Negro children of Prince Edward a public school education by the unconstitutional decision of May 17, 1954. They have forced many localities in Virginia to bend to their will of racial integration—but not Prince Edward County—if Prince Edward does not wish to compromise its principles, then let them do it without criticism from anyone."

J. BARRYE WALL,
Editor, Farmville Herald.

Record of Hon. Gerald R. Ford, Jr., Fifth District, Michigan, in the 1st Session, 86th Congress

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include a report of my voting and attendance record during the 1st session of the 86th Congress.

The record includes all rollcall votes and all quorum calls. The description of bills is for the purpose of identification only; no attempt has been made to describe the bills completely or to elaborate upon the issues involved.

The purpose of this report is to collect in one place information which is scattered through thousands of pages of the CONGRESSIONAL RECORD. I want to be able to provide any interested constituent with a simple compilation of my voting and attendance record.

During this session there were 90 quorum calls and 86 rollcall votes. Because of attendance as an official delegate at the sessions of the Interparliamentary Union I was not in Washington for 11 quorum calls and 20 yea-and-nay votes. Prior to leaving for these meetings I missed three quorum calls and two rollcall votes for an attendance record of 96.5 percent. An explanation of my position on each of the rollcalls missed is given in the chart by an announced "pair" or in the footnotes.

During my 11 years in the House of Representatives, including the 1st session of the 86th Congress, I have responded to 1,965 out of 2,048 quorum calls and rollcalls for an overall attendance record of 95.9 percent.

Voting and attendance record of Representative Gerald R. Ford, Jr., 5th District of Michigan

Roll-call No.	Date, 1959	Measure, question, and result	Vote
1	Jan. 7	Quorum call	Present.
2	Jan. 7	To elect Speaker of House. (Rayburn 281 to Halleck 143)	Halleck.
3	Feb. 4	Quorum call	Present.
4	Feb. 4	H.R. 2256, to recommit motion designed to delete additional funds for direct housing loans. (Defeated 123 to 277)	Yes.
5	Feb. 4	H.R. 2256, to provide additional funds for direct loans, to remove certain requirements with respect to the rate of interest on guaranteed loans. (Passed 310 to 89.)	No.
6	Feb. 5	H.R. 2260, to extend until July 4, 1963, the induction provisions of the Universal Military Training and Service Act. (Passed 381 to 20)	Yes.
7	Mar. 4	Quorum call	Present.
8	Mar. 5	Quorum call	Present.
9	Mar. 11	H.R. 4221, to adopt H. Res. 205, the open rule providing 6 hours of debate on measure to provide for the admission of the State of Hawaii. (Passed 337 to 69.)	Yes.
10	Mar. 1	Quorum call	Present.
11	Mar. 12	S. 50 (substituted for H.R. 4221), to provide for admission of the State of Hawaii into the Union. (Passed 323 to 89)	Paired for.[1]
12	Mar. 12	Quorum call	Absent.[2]
13	Mar. 13	H.R. 1, to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into Illinois Waterway for navigation. (Passed 238 to 142.)	No.
14	Mar. 13	S. 70, to amend Federal Food and Drug and Cosmetic Act to permit the continuance of established coloring practices in orange industry. (Passed 213 to 94.)	No.
15	Mar. 16	Quorum call	Present.

Footnote at end of table.

Voting and attendance record of Representative Gerald R. Ford, Jr., 5th District of Michigan—Continued

Roll-call No.	Date, 1959	Measure, question, and result	Vote
16	Mar. 17	Quorum call	Present.
17	Mar. 18	Quorum call	Present.
18	Mar. 19	Quorum call	Present.
19	Mar. 19	H.R. 1011, an amendment to reduce from $297,000,000 to $200,000,000 the amount of Federal aid for airports over a 4-year period. (Defeated, 194 to 214.)	Yes.
20	Mar. 19	H.R. 1011, an amendment to require annual appropriations for Federal aid for airports. (Defeated, 191 to 216.)	Yes.
21	Mar. 19	H.R. 1011 (S. 1), to authorize Federal aid for airports totaling $297,000,000 for a 4-year period. (Passed, 272 to 134.)	No.
22	Mar. 23	H.R. 2575, to authorize the appropriation of $500,000 for the 3d pan-American games to be held in Chicago. (Passed, 257 to 109.)	No.
23	Mar. 24	Quorum call	Present.
24	Mar. 25	H.R. 4452 (S. 1094), to amend the Bretton Woods Agreements Act to increase the U.S. quota in the International Monetary Fund and its subscription to the International Bank for Reconstruction and Development. (Passed, 315 to 57.)	Yes.
25	Apr. 14	Quorum call	Present.
26	Apr. 14	Quorum call	Present.
27	Apr. 15	Quorum call	Present.
28	Apr. 15	H.R. 1321, to amend Reorganization Plan No. 11 of 1939 to transfer from Secretary of Agriculture to REA Administration the authority of approving or rejecting rural electrification loans. (Passed 234 to 131.)	No.
29	Apr. 16	Quorum call	Present.
30	Apr. 16	H.R. 5674, to authorize certain construction at military installations. (Passed 377 to 7.)	Yes.
31	Apr. 29	Quorum call	Present.
32	Apr. 29	Quorum call	Present.
33	Apr. 30	Quorum call	Present.
34	Apr. 30	To override President Eisenhower's veto of Rural Electrification Administration bill. (Defeated 280 to 146; ⅔ majority required)	No.
35	Apr. 30	Quorum call	Present.
36	May 4	Quorum call	Present.
37	May 6	Quorum call	Present.
38	May 7	Quorum call	Present.
39	May 7	Quorum call	Present.
39	May 7	H.R. 3460, to recommit to committee, bill to amend TVA Act of 1933 relative to financing its power program with proceeds from revenue bonds. (Defeated 182 to 23.)	Yes.
40	May 7	H.R. 3460, to amend TVA Act of 1933 relative to financing its power program with proceeds from revenue bonds. (Passed 245 to 170)	No.
41	May 11	Quorum call	Present.
42	May 18	Quorum call	Present.
43	May 18	Quorum call	Present.
44	May 19	Quorum call	Present.
45	May 19	Quorum call	Present.
46	May 20	H.R. 7007, to suspend rules and pass bill to authorize appropriations to the National Aeronautics and Space Administration for fiscal year 1960. (Passed 294 to 128.)	No.
47	May 20	To recommit Department of Agriculture appropriation bill in order to insert provision limiting farm price-support loans to $50,000. (Passed 262 to 105.)	Yes.
48	May 21	Quorum call	Present.
49	May 21	S. 57 (Housing Act of 1959), to adopt Thomas amendment to require direct congressional appropriation of funds in lieu of present Treasury authorization method of financing. (Passed 222 to 201.)	Yes.
50	May 21	S. 57, on motion to recommit bill and insert provisions of H.R. 7117, for the text of the committee substitute amendment. (Defeated 189 to 233.)	Yes.
52	May 25	Quorum call	Present.
53	May 26	Quorum call	Present.
54	May 26	Quorum call	Present.
55	May 27	Quorum call	Present.
56	May 27	H.R. 7176, on recommittal motion to insert language limiting President's handling of emergency fund. (Defeated 171 to 229)	No.
57	May 27	H.R. 7343, to increase appropriations of Department of Justice by $2,000,000. (Passed 266 to 133)	No.
58	May 27	H.R. 7086, on motion to recommit bill to limit the extension of Renegotiation Act to 27 months. (Defeated 153 to 264)	Yes.
59	May 27	H.R. 7086, to amend and extend for 4 years the Renegotiation Act of 1951. (Passed 375 to 7)	Yes.
60	May 27	Quorum call	Present.
61	June 2	Quorum call	Present.
62	June 2	Quorum call	Present.
63	June 3	Quorum call	Present.
64	June 3	H.R. 7454, on final passage of $38,400,000 defense appropriation bill. (Passed 393 to 3.)	Yes.
65	June 4	Quorum call	Present.
66	June 5	Quorum call	Present.
67	June 8	Quorum call	Present.
68	June 9	H.R. 3610, to recommit the bill in order to add an amendment requiring States to match the Federal grants for construction of sewage treatment works. (Defeated 156 to 240.)	Yes.
69	June 9	H.R. 3610, on final passage of the Federal Water Pollution Control Act. (Passed 254 to 142.)	No.
70	June 9	H.R. 7500, to add to public works appropriations bill the sum of $500,000 for water lily eradication program. (Passed 199 to 198.)	No.
71	June 9	H.R. 7509, to add to public works appropriations bill the sum of $75,000 for planning of a river project in Wisconsin. (Defeated 192 to 203.)	No.
72	June 9	H.R. 7509, to recommit the public works appropriations bill in order to reduce by 5 percent each construction item of $5 million or more. (Defeated 149 to 251.)	Yes.
73	June 9	H.R. 7509, on final passage of the public works appropriations bill. (Passed 380 to 20.)	Yes.
74	June 10	Quorum call	Present.
75	June 10	S. 1901, to recommit the tobacco price support bill in order to freeze price supports at 1958 level for next 3 years. (Defeated 138 to 260.)	Yes.
76	June 10	S. 1901, to amend sec. 101(c) of the Agricultural Act of 1949 and of 1945 to stabilize and protect the level of price support for tobacco. (Passed 250 to 149.)	No.
77	June 11	Quorum call	Present.
78	June 12	H.R. 7246, on recommittal motion to insert provisions of Belcher amendment (H.R. 7611) for text of H.R. 7246, to amend existing laws with respect to acreage allotments and price supports for wheat for 1960-61. (Defeated 141 to 224.)	Yes.
79	June 12	H.R. 7246, to amend existing laws with respect to acreage allotments and price supports for wheat for 1960-61. (Passed 188 to 177.)	No.
80	June 12	Quorum call	Present.
81	June 12	H.R. 6596, to encourage and stimulate the production and conservation of coal in the United States through research and development by creating a coal Research and Development Commission. (Passed 251 to 54.)	Yes.
82	June 15	Quorum call	Present.
83	June 15	Quorum call	Present.
84	June 15	H. Res. 293, to adopt the rule providing for the consideration of 4 hours of debate on, and the waiving of points of order against, H.R. 7500, to amend Mutual Security Act of 1954. (Passed 277 to 93.)	Yes.
85	June 16	Quorum call	Present.
86	June 16	Quorum call	Present.
87	June 16	Quorum call	Present.
88	June 16	Quorum call	Present.
89	June 17	Quorum call	Present.
90	June 18	Quorum call	Present.
91	June 18	S. 1968, on accepting conference report on bill to strengthen wheat marketing quota and price support program. (Defeated 202 to 215.)	No.
92	June 18	H.R. 7500, to amend Mutual Security Act, as amended. (Passed 271 to 142.)	Yes.
93	June 19	Quorum call	Present.
94	June 19	H.R. 7749, to increase amount of obligation issued under 2d Liberty Bond Act, which may be outstanding at any one time. (Passed 255 to 177.)	Yes.
95	June 22	Quorum call	Present.
96	June 23	H. Res. 288, to adopt rule providing for consideration and 5 hours' debate on H.R. 3 to establish rules of interpretation governing questions of the effect of acts of Congress on State laws. (Passed 233 to 116.)	Yes.
97	June 22	Quorum call	Present.
98	June 23	Quorum call	Present.
99	June 23	S. 57, to adopt conference report on Housing Act of 1959. (Passed 241 to 177)	No.
100	June 24	Quorum call	Present.
101	June 24	H.R. 3, on motion to recommit bill to establish rules of interpretation governing questions of the effect of acts of Congress on State laws. (Defeated 191 to 227.)	No.
102	June 24	H.R. 3, to establish rules of interpretation governing questions of the effect of acts of Congress on State laws. (Passed 225 to 192)	Yes.
103	June 29	Quorum call	Present.

Voting and attendance record of Representative Gerald R. Ford, Jr., 5th District of Michigan—Continued

Roll-call No.	Date, 1959	Measure, question, and result	Vote
104	June 30	Quorum call	Present.
105	June 30	H. Res. 294, to adopt rule for consideration of H.R. 5752 relating to observance of legal holidays by Federal employees. (Passed 339 to 42.)	No.
106	June 30	Quorum call	Present.
107	July 1	On motion to recommit S. 1120, respecting reserves required to be maintained by member banks of the Federal Reserve System. (Defeated 60 to 309.)	No.
108	July 7	H. Res. 295, to disapprove Reorganization Plan No. 1 of 1959. (Passed 266 to 124.)	No.
109	July 7	H.R. 4957, to recommit bill to amend United States Code to provide for admission of certain evidence and confessions. (Defeated 138 to 261.)	No.
110	July 7	H.R. 4957, to amend United States Code to provide for admission of certain evidence and confessions. (Passed 262 to 138.)	Yes.
111	July 20	Quorum call	Present.
112	July 21	Quorum call	Present.
113	July 22	On motion to adopt conference report on H.R. 7500 to amend further the Mutual Security Act of 1954 as amended. (Passed 257 to 153.)	Yes.
114	July 23	Quorum call	Present.
115	July 23	H.R. 3460, on motion to order previous question on H. Res. 326, a resolution to agree to Senate amendments to H.R. 3460, the TVA financing bill. (Passed, 244 to 166.)	No.
116	July 27	Quorum call	Absent.[1]
117	July 27	H.R. 7072, to provide for the participation of the United States in Inter-American Development Bank. (Passed, 230 to 87.)	Absent.[1]
118	July 28	Quorum call	Present.
119	July 29	H.R. 8385, mutual security and related agencies appropriations bill. (Passed, 279 to 136.)	Yes.
120	July 30	Quorum call	Present.
121	July 31	Quorum call	Present.
122	Aug. 3	Quorum call	Absent.[4]
123	Aug. 5	H.R. 7740, to suspend rules and pass bill to amend Agriculture Adjustment Act of 1938 with respect to preservation of acreage and reallocation of unusual cotton acreage allotments. (Passed, 308 to 90.)	Yes.
124	Aug. 10	Quorum call	Present.
125	Aug. 10	Quorum call	Present.
126	Aug. 10	Quorum call	Present.
127	Aug. 11	Quorum call	Present.
128	Aug. 12	Quorum call	Present.
129	Aug. 13	Quorum call	Present.
130	Aug. 13	H.R. 8442, to adopt Landrum-Griffin amendment (H.R. 8400) to replace language of labor-reform committee bill. (Passed 229 to 201)	Yes.
131	Aug. 14	H.R. 8342, on motion to recommit labor-management and disclosure bill (Griffin-Landrum text). (Defeated 149 to 279)	No.
132	Aug. 14	H.R. 8342, on final passage: Labor-management and disclosure bill (Griffin-Landrum text). (Passed 303 to 125)	Yes.
133	Aug. 14	H.R. 7040, on motion to disagree with Senate amendment No. 1 which would increase from $10,000,000 to $25,000,000 the Federal contribution to civil defense. (Passed 240 to 166.)	Yes.
134	Aug. 17	H.R. 6904, to establish an Advisory Committee on Intergovernmental Relations. (Passed 335 to 31)	Yes.
135	Aug. 17	H. Con. Res. 269, expressing sense of Congress against seating of Communist regime in China as representative of China in United Nations. (Passed, 368 to 2.)	Yes.
136	Aug. 18	Quorum call	Present.
137	Aug. 18	Quorum call	Present.
138	Aug. 19	Quorum call	Present.
139	Aug. 19	Quorum call	Present.
140	Aug. 19	Quorum call	Present.
141	Aug. 20	H.R. 8609, to adopt the request for separate vote on Sullivan amendment authorizing institution of food stamp plan for distribution of surplus commodities. (Passed, 232 to 127.)	No.
142	Aug. 20	H.R. 8609, to amend Agriculture Trade Development and Assistance Act of 1954. (Passed, 305 to 53.)	No.
143	Aug. 24	Quorum call	Present.
144	Aug. 26	H.R. 1341, on motion to recommit bill to require passenger-carrying motor vehicles purchased by the Federal Government agencies to meet certain safety standards. (Defeated, 125 to 265.)	Paired.[5]
145	Aug. 26	H.R. 5421, to provide program of assistance to correct inequities in the construction of fishing vessels. (Passed 272 to 108)	Paired.[6]
146	Aug. 27	Quorum call	Absent.[7]
147	Aug. 27	S. 2539, on recommital motion designed to delete provision of $50,000,000 loan fund for construction of classrooms and to spread the $550,000,000 urban renewal funds over 2 years in lieu of 1 year. (Defeated 156 to 231.)	Paired for.
148	Aug. 27	S. 2539, to extend and amend laws relating to provision and improvement of housing and renewal of urban communities. (Passed 283 to 105.)	Paired against.
149	Aug. 29	Quorum call	Absent.[7]
150	Aug. 29	H.R. 2247, on engrossment and 3d reading of bill to authorize the conveyance of certain real property to Sacramento County, Calif. (Passed 203 to 94.)	Paired.[8]
151	Sept. 1	S. 2162, on approving Government employees health insurance bill. (Passed 382 to 4)	Paired.[9]
152	Sept. 1	H.R. 7889, to require rice marketing quota for rice when the total supply exceeds the normal supply. (Passed 330 to 52)	Paired.[9]
153	Sept. 1	H.R. 3151, to suspend rules and pass bill relating to withholding for purposes of income tax imposed by certain cities on the compensation of Federal employees. (Defeated 251 to 133; ⅔ required for suspension passage.)	Paired.[9]
154	Sept. 2	Quorum call	Absent.[7]
155	Sept. 2	H.R. 7509, to override President's veto of public works appropriation bill. (Defeated 274 to 13; ⅔ required)	Paired against.
156	Sept. 2	H.R. 4279, to authorize Secretary of the Interior to construct, rehabilitate, operate, and maintain the lower Rio Grande rehabilitation project, Texas La Feria division. (Passed 281 to 114.)	Paired against.
157	Sept. 2	Quorum call	Absent.[7]
158	Sept. 2	S. 2524, to prevent under certain conditions States or political subdivisions from imposing on a person a net income tax on income from interstate commerce. (Passed 359 to 31.)	Paired.[9]
159	Sept. 3	Quorum call	Absent.[7]
160	Sept. 3	H.R. 8678, Federal Aid to Highway Act of 1959. (Passed 243 to 162)	Paired for.
161	Sept. 4	Quorum call	Absent.[7]
162	Sept. 4	S. 1555, to adopt conference report on Labor-Management Reporting and Disclosure Act of 1959. (Passed 352 to 52)	Paired.[9]
163	Sept. 4	Quorum call	Absent.[7]
164	Sept. 4	H.R. 9035, to recommit bill to permit issuance of series E and H U.S. savings bonds at interest rates above existing maximum and to permit Treasury Secretary to designate certain exchanges of Government securities to be made without recognition of gain or loss. (Defeated 133 to 256.)	Paired for.
165	Sept. 4	H.R. 9035, to permit issuance of series E and H U.S. savings bonds at interest rates above existing maximum and to permit Treasury Secretary to designate certain exchanges of Government securities to be made without recognition of gain or loss. (Passed 378 to 7.)	Paired.[9]
166	Sept. 5	Quorum call	Absent.[7]
167	Sept. 5	Quorum call	Absent.[7]
168	Sept. 5	Quorum call	Absent.[7]
169	Sept. 8	H.J. Res. 352, to suspend rules and pass bill to authorize study and review in connection with proposed additional building for Library of Congress. (Passed 323 to 46.)	Paired.[10]
170	Sept. 8	H.R. 9105, fiscal 1960 appropriations for public works. (Passed 303 to 93)	Paired against.
171	Sept. 8	H.R. 9069, to provide standards for issuance of passports. (Passed 371 to 18)	Paired.[9]
172	Sept. 9	S. 2208, to provide for equal treatment for States of Alaska and Hawaii under Federal Airport Act. (Passed 309 to 75)	Paired.[10]
173	Sept. 10	Quorum call	Absent.[7]
174	Sept. 10	To override President's veto of public works appropriations bill. (Passed 280 to 121)	Paired against.
175	Sept. 15	H.R. 8365, to adopt conference report on mutual security bill. (Passed 194 to 109)	Yes.
176	Sept. 15	On Senate amendment to extend the Civil Rights Commission for 2 years. (Passed 221 to 81)	Yes.

[1] Long standing speaking engagement.
[2] Speaking engagement in Michigan.
[3] In Michigan, if present would have voted "Yes."
[4] In Michigan.
[5] On official leave to attend Interparliamentary Union; if present would have voted "No."
[6] If present would have voted "No."
[7] On official leave to attend Interparliamentary in Warsaw as delegate from House of Representatives.
[8] If present would have voted "No."
[9] Would have voted "Yes."
[10] Would have voted "No."

Federal Reserve's Tight-Money Policy a "Merry-Go-Round"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Leslie Gould, financial editor of the New York Journal-American, which appeared in the Journal-American of September 11, 1959:

FEDERAL RESERVE'S TIGHT-MONEY POLICY A "MERRY-GO-ROUND"

(By Leslie Gould)

In boosting the discount rate to 4 percent—the highest since 1930—the Federal Reserve is taking another one of its long-shot gambles.

The gamble this time is that there will be no easing in the money market in the foreseeable future—that is, in the final quarter of the year. Also, that inflation is still the biggest threat.

The increase is the fifth since just a year ago, when it was raised from 1¾ percent to 2 percent.

In August of 1957—2 years ago—the Federal Reserve made another gamble and it was a wrong one. It put the discount rate up to 3½ percent, when the stock market and business were declining. It never did recover from that mistake in judgment. It had to reverse itself 3 months later. It may have to do so again.

FOLLOWS PRIME RATE RISE

The Federal Reserve, which is the architect, or whatever you call it—maybe plumber is the more correct word—of the tight-money program, claims that it merely was following the market. Commercial banks raised the prime rate for money to 5 percent 2 weeks ago, so the Federal takes the position after waiting a week that there was nothing else it could do.

The discount rate is the charge the Federal makes to commercial banks borrowing from it. The commercial banks will make a loan at their higher rates and then discount it at the Federal Reserve. With the money borrowed from the Federal the commercial banks make another loan.

STEEL STRIKE CAN CHANGE PICTURE

The normal procedure is to keep down the spread between the commercial bank rates and the discount rate, so that there is no chiseling. Actually, there has been very little chiseling and the Federal Reserve has ways and means of controlling that.

The smarter course for the Federal would be to wait just a little before moving as hastily as it did in 1957. For one thing, a continuance of the steel strike beyond October 1 will change the picture. It will slow down business and this in turn will be reflected in easier money.

There are other indications that there may be some slowdown in business after the very rapid recovery from the 1957–58 slide in business—a slide, which, incidentally, the Federal Reserve helped aggravate by its tight-money policy. It can do this again.

NOT A CREDIT INFLATION

The Federal Reserve is taking the position that this is a credit inflation—which it isn't. The 1929 inflation was a credit one, with too much money being siphoned off into the stock market. This isn't happening today. Except for some of the jiggles and monkey business through mystery moneylenders, this is a cash investment stock market.

The inflation of the last few years stems from the wage-price spiral and the heavy deficit spending by all governments—Federal, State, and local. The Federal Reserve's tight-money policy is having no influence on either—except making it tougher and more expensive for governments to borrow.

By putting up the cost of borrowing, the Federal Reserve's tight-money policy is adding to the inflation. Businesses pass along the higher cost of borrowing, the same as wage and material price increases.

HELPED BRING ON RECESSION

The only way the Federal Reserve's tight-money policy can check the wage-price inflation is to bring on a business recession, which it helped do in 1957. That would be a mistake.

Tight money is slowing down the home-building boom. With prime interest rates at 5 percent, mortgage lenders are demanding and getting from 6 percent and in some parts of the country 8 percent.

The Federal Reserve's on-again-off-again tight-money policy is becoming a merry-go-round—only the public isn't getting the brass ring. It isn't getting a free ride. It is being taken for a ride.

Two Great Dangers of Visit: A Letdown or Delusion

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond which appeared in the New York Herald Tribune of September 14, 1959:

TWO GREAT DANGERS OF VISIT: A LETDOWN OR DELUSION

(By Roscoe Drummond)

WASHINGTON.—The summit conference between Prime Minister Khrushchev and President Eisenhower involves two grave risks which, if seen clearly in advance, can be greatly reduced.

I am not referring to the security risk, the danger of some untoward incident or the possibility of a discourteous public demonstration while Mr. Khrushchev is the guest of the Nation. These are minor risks and not likely to develop.

The real dangers are these:

Risk No. 1: The risk that the big buildup—of hope and expectation that the Eisenhower-Khrushchev personal meeting will end the cold war—will bring a massive letdown by settling absolutely nothing, hope shattered, expectation blunted.

The only protection against this risk is a fuller awareness that the Khrushchev-Eisenhower meetings can produce no more than the minutest beginning in a better direction.

Risk No. 2: The risk that the Eisenhower-Khrushchev talks will create a dangerous delusion, that the talks, all of which will necessarily be private, will leave the appearance of relaxing tensions but will settle nothing and that what will be relaxed will be our alertness and our defense.

This is what happened after the Big Four summit meeting at Geneva. The only protection against it happening again is for the President to substitute a candid report to the Nation on his talks with Mr. Khrushchev for the usual doubletalk diplomatic communique.

Mr. Eisenhower has himself warned against a summit conference without advance preparation to make sure it would be somewhat productive. He has always held that such a meeting would be hurtful because it would almost certainly dash the hopes of the world, leave things worse off than before.

True, these Eisenhower-Khrushchev talks are not exactly a summit conference since they are not for purposes of negotiation but only exploratory. But that is a pretty fine distinction. The truth is that nearly the whole world expects something to happen at these Washington meetings and many people expect that something important and good will happen.

Mr. Eisenhower says he has profound hope for some real progress but that no one would dare predict such an outcome.

To guard against false expectations we need to keep these facts in mind;

Prime Minister Khrushchev boasts of the military strength and missile superiority of the Soviet Union. He shows no sign of feeling the need to make concessions to get concessions.

His avowed purposes are to force or fool the West into liquidating NATO and to persuade the United States to shrink its forces and influence back to continental United States.

Mr. K is not abandoning the Soviet aim of implanting communism everywhere in the world and so far Moscow has not been able or willing to plant it without coercion.

The Soviet Union does not want a nuclear war but it has shown no willingness to leave other nations free to choose their own way of life. One Western diplomat has put it this way: "Khrushchev wants peace, but he wants peace at no price."

Conceivably Mr. Khrushchev will view some things differently when he sees America and when he talks with the President. But he will not see them much differently. It may be useful to have Mr. K in our midst but cutting back the cold war is going to take a long, painful, painstaking effort. There are no shortcuts.

One thing that will be needed to guard against false optimism will be for the President to report quickly and candidly after his talks with Mr. Khrushchev at the end of the visit. The appearance of relaxed tensions can only serve Moscow's interests. These conversations will inevitably look better than they are if Mr. Eisenhower fails to speak out at once and frankly.

Wrongs Existent in the New Labor Bill

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLYNN. Mr. Speaker, during my campaign and since, I have repeatedly stated and announced that I was in favor of a strong labor control or labor reform bill to curb excesses. I stated that I favored the original Kennedy bill introduced last year and that I would vote for the Kennedy bill as originally drafted by Senator KENNEDY this year. I stated that I believed there were abuses in labor which needed correction, that the public should be protected from labor leaders

who abuse both their power and their financial position. In supporting the Kennedy bill, I kept faith with that promise. I did not pledge to vote for a bill which amended the original Wagner Act and I do not believe that Congress should have been forced to vote at one time on two separate measures—a labor reform bill and a bill amending the basic labor law, known as the Wagner Act and the Taft-Hartley Act.

I, therefore, voted against the conference committee bill because it did more than contain good and sound labor reform legislation. It contained amendments to the labor law which I felt were not pertinent and did not belong in the labor reform bill. A study of the bill definitely indicates to me that the bill, as finally drafted, does materially change the Wagner Act and does all but emasculate it, for the reason, that under the terms of this bill, a large percentage of American labor and industry, I believe in excess of 50 percent of all the working men and women of America and over 90 percent of all employers, will be denied rights that organized labor and management have enjoyed from the time the Wagner Act was passed in 1934 up to the present time. I believe that any bill which does this emasculates the Wagner Act. Let me pinpoint exactly what I mean.

Prior to the decision of *Guss* v. *Utah* (353 U.S. 1) various States having labor-management laws were able to exercise jurisdiction in the regulation of labor disputes involving employers whose business affected interstate commerce over which the National Labor Relations Board declined to exercise its jurisdiction.

The Guss decision made this impossible and created a vast area which was subject to no regulation. An area in which the Federal board, in many instances, refused to act and in which the exercise of State authority was banned. It was estimated that the "no man's land" area applied to approximately 25 percent of the working force and 90 percent of all employers. This was set forth in a bulletin of the U.S. Department of Commerce—the Department of Health, Education, and Welfare, pages 4–6, table 1A. This bulletin was known as County Business Patterns.

Even before the Guss against Utah decision, in States where there was no State labor board, no one had jurisdiction of cases in which the National Labor Relations Board failed to act. Both management and labor in those cases were denied the benefit of a labor court or labor control.

In my home State of Wisconsin, it was estimated, in 1958, that approximately 29 percent of the working force and about 92 percent of all employers were within the no man's land, as a result of the Guss decision. In many of the States, particularly in the South, this percentage was much higher. It is to be remembered that 37 of the States of the Union have no State labor board at all, and it is only in 13 States that machinery has been set up to hear the cases which fall witihn the no man's land provision. In addition to this, the National Labor Relations Board has such a backlog of cases that many matters which should be expeditiously determined are delayed for such a period of time that they also must be considered to be in no man's land. I doubt if any State having right-to-work laws, such as many of the 37 have, will bother to pass State laws similar to the new Federal labor law or that they will set up State labor boards to hear labor cases.

Of major concern to this Congress has been the elimination of racketeering in labor-management relations. It is hard to conceive of a better opportunity for racketeering to flourish, than to have no regulation available, either at a State or Federal level, to govern labor disputes either among the smaller employers and smaller collective bargaining units throughout the land, or among some of the larger units which are not engaged in interstate commerce. The National Labor Relations Board should have been directed to take jurisdiction of "no man's land" cases and apply a uniform Federal law.

By the turning over, through the labor reform bill, of the "no man's land" cases to the States, we have thrown these matters into State courts for handling. In those States, 37 in number, where there are no labor boards, labor laws, or labor courts set up to take jurisdiction, it means that we have permanently placed those cases which the National Labor Relations Board does not handle—in a permanent "no man's land."

It means that we are denying the people involved in these labor disputes, both the employers and the employees, the right to a hearing before a tribunal of law. We are supplanting the rule of law with the rule of economic power. This is as it was before the passage of the Wagner Act during the Roosevelt administration in 1934. Today large areas of our country have returned to the same type of labor chaos we had before passage of the Wagner Act in 1934.

We heard extensive testimony indicating that service industries, usually employing small numbers of persons, had been the most easy prey for the racketeers. The continuing vacuum in the labor relations law, in at least 35 States or possibly 37, encourages rather than discourages the continuance of unfavorable practices in labor-management relations. The Guss decision indicated that courts wanted uniformity in labor law, but it is hard to see how uniformity will be achieved by turning labor matters over to the varying laws of 37 separate States in addition to the National Labor Relations Board. The only uniformity apparent to me is the fast-growing practice of returning stable labor relations, which have been fostered by State and Federal statutes, to the anarchy which existed prior to the enactment of the Wagner Act, Employment Peace Act, and the Taft-Hartley Act.

In the no man's land cases now assigned to States that have no State labor law or State labor board, the right of employees to be represented by labor unions and to engage in active bargaining will now be determined by economic force, rather than by secret ballot; the right of employees to be free from discriminatory discharge and other abuses because of union activities will be dissipated; and the rights of employers in these areas to be free from illegal picketing and from secondary boycott will go unprotected even under the terms of the new law, because this law will not apply in these instances. In 1958, 62 percent of all charges of unfair labor practices filed in the first quarter of that year were filed by individuals. It is difficult to understand how such individuals, over whom the NLRB has jurisdiction, should have rights and remedies more worthy of protecting by a uniform Federal labor policy than those individuals who are employed in enterprises falling within the no man's land area. This same argument applies to the rights of labor organizations and in particular, to the rights of employers who are located in those areas, and who will now find themselves without any tribunal before which they can bring their labor grievances, and who will be at the mercy of labor leaders, corrupt or otherwise, and who will have to fight it out on the basis of economic power as between the power of their own organization and power and wealth of the union with which they are dealing.

The only uniformity apparent to me in the no man's land area is a chaos of no regulation which has now been permanently written into the labor-management law. If the Southern States, those which have right-to-work laws, continue with the same viewpoint that they have had over these many years and choose not to pass labor legislation, it amounts to forbidding the States from enforcing labor relations violations, either upon the complaint of management or labor if the violations are in the no man's land area.

Let us look for a moment at what this will mean to the average employer. Now that the Federal law turns these matters over to the States, the employer can be sued by any employee in the State court because of an alleged violation by the employer of a union contract or because the employer failed in some manner to do what the employee alleges should have been done. This is going to subject employers from these States to a rush of lawsuits brought by individual employees and by their labor organizations. These will be civil suits, damage suits, if you will, wherein the injured party will be seeking a remedy in terms of dollar damages. This is not in accordance with the terms of the Wagner Act. It is a gross change, and one of the changes which I say emasculates the original Wagner Act. Large increases in these suits can be expected in the absence of any other means of resolving labor disputes. The individual workman and his labor organization must now also be aware of the fact that it can be sued in a State court. You can only think for a moment before you realize the serious implication that this will have throughout the Nation.

Insofar as uniformity of labor law in the future is concerned, we need only think of what will happen when 37 States start deciding cases, under 37 different laws, if they eventually pass them, and when 9 circuit courts of appeals pass on

National Labor Relations Board decisions. It will be almost impossible for any State administrative agency to guarantee consistency of interpretation, no matter how hard it tries and no matter what the spirit of the administrators toward the statutes is. This, again, is a return to the situation that we had prior to the passage of the Wagner Act in 1934. It is chaos—it is chaos both for management and for labor in a large area of labor-management relations. This includes all business which is not engaged in interstate commerce and it includes many small businesses and retail establishments in addition thereto, plus all cases referred by the National Labor Relations Board.

For a moment, let us analyze what has been so frequently stated here in Washington during the discussion of the labor-management bill. The charge has been repeatedly made that Southern States have been doing everything within their power to get eastern and northern industry to move from their home locations to the South. It has been charged that southern areas have guaranteed a work force which will work at a rate of pay below the union rate which the company pays in its present locations. It has been pointed out that the Southern States guarantee a docile work force which will not organize a union because of the existence of right-to-work laws in many of the Southern States. It has been pointed out that guarantees have been made to the owners of industry as to the substandard labor relation situation which will exist if they move to the Southern States. The charge has been made that much eastern and northern industry has taken advantage of these representations and has already moved. I can only speculate as to what this will mean. In my hometown of Racine, Wis., if industry, to avoid our average wage of about $2.35 per hour, moves to a southern State where the wage is only $1.25 per hour, how can the industrial committee of the chamber of commerce under the direction of George Wheary bring new industry to Racine, in the face of this substandard competition? Yet it is the removal of industry from Racine and the rest of the First District of Wisconsin that the 1959 Labor Reform Act tends to induce, in favor of southern competition. This is the result of a Dixiecrat-Republican alliance over labor and civil rights.

The thought, however, has been that in any of these industries where the National Labor Relations Board had jurisdiction, the inviting State could not guarantee that their glowing promises would be kept, for the reason that the Federal law would apply. The workingmen in the East and North had an opportunity of picketing the plant if there was just cause. They have an opportunity of asserting that there has been an unfair labor practice, and taking the employer before the National Labor Relations Board. On the contrary, the employer if he lived up to all the laws, had a right to go before the National Labor Relations Board, to secure justice insofar as he was concerned. It is important, however, that in many of these cases, the union men who were thrown out of work were able to follow the plant into a new location, and through collective bargaining, and through the assertion of economic power, as permitted under the Wagner Act, were able to get concessions to save jobs and get wage increases for the working force.

Now the Southern States through the passage of this law are able to have the Federal Government write into its charter a law protecting them and guaranteeing the enforcement of the southern statutes affecting labor which are on their books. In other words, the Southern States with 1890 labor laws, can now enforce them without any fear of recriminations by unions, by the previous working force, or by the public generally. When these Southern States send their products made with substandard labor, and nonunion labor—at prices which will only tend to hurt northern manufacturers and when this merchandise is shipped back into the other States for sale, it will be unlawful to conduct a secondary boycott. It will be unlawful to engage in any practical activity which will tend to force the hand of the employer to comply with more reasonable labor management relations. Industry can now move into the South where right-to-work laws exist and with virtual immunity pay such wages and pursue such labor policies, and then sell on the competitive market with northern industry. The result of this will be to bring down wages in the North to the level of wages paid in the South and the ultimate result will be to reduce the standard of living of all Americans to the standard of those working in these sweatshops. Yes, this again emasculates the Wagner Act and returns labor-management relations to the same basis it was prior to the passage of the Wagner Act during the Roosevelt administration in 1934.

The Landrum-Griffin conference report bill will not only slow down further the growth and the strength of the trade union movement but it will eventually lead to more regressive developments. By this, I mean that this has only whetted the appetite of the enemies of labor and their drive will soon start to bring labor under the heel of the antitrust law and the passage of a national right-to-work law. I say that if this happens, it will be the breakdown of American democracy.

The Landrum-Griffin conference report bill was a vote to speed the flight of industry from the North to the largely unorganized South. Yes, industry will now move into not only the unorganized South but also, the never-to-be-organized South.

Another strongly motivating factor in my vote against the Landrum-Griffin conference bill was the open invitation for the powerful unions of the Nation to take over the small, struggling unions. Under the terms of this conference agreement, only the well-entrenched international unions, with great assets and legal talent, will be able to meet the legal delays, the legalistic entanglements, and slanted antilabor decisions of the State courts, operating under State statutes and decisions. This, in turn, means that the small unions which cannot afford to fight against these handicaps will be absorbed by the big unions, which have caused the people of America, who have been given an antilabor brainwashing over the past several years, to demand so-called reform legislation. The Landrum-Griffin conference report, in its seventh section is not corrective. It is punitive and destructive of legitimate union aims and activities.

This bill, as stated above, means that small unions because of all the provisions placed therein, will be required to seek membership in the bigger and more powerful unions, and the day of union merger is here, just as is the day of business merger. As we get big unionism to match big business, we will indeed have a new type of economy. I ask you—is this for the best interests of America and the people of America? I do not think so and I, therefore, voted against the conference bill.

It is to be remembered that the teamsters organization, including Hoffa and Beck, were not Democrats and were not supporters of the Democratic Party in the last several campaigns. They backed the Republican Party and recently I saw a picture of Dave Beck standing side-by-side with our President and the two of them were smiling at each other. It is to be noted that the Teamsters Union was discharged from membership in the AFL–CIO and I question what the status is of Beck and Hoffa, insofar as their membership is concerned, in the Republican Party.

It is noteworthy also to see that the hysteria which the chamber of commerce and the National Manufacturers Association worked up over the activities of these two Republican labor leaders was the very thing that the Republicans and southern Democrats here in Congress used to put American labor in a straitjacket—labor supported the Democratic Party because the Republican Party always refused to understand or sympathize with their problems. There is no question about it, we in the North feel that the Republicans and the Democrats of the South made a deal, with the South supporting the labor bill which is so beneficial to members of the Republican Party, and the South—in return for the North supporting the anticivil rights legislation.

Of course, we were not present at the conference and can only presume what must have taken place for the North and virtually the Solid South to vote so uniformly on this bill. I feel that the southern Democrats and the Republicans made a deal on labor and civil rights, just as it is charged the Republicans made a deal on colored support in the last election.

It is going to be noteworthy to see, when northern businessmen receive an analysis of this bill, that they are going to find there is as much bad in it for them as there is good. I voted against this bill because it was bad for businessmen as well as bad for labor. I was wholeheartedly in favor of the first six sections of the labor bill.

Business can now be sued and harassed in the State courts by their em-

ployees and their labor organizations. They can now be held liable in money damages. Can you imagine an employer, when a union starts to organize his plant, raising his employees wages? This employer can now be sued for having engaged in an unfair labor practice in trying to prevent the formation of a union. Can you imagine the employer being held liable in money damages with a judgment rendered against him because of this activity? Yet, this is exactly what can and will happen to employers under this act.

In 1934 President Roosevelt, because he had a social conscience and because he wanted to bring stability out of labor chaos, proposed and had passed the Wagner Act, in order to make labor and management relations stable and in order to promote the growth of the trade union movement and to raise the standard of living of the American people.

With the passage of the Landrum-Griffin bill, we are denying the privilege of the Wagner Act to a large percentage of American men and women. We have emasculated its terms and while we have not denied its use entirely, we have curtailed its use and so limited it as to make it ineffective and inoperative. We have taken away from American union men and women, the powers that they need to deal on an equal footing or terms with management when labor disputes arise. I am happy to have been one of those who voted against the conference committee report and bill, and again, I repeat, it is my opinion that this bill emasculated the Wagner Act. I believe, in making this statement, that any newspaper should read carefully before impugning my motives. If it wants to disagree, that is its right, but on a matter of this importance, I do not believe it has the right to disagree and impugn motives at the same time.

It is interesting to note that the 52 votes against the bill, 27 came from New York and Pennsylvania. These votes were not votes against the labor reform provisions of the bill any more than mine was, but these were votes against enacting a Federal law which would freeze a right in the Southern States to continue a raid on northern and eastern industries and mills. These votes opposed giving Federal sanction to archaic State labor laws of the South and preventing the Federal Government from enforcing fair labor-management standards in Southern States; then enabling Southern States to compete unfairly with the North and East by selling sweatshop products to our people. Yes, permitting the South to become an industrial empire at our expense while, at the same time, it reduces the standard of living of all American working men and women.

I will not mention the unfair bonding provision of the act which excludes all but a few chosen bonding companies from getting the bonding business of union officers and trustees.

The employer is much worse off, under this act, insofar as informational picketing is concerned, for the reason that it may now go on indefinitely, whereas it is felt that the Curtis case, now before the Supreme Court, will uphold the principle that picketing is not legal, under Taft-Hartley, unless the union had the backing of a majority of the employees. Under the new act, this is not necessary.

The State courts of the Nation will be filled with injunctive proceedings by both management and labor because, when the National Labor Relations Board failed to act, either side, just as in the 1920's, can go to court for an injunction. Employers can be sued in State courts for an injunction to stop firing employees for union activities, for threatening employees during a union organizing campaign, for trying to buy their allegiance with pay raises or for refusing to bargain in good faith. Unless the States pass appropriate laws, thsee injunctive suits can never be settled in 37 States, because the State courts lack the authority to go further; to do such things as ordering an election or determining right of representation. There will be labor chaos and economic force supplanting order and peace in the labor-management field.

The special privileges given the building trades do not apply in the 19 States that have right-to-work laws. These privileges are in effect a closed shop right, which is outlawed in the right-to-work States.

As long as I am a Member of Congress, you may be assured that I will not vote for any legislation that does violence to any segment of our economy. This includes both management and labor. Neither will I vote to aid Southern States at the expense of my home State and other Northern States.

I believe in assisting all segments of our economy, if I can do so without injuring or tearing down some other segment of the economy.

Valuable Tome Acquired by Knights of Malta

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following announcement made recently by Charles L. T. Pichel, O.S.J., secretary to the board, Knights of Malta, Shickshinny, Pa., concerning a very rare antique tome containing what is believed to be the first account of the famous Knights of Malta published in the English language:

VALUABLE TOME ACQUIRED BY ORDER

What is believed to be the first account of the famous Knights of Malta published in the English language is contained in a 13-page chapter of a very rare antique tome now 336 years old, having been published in London, 1623.

The book was first published in 1620 in the French language by the author Andrew Favine, "a Parisian and advocate in the High Court of Parliament."

Full title of the English volume is "The Theatre of Honour and Knighthood, or A Compendious Chronicle and Historie of the whole Christian World." The title page continues to explain, "Containing The Originall of all Monarchies, Kingdomes, and Estates, with their Emperours, Kings, Princes, and Gouvernours; Their Beginnings, Continuance, and Successions, to this present Time."

Further description on the title page states: "The First Institution of Armes, Emblazons, Kings, Heralds, * * * With all the Ancient and Moderne Military Orders of Knight-hood in every Kingdome * * * with their Originall, Lawes, and Observations."

Only one other copy of this work is known to exist in the United States, and that copy reposes under special guard in the reserve room of the New York Public Library.

Although the book carries a short account of the Sovereign Order of Saint John of Jerusalem, nevertheless, it contains facts and information about this order and all other orders, of the time, not found in the regular sources and textbooks, thus becoming a priceless acquisition for anyone interested in these ancient orders of chivalry.

This tome was located about 3 months ago in a secondhand bookshop in a London suburb by an official of the Order of Saint John familiar with its rare contents and age. It is in excellent condition. This first English translation of 538 pages measures 8¾ by 13½ inches by 3¼ inches thick. It may be seen at the convent of the order, Shickshinny, Pa.

Khrushchev's Visit Called Plot To Dull Moral Force

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by David Lawrence as it appeared in the New York Herald Tribune of September 14, 1959:

KHRUSHCHEV'S VISIT CALLED PLOT TO DULL MORAL FORCE

(By David Lawrence)

WASHINGTON, September 13.—The American people are entitled to know the game Soviet Premier Khrushchev is playing.

It is a game of diversion—rockets to the moon, protracted conferences on disarmament, and nuclear tests and summit talks that, if carried on for years, are intended to make the American people grow weary of international tension and finally to accept the unmoral and unlawful conquests of millions of peoples now enslaved.

There are two instruments of power in the world today that can affect the peace of mankind. One is military, and it is designed to act as a deterrent to physical aggression. The other is moral force which when developed to full strength can influence whole nations and cause them to rise up against their oppressors.

Khrushchev's game is to deaden the moral force that has made liberty-loving nations so articulate in world history in behalf of human freedom.

Khrushchev's game is to make it appear that, by exchanges of visits, by expansion of trade, by constant talk of peaceful coexistence, Americans are abandoning their dedication to moral force. This is expected to discourage revolt behind the Iron Curtain.

For if America becomes indifferent, the captive nations, it is persumed, will lose all hope.

Khrushchev's game is based on a belief that Americans are influenced only by selfishness and materialism—solely by the desire of businessmen for more trade—and that such idealism as remains can be anesthetized by wearisome and exhausting negotiations, or by implied threats of war through emphasis on missile and rocket development.

Khrushchev's game reaches a climax in propaganda intensity this week as he visits the United States. The dispatches and radio reports from America telling of enthusiasm for him, official honors paid and courtesies extended, together with news pictures of high American officials fraternizing with Khrushchev, will be displayed throughout Eastern Europe and behind the Iron Curtain, generally, as meaning approval of Communist policies by the people of the United States and their Government.

What can the American people do about it all? Various types of protests have been planned for the next 2 weeks and will be published widely. These devices are effective psychologically to some extent abroad, but it is here in Washington that the biggest opportunity has been missed.

The Congress speaks for the American people. It should have decided to stay in session throughout the Khrushchev visit to allow for an extensive debate on the cold war issues. This would have told the world in unequivocal terms that the American people have not forgotten what happened in Hungary and East Germany. It would have furnished an opportunity to ask Khrushchev openly what has become of the millions of persons exiled to concentration camps behind the Iron Curtain, and to expose to full view the operations of his autocratic government.

MORAL FORCE IS POTENT

For moral force is potent when it effectively expresses a nation's ideals, and when it seeks by debate and discussion to underline and emphasize the basic principles of human freedom.

Actually there is only one issue. It is the self-determination of peoples everywhere—the right of the people to vote in free elections and choose their rulers. In the Soviet Union, only one party can vote and military duress is applied to suppress free speech and debate. Just the other day, Khrushchev himself publicly told a group of Soviet writers that they were overstepping the bounds in their criticism, and that he might have "to shoot a few of you, and my hand will not tremble."

Moral force means a constant emphasis on the right of peoples to govern themselves.

Moral force means the exercise of the right of free speech persistently, without regard to the inhibitions of official courtesy. For, while the President and high officials of our own Government must follow the amenities, this does not bind the American people. There must, of course, be only peaceful demonstrations and never the slightest encouragement of disorder. But the American people ought not to be misled into allowing so-called courtesy to squelch those expressions of contempt for tyranny which ought never to be suppressed.

For the "butcher of Budapest," and the man who is responsibile for the murder, exile, and imprisonment of tens of thousands of people in Eastern Europe, cannot be allowed to believe that his crimes have been forgotten. To kowtow to dictators, and to let them misconstrue official courtesy as approval of their cruel acts, would be a backward step for America in world history.

Today tens of millions of people in the world are in bondage. Many of them are being tortured daily in concentration camps by the two big Communist regimes—in Moscow and Peiping. It is time to show the deepest sympathy for the oppressed and to speak frankly to the visiting ruler who has earned the doubtful distinction of having by his acts become the cruelest man in the world today.

Prayers are in order—prayers to the Almighty to give courage to the faltering and to find ways to bring the criminally guilty to the bar of justice. Peaceful coexistence should mean freedom for everybody, and not a world half slave and half free.

The Fight in 1959 for Hawaiian Statehood

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RIVERS of Alaska. Mr. Speaker, under leave to extend my remarks I submit my impressions of what I think was one of the major accomplishments of the 1st session of the 86th Congress, and convey my congratulations and thanks to my colleagues in the House of Representatives who worked so hard and cooperatively toward their goal. The subject of which I speak is the granting of statehood to the Territory of Hawaii and bringing this island empire into the family of States of our great American Union.

Aside from the overwhelming majority of the people of Hawaii who had struggled for years to gain admission of their territory as a State, I feel that I as an Alaskan who is also less than a year old as a fully endowed American citizen, probably have a better basis than most for understanding the human values involved. As the sole Member of this House from the now second newest State, my memory is fresh as to how it feels to be a colonial on the outside looking in, as contrasted with the fulfillment of being on the inside looking out.

As a youth raised in Alaska, and as an adult who has spent his mature years in Alaska, I had never been eligible until less than 10 months ago, to vote in a Presidential election, or until less than 10 months ago, to vote for U.S. Senators and a Representative to the Congress, or even for Governor.

The people of Hawaii had, until passage on the enabling legislation, been in exactly the same situation. The frustration—the feeling of helplessness in charting our own course of destiny—is something that can be fully understood and appreciated only after having experienced it. It is basic to our American heritage of economic and political independence—something ingrained in the minds and hearts of Americans, that has its origin in the years long before the American Revolution lead to the establishment of the Original Thirteen States. As Americans, our educational backgrounds, our cultural evolution—even our economic philosophy—all have taken a part in establishing in each of us the craving for sovereignty—not absentee government.

The people of a territory organized by the Congress under the American flag can for a period of years be satisfied to conduct a program of limited self-government—under tutelage, if you please—but only with the promise and in the hope that it will be only a temporary situation. After having gained experience and a fair degree of political maturity and economic self-sufficiency, the people of such a territory find themselves eager to be graduated and awarded the full measure of American political rights and responsibilities. The people of Hawaii had undeniably demonstrated that they and their great homeland were ready for graduation. This Congress refusing to be further delayed, tackled the problem early in the session, and before the Congress was many weeks old, embraced the Territory of Hawaii as an inalienable part of the Union, and removed them from the twilight zone of territoriality. Another goal of the Democratic Party achieved.

But I would not leave the impression that the only benefit derived has been for the people of Hawaii. Far from that. The United States as a whole will benefit from the enabling of these peoples to fully participate in the conduct of our national affairs, thereby obtaining the benefit of the fine contributions which all of us know they will make as our 50th State. We have already seen clear evidence of this in the Senators and Representative the State of Hawaii has sent to the Congress. Serious, honorable, intelligent and dedicated men—men of good will—men from varied ethnic groups—a real lesson in democracy.

We in the House naturally know our colleague, Congressman DANIEL K. INOUYE, better than we know those in the other body. A Japanese-American, lawyer, combat veteran, and hero, a young man of vision and determination, he typifies Americans everywhere. This able gentleman will, I am certain, do great credit to the State of Hawaii, the United States of America and the House of Representatives. His youth and vigor are priceless assets, and we shall all be proud and thankful to have him in our midst.

In closing, I would say that in granting statehood to Hawaii, the 1st session of the 86th Congress has built another monument to the greatness of the United States.

More Economic Fantasy

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PORTER. Mr. Speaker, Mr. Reese H. Taylor, chairman of the board of the Union Oil Co., of California, and I have been having some interesting correspondence. Again, under unanimous

consent previously granted, I include one of Union's Oil's advertisements, in which that company appears to be educating the public in the basics of economics. I feel that it is doing no such thing, but is, in fact, misleading it.

Following the advertisement, which appeared in the September 7, 1959, issue of Life, is my reply to Mr. Taylor.

The matters follow:

THE ONLY WAY YOU CAN REDUCE YOUR TAXES

"From time to time there are factions who argue that special taxes should be levied against a business or industry.

"And there is always the same reason given—these special taxes will help to relieve the burden of the 'little man,' the average taxpayer.

"This is a beguiling promise. And a great delusion.

"Take our own company as an example. Union Oil has no source of income except what our customers pay us. So every dollar we spend in the conduct of our business is a customer's dollar.

"It's a customer's dollar whether we pay it out for a truck, a tanker, a service station, a salary or a tax.

"Each time our taxes are raised, we have to get the extra money out of the customer by increasing prices.

"Every business does the same thing, or it couldn't keep its doors open. No matter what company pays the taxes, its only source of income is its customer.

"Direct and indirect taxes are, in fact, a major part of overhead of every business. And they always have to be paid. By you."

Arthur Mackenzie is assistant manager of our tax division.

His logic, we think, highlights a simple truth. You cannot lower your own tax burden by increasing someone else's.

The only way to reduce everyone's taxes—including the ones you pay, is to cut needless Government spending at all levels.

Your comments invited. Write: chairman of the board, Union Oil Co., Union Oil Center, Los Angeles, Calif.

Mr. REESE H. TAYLOR,
Chairman, Union Oil Co.,
Union Oil Center, Los Angeles, Calif.

MY DEAR MR. TAYLOR: You may remember that once before, at the end of July, I took the liberty of addressing certain remarks to you concerning an advertisement which the company of which you are the able chairman placed in the July 13 issue of Life. That one contained some very dubious generalizations by you and by Mr. Charlie Perkins, purchasing agent of your company. Your new advertisement in the September 7 issue of Life, containing certain statements presumably made by the assistant manager of your tax division, Mr. Arthur Mackenzie, is, frankly, every bit as alarming to me as your earlier statement. It is hard for me to believe that any person whom you would be willing to have on your payroll as an assistant manager of your tax division could set forth for publication such naive nonsense as is contained on page 11 of Life's September 7 issue.

We can, of course, agree that taxes are one of the costs of doing business, and in this respect are like any other cost—wages, materials, services, etc.—that a business has to pay. In the long run, of course, no business can succeed which does not cover these costs and have enough profit to serve as an incentive to continue its operations. But to conclude from this fact that "each time our taxes are raised we have to get the extra money out of the customer by increasing prices" is an utterly fallacious conclusion, as any freshman student of economics could tell you. Raising prices to the consumer is, in fact, sometimes not even a feasible alternative. If a tax were imposed, for example, on fuel oil, but not on natural gas, or on other competitive fuels, it might be economic suicide to raise the price of fuel oil. In this respect, again, taxes are like any other cost which may go up. Sometimes a business finds it prudent to pass the increased cost on to the consumer, sometimes it is utterly impossible. Alternatives must be constantly examined, such as cutting other costs, increasing productivity, changing the product mix of the company, reducing dividends, and cutting executive salaries.

The conclusion you reach that "you cannot lower your own tax burden by increasing someone else's" is again quite untrue, as any student of the history of taxation knows. Every change in tax rates inevitably shifts the relative tax burden in one direction or another. If more taxes are gained from excises on tobacco, liquor, and playing cards, consumers of these items are assuming a part of the tax burden which otherwise would fall on others. If the oil industry gets a depletion allowance that is considered by many tax experts and myself as excessively generous, a relatively heavier burden falls on other businesses and individuals. If the tax rates on individuals are steeply graduated, those with lower incomes benefit directly. If corporate taxes are reduced, corporations, their officials, and their stockholder-owners, and in the rare instances where such reductions result in price cuts, even their customers may benefit. But a correspondingly greater burden falls upon the rest of the economy.

Of course, in the abstract, it is easy to say that cutting needless Government spending at all levels is the only way to reduce everyone's taxes. But this platitudinous generalization is of absolutely no help to anyone concerned with the determination of what the Government should spend. As you well know, Mr. Taylor, there is not a single Government program which does not have its spokesmen and advocates, those who insist that spending on their particular programs is essential and necessary. Nothing is of more constant concern to the Members of the Congress than seeing to it that the appropriations it authorizes are necessary for the security and welfare of our people. Our committees are vigilantly on guard against waste, fraud, and inefficiency. Aided by the General Accounting Office, and the Bureau of the Budget, the Congress is constantly aiming to keep Government expenditures to a point where they are economically sound and benecial to the American people.

But, Mr. Taylor, you must not forget that in a growing country such as ours, and in a world fraught with dangers to our national security, we would fail in our duties to our people, if we were directing our attention exclusively toward cutting expenditures. Russian military might has taught us to redouble our efforts for a strong national defense—and that costs money. Sputnik showed us the spectacular advances of Soviet science, and demonstrated the need for accelerating American education in science and technology—that too costs money. Our growing population and expanding economy make expenditures on schools, highways, hospitals, imperative. None of this comes cheap. If you feel, Mr. Taylor, that these, or any other specific Government programs should be abandoned, I should be glad to hear about it. But please don't just ask for cutting down Government spending at all levels. That is too much like saying you're against sin.

Let me assure you I don't like taxes any more than you do. I have to pay them on my salary, just that way you do on yours. Excise taxes, sales taxes, property taxes, eat into my income in a painful way. But I would never be able to live with myself if I thought for a moment that reducing these taxes was more important than the security of the United States and the welfare of its people. I am sure you feel the same.

No, let's not just "cut needless Government spending." Let's eliminate needless Government spending. But let us be sure that we know what spending is needless before we start to swing the meat ax around cutting down programs whose termination or reduction would place the security and the welfare of our people, of our children, and of our children's children in jeopardy.

With best regards,

Sincerely,

CHARLES O. PORTER,
Member of Congress.

Kirby-Woolworth Saga

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader entitled "Wilkes-Barre Notes Milestone," the occasion being the anniversaries of the Kirby-Woolworth Stores:

WILKES-BARRE NOTES MILESTONE

From tiny acorns mighty oaks spring.

The first acorn that developed into the F. W. Woolworth Co., with 3,290 stores in 11 countries around the globe, was planted in the town of Lancaster in southern Pennsylvania in 1879 by Frank W. Woolworth, whose name the firm continues to bear. He was one of the three Watertown, N.Y., store clerks who toyed with the idea of offering merchandise, priced at 5 and 10 cents to attract the general public. Shoppers flocked to the establishment and the experiment was a huge success.

Another clerk, Fred Morgan Kirby, decided to launch such an enterprise in Wilkes-Barre. In partnership with Sumner Woolworth, he opened a store on East Market Street on September 10, 1884, and it, too, was a success.

Three years later, Mr. Kirby became the sole owner when he purchased the interest of his partner who decided to concentrate on a similar store at nearby Scranton, seat of the newly formed county of Lackawanna.

In the meantime, a man named Seymour H. Knox had founded a 5-and-10 store at Erie and one E. P. Charlton had gone into business at Little Falls, Maine.

The initiative of these pioneers paid off handsomely. In 1912, F. W. Woolworth had some 300 stores in a chain throughout the country. Mr. Kirby's modest establishment in central city had grown to 96 stores under the firm name of F. M. Kirby & Co. The others, too, prospered. Merging their interests, the F. W. Woolworth Co. was organized and the rest is familiar history.

To commemorate the 80th anniversary year of the F. W. Woolworth Co. and the 75th anniversary of one of the original stores, established in this instance by Mr. Kirby in Wilkes-Barre, a special celebration will be held in this city. It will be opened with a reception and dinner in the Westmoreland Club tonight with top Woolworth executives and civic leaders in attendance and will be continued with Kirby-Woolworth Founders Days, starting September 24.

The eminence the F. W. Woolworth Co. attained was no accident. Its founders built

on a solid foundation, as the career of Mr. Kirby attests. Today, its executives and employees have stirring examples from the past to guide them. It is easy to understand the firm's progress and enterprise under these stimulating circumstances. Today's Woolworth store, still known as Kirby's in Wilkes-Barre, is a far cry from the modest five-and-tens of yesteryear, but, basically, the principles are unchanged.

Mr. Kirby lives on in Wilkes-Barre, not only in the memory of a generation that knew him personally, but in the many monuments he has left—his modern store, the park that bears his name, the magnificent health center on North Franklin Street and in every so many civic undertakings with which he was identified. A grateful Wilkes-Barre will never forget him.

It is especially gratifying to this city that Mr. Kirby's son, Allan P. Kirby, a native son, not only is following in the footsteps of his distinguished father as a businessman, financier, and philanthropist, but is carving a notable career of his own. As head of the Allegheny Corp. and the New York Central Railroad, as well as a director of the F. W. Woolworth Co., and other enterprises, he has become a nationally known figure. The Kirbys, father and son, have a special place in the affections of Greater Wilkes-Barre as we are reminded by the current Kirby-Woolworth milestone.

It is a privilege, on behalf or the community, to extend congratulations and best wishes on this momentous occasion.

Agriculture and the 86th Congress

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HOEVEN. Mr. Speaker, the 1st session of the 86th Congress has now drawn to a close. At this point it seems especially appropriate to review for a few moments what this session of Congress accomplished and what it did not accomplish on one of the more prominent problems of our economy today—the agricultural problem. I believe most Members of the Congress will agree that agriculture occupied a great deal of their time during the past few months.

Agriculture is very important to every man, woman, and child in these United States. Agriculture is our most basic industry upon which our whole existence depends and from which a large segment of the population makes a livelihood. Agriculture is vital not only to the millions who are engaged in it directly but to many more millions of people whose interests and occupations are tied closely with agriculture in the transporting, processing, delivering, and servicing of our food and fiber. Indeed, our very lives depend upon this very vital industry, and its importance is well recognized by Members of Congress. It is with this recognition that we give prominence to the problems of agriculture.

We should give agricultural legislation first consideration in our deliberations. The American farmer must receive equitable treatment at the hands of government.

We all agree that the man who is feeding and clothing us so efficiently and well—the American farmer—is entitled to a fair return for his efforts. He should not be shackled with regulations and restrictions which will be adverse to his welfare and that of the American public.

Much has been said about the farm mess. Probably most people are aware of the so-called farm problem. The inclination has been to point the finger of blame at the farmer. I rise to the defense of the farmer in this situation. He is not to blame, as most informed people know. If there is anyone to blame, it is someone other than the man on the farm.

Many opponents have cast particular blame on the administration for the farm problem. Actually, many of those who would blame the farmer or the administration for the farm problem are trying to cover up their own lack of responsibility. Actually, no individual should be blamed for the farm problem. But certainly the bulk of responsibility should be accepted by the Congress itself.

Our constituents know that it is the responsibility of Congress to draft, debate, and pass needed legislation. That is not the responsibility of the administration or anyone else. The responsibility can only be that of the Congress. We cannot dodge that responsibility.

We must accept the truth for what it is. One truth that is self-evident is the fact that the 86th Congress is controlled by the Democratic Party in a ratio of around two to one. As a matter of fact, the House Committee on Agriculture, as constituted, includes 22 Democrats and 12 Republicans. By this majority the Democratic Party must accept the principal responsibility for congressional action or inaction as it regards agriculture. The responsibility rests squarely on the Democrats in the present session. That majority party has controlled the legislation during this session from start to finish. By an overwhelming majority, as exists this session, the Democratic Members, if they so chose, could have brought forth the kind of legislation which is so badly needed. Instead, they did little to provide a sound, practical, and workable farm program. The majority party failed to face up to the realities of the farm situation despite an ever-increasing volume of criticism over the tremendous surpluses that are accumulating and the mounting costs of the farm program. The majority party, by failing to act, has provided the basis for still greater farm problems in the future.

The desire of the Democrats to act as politicians instead of statesmen has created a farm situation which will be much harder to correct than if remedial action had been taken. Because the majority party chose to take a course of inaction as pertains to sound farm legislation, the farm problems will accumulate even more another year.

The Democrats have quibbled on the farm problem. They not only failed to take the initiative in writing needed new basic farm legislation, they chose to avoid those difficulties by doing nothing about them, or in those instances where they tried to do something they took such ridiculous action that they knew beforehand the legislation would be vetoed.

The party in control of Congress this session made no strong attempt to provide sound remedial legislation for farmers. Again and again they dodged the issues that were squarely before them. Their main attempts were in the form of criticism of the administration. Honesty and statesmanship would have been a wiser course. Because of the delaying tactics that have been used the farm problem will undoubtedly worsen. It is entirely possible that the hue and cry that will be raised in the future will force legislation which will compel the withdrawal of some of the assistance programs needed by farmers.

The problems of agriculture and the differences between those of us who are close to agriculture are often far out of proportion to our accomplishments and our agreement. Bipartisanship efforts for greater agricultural research, for an expanded school milk program, for improving and strengthening the farm credit system, the expansion of activities on the control and eradication of plant and rodent pests, and the extension of Public Law 480 each stand as constructive and sound steps taken in the first session of this Congress for the overall improvement of Agriculture.

During the 86th Congress I personally and in conjunction with my Republican colleagues on the Committee on Agriculture urged the Secretary of Agriculture to take what I feel were two constructive steps in our agricultural program.

The first was to expand the types and varieties of commodities eligible for donation to needy persons and to welfare institutions. In particular, this covered peanut butter and some vegetable shortening. I am happy to say that later in the year the Secretary of Agriculture saw fit to carry out my recommendations. My second recommendation was that the Secretary take a long and hard look at recent developments in the hog-marketing situation in Canada. We from the Corn Belt are very much concerned over recent reports that the Canadian Government is considering the institution of a compensatory payment program on live hogs and dumping its surplus into the United States. While everybody is for mutually advantageous trade, we should not sit idly by. If Canadian Government-subsidized pork is dumped into this country at a time when our free livestock industry is facing an overabundant supply of pork, we may have to limit imports. I have been assured by the administration that it will closely scrutinize developments in Canada and take appropriate action if necessary.

I am disappointed, however, that we in Congress have not been able to approach some of the really huge problems of agriculture, such as surpluses and farm income, in an equally statesmanlike and bipartisan manner. I am disappointed that the Congress has not seen fit to seriously consider the President's recommendations on agriculture while sending to him completely unsound and unacceptable proposals.

There has been a lot of political talk about the corn crop, about the poultry situation, about food distribution, and about the hog situation. But there has been absolutely no action by the Congress on these important aspects of agriculture. The administration has conducted purchase programs on both eggs and pork and it has been doing an outstanding job of distributing our surplus food to needy people, to welfare institutions, and to children in the school lunch and school milk programs. The following table illustrates the dramatic increase in our food distribution activities under this administration:

Surplus foods distributed in the United States

Fiscal year	Quantity	Cost
	Pounds	*Dollars*
1953	161,100,000	68,700,000
1954	417,800,000	155,200,000
1955	492,500,000	167,700,000
1956	789,100,000	234,600,000
1957	1,061,900,000	236,400,000
1958	871,600,000	185,400,000
1st half 1959	558,400,000	113,700,000
Total	4,352,400,000	1,161,700,000

[In thousands]

Fiscal year	Children in school lunches	Needy persons in institutions	Needy persons in family units	Total
1953	9,300	1,300	100	10,700
1954	9,400	1,400	1,100	11,900
1955	10,200	1,300	3,290	14,790
1956	10,900	1,400	3,170	15,470
1957	11,900	1,400	3,485	16,785
1958	13,600	1,400	4,665	19,665
1st half 1959	14,100	1,400	5,230	20,730

The logical inconsistency of the Democratic-controlled 86th Congress on farm legislation was readily apparent on the two important farm bills vetoed by the President. These bills dealt with wheat and tobacco.

The tobacco bill merely tampered with tobacco price supports, while the wheat bill would actually have raised price supports, while the wheat bill would actually have raised price supports.

The tobacco industry was thoroughly aware of the fact that the ever-rising parity formula with tobacco price supports keyed to it at 90 percent of parity was steadily pricing this great industry out of the world market. The industry also was keenly aware that further acreage cuts would be necessary on an already drastically cut acreage unless price supports were lowered and the surplus buildup was reversed.

The Democratic leadership fully realized these tobacco "facts of life." But rather than face the problem squarely and forthrightly they pushed through Congress a bill which would freeze future tobacco price supports from going higher in dollars and cents than they were in 1959. This was a real freeze bill—only the freeze was in effect a ceiling price, not a sound approach to help tobacco farmers. The bill also provided that this freeze or ceiling price on tobacco would remain in effect until 90 percent of the old parity formula reached the 1958 level of support or until 90 percent of the new parity formula dropped below the 1958 level. This proposal was mere political window dressing designed to fool farmers.

Anyone who studied the tobacco situation knew that the old formula—which is based on tobacco prices received over 40 years ago—would not catch up to the 1958 level for at least 5 years.

Expecting the new formula to drop below the 1958 level was sheer wishful thinking. Experts stated it would not happen in the foreseeable future.

The sum and substance of the vetoed tobacco bill was that the Democratic-controlled Congress did not want to admit the failure of the 90 percent of parity price support program on tobacco. They wanted their cake and they wanted to eat it too. They wanted to continue 90 percent of parity for tobacco above all else, but they did not want to lose any more exports or face further acreage cuts.

When the bill came to the floor of the House, I offered an amendment, which was supported by the minority, to call a spade a spade and freeze tobacco price supports for 2 years at the 1958 level. There was no sound reason why tobacco should set the precedent of being the only commodity under the old parity formula. The Democratic-controlled Congress rejected my amendment and then professed profound misunderstanding when the President vetoed the bill. As the President pointed out:

> The bill's demerits are fundamental and far reaching. The bill takes a long step backward by resurrecting 90 percent of old parity as one basis for determining support levels for tobacco. The Congress itself discarded the old parity formula years ago.

The tobacco bill was not sound legislation. It was mere shadowboxing.

It was indeed ironic that at the conclusion of the debate on the tobacco bill, which would have accepted a 90 percent of parity religion in tobacco price supports, the Democratic leadership called up the wheat bill that raised price supports. The tobacco bill at least recognized what the present harmful program was doing to it. The wheat bill, on the other hand, not only failed to recognize the shortcomings of the present wheat program but it also stepped backwards to a disproven 90 percent of parity concept on this important crop.

As we pointed out in our minority report on the wheat bill, the shortsighted approach made by this legislation would have cost the taxpayers of the United States an estimated $110 million per year more than the present program, and it would not begin to deal with the problem of surplus in this basic grain.

There was a great deal of argument about the cost of this bill, but the record is clear that experts within the Department of Agriculture—not me, not the Congress, and not the Library of Congress—estimated the increased cost of the bill to taxpayers to be $110 million per year.

In addition, this wheat bill, which was not supported by farm organizations or wheatgrowers, would have imposed a 24 percent cut in the acreage allotment of every wheat farmer in America. It would have imposed some of the most stringent penalties to farmers ever on the lawbooks. It would have left the referendum outcome in the hands of only one-third of the wheat farmers in this country.

It was undoubtedly the poorest piece of farm legislation in this session of Congress. Even the Democratic-controlled House rejected the bill after it had gone to conference with the Senate. But rather than assume their rightful responsibility, the Democrats passed the buck to a sincere and conscientious President. Knowing fully in advance that it would be vetoed, they attempted to shift the blame for their own failure to the shoulders of this administration.

Mr. Speaker, it is high time we in Congress face the issues on agriculture squarely and honestly.

It is my earnest plea that the 86th Congress forgo its political ambitions and approach the problems of agriculture in a statesmanlike and candid manner.

There have been a number of efforts in the 86th Congress to find an easy way out of the farm problem. There have been many who have shown by their frantic efforts that they are under the illusion that there is an easy way out. There is no easy way out of the difficult position that the farm economy now finds itself. The farm problem must be recognized as being, in large part, the result of the laws passed by Congress under the impression that those laws were for the great benefit of the farmer.

There are too many who consider themselves a friend of the farmer, and who are under the illusion that you can tamper with the economics of farming for political purpose and gain, and do good to the farmer. That just is not so. We can see the fallacy of that thinking all around us right now, in the form of the tremendous, costly, surpluses of such important farm crops as wheat, corn, and cotton.

Some people, including a number of the majority party in Congress now, apparently believe there is no surplus of farm products—that we can sell anything if we try hard enough. This has been appropriately described as trying to sweep our problems under the rug. There is a market potential, and we should do whatever is practical to develop our markets. But there is a limit to what we can sell, and a limit to what we can even give away. Too many are prone to close their eyes to the hard facts of reality in agriculture, and recognize that our production capacity today exceeds our markets. Sometime this fact must be faced—sometime soon. The time is already far past when we should have recognized it. The majority party must recognize that and face up to it. Their shadowboxing with the farm problem during the past session must stop. They must get down to the business of facing the facts before it is too late.

The Battle of the Budget

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, one of the major battles of the session just concluded involved the impact of congressional and Executive action on the budget.

The Congress reduced the President's requests by $1,881 million. There was one request we could not reduce—that was the request for additional sums to pay interest. The January budget request was for $8.1 billion for interest for the present fiscal year. The President's message of June 8 estimated the interest cost at $8.6 billion. With the subsequent increases in interest rates, we may expect the actual figure for fiscal 1960 to be nearly $9 billion.

The administration's hard money policy has, in the past year alone, added nearly $1 billion to the cost of operating the Federal Government. Since 1953 it has added approximately $3 billion a year to the annual cost. These increases in the tax burden did not add $1 worth of service to the people of the country. They did subtract from the services we can perform.

The additional sum we will spend in interest this year is more than the sum of all of the major budgetary items in dispute between the Congress and the President.

The annual cost of the housing bill vetoed by the President was roughly $100 billion a year. The clean streams bill, H.R. 3610, which rests in conference would have cost an extra $50 million in the House version or $30 million in the Senate version.

The depressed-areas bill which rests in the Rules Committee would have cost only a few million dollars apart from the loan program it contained. The airport bill was cut by $37 million and service to the public was cut as a result.

The public works bill was vetoed because it included 67 construction items authorized by the Congress which would have cost this year about $35 million. The President claims they involved a future commitment of $804 million. But these are not sums wasted as interest payments are wasted. These are investments in the water resources of America.

The highway program for 1960 was cut back by $300 million under Presidential pressure.

In addition to these items of expenditure, Mr. Speaker, there has been a continuing battle over certain loan programs. It is regrettable that the administration cannot see the difference between expenditures and loans. For example, the loan program of $50 million for college classrooms cut from the housing bill would not cost the taxpayer anything. Every cent would be repaid with interest.

It would be most helpful if the public discussion of complex fiscal matters would be conducted in a manner which adds to public understanding. The misrepresentation and deceit which surrounds administration discussion of these issues betrays a contempt for the intelligence of the public or else an inadequacy on the part of these officeholders. The American people are entitled to a candid explanation of the facts, not only about the public purse but about all public issues.

I submit, Mr. Speaker, that every dollar which this Congress saved the taxpayers by trimming these essential services and essential investments in the public welfare are being spent in this same year in payments to moneylenders because of the administration's refusal to adopt sound monetary, credit, and fiscal policies.

The Democratic Party deserves credit for its refusal to permit the Treasury to commit the taxpayers to 30- and 40-year loans in this period of high interest rates. It appears regrettable that rather than mend its ways the administration chooses instead to abuse us for defending the taxpayer's interest.

The Democratic Party is to be congratulated, Mr. Speaker, for persisting in its desire to give the taxpayers service for the money taxpayers pay. We shall continue to do so, notwithstanding the calumny and misrepresentation which appear to be our lot. For we have faith in the good judgment of the people at the polls.

Talk by Former Senator Benton at Distinguished Service Awards Luncheon

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. KOWALSKI. Mr. Speaker, a witty and brilliant address by the former Senator from Connecticut, the Honorable William Benton, was delivered last Friday at the congressional distinguished service awards luncheon of the American Political Science Association.

Senator Benton's remarks stole the show at the Mayflower. I commend them to my colleagues for perusal:

COMMENTS OF HON. WILLIAM BENTON AT THE CONGRESSIONAL DISTINGUISHED SERVICE AWARDS LUNCHEON, AMERICAN POLITICAL SCIENCE ASSOCIATION, MAYFLOWER HOTEL, WASHINGTON, D.C., SEPTEMBER 11, 1959

When I was serving as Assistant Secretary of State late in 1945, Secretary Byrnes tossed me at the Congress. As he prepared to leave for 5 months at the Paris Conference in the spring of 1946, he dumped a mass of proposed legislation in my lap and told me to put it through. After objecting strenuously and telling him that this was his job or Dean Acheson's job, I asked him how to do it. He said, "First try to find the keyman and sell him; then ask him who the next man is and go to see him; then go back and report to the keyman; then ask both of them who the third man is, and always keep reporting back; and keep going." Later, from another source, I was advised, "Hire as your assistant a man with a southern accent." I did better than that. I got one with the accent who was the protege of one of the most powerful Senators and the son-in-law of a former chairman of one of the most important committees of the House.

My first call was on Gene Cox who was blocking one of my bills in the Rules Committee. He informed me that the unanimous approval which I had secured after my testimony to the Foreign Affairs Committee really didn't help me. The reason? Only two members of the committee, Congressman Cox explained, carried any real weight in the Congress, and one of them not much. Secretary Byrnes on his return, impressed by my conversion of Congressman Cox, referred to him as a mighty man.

This call started my increasingly intimate acquaintance with the most remarkable group of men I've ever known. I shall always treasure as among my greatest triumphs the part I played in winning such Congressmen as Everett Dirksen, Dewey Short, and Karl Mundt to the support of what 2 years later became known in the 80th Congress as the Smith-Mundt bill. I well remember how surprised I was when Arthur Vandenberg, my keyman in the Senate, selected Senator Smith for the role that brought him world fame with the remark that Alex Smith had had something to do with Princeton. And I remember also Senator FULBRIGHT's surprise when I named the act he had created and sponsored the Fulbright Act and announced in a State Department press release that the scholarship fellows would be known as Fulbright fellows. This is how good administrators try to pay off to good Senators when the Senators have a good idea. A trophy I prize, which hangs on the wall of my office, is one of the two pens with which President Truman signed this act. Senator FULBRIGHT has the other.

Perhaps more remarkable are the wives. I once told the Young Democrats at Yale that if they aspired to political careers their first make-or-break decision was their choice of a wife. Unlike most wives in the business community, the wives of our Senators and Congressmen are full-fledged partners. Sometimes, as Senator MARGARET SMITH and many others illustrate, they do even better when the other half passes on. They are assuredly the most gifted and able group of women ever automatically selected by the profession of their husbands.

Yet since the founding of our Republic, sneering at Congress has been a popular American sport. Mark Twain won laughs when he denigrated Congress by saying, "It could probably be shown by facts and figures that there is no distinctly native American criminal class except Congress."

My boyhood contemporaries laughed at Artemus Ward's quip, "I am not a politician and my other habits are good."

Even Congressmen join in the sport. The eloquent Dewey Short once referred to the Congress as that "supine, sporific, supercilious, pusillanimous body of nitwits." (Perhaps Chairman CARL VINSON, one of our award winners of today, will ask Assistant Secretary Short about this remark the next time he appears before his committee.)

No wonder it has been almost axiomatic that Members of the Senate and House have virtually no chance to run for President. Senator Knowland is the most recent Senator of some prominence who seems to have believed the axiom. I hope that Senators HUMPHREY, KEATING, and WILLIAMS, our other three winners, will prove impervious to it.

Now of course we can agree that there are occasional nitwits on the Hill. And unfortunately those Congressmen who are the least responsible may be those who get the most publicity—at least, for a time—or until they're censored. As Woodrow Wilson, a perhaps not forgotten former president of your association, pointed out in his famous doctoral thesis—there is a kind of built-in irresponsibility in our congressional system. The Constitution puts a premium on congressional controversy. And who can too readily blame the Congressman who seeks

the publicity of the headlines? Politics, like the theater, depends on personal publicity. Just as Brigitte Bardot's picture in the paper is converted into ticket sales at the box office, so the politician hopes his headlines will be translated into votes at the polls—or into campaign contributions which in turn translate into votes.

But what about the Congressmen who perform the nonglamorous drudgery which is the heart of effective work by the Congress? Often they remain virtually unknown, unnamed, unheralded, unsung, and unappreciated except by their colleagues. Yet these specialists in the art of the possible, these compromisers and choosers of the lesser evil, these followers and leaders of public ignorance and public insight—these are the men on whom our democracy depends. They are the ones who put in the night hours of solitary study—the attendance at often tedious committee meetings—which lie behind the construction of appropriation bills, tax measures, and major substantive legislation of all kinds.

Einstein once remarked that the world is more likely to die of bad politics than bad physics. It would seem to follow that good politics and constructive politicians should be duly honored if we can find a way to do it.

Thus I congratulate the American Political Science Association on its innovation today. I am flattered that an article of mine in the New York Times Sunday magazine, titled "For Distinguished Service in the Congress," stimulated the awards you are about to confer. Today your association formally responds to a question I asked in this article, "Do we (Americans) lack the resourcefulness to assess key political policymakers, and to bring them out in the open so that we can better judge their deeds and know who they are?"

Further, I'm pleased that the William Benton Foundation was in a position to finance Dr. Kirkpatrick and his associates through their many months of painstaking planning on how to pick the four Congressmen and Senators who are with us today, those who have been judged to have turned in the best performances, those in the national interest—and regardless of the local or national publicity.

I am hopeful, of course, that these biennial awards will enhance the prestige of Congress. Perhaps they will help rectify the imbalance of the headlines by providing a moral equivalent which will not only prove personally rewarding to the four recipients but which may generate publicity that in turn can be translated into the votes at the polls which every politician needs if he's to stay alive. On the Dave Garroway TV show this morning, I expressed this hope for our four winners and most particularly I congratulate these pioneers of today. They are the advance guard in our parade of recognition. They have been selected from the entire Congress and this will be the last such selection in the history of the awards—because henceforward prior award winners will be ineligible. Their records exemplify why Congress is a great and effective body—why it is the forum for the American people, the watchdog of our safety and welfare, and the bulwark of our democratic processes.

War on Unions

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following speech which I made before the Pennsylvania State Board of the American Bakery and Confectionery Workers, AFL–CIO:

WAR ON UNIONS

In the April 1958 edition of Steel Labor, the United Steelworkers of America warned their membership by a front page story that "war had been declared on the unions."

They pictured many brochures received by my office that were being used to undermine union activities, union leaders, and the union membership in general.

The war on unions gained in momentum. Labor forces were not mobilized; and we find out that the American labor movement has lost, by default, the first battle.

The year 1959 shall be known as the year of crisis for labor.

Let us go back, just a little, and see just what happened.

For many, many years propaganda and pamphlets, which were definitely antilabor, have been shoved aside and ignored. Many who received them felt there was no planned program on the part of big business who refused to accept labor as a part of our economic life and who objected to negotiating with labor to give them their share of the profits of our capitalistic system.

While I was a member of the Pennsylvania Senate I received many pamphlets and speeches against labor; but, in 1956, when I took office in Congress, I was amazed by the amount of antilabor material that came to my desk daily.

Brochures, books, reprints of speeches by leading industrialists, copies of editorials, and all kinds of folders and statements that were nothing but out-and-out "union busting" throwaways were being received by me and by every other Congressman and Senator down in Washington.

On numerous occasions, when addressing union meetings back here in the district, I pointed out this fact; indeed, I stressed the seriousness of the atmosphere that was being created in Washington concerning labor in general.

When the McClellan committee came into being, in January 1957, they started their investigative hearings. Every exposé they made concerning labor—any segment of it—was played up by the daily papers, from coast to coast. The television stations gave "blow by blow" shows of the hearings. The radios, in our cars and in our homes, repeated again and again stories of isolated cases of violence and corruption until they convinced the listening public that these were normal, everyday occurrences.

The year 1958 saw the start, therefore, of the labor bills.

The Kennedy-Ives bill was passed by the Senate—with only one vote against it. That was Senator BARRY GOLDWATER'S—and he opposed it because he said it was too weak.

That bill was defeated in the House by a coalition of reactionary Republicans from the North and the southern Democrats because, they said, it was not strong enough.

The year 1959 will be noted in the history of the labor movement as the greatest year for all those who opposed unions—for the antilabor forces, with their high-powered advertising companies, joined ranks in a well-planned campaign of brainwashing the American public.

Not until the House voted and the Landrum-Griffin bill went to the Senate for conference, did the rank and file of labor wake up and realize the setback they had received.

It was then too late to do much about it.

The representatives of organized labor were on the job, they had talked with the Members of the House and the Senate; but—let's be honest—we were not swamped by mail from home, from our district, from the average union member.

The reason for it, the average member of each and every union was confused. The Madison Avenue boys had done an excellent job in painting a foggy picture.

Bernard Nossiter, a columnist in the Washington Post, analyzed the labor bill lobby very calmly and revealed and reviewed what has happened to the citizens of our country—and that includes the members of labor, organized and otherwise. He says:

"Sophisticated business lobbying—combined with conscious manipulation of public mood—is being credited with a major role in the passage of the strong labor bill. Details of this skilled operation began coming out this week."

He goes on to say that the core of the technique was to focus on the "uncommitted House Members—particularly those in marginal districts. In those districts a deliberate effort was made to translate public anger at the disclosures of union corruption, by the McClellan committee, into a barrage of letters urging the Congressmen to vote for a tough bill."

The major organizations involved were the National Association of Manufacturers and the U.S. Chamber of Commerce—aided by many of their own State groups, such as the American Farm Bureau Federation, the American Retail Federations, the National Small Business Men's Association.

Mr. Nossiter states that while these groups did not march in perfect steps together—the degree to which they cooperated and coordinated their efforts was the greatest that had been experienced by business.

They did not descend upon Congress; they went after only those Members who were in marginal districts. That is, the men who won by only 5 percent, or less, of the popular vote and who had never voted on a labor bill. They found there were about 120 in this group.

However, they discovered that, out of these 120 Members, some definitely favored a bill, but were not committed; and by a process of elimination they decided to concentrate on 54 Congressmen and the districts in which they lived.

The McClellan committee, with all its publicity and exposes, had set the public mood.

So early in June this group started their major effort.

They set about systematically to arouse the constituents in these marginal districts and get them to flood their Congressmen with mail demanding the passage of a "strong labor bill."

One important tool was the television show "Sound of Violence."

Do you remember seeing it, or hearing about it—the hour-long show portraying union hoodlums in the jukebox field that the Armstrong Cork Co.'s Circle Theater had shown in April? An estimated 25 million saw that and heard, at its end, an appeal from Senator MCCLELLAN asking the American people to do something about the evils shown in the play.

The Armstrong Cork Co. very obligingly decided to show the drama again in July, and the business lobbyists cooperated fully.

Mr. Nossiter states that local affiliates of the National Association of Manufacturers and other trade associations told their members where and when the show could be seen. They advised employer members to urge their employees to watch it, and they encouraged their members to get their employees to write their Congressmen on the labor bill.

The Washington Post states that:

"The strategists discovered that TV stations in 27 key congressional districts would not carry the rerun of the show. Arrangements were made to get eight of these stations to run it as a public service or under local sponsorship. Newspaper ads were taken in 20 of the important congressional districts urging people to watch and then write their Congressman."

Not satisfied with that, the paper further states that "an estimated 4½ to 5 million mailing was made telling about the show

and requesting letters be written to Congress; and an estimated 15 to 20 million persons were said to have watched the rerun of the show."

Late in July the Landrum-Griffin bill was introduced in Congress.

The heat became even hotter in Washington.

These organizations made brief tape recordings for radio and TV, featuring Congressmen LANDRUM and GRIFFIN, and starting in August these tapes were run quite frequently as public service features or under local sponsorship in 35 of these crucial congressional districts.

In one congressional district, the paper pointed out, a good sized corporation sent its foremen out to ring neighbors' doorbells; they claim that this produced 3,000 letters in 1 week which urged that particular Congressman to vote for a stiff bill.

The vote for this bill came on August 13, and it won by 28 votes.

Since the entire group of 54 had originally been selected on the premise that they leaned toward a soft bill, the lobbyists claim their work helped produce this victory.

"Business lobbyists, so pleased with their efforts, expect to use these techniques with more success in the future," so states Mr. Nossiter of the Washington Post.

That is what happened:

No doubt you have read the recent reports appearing in the papers that business—big business—is realizing that it must become active in politics, in the affairs of our Government. The Gulf Corp., for instance, has announced that it will endeavor to get its people interested in the part they must play in politics.

Only a couple of weeks ago the papers reported on a group of political science students from the various large corporations in and around Pittsburgh who went to Harrisburg to learn how laws were passed and see the house and the senate in action.

If anyone over the age of 10 today thinks that business has not been active in politics for the last 50 years or more, his education has been very inadequate.

What have the National Association of Manufacturers, the U.S. Chamber of Commerce, the national right-to-work advocates been doing?

I would certainly call the steady barrage of mail, letters, articles, copies of speeches, and antilabor material that I have been receiving ever since I went to Washington a program of activity in politics.

I think they meant to say they are going to become "more active."

And, when you see how they worked on this so-called labor reform legislation, you can see what is in store for us.

The chips are down.

We are in an economic war.

Although the leaders and representatives of big business pay lipservice to good unions, they are out to do away with them, if possible.

Senator BARRY GOLDWATER—I believe you have heard tell of him—said: "I am for unions, but I like the unions without officers or members."

Mr. Roger Blough, the Wall Street lawyer now the head of the United States Steel Corp., said:

"Unions have gone too far, too fast."

Mr. Blough, incidentally, was much in favor of the Landrum-Griffin bill, or even a stronger one, if it could have been passed. He was all for Government control of the unions and Government interference with the internal affairs of labor organizations. However, he lost no time, nor did he hesitate, in telling the Government—and President Eisenhower—that he wants no Government interference with his steel strike. He wants no factfinding body to look into his problems.

Up to date, the President has cooperated fully with Mr. Blough.

Why?

Drew Pearson told us why just a week or so ago. He stated:

"Personal friends of the President (who are members of industry active in the U.S. Chamber of Commerce, the National Association of Manufacturers, the national right-to-work organizations) have convinced him that he should stay out of the present steel strike controversy so the steel companies can give the unions a defeat it will not soon forget."

Mr. Pearson further pointed out that the following individuals contributed $214,250 to Mr. Eisenhower's 1956 campaign for reelection and he listed:

"National Steel, with Mr. George Humphrey contributing $37,200.

"Republic Steel, with Messrs. James Black and George Allen (Ike's bridge crony and farm partner) contributing $16,000.

"United States Steel, with the executives of the company contributing $26,800.

"Armco Steel, with Mr. and Mrs. Charles Payson, Mr. Kenneth Spencer and other officers contributing $96,450.

"Bethlehem Steel, with its executives contributing $8,750.

"Inland Steel, with Mr. and Mrs. E. L. Ryerson contributing $3,150.

"Jones & Laughlin, with its executives contributing $25,800."

If that is not taking an active part in politics, what is?

I would say that the steel business invested rather heavily in Ike, and, up to date, their investment has paid off. He is doing as they ask.

Do you realize that if steel management can get a contract they dictate every other corporation will do the same thing, or try to?

We must realize right now this is no cold war on distant shores.

This is a hot war right here at home—on how our own economic future will turn out.

Let me show you just how serious it is.

The Landrum-Griffin bill was passed by a coalition of northern Republicans and southern Democrats—after the President of the United States had made a public appeal for its passage by means of a coast-to-coast television program.

The reason why it passed is not too difficult to find when you look at the economic picture.

The Congressmen from the southern right-to-work States, almost unanimously, supported this bill—that is, Alabama, Arkansas, Florida, Mississippi, Tennessee, Texas, and Virginia.

Do you know the per capita income in these States—that is, the average yearly income down there? Well, here they are:

Alabama	$1,300
Arkansas	1,200
Florida	1,800
Georgia	1,400
Mississippi	1,500
North Carolina	1,300
South Carolina	1,200
Tennessee	1,400
Texas	1,800
Virginia	1,600

In Pennsylvania our average income is $2,100.

Did you know that in those Southern States—where they are continually fighting against Federal aid to education and the improvement of our schools—the percentages of draftees turned down because of illiteracy is—

Alabama	42.6
Arkansas	32.1
Florida	31.3
Georgia	37.0
Mississippi	49.9
North Carolina	32.4
South Carolina	49.8
Tennessee	28.9
Texas	23.1
Virginia	31.9

In Pennsylvania our turndown was only 9.5.

Did you know, or could you believe, that in Georgia laws prohibit mass picketing? In Alabama, Florida, Georgia, North and South Carolina, Tennessee, and Texas there is no compulsory workman's compensation laws? There is no minimum-wage law in Alabama, Florida, Georgia, Mississippi, North and South Carolina, Tennessee, and Texas. Arkansas, the home of the great defender of the laboring man, Senator MCCLELLAN, has a minimum-wage law. It is 10 cents per hour.

A mayor from one of the cities of Mississippi wrote a northern manufacturer, and said:

"No one will tell you whom you must employ. All detrimental State laws for industrial operations have been repealed. The closed shop in Mississippi has been outlawed. Industrial wages are from 50 cents to 95 cents per hour lower than in the Northern States."

The passage of the Landrum-Griffin bill will guarantee the continuation of cheap labor and unbelievably poor working conditions for the workers.

The northern Republicans, who voted for this bill, apparently want to see those conditions and wages exist in the Northern States as well.

Oh, I was in favor of the original purpose of the so-called labor reform legislation—to eliminate crooks and racketeers in both management and labor.

But the Landrum-Griffin bill did not do this.

The truth is—rather than being a reforming bill it turned out to be a deforming bill.

Mr. A. H. Raskin, of the New York Times, stated:

"On the ironic side is the possibility that the law, for all its emphasis on stamping out union rackets, will prove a legal umbrella for hoodlum-infested paper unions. The bill prohibits picketing for union recognition where an employer has lawfully entered into an agreement with another union. This provides a strong incentive for deals by unscrupulous employers and racketeers who go into the 'union business' by the simple expedient of printing a fistful of independent charters. Contracts with such complacent outfits can serve as insurance against recruiting drives by bona fide unions. Proving that there is anything wrong about the arrangement is always difficult. With the added vigilance the crooks have learned, as a result of the McClellan committee, it is going to be even harder to establish collusion in the future."

Mr. Raskin goes on to say that:

"The most substantial revision in union practices will flow from the rules governing picketing to force union recognition and the virtual ban on secondary boycotts. With the spread of subcontracting in many major industries, the prohibition on union action to compel the sending of work to unionized contractors or even to unstruck shops may mean a significant decline in the automatic extension of organization in the mass production fields.

"To a considerable extent, the secondary boycott ban accomplishes one of the chief aims of those who have been trying vainly for many years to bring unions under the antitrust laws.

"It makes it illegal for unions to put pressure on employers not to do business with other employers as a means of influencing their labor standards."

There are numerous other points that I could bring out that, in very subtle ways, will hinder the organizational work and growth of the unions.

Under the new law, the Washington Post reported over 55,000 labor unions would have to file reports on their organization within the next 90 days. In addition 37,000 financial reports and 1,000 reports on trusteeships would have to be made before April 1.

As a sidelight they also stated that 400 to 800 new employees would have to be hired to handle all the paperwork these reports entail.

The President, who does not hesitate to veto legislation on the pretense of cutting expenditures and living within his budget, will not veto this bill that would add possibly 800 new jobs—these are jobs to hamstring labor. The legislation he saw fit to veto would only help people.

The average union member must waken up, he must realize that all this hogwash the "soap salesmen on TV and radio" are selling is just that; he must realize that the sponsors of these programs—the news, dramas, plays, and so forth—are not investing millions in TV and radio time to improve the worker's lot. They are not.

They must make their investments pay off.

And they are doing just that—when they can dictate to the President of the United States and tell him to stay out of the strike picture, when they can convince working men and women to bombard their Congressmen with letters asking for punitive legislation that will retard the progress of the working people in America.

Business is indeed active in politics.

If labor doesn't want to lose what little it has left it better become active, too.

Labor today—or ever, in fact—hasn't the millions required for advertising by television, radio, and the newspapers; we must count on legwork, on personal contact with neighbors, friends, and fellow union members; we must go back to ringing doorbells and the telephone campaigns if we want to stay as a participating part of this economy of ours.

The battle of automation is on us right now; provisions must be made for many displaced workers; displaced by machines, not by other workers.

Provisions must be made for better education for our youth so that they will be prepared to take their place in the new automation age and the dawning of the space age.

Provisions must be made for proper medical care for our citizens and especially for our elder citizens now on pensions and social security.

Much is to be done for the general welfare of our people.

This is no time to sit back and relax. We must fight to regain what we have lost and go to even greater heights.

It is up to you, your fellow union members, your friends, and your associates.

The future depends on you.

In Memory of Nikola Petkov

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MULTER. Mr. Speaker, it is remarkable that Khrushchev should affect the air of offended innocence when Americans received him during his visit here in a spirit of cool reserve.

Khrushchev wants us to forgive and forget Soviet misdeeds of the past and present. But the catalog of these offenses against humanity is long and serious, and we as a morally sensitive nation cannot ignore them. There is something tragically coincidental that the commemoration of the death of Nikola Petkov, the Bulgarian agrarian leader, should fall during the visit of Premier Khrushchev to the United States; for more than anything else this anniversary should be a reminder that the Soviet Government respects only force and power in international relations, and that it does not hesitate to employ the harshest means to achieve its ends.

Nikola Petkov represented a genuinely democratic segment of Bulgarian political life. His political attitudes fall within the great American tradition of democracy. Petkov had sought desperately to preserve even a small segment of Bulgarian democracy. But the future of his nation, as that of all other east European states, had been foredoomed by 1947. Against the assertion of total Soviet power over Bulgaria, Petkov could not prevail. On June 5, 1947, he was arrested and in August was tried on false charges of conspiracy against the government. A Communist-manufactured publicity campaign demanded the death penalty. Tried by Communist judges and in a state where local Communists and the Soviet conquerors were bent on establishing a Soviet satrapy out of Bulgaria, Petkov did not have a chance for survival. He was condemned to death on August 16. The death sentence was carried out on September 23, 1947.

Thus, for all practical purposes, the way was cleared for total sovietization of Bulgaria.

In the charges brought against Petkov, there was no truth; nor was there even a pretense of justice as we know it in his trial. This was a political act brutally calculated and carried out to destroy a man who opposed Soviet power.

As Americans we cannot be insensitive to such grave injustices and acts of brutality. The death of Petkov was one of many inhuman Soviet misdeeds that altogether helped create in the American mind a disturbing image of Soviet power and political conduct. This is not a distorted image, and all the state visits of Soviet leaders, who must, after all, share some moral responsibility for these acts, cannot change it.

It is with this thought in mind that again we commemorate the death of a great Bulgarian, Nikola Petkov.

Resolutions of Zionist Organization of America

EXTENSION OF REMARKS

OF

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. HALPERN. Mr. Speaker, on September 10 through 13, the Zionist Organization of America held its 62d annual convention at the Willard Hotel in Washington, D.C. This fine organization of American citizens of the Jewish faith, since its inception in 1897, has propagated the concepts of American freedoms throughout the world. It has worked for the establishment and maintenance of the democratic State of Israel, and has done much to introduce the American way of life there. In addition to the American House in Tel Aviv, this organization also maintains an agricultural school in the country, at Kfar Silver, the only American-chartered school in Israel granting diplomas under the authority of the regents of the University of the State of New York.

On numerous occasions it has been cited for outstanding work in the public interest, as for instance on its U.S. savings bond drive during the last war.

Its convention in Washington was representative of the sentiments of its nationwide membership with units in some 700 major communities across the country. The resolutions which it adopted were not only thoroughly and spiritedly discussed at the convention, but they were considered by all of the local units prior to the convention. Thus, they comprise the serious and thoughtful views of its full membership. They are not merely the opinions of a resolutions or a steering committee. They are the considered views of thousands of Americans about aspects of the existing international situation.

Because the resolutions are so relevant to current affairs, under unanimous consent, I include them in the Appendix of the RECORD. They follow:

EISENHOWER PEACE EFFORTS

The convention salutes the President of the United States and offers its prayers for the success of the efforts he has undertaken to find a road to peace with justice. May he be granted strength and health to continue to pursue every avenue toward the removal of world tensions and the danger of war.

The Zionist Organization of America recognizes that the free world must stand firm to resist and repulse encroachments upon the freedom and rights of nations, wherever such encroachment may be attempted. At the same time it must be ready to search for all reasonable accommodation between the great powers, consistent with principle and in a spirit of good will and cooperation.

U.S. ECONOMIC ASSISTANCE

The Zionist Organization of America hails and warmly supports the continued adherence of the United States to its generous policy of assisting underdeveloped nations to build up their economies and their societies, in freedom and independence. Mankind can conceive of no nobler ideal than that of sharing with other peoples the bounties with which the American Nation has been blessed.

We take deep pride in the realization that our country continues to play a significant role in the development of Israel's economy and the preservation of her security.

We respectfully urge the continuation of the grants-in-aid and other economic assistance by our Government to the State of Israel, to maintain her independent democratic existence.

THE SUEZ CANAL

The convention has noted with grave concern that the United Arab Republic has now virtually sealed the Suez Canal to all Israel commerce. The present deadlock makes inescapable the conclusion that the long efforts by the United Nations to enforce the

decision of the Security Council to maintain the Suez Canal as an international waterway open to all nations has resulted in failure.

Nasser's defiance of the United Nations and the Security Council's decision as well as of the Constantinople Convention and his violation of his own pledges in relation to the canal are bound to encourage anarchy in the Middle East and to undermine the authority of the United Nations. His persistent flouting of international commitments must further endanger peace and stability.

The convention notes hopefully that the Government of the United States is on record against the United Arab Republic's blockade and is pledged to take action to uphold the rights of Israel and the maritime community as a whole. The Zionist Organization of America respectfully urges the Government of the United States to use its influence with the World Bank to obtain ironclad guarantees for free canal transit for the shipping of all nations including Israel, as a condition for the granting of any financial aid for the improvement of the Suez Canal.

BOYCOTTS AND BLOCKADE

We urge the U.S. Government to use its best efforts to end the illegal boycotts and blockade which are carried on by the Arab States against the State of Israel and against American firms and individuals friendly to Israel.

White Sox Live in Second District

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. O'HARA of Illinois. Mr. Speaker, as the 1st session of the 86th Congress nears the end I think it is proper that I should acquaint my colleagues with the inside secret of why the Chicago White Sox are on the eve of winning their first pennant in 40 years. I appreciate the fact that my distinguished colleague and beloved friend from the 5th district, Mr. KLUCZYNSKI, has a prior claim on the White Sox because their park is in the district that he so ably represents, and also JOHN KLUCZYNSKI is one of the most loyal and rabid White Sox fans that Chicago has ever known. But, Mr. Speaker, the circumstance of the location of the park is small indeed to the circumstance of where the players live when they are in Chicago. If they did not get good rest at night and good food and live in the choicest of residential environment, how could one expect them to win ball games?

Here, Mr. Speaker, is the inside secret. The White Sox players when they are in Chicago live in the great Second District. Everybody knows of Early Wynn. His name will go down as that of one of baseball's immortals, and Billy Pierce, and Dick Donovan and Gerry Staley, all deserve to be in the hall of fame. They may play baseball in a lot in JOHN KLUCZYNSKI's district, but they get the strength and build up the morale to win games by living when they are in Chicago among the good people and in the beautiful environment of the Second District.

As my colleagues so well know, I have always maintained that most of the good things of the world either come from or have some connection with the Second Congressional District of Illinois. I am happy to have this opportunity of informing my colleagues before we adjourn that when the White Sox finally cinch their first pennant in 40 years the Second District will be claiming a lot of the credit.

Noel Nelson, whom Ken Harding and others at the last Democratic National Convention will favorably remember, has furnished me with the evidence. Fourteen of the White Sox players and two coaches live at the Piccadilly Hotel, at 5107 Dorchester Avenue, in the heart of the district that I have the honor to represent. They are Jim Landis, center field; Bubba Phillips, third base and outfielder; Nellie Fox, second base; Jungle Jim Rivera, outfielder; Sherman Lollar, No. 1 catcher; Luis Aparicio, shortstop; Ken McBride, pitcher; John Romano, No. 2 catcher; Gerry Staley, relief pitcher; Rudolpho Arias, pitcher; Turk Lown, relief pitcher; Ray Moore, pitcher; Bob Shaw, pitcher; Norman Cash, infielder; Tony Cuccinello, third base coach; Don Gutteridge, first base coach.

Early Wynn, Billy Pierce and Billy Goodman live at the Flamingo Hotel at 5520 South South Shore Drive. Al Lopez, the great manager of the White Sox, and Earl Torgeson, the great first baseman, live at the Shoreland Hotel. Pitcher Dick Donovan lives at the Country Club apartments, 5530 South South Shore Drive.

Miss Nelson adds:

Now, Congressman, as you can see from the above, we have so far 19 out of the 25 regular players on the team, plus the manager and two coaches who live in your district. You know, of course, that they are not permanent or voting residents—but this is where they live about half the year, while they are playing. Moreover, I know that for years the majority of the players have lived at the Piccadilly or Flamingo hotels. Nellie Fox, for instance, I believe has stayed at the Piccadilly ever since 1950, when he came to the White Sox. The manager of the Piccadilly Hotel told me that Barry Latman might move in there within the week.

It may turn out that most of these remaining players plus the two other coaches may live in the district. Also, as you of course know, Bill Veeck, owner of 56 percent of the team, lives at the Sherry Hotel, and I believe this is his legal residence. In fact, I'm sure of it.

To the list furnished me by Miss Nelson should be added, of course, the name of "Chuck" Comiskey, grandson of Charles Comiskey, whom we all called "the Great Roman," and son of Louis Comiskey. The Comiskey of the third generation is a product of our Second District, and a graduate, if I remember correctly, of a high school in Hyde Park.

Anniversary in Germany

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JAVITS. Mr. President, September 15 will mark the 10th anniversary of the election of Konrad Adenauer as Chancellor of the Federal Republic of West Germany and also the 10th anniversary of the election of President Heuss.

On that day telegrams of congratulation to Chancellor Adenauer will come from many prominent Americans, including the Vice President of the United States and Francis Cardinal Spellman, Archbishop of the Catholic Diocese in my own city of New York; there were special broadcasts including those of Germania Broadcast and WGES in Chicago and special editorials including one in the Aufbau, of New York, on President Heuss.

I believe it would be of interest to my colleagues for the text of these messages to appear in the Appendix of the CONGRESSIONAL RECORD.

Chancellor Adenauer has become identified with certain historic movements in the German Federal Republic which have stamped him as a leader for peace, freedom, and justice. His espousal of the integration of free Europe and of the pan-European role of the German people; his firm yet wise position on German reunification and Berlin; and his understanding in settling Jewish claims against Germany and standing fast against Arab intransigence have all secured his stature as a great statesman in the estimation of the free world. President Heuss' leadership in these affairs has added immeasurably to the hopes of the whole free world for a new Germany.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the messages and editorial referred to.

Also, Mr. President, I append an interesting article on this anniversary, which appeared in the New York Post on Monday, September 14.

There being no objection, the messages and editorials were ordered to be printed in the RECORD, as follows:

TELEGRAMS OF GREETING

His Eminence Cardinal Spellman, archbishop of New York:

"On this happy occasion I am pleased to felicitate His Excellency Dr. Konrad Adenauer and congratulate him on his courageous and effective leadership as Chancellor of West Germany. He has been a bulwark for the preservation of peace in his country and also throughout the world. I renew my personal friendship and admiration for him recalling the occasion when he was a welcome guest in my home and in St. Patrick's Cathedral in New York. May God grant him strength to continue his challenging work to preserve the God-given rights to people at home and everywhere."

Adlai E. Stevenson:

"Only a few people leave lasting impressions on their own generation. Certainly the leader of Western Germany in its period of spectacular recuperation from disaster is such a person. I join countless fellow Americans in expressing our great respect and admiration for Chancellor Adenauer and for the peaceful, prosperous, free, and friendly Germany he has helped create."

Former Military Governor, U.S. Zone, Germany, Lucius D. Clay:

"I am delighted to know that you are commemorating Chancellor Adenauer's 10th year in office. His leadership in the rebuilding of democracy in West Germany, in bringing West Germany into the free world, and in trying to create a new French-Ger-

man relationship based on understanding and trust have contributed much to the growing strength of the free world and to his stature as a statesman. He has earned our respect and friendship."

U.S. Senator ALEXANDER WILEY:

"I am happy indeed on this 10th anniversary of the ascension to office of Germany's distinguished Chancellor Konrad Adenauer to join with the millions of people who are grateful for his outstanding service. I am very happy and proud to call him friend."

Vice President RICHARD M. NIXON:

"I appreciate this opportunity to join with you in commemorating over station WGES the 10th anniversary of the Chancellorship of Konrad Adenauer. It is indeed fitting on this occasion that special tribute should be paid to this dedicated statesman and leader who has had such a vital part in guiding the physical and spiritual reconstruction of Germany and in restoring her to a position of honor in the community of nations. With every good wish to you and your listeners."

U.S. Senator HUBERT H. HUMPHREY:

"I am delighted to join in giving high praise to the distinguished German leader, Chancellor Konrad Adenauer. His unyielding opposition to Soviet pressure and Soviet threat deserve the gratitude of the free world. Under his leadership, German democracy and freedom have flourished."

U.S. Senator STYLES BRIDGES:

"Re your telegram today. My message follows 'Chancellor Konrad Adenauer's name will have a special page in world history, honored and distinguished as a man who saved his country in its darkest hour from Communist infiltration and gloriously piloted it to the free world pinnacle on which it stands today'."

Congressman EMANUEL CELLER:

"I send greetings to Chancellor Adenauer on the 10th anniversary of his leadership and my compliments to President Heuss and his able successor in the Presidency, Heinrich Luebke, Foreign Minister Brentano, and Economic Minister Erhard for work well done. Out of rubble and ruins, the Chancellor and his cabinet have built a strong republic, which is oriented westward and has done all and sundry to buckle itself as a staunch ally to the United States and Western democracies."

Former High Commissioner John J. McCloy:

"Through a particularly trying period filled with domestic and international problems of the greatest magnitude Chancellor Konrad Adenauer has emerged as one of the world's leading statesmen. He with President Heuss has given character and direction to the new German state which has brought about a political stability and recovery as pronounced as the economic rehabilitation of the country.

"Chancellor Adenauer's warm spirit of Western European unity based upon a new and broad understanding with France has marked him as an international figure as well as the leader of his own country. I am very glad to learn that you are commemorating this 10th anniversary of his term in office as it is fitting that this man's contributions to his nation and the free world should be especially recognized."

Minority leader, House of Representatives, CHARLES A. HALLECK.

"I am happy to join with the many Americans who are paying their respects to Chancellor Konrad Adenauer for his leadership during the past decade. We all wish for him many more years of useful service to the cause of mankind."

Julius Klein, major general (retired):

"I am honored to join millions of Americans and freedom-loving people all over the world in extending congratulations to Chancellor Konrad Adenauer on this his 10th year of office. The Chancellor has proved himself as a leading spokesman against Soviet aggression and a courageous advocate of democracy. I congratulate the Germania Hour, America's oldest foreign language broadcast, on this special program."

Gov. William G. Stratton:

"The reconstruction, progress, and production of Germany under the leadership of Chancellor Konrad Adenauer is a dramatic demonstration of the ability of a free people, working under a free government, to improve their standards. It is an inspiration to all freedom-loving people throughout the world. I extend my congratulations and best wishes to the Chancellor on this occasion of his 10th anniversary in office."

Congressman THOMAS E. MORGAN, chairman, Committee on Foreign Affairs:

"Acknowledging your telegram advising that on September 15 you will commemorate in a special program the 10th anniversary in office of Germany's distinguished Chancellor Konrad Adenauer, it is indeed a pleasure for me to join with you in honoring Chancellor Adenauer as one of the great and outstanding statesmen of our time. Chancellor Adenauer's selfless dedication to the welfare of his people and country has won our highest admiration and esteem."

Mayor Richard J. Daley:

"As mayor, on behalf of all of the people of Chicago, I am happy to join today with the Germania Broadcasting Co. in commemoration of the 10th anniversary of the administration of Konrad Adenauer, Chancellor of the German Federal Republic.

"Under his stewardship, the people of West Germany have enjoyed a new era of government, the triumph of democracy as compared to the despotism of Eastern Europe. In the past decade, Chancellor Adenauer's Germany has come to produce twice as much coal as East Germany, three times as much electricity, and eight times as much steel. This productivity was reflected last year in a favorable balance of trade in excess of $2 billion and a foreign exchange gold balance of $5 billion. Such achievements have had a healthy economic impact on the free world, and the people of Chicago look forward to the day when ever more ships from the great Federal Republic tie-up in the new international seaport that is Chicago. As mayor, I have long been aware of the great and enduring contributions which Americans of German descent have made in helping to build Chicago as one of the great cities of the earth. It was not by chance that one German-born citizen, John Peter Altgeld, became an outstanding Chicagoan and a great Governor of Illinois.

"The same devotion to democracy which made Governor Altgeld great may be seen today in the able leadership of Chancellor Konrad Adenauer. We pay tribute today to the great strides of West Germany under his administration as a partner in the defense, democracy, and economic sufficiency of the Western alliance."

[From the New York Post, Sept. 14, 1959]

A HOUSE BY A RIVER

(By Seymour Freidin)

The Bundestag had a birthday the other day, but nobody seems to have remembered it.

The West German Parliament is housed in a low-slung pile of masonry fronting on the Rhine. It's been closed, except to some painters slapping whitewash in a desultory way on a few bare spots. The 500 parliamentarians, including Chancellor Adenauer, are still on vacation.

It seemed a little strange, however, that the 10th anniversary of the Bundestag should have slipped by unnoticed. This is where the latest experiment in German parliamentary democracy is practiced. This is where the German economic miracle was planned.

As a capital for West Germany, Bonn is convenient for practically only one man. Adenauer is virtually the only politician in Germany who thinks Bonn is a pretty good place for a capital. He has lived in the Rhineland all his long life.

The wisecracks about Bonn's place in the political sun are about as long and hoary as Joe Miller's jokebook. Many are quite valid, especially those touching on the drabness of activity inside the Bundestag. Debate is totally uninspiring and torpor characterizes the political outlook of most of the participants.

Adenauer himself is probably the outstanding reason for this somnolence. He is the most powerful figure inside and out of the Bundestag. His majority is dutiful. The same obedience to party discipline exists in the opposition Social Democrats. They don't get out of line either.

But to call the Bundestag an instrument of revenge-seeking militarists, as Khrushchev has often done, distorts the whole picture. The Russians need only to look across to East Berlin and see their image in what is called the Volkskammer—the People's Chamber. This is a real rubber-stamp job. And it contains, proportionately, far more veterans of the Nazi Party than the Bundestag.

This Communist German Parliament will soon celebrate its own 10th anniversary. The division of Germany became complete in 1949 when the two Germanys set up shop in two Parliaments. Nothing can become more permanent than the self-perpetuity of office holders.

One of the immediately discernible differences between the two German Parliaments is the right of opposition. If the debate in Bonn is uninspired and colorless, that is the fault of the opposition. Adenauer has lots of critics. They get a hearing and they get big press play. But they don't get votes, which is nobody's fault but their own.

Up in East Berlin, where the comrades are preparing the usual spontaneous celebration to mark the Volkskammer's 10th birthday, a man's present loyalty atones in full for his past. That is another great difference with Bonn. An odorous record here is frequently exposed, held up to parliamentary and public examination.

But consider the case of Ernst Grossmann in East Germany. He became a party golden boy and a hero of labor. The Volkskammer often applauded him and greeted news of his high decorations with fervent thanks. Grossmann won commendations from both Stalin and Khrushchev.

Grossmann, it later developed, had been an SS (Elite Guard) man and an officer at one of the worst Nazi concentration camps. The Communists deliberately concealed his past until it was dug up from under them. Then they had no choice but to get rid of Grossmann, by now a member of the central committee. It could not have happened in the Bundestag here. The opposition would have seen to it.

In East Germany there are about 50 men like Grossmann sitting in the Volkskammer. Nobody has so far shown any crusading zeal to get rid of them.

The Bundestag's first 10 years have not been uplifting for parliamentary traditionalists. But compared with the first decade of the Volkskammer, it looks like the mother of parliaments.

[From Aufbau, New York]

A PRESIDENT RETURNS TO AUTHORSHIP—THEODOR HEUSS' FAREWELL TO BONN

(By Manfred George)

Last Saturday, Dr. Theodor Heuss, President of the West German Republic, again turned into plain Theodor Heuss, private

citizen of Germany. And this private citizen exchanged the presidential palace for a small, comfortable villa in the vicinity of Stuttgart. This much-honored and honor-deserving man took upon himself the heavy burden of the presidency after the Second World War. Now that he has resigned after 10 years of official service, he has chosen a beautiful, blessed countryside for his retirement residency.

During his 10 years in office he accomplished what scarcely any leader of the German people had ever been able to do: he stayed clear of party fights; yet that in itself would only have been interpreted as weakness or shrewdness. At the same time, however, he won for himself such respect, such authority and genuine love that he became what once used to be referred to as a father of the people.

If one just recalls the embattled figures of Ebert and Hindenburg, or even the last Kaiser, the difference in the people's attitude toward Heuss immediately becomes apparent. He really was "Papa Heuss." And the most wonderful thing about it was the fact that he was a strong personality, a man whose importance did not only stem from the amiability of his character or his popularity, but that above all he exercised moral authority during a time when great suffering had to be alleviated.

In addition, those were the years in which a totally demoralized people, enslaved by the Nazi tyranny, partly had lost its commonsense, partly had been humiliated by the brown-shirted usurpers who had tortured it and robbed it of honor and human dignity. This people needed primarily a leader who was above the fights of the opinions of the day, beyond influences and considerations, who was a guardian of intellectual values and an arbitrator of moral issues.

It was on the basis of his great humanistic intellect and his humanity that Theodor Heuss was so beautifully effective. He was a real stroke of luck for the Germans.

His retirement now represents the natural end of a task which at the very outset had been limited in time. For Theodor Heuss it does not mean retirement from learning and productivity. It is a return to privacy, to his garden and his desk, and to the creative activity which will make up the total balance of a wisely spent life.

He will go his way not only accompanied by the good wishes of his countrymen but of all those in the world who saw in President Heuss the personification of the true Germany.

Record of the 1st Session, 86th Congress

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. PRICE. Mr. Speaker, the 1st session of the 86th Congress has been a long and highly productive one in the sense that the Democratic majorities moved steadily forward on a progressive, sound, and responsible course. The necessary authorization and appropriation bills were given careful scrutiny, they were trimmed where this seemed desirable, and they were passed expeditiously. The country's foreign policy was upheld, the mutual security funds deemed essential were voted after the President's proposals had been properly considered and reviewed in accordance with legislative responsibility and obligation.

The 86th Congress, as did preceding Democratic Congresses, reduced the budget requests of President Eisenhower. The President asked for $74,858 million. The Congress lopped $1,882 million from this. In the two sessions of the 85th Congress, the budget submitted by the President had been cut over $6 billion.

The Congress labored diligently to reduce spending authorizations below those recommended by the President, without sacrificing important programs to strengthen the economy in the long run.

It is only candid, however, to report that the session was in many ways a frustrating one, because the Eisenhower administration tried to reverse the election of very solid majorities last November by the formidable threat of vetoes.

An odd thing seemed to happen to the administration. Whereas President Eisenhower only a couple of years ago—in January 1957—presented what might have been called a New Deal budget, showing a great deal of concern for social services the people need and deserve, he showed in 1959 that he had backed clear away from this position. In 1957 he was almost directly attacked by the man who was then his Secretary of the Treasury, George M. Humphrey, and the upshot was that he surrendered. He became increasingly obsessed with what he chose to call the spending issue, and he never again bothered to ask himself whether what he labeled spending was for a good purpose or a bad, wasteful purpose. He used to talk about modern Republicanism and progressive conservativism and the middle of the road. But these phrases disappeared after his surrender to Humphrey, who left the administration to become president of a large steel company.

The record is clear—on such subjects as housing, school construction, slum clearance, health programs, which are of enormous importance to the great majority of Americans who live in cities and in suburban areas close to cities, he moved steadily to the right of the late Senator Taft. He became more conservative on these subjects, and even on labor legislation, than Taft had been. Because of this, the record of the session was a record of the collision between realistically progressive Democratic ideas and the President's rigid determination to veto the results of the 1958 election.

We must understand two things:

First. There has been no political cold war between the President and the Democratic Congress such as the Republicans used to predict. This is the third Congress in succession in which Democrats have held a majority under a Republican White House, and yet partisanship has been held to a minimum.

On foreign policy, the President has been upheld. No one has attempted to embarrass him in regard to such things as the meetings with Khrushchev, or our relations with our North Atlantic allies. The basic foreign policy of the United States, which originated with President Truman and two great Secretaries of State, George C. Marshall and Dean Acheson, has been sustained wherever the President felt it carried him.

Second. The President, on the other hand, might be considered to have used his veto power and the threat of his veto to wage a kind of political cold war on the 1958 election returns by stubbornly blocking the development of domestic programs the people have repeatedly shown they demand. As of the close of this session, he allowed no new programs, and only the vigor of Congress prevented him from scaling down those already in existence.

My own work has been concentrated, as usual, in the area of the two committees on which I serve—the House Committee on Armed Services and the Joint Congressional Committee on Atomic Energy.

It is fair to say that American development of a nuclear-powered aircraft has been pushed through by our efforts and against the opposition of the administration, which, in familiar fashion, has seemed more worried about budget balancing than about the security of the Nation. It has seemed to feel, at least, that a technically balanced budget was a greater element in our security than nuclear-power development. It is a viewpoint with which I do not agree.

I worked as a member of a special subcommittee headed by Congressman HOLIFIELD, of California, which delved deeply into the subject of the dangers from nuclear fallout, on which the future of the whole world may depend, and the subcommittee broke through the barriers created by the administration to produce an interim report that both abates unnecessary fears and emphasizes the directions in which we should move.

The subject of radiation hazards in industrial operations also was studied comprehensively. This is a whole new field, involving safety precautions, public health, insurance responsibilities, and the proper obligations of the Federal Government in meeting a new national problem. It is a difficult area, involving State and Federal cooperation, but the work must still be done, and we have made progress.

In addition, I was directly involved in one of the President's celebrated vetoes.

In cooperation with Senator HUBERT HUMPHREY, of Minnesota, I sponsored a bill to reverse an Eisenhower administrative reorganization plan of 1953 which, in the judgment of Congress, placed the lending policies of the Rural Electrification Administration in the hands of the REA's enemies. A resolution was passed to cancel the reorganization plan and restore the REA as an agency operating with some initiative and creative responsibility, but still subject to the direct administrative control of the Secretary of Agriculture. It was the belief of Congress that the administration had violated its 1953 promises that the REA would not be hamstrung by the reorganization plan.

The President vetoed the bill, and a valiant effort to overturn the veto failed by just four votes in the House. I was deeply disappointed, because I believe in the REA and do not think that its proud record justified the Eisenhower-Secretary Benson treatment of the rural elec-

tric-and-telephone systems as an unloved stepchild. In another sense, also, I felt that the failure of the overriding vote was disappointing, because it gave the White House political advisers a sense of security in threatening that various other measures would be vetoed. The effect was that there was little pressure on the administration to try to find reasonable areas of compromise, and the end result was that Congress was unable to pass perfectly reasonable programs that would have commanded the general support of the public.

The palace guard went too far, at last, on the second public works bill authorizing water development projects even after Congress had reduced the public investment to the total the President set as his limit. At this both Houses rebelled, because it is intolerable for a veto of such projects to be defended on the argument that nobody but the Budget Bureau has any policy control in the development of America's waterways, rivers and harbors. Congress, too, has a role to play, and it asserted its constitutional rights to authorize projects for the enhancement of America's national resources.

This ended the President's record for "never having a veto overridden"—a record temporarily preserved only by the device of a White House survey leading to his signature on an earlier airport construction bill because he was reliably informed by his party leaders that he could not win on a veto.

The efforts of Congress to pass a sound and fair labor-management bill were seriously impeded by administration efforts to make political capital from an issue that should have nothing to do with partisanship.

Looking backward, perhaps everyone can realize that all the bills seriously offered in Congress were equally strong in the sense that they would impose ground rules that honest union leaders are glad to accept and which, in fact, they long ago accepted in practice in overwhelming numbers without the need of a law. But the Republicans in Congress did not want the Democrats to get credit for passing an effective but fair bill, so they shouted that our bills were "weak." A GOP spokesman let it slip out that he wanted a "killer" or no legislation at all, and this was the attitude of the administration. President Eisenhower even endorsed a section of the legislation that his own Secretary of Labor Mitchell had opposed in testimony, and the Secretary had to swallow the reversal.

Insofar as the legislation actually injures honest unions, particularly small and weak unions in antiunion low-wage sections of the country, it will be bad class legislation rather than a reform proposal. It will damage Illinois industry and industry specifically in Madison and St. Clair Counties, where our unions are strong, well established and are not going to be broken. By encouraging low-wage sections to continue to try to attract runaway business, it may increase the differential in prosperity and good wages between areas. I would have greater preferred a sound reform bill, limited to reform, rather than anything advocated as "killer" legislation and sponsored with partisan purposes.

There are a great many credits in the record of the session in which Congress resisted attempts of the administration to kill useful and desirable programs.

For instance, the White House group says that Federal spending in what are called federally impacted areas, where there are large concentrations of people due to defense or other Government activities, is wrong. Several school districts in Madison and St. Clair Counties participate in this program. Congress did not agree and refused to nonappropriate the program out of existence.

The White House also tried to scale down or abandon the relatively new antipollution program, under which cities are helped to meet their massive problems of water pollution and sewage disposal. The matter of pure water supplies is surely a national issue, but Mr. Eisenhower's advisers tried to argue that self-reliance would be sapped unless we abandoned our efforts to promote the swift development of antipollution systems with Federal aid.

Congress refused to go along with this, and after both Houses had passed bills to increase the program, instead of killing it, it was agreed to hold the measure in conference committee until next January when Congress is back in session and action can be completed without risking a pocket veto. After Congress reconvenes, the President will have to veto the bill directly by refusing his signature or let it become law. The total program will not be seriously impeded by the 4 months of delay.

Congress repeated its pattern of the last several years and insisted on authorizing and appropriating more money for medical research than the President said he wanted. The sum is not bing in a relative sense, and it would be folly to let people die unnecessarily of cancer and cardiac diseases when substantial breakthroughs may be made by the investment of a few millions more in money.

This Democratic Congress has been an economy Congress. Despite the hocus pocus constantly talked about by the administration, the session has actually slashed the proposed spending programs of the Budget Bureau in bill after bill. It has slashed the proposed authorization bills, sending each of them under the careful scrutiny of expert committees and trained committee staff experts.

A certain trickery is involved when people toss around Government spending figures without any clear sense of ethics. One might suppose, for example, that an administration that talked about economy so frequently would have a proud record of budget balancing, but in fact President Eisenhower rolled up a record peacetime budget deficit of $12 billion for his last fiscal year. Even more embarrassing to him, however, was the danger that he might have another deficit in fiscal 1960, which is an election year. So we saw instance after instance in which, for bookkeeping purposes only, the White House tried to get spending charged against last year rather than the 1960 fiscal books. It does not mean either more or less spending, but merely involves a political talking point.

There can be trickery also in such things as the highway program. Mr. Eisenhower insisted on raising gasoline taxes to pay for the Interstate System, which was threatened with a slowdown. There were obviously many ways to raise the money—by general revenues or by setting aside funds from taxes already imposed, as well as by raising gasoline taxes again. But the administration kept on demanding the highest possible raise in gasoline taxes—which would give the White House credit for keeping the program rolling and Congress the blame for imposing special new highway-user levies that, in the opinion of many of us, were unnecessarily and improperly high. A compromise was obviously required, and it would have been easier to get if the administration had not adopted so self-righteous an attitude in regard to its own proposals.

Perhaps the greatest service of the session has been in its demonstration of the clashes of philosophy between the administration and the Democratic majority. Look at the record of programs blocked by vetoes or threats of vetoes:

They include an effort to develop a new farm bill. They include Federal aid to schools, where administration hostility forced the scaling down of bills and even the smaller programs were not given a green light.

They include housing, where the President vetoed a comprehensive but compromised bill, then vetoed a somewhat scaled down bill, and finally accepted only a third measure.

The President gave no affirmative leadership for an improved minimum wage system, to meet needs that are now apparent to modernize a sound program. When the administration was asked to help modernize the unemployment compensation system, it refused, and said that no such thing was justified. When hearings were held on a bill to improve the social security system by liberalizing retirement age provisions, the Secretary of Health, Education, and Welfare went before the committee and said he was against it.

A highly respected liberal Republican, Senator AIKEN, of Vermont, said after the last election that the President's trouble was that he didn't understand the difference between waste and useful and desirable public investment. I thoroughly agree, and I regret that the session has demonstrated that this failure in comprehension in the White House has been more flagrant rather than modified.

The result is to leave us a great deal of work for next year—and the work will have to be done no matter what the difficulties are.

The 1st session of the 86th Congress came to an end at 6:21 a.m., Tuesday, September 15, after finally approving the mutual security appropriation bill and extending the life of the Civil Rights Commission for 2 years. It had been in continuous session longer than any other session of Congress since 1951.

One-fourth of the Historical Buildings in Existence in This Country in 1941 Have Since Been Destroyed, Many of Them by Modern Highways Financed by the Federal Government

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, according to a recent estimate one-fourth of the historical buildings in existence in this country in 1941 have been destroyed, many of them by the modern highways financed in part by the Federal Government.

This is a shameful thing. Many kinds of criteria are considered by the highway builders in reaching their decisions as to where highways should be located but criteria as to the national, regional, or local historical and architectural significance of buildings which may lie in the path of these highways are not taken into account. I think that President Eisenhower and the Federal highway officials must shoulder a large part of the blame for this disregard of the precious and irreplaceable heritage which is being destroyed by the Federal highway program. I have said before and I will say again that never before have powerful Federal officials shown so little interest in, or knowledge of, the importance of the great heritage which is ours in the buildings linking us with our past.

We are horrified when we read about the destruction of great libraries or priceless art by military commanders in the field from ancient times to the World War of recent years. In this century all governments have set up elaborate procedures to prevent such destruction whenever possible. But how much more must we condemn the heedless, thoughtless destruction in peacetime of our priceless cultural heritage by high Federal officials who will not raise a finger to require that Federal funds shall not be used to aid such destruction?

A Saturday Evening Post cover of July 18, 1959, by the distinguished artist, John Falter, of Bucks County, Pa., calls attention to the loss of our Nation's historic sites and structures due to the accelerated pace of highway construction. The painting shows engineers laying out a new highway route through the wing of a typical historic old Bucks County stone farmhouse while the owner waves his hands in anger and frustration.

This anger and frustration has become increasingly widespread as the federally assisted highway programs takes an increasing toll of our historic sites and structures. John Oakes called attention to this situation in an article: "Conservation: Our Historic Sites Are in Danger"—New York Times, December 1, 1957; as did Nona Brown in the same newspaper—September 28, 1958—in an article entitled "The Fight To Save the Nation's Landmarks." A recent Reader's Digest article early this year entitled "Wanton Disregard of Our Nation's Heritage" points out that at least 25 percent of the finest historical and architectural buildings existing in 1941 have since been destroyed.

The urgency of this situation requires the immediate passage of several bills which have been introduced in this Congress by Senators JAMES E. MURRAY, HUBERT H. HUMPHREY, and JOSEPH S. CLARK, Jr., and by a number of Members of this House, particularly my H.R. 285, H.R. 3509, H.R. 4046, and H.R. 6680. The major stumbling block to the enactment of this legislation is the lack of any report by the administration setting forth the position of President Eisenhower on this matter of historic preservation. It is a matter of record that when the administration is really interested in something it can furnish a report on legislation within a matter of a few days at most, yet months have dragged by without a report on this legislation which has as its purpose the preservation of our cultural heritage.

There are increasing signs that the American people are getting fed up with the run-around the administration is giving them on this subject, Mr. Speaker, and are determined to do something about it. One heartening example of this newly found determination, which could have important results in encouraging similar action elsewhere, took place recently in New Jersey.

Here is what happened, something reminiscent of some of the farm auctions of the depression years of the 1930's when neighboring farmers simply refused to bid more than a nominal sum for the farm, its stock, and its equipment which was up for sale. Then, having bought the farm, it was given back to the hard-hit farmer who had owned it.

On Tuesday, September 8, 1959, the historic Old Brick Tavern at Perryville, in Hunterdon County, N.J., was sold to make way for new Interstate Highway 78 which will connect Phillipsburg, N.J., with the Holland Tunnel. The Trenton (N.J.) Evening Times declared on September 10, 1959, that—

> Fortunately for history, Robert Trubek, of Clinton, N.J., paid $250 to secure the building which was built in 1813 to serve as an inn for stagecoach travelers between New Brunswick and Easton.
>
> Trubek, who was the only bidder, will spend $20,000 to move the tavern to a new site where it will be reconditioned and then sold. Any profits will be to the Hunterdon County Medical Center in Flemington.

The rest of the story is told by B. A. Sorby, of the Delaware Valley Protective Association, who wrote me that—

> Lack of awareness on the part of highway officials as to the great loss of historic sites and buildings occasioned by current construction is graphically illustrated by the Hunterdon County Democrat's story of September 10 which stated: "There was some pleading on the part of the auctioneer for other bids (on the tavern) on the grounds that both the State and Federal Governments had an interest in achieving the highest possible net return."

Mr. Sorby adds that—

> Not only was Mr. Trubek allowed to preserve the building as part of our historic heritage, but the State and Federal Governments were urging that he be forced to pay the highest possible price for the privilege.
>
> Best wishes for success in obtaining immediate passage of your bills.

Let us hope that this action by the good people of New Jersey proves contagious, and that the citizens of other States are encouraged to emulate this fine example even to the extent of staging another Boston Tea Party if necessary to save our historic shrines.

I include here the text of my bill H.R. 6680, regarding which I shall continue to hope, perhaps in vain, that the Secretary of the Department of the Interior and the Director of the Bureau of the Budget will report favorably before the end of this year. I also include some correspondence, and articles from the Trenton Evening Times, the Trentonian, and the Hunterdon County Democrat which, taken together, reports on this matter in much greater detail than I have been able to.

The matters follow:

H.R. 6680

A bill to amend the Historic Sites Act of August 21, 1935, to provide a method for preserving sites, areas, buildings, and objects of national, regional, or local historical significance which are threatened with destruction by federally financed programs, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the Act entitled "An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes", approved August 21, 1935 (16 U.S.C. 461), is amended to read as follows:

"It is hereby declared that it is a national policy to preserve for public use historic sites, areas (including sections of cities), buildings, and objects of national, regional, or local significance for the inspiration and benefit of the people of the United States."

SEC. 2. Section 2 of such Act (16 U.S.C. 1462) is amended by redesignating paragraph (k) as paragraph (m) and by adding after paragraph (j) the following new paragraphs:

"(k) Carry out (insofar as practicable and appropriate) the same duties and functions with respect to historic areas (including sections of cities) as those which are specified in the preceding paragraphs of this section with respect to historic sites, buildings, and objects.

"(l) Protect and preserve, in the manner provided in section 8 and through the performance of such other functions of the type described in this section as the Secretary may deem appropriate, historic sites, areas (including sections of cities), buildings, and objects of national, regional, or local significance."

SEC. 3. Such Act is further amended by adding at the end thereof the following new section:

"SEC. 8. (a) Whenever the Secretary receives a petition from any State or political subdivision thereof, or from the American Institute of Architects, the National Trust for Historic Preservation, or any other organization recognized by the Secretary for purposes of this section as being concerned with historic preservation, alleging that a Federal project or program or a State or local project or program financed in whole or in part with Federal funds will seriously damage or destroy a historical site, area (including a

section of a city), building, or object of national, regional, or local significance, or upon his own motion, the Secretary shall conduct an investigation, which shall include (but not be limited to) holding public hearings or affording the opportunity for such hearings, for the purpose of determining whether or not such site area, building, or object is of national, regional, or local historical significance.

"(b) Whenever the Secretary determines under subsection (a) that a site, area, building, or object is of national, regional, or local historical significance, he shall forthwith determine whether or not the proposed project or program will seriously damage or destroy it.

"(c) Whenever the Secretary determines under this section that a site, area, building, or object of national, regional, or local historical significance will be seriously damaged or destroyed by a Federal project or program (actual or proposed) or by a State or local project or program which is or will be financed in whole or in part with Federal funds, he shall submit such determination to the head of the Federal department, agency, or instrumentality under the jurisdiction of which the project or program is to be carried out; and after the receipt of such determination the head of such department, agency, or instrumentality shall not commence or further proceed with such project or program, or expend or approve the expenditure of any Federal funds (or further Federal funds) for such project or program, unless and until such project or program has been modified and the plans, specifications, and contracts thereunder amended so as to provide to the satisfaction of the Secretary for the preservation of the historic site, area, building, or object involved. Such modification or amendment may be made notwithstanding any provision of law limiting the right of a department, agency, or instrumentality to modify a project or program or amend plans, specifications, or contracts, but shall otherwise be subject to all the provisions of the law under which the project or program is being or will be carried out."

SEC. 4. The Secretary of the Interior, in consultation with the American Institute of Architects, the National Trust for Historic Preservation, and other organizations recognized by the Secretary as being concerned with historic preservation, shall make a continuing study of the tax advantages, technical and financial assistance, and other incentives which could be provided (by legislation and otherwise) to promote and encourage the restoration and preservation of sites, areas, buildings, objects, and antiquities in the United States of national, regional, or local historical significance by the Federal Government, and by States, political subdivisions, private organizations, and individuals, giving appropriate consideration to the methods which have been used to encourage such restoration and preservation in other countries and in areas of the United States where intensive programs for historic preservation have been successfully carried out.

DELAWARE VALLEY
PROTECTIVE ASSOCIATION,
Stockton, N.J., September 14, 1959.

FRANK THOMPSON, JR.,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR MR. THOMPSON: In reference to my letter of August 8, 1959, with enclosures, in regard to the Old Brick Tavern, near Hampton, N.J., and your bills H.R. 285 and H.R. 4046, please advise the status of these bills. The information is needed for news articles I am writing.

Apparently the need for immediate passage of these two bills is increasingly realized now that the Federal highway program is again underway. The Doylestown (Pa.) Intelligencer states: "CURTIN backs bill to protect shrines." No mention is made of the author or number of the bill, but I assume Mr. CURTIN was referring to your proposed legislation.

The Trenton Evening Times (September 10) story, "Vintage Homes Versus Pikes," is based on the enclosed release which I sent out to the New York Times, New Brunswick Daily Home News, Newark Evening News, Newark Star-Ledger, Easton Express, Hunterdon County Democrat, Lambertville Beacon, South Rutherford Leader-Free Press, Red Bank Register, and Doylestown (Pa.) Intelligencer. I do not know how many of these papers carried the story other than the Trenton Times.

The Trenton Evening Times of September 14 carried a followup story on Mr. Trubek's plans for restoration of the tavern.

Lack of awareness on the part of highway officials as to the great loss of historic sites and buildings occasioned by current construction is graphically illustrated by the Hunterdon County Democrat story of September 10, which stated: "There was some pleading on the part of the auctioneer for other bids [on the tavern] on the grounds that both the State and Federal Government had an interest in achieving the highest possible net return." Apparently not only was Mr. Trubek to be allowed to preserve the building as part of our historic heritage, but the State and Federal Government were urging that he be forced to pay the highest possible price for the privilege.

Best wishes for success in obtaining immediate passage of your bills.

Yours sincerely,

B. A. SORBY.

NATIONAL TRUST FOR
HISTORIC PRESERVATION,
Washington, D.C., August 19, 1959.

MR. B. A. SORBY,
DVPA Director for Raven Rock,
Stockton, N.J.

DEAR MR. SORBY: Thank you for the carbon of your letter of August 8, to Congressman FRANK THOMPSON, JR., concerning the old Brick Tavern, on Route 22. We have been informed about the plight of this house some time ago, and I enclose carbons of my correspondence concerning this important landmark. I hope very much that my letters to the Federal and State road commissioners may be helpful, and, at your request, I am sending a letter to the editor of the Democrat, Mr. D. H. Moreau, a copy of which is enclosed.

With all good wishes,

Sincerely yours,

RICHARD H. HOWLAND,
President.

[From the Trenton Evening Times, Sept. 10, 1959]

VINTAGE HOMES VERSUS PIKES—BATTLE OVER HISTORIC LANDMARKS

An angry homeowner watches a group of surveyors plot the course of a new turnpike or expressway which will surely cut across the yard of his old stone farmhouse.

That scene is repeated as many homeowners in New Jersey prepare to do battle with the State highway department on the age-old issue of new roads versus vintage homes.

The Hunterdon County Historical Society, the Delaware Valley Protective Association, and individuals such as D. H. Moreau, editor of the Hunterdon County Democrat, have been battling the relentless advance of modern highways through Hunterdon County's historical heritage.

"No one gets excited about any of this unless it hits close to home," said one anti-highway man. "And by then it's often too late."

One big hope of the homesteader who is resisting with all his resources the new superhighways is a congressional bill now stalled in committee.

Introduced and promoted by Congressman FRANK THOMPSON, JR., the land-saving bill would bar Federal-supported highways (which includes most major projects) from adversely affecting historical sites, buildings and objects of national significance. Thus far THOMPSON's bill has gone nowhere, however.

One-fourth of the historical buildings in existence in this country in 1941 have been destroyed, according to one estimate.

Pointing up the problem in New Jersey are two mammoth Federal-supported highway projects soon to be undertaken by the State highway department. Both projects will affect this country's architectural history.

On Tuesday the historical Old Brick Tavern in Hunterdon County's Hampton was sold to make way for new Interstate Highway 78 which will connect Phillipsburg with the Holland Tunnel.

Fortunately for history, Robert Trubek, of Clinton, paid $250 to secure the building which was built in 1813 to serve as an inn for stagecoach travelers between New Brunswick and Easton.

Trubek, who was the only bidder, will spend $20,000 to move the tavern to a new site where it will be reconditioned and then sold. Any profits will be to the Hunterdon County Medical Center in Flemington.

And a similar preservation move is welling up in Shrewsbury, near Red Bank, where the mayor, town council, and residents are trying desperately to halt the proposed widening to four lanes of a two-lane highway in the town's center.

The town is now planning a celebration of the 300th anniversary of the Shrewsbury Grant issued by King Charles in 1664. Colonial structures in the town will be renovated for the celebration.

[From the Trentonian, Aug. 31, 1959]

SEEK TO SAVE FAMED OLD BRICK TAVERN

(By Eleanore Nolan Shuman)

The fate of the venerable Old Brick Tavern at Perryville, 2½ miles west of Clinton, is uncertain but public interest is great. Will the State raze it after it takes possession tomorrow or will some private source provide funds to have the structure moved? The picturesque building, considered one of the best examples of early American architecture in Hunterdon County, is important for its historic as well as its artistic values.

Famed as a dining place on the old Brunswick-Easton Turnpike, the tavern entertained travelers and traders. Here, it is said, thousands of cattle and sheep changed hands annually. Just as the landmark became established because of its location on the turnpike, so now it faces extinction because of its situation on a modern freeway. U.S. Highway 78, under joint Federal and State construction, calls for the removal of the building for it prevents the construction of an underpass at the Jutland-Norton intersection. No crossings are allowed on highway level.

The edifice, an important part of the heritage of New Jersey, was restored faithfully by its last two owners, Mr. and Mrs. Francis Marckstein, who found the place in a frightful condition when they purchased it 4 years ago. The ballroom, probably the handsomest room of the period in Hunterdon, contains a mantel, a work of art, that was restored after hours of hard and painstaking work.

The interior details of the house are of great merit and the Marcksteins were quite encouraged when they sold their home to the State last June, because they were told to leave everything intact. This led them to believe that perhaps some of the valuable

items, such as the mantels and trim, might be preserved.

The architecture of the building is of the colonial period although it was built as late as 1813. This is possibly because the architect-builder, Cathhart, convinced the original owner that a dignified building would attract the genteel carriage and stagecoach trade. The building was almost completed in September 1813 when a courier rode up the highway and told the mechanics working on the building of the surprise victory of Commodore Oliver Hazard Perry over the British Fleet on Lake Erie. The craftsmen who were just putting on the last pair of rafters decided to celebrate. They finished their work, nailed a small bush on the peak of the roof as was the custom, poured some whisky over it and christened the place Perryville, which name it still retains as a post town.

The tavern was popular during the pre-Civil War period but with the decline of the turnpike traffic due to the perfecting of the railroad, the building, after 1873, was used as a dwelling. Since the Marcksteins worked on it, the place has been restored to the original.

Many groups are fighting to keep the building intact, particularly the Delaware Valley Protective Association, which is pledged to preserve the charm of the Delaware Valley. Under the leadership of Hal Clark of Doylestown, and Berthold A. Sorby of Raven Rock, a wealthy donor may be influenced to contribute toward the moving and conserving of the structure. The undertaking is expensive but the building is a historic scenic asset that must be preserved.

The Delaware Valley marches on. Its progress is heartening. Sometimes there is a little too much progress and historic values are forgotten. As travelers speed over distance-melting superhighways, they seldom consider the old structures they are speeding through but the public is beginning to care as they realize that our valuable historic heirlooms cannot be replaced.

[From the Hunterdon County Democrat
Flemington, N.J., Aug. 6, 1959]

BULLDOZERS WILL RAZE OLD BRICK TAVERN UNLESS STEPS TO SAVE IT SOON MATERIALIZE

(By D. H. Moreau)

What will happen to the "Brick Tavern" at Perryville after the State takes possession September 1?

From all that has been revealed it will be razed. Bulldozers will move in and level the proud building, reminiscent of a century and a half ago when men traveled by stagecoach between New Brunswick and Easton and this was one of their stopping places—one of the handsomest and finest of its day and still one of the best examples of colonial architecture in this part of New Jersey.

There is talk, yes, of efforts to save the building, but so far they are only in the talking stage; for all intents and purposes the structure has but 3 weeks to stand.

Mr. and Mrs. Francis J. Marckstein, who bought the building 4 years ago, after receiving solemn assurances from officials in the highway department that the then existing Route 22 would not encroach further in that direction, are sick at heart.

IN PATH OF PROGRESS

"It has been hard to take. I have shed all the tears I am going to shed. We've just had to face the fact that we cannot stand in the path of 'progress' and are trying to be philosophical about it all", said Mrs. Marckstein as she ushered us into the commodious kitchen of the once popular tavern. In June the Marcksteins signed an agreement of sale with State highway negotiators.

The kitchen, like the entire building, was in a frightful state when she and her husband took possession. Skilled in the handcrafts and an engineer in his own right, Mr. Marckstein starter working on the old building and continued with the able assistance of his wife until well into 1958, when it seemed that nothing would dissuade the engineers from changing the course of the new freeway toward which the U.S. Government had appropriated millions. Formerly designated FAI 102—it is now U.S. 78 on the official records.

KITCHEN A MUSEUM

The big kitchen, with its broad fireplace, furnished with the utensils gathered by the Marcksteins who spent years collecting and dealing in antiques, stands as a veritable museum—a display that would grace Williamsburg, Va., or Shelburne, Vt.

As a concession to this modern age Mrs. Marckstein had installed a new electric range, refrigerator, and some other appliances, but everything is in keeping with the days when meals were prepared in this big kitchen for hungry and travel-weary patrons of the stagecoaches. These lumbered past, bound for Easton and the West, or headed for Brunswick and the Raritan River boat to New York.

Incidentally, the building did not have running water when the Marcksteins took possession. There was electricity, a few single bulbs suspended from the ceilings served as a reminder that Thomas A. Edison had improved on coal-oil lamps and candles. Heat has also been installed—but not a pipe or a duct is visible.

LOVELY DOORWAY

The center room, which in stagecoach days was reception-dining room, is entered from the highway through a handsome arched doorway, with its heavy six-panel door. This was two rooms when the Marcksteins took over. A partition had been run through its center and the broad fireplace had been boarded up for a stove. It is quite different now, restored to its original simplicity and commodiousness. This room is handsomely and comfortably furnished in period antiques, including windsor dining chairs, an antique table, and upholstered easy chairs. There is a simple shelf mantel over the wide tapered fireplace.

At the far end and to the left one enters what in former times had been the bar room. This originally had been two rooms as there were two fireplaces and evidences of a partition. The Marcksteins believe these two rooms were ladies sitting rooms in the original tavern. A later owner had installed a chair rail with wainscoting beneath—as protection from bar customers who were wont to lean their chairs against the walls.

The mantel at the south side of this room is beautifully designed, giving full evidence that the builder and designer of the tavern was no ordinary craftsman. The bar was long since removed; the records show that no license was held there since early in the present century. As stated, there is no opening where formerly there was a fireplace on the side which served as a combination parlor and hall. In one corner a stairway leads gracefully to the upper floor.

GRAND BALLROOM

There are two small bedchambers at the west end, atop the stairs. To the left you enter what is now the large master bedroom. The Marcksteins and many who have seen the room, believe it once served as a ballroom. On this room the builder spared nothing when it came to providing a handsome and appealing interior. The ceiling is surprisingly high for a room of the period. In the center of the east wall is a mantel which has made the mouth of many a decorator water.

"It's the finest I've seen anywhere and I have seen a good many," said Mrs. Marckstein. Its exquisite hand carving is in keeping with the design of the smaller and less ornate mantel on the first floor. And the motif is carried out in door and window trim.

The Marcksteins worked for weeks to bring out the detail of this lovely mantel, which had been covered with innumerable layers of paint of different colors, not to mention soot, smoke, and dirt. To top it off, a later generation of owners had built a partition from wall to wall running smack into the fireplace and mantel. But they had spared this work of expert craftsmanship. Today the trim is finished in a lovely Williamsburg green and the bedroom furnishings are in keeping, including the handsome bedspreads, a little rocker-chair crib by the fireplace, attractive sidetables, drapes, rugs, and other furnishings all of the period. Few museums boast a finer interior than this. And it is authentic, even to the wide-board floors, all hand finished.

Over the kitchen end there is a single, low-ceilinged chamber, replacing what in later years had been two rooms. The old building now has 7 rooms, as compared with 11 when the Marcksteins took over from the estate of Mrs. Clarence Zabriskie. The Zabriskies had once tilled the surrounding acres, now whittled down to a single acre at the southwest intersection of the Jutland-Norton road and Route 22.

WHY PERRYVILLE?

The history of Brick Tavern and how its site got the name Perryville is told in Snell's History of Hunterdon and Somerset Counties, published in 1881. Snell says in his chapter on Union Township:

"Another tavern was one that was built by Cornelius Carhart, along whose lands the New Jersey Turnpike ran. It was built of brick and is sometimes called the Brick Tavern. It was erected in September 1813, at the time of Commander Perry's victory on Lake Erie, the news of which was received through a courier as workmen were putting on the last tier of joists, who were so overjoyed at hearing of the victory that when they put on the last pair of rafters and nailed the bush on the peak, as was the custom of the day, and poured some whisky out of a bottle on it, they unanimously called it Perryville, which name it still remains as a post town. But it has not grown much since that day, only one dwelling and a blacksmith shop having been added to the tavern. It was a place that for many years (until the time of railroads) entertained drovers and droves—more than any one hotel in all this section of country; thousands of cattle and sheep annually changed hands here. Railroad facilities have in great measure broken up the traffic."

How come that Brick Tavern is in architecture of the colonial, rather than a later period? By 1813 concessions were being made by builders to a more modern style. Mrs. Marckstein believes that Carhart must have been an older man who adhered to the colonial style or possibly the architect-builder convinced him that it was worth the extra cost to erect a building of more dignified style to attract the carriage and stagecoach trade.

As a stopping place for drovers, the inn may have been found a bit too dignified and stylish—leading to interior changes like making two sitting rooms into a larger barroom and cobbling the ball room into two bedchambers.

HARDESTY HOUSE

But tradition says that the Brick Tavern catered to the inner man only. The old Hardesty House, farther west a few hundred yards and on the opposite side of the road and erected in 1843, put the drovers and the stagecoach patrons up overnight after they had been wined and dined at Brick Tavern. Here Monroe DeMott, Clinton real estate broker, who a few years ago restored Hardesty House, found plenty of evidence that lots of

patrons, horses, and cattle had been accommodated.

The big buildings back of Hardesty House burned last year. The barn, 80 feet long, had many stalls for horses and a carriage house, 150 feet long, with more than ample space for coaches and wagons. Hardesty House had plenty of rooms also for accommodating the drovers and travelers.

When Mr. DeMott was excavating near Hardesty House he uncovered one of the old turnpike mileposts with the legend "32 Mi. to Brunswick." He set it in concrete and it now graces the front yard of the house, now owned by Wintrop Clement.

TAVERN SIGN

The swinging tavern sign which formerly hung on the turnpike side of Brick Tavern now graces the walls of the Hunterdon County Historical Society in Flemington. Its weathered face bears the likeness of "Old Hickory"—General Andrew Jackson.

Dr. I. S. Cramer, late of Flemington, rescued the sign years ago and it was given to the Historical Society for its collection of antiquities.

There had been at least two buildings across the Jutland road on the opposite corner—a blacksmith shop and barn. Only one of these remains.

The more popular entrance to the tavern in the days when it still served as a licensed place of refreshment was through the door in the west end. This formerly had a broader porch with a peak roof, as evidence in the brickwork shows. The bar was long since removed but the legend persists that it was a lively place—and at times a place of great solemnity.

THE WAKE

Once the proprietor, one Peter Mulvey, patronized his own barrel a bit to excess and passed out. His patrons solicitously lifted the proprietor's bulk to the top of the bar, folded his arms, placed candles either side of him as for a wake. When Mulvey came to and noted the joke that was being played on him he quickly cleaned house of the jokesters.

David Wean and his sister, Miss Ella Wean, of Pittstown, whose uncle's wife was a daughter of Peter Mulvey, recall having visited the place when the Mulveys were there. Mr. Wean remembers 55 or 60 years ago when the hotel was conducted on the premises. To the best of the recollection of members of the Mulvey family, Peter conducted the tavern about 11 years, commencing in about 1874. At that time the farm contained about 100 acres.

Published records of the line of ownership fail to show Mulvey's ownership.

PRIOR OWNERS

Cornelius Carhart, Jr., sold the tavern and 100 acres April 1, 1833, to Daniel VanSyckel. The price was $4,661.77. Earlier deeds show that the elder Carhart had sold his son four parcels between 1794 and 1805, 8 years before the tavern was erected.

VanSyckel owned the property until 1864 when John T. Leigh bought it for $7,000 and resold it the next year to Joseph VanSyckel for $8,450. Two years later Joseph VanSyckel sold it to Joseph Stires for $9,000. Those were boom (post-Civil War) times. The railroad had not yet made its impact on turnpike travel.

By 1870 the crash had come and traffic had gone to the rails. Richard Bellis, sheriff, took over, selling the property to Mary Taylor, who in turn in 1873 sold it to Cornelius V. Hall. Apparently the Taylors had been tenants before Mary Taylor bought, because a map printed in 1851 shows the building and the legend "S. Taylor Hotel." Another township map of 1860 designates the site with the name "John M. Leigh."

In 1879 H. C. Beldon, sheriff, conveyed the property back to Mary Taylor and in 1889 the sheriff, this time John T. Cox, stepped in, selling the property to the executors of Charles T. Tomlinson, deceased. William Deremer bought the place in 1902 and soon conveyed it to Clarence A. Zabriskie. The latter family never conducted a hotel there but used it as a farmhouse, and after his death Clarence's widow, Mary J. Zabriskie, continued to live there. In 1955 the Marcksteins became the owners.

THE FUTURE?

The Marcksteins plan to move soon to a dwelling in Petticoat Lane, between Annandale and Cokesbury, which they bought recently from Andrew Fox. Mr. and Mrs. Marckstein have been given not the slightest clue as to the State's plans for "Brick Tavern." They were told that everything in the building must be left intact, which has encouraged them to feel that some of the valuable items, such as the mantels and trim, may be preserved. The Marcksteins, when told that the building stood in the highway's path, inquired into the possibility of moving the structure. They found that it would have to be encased in a steel framework for reinforcement and would have to be moved in two sections, the kitchen wing being separated from the main structure. They said that lack of nearby property on which it could be placed and the necessity of removing electric power lines to provide clearance, discouraged them.

Recently some individuals have given further study to the possibilities of moving the house in the direction of "The Hensfoot," near the Jutland school and preserving it for some public purpose or selling it eventually, any net return to go to a charity. These plans are still nebulous.

It looks at this writing as though, soon after September 1, the bulldozers will take over.

Needed: A Department of Science

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made concerning the need for a Department of Science.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NEEDED: A DEPARTMENT OF SCIENCE

More than 2 years ago, before the adjournment of the 1st session of the 85th Congress, the Committee on Government Operations, through its Subcommittee on Reorganization, of which I was chairman, undertook a study directed toward the reorganization of the civilian science program of the Federal Government. That was 2 months or more before Sputnik No. 1 was sent into orbit by the U.S.S.R.

Immediately following this important development in the science field, which indicated that the Soviet Union was far ahead of the United States in the space field, there was a tremendous upsurge of public opinion in support of immediate action to eliminate existing deficiencies in the civilian science program of this country.

Pursuant to action taken by the Committee on Government Operations, the Subcommittee on Reorganization developed legislation entitled "The Science and Technology Act of 1958," which was introduced in the 2d session of the 85th Congress as S. 3126. This bill proposed the creation of a Department of Science and Technology; Standing Committees on Science and Technology in the Congress; to establish National Institutes of Scientific Research; to authorize a program of Federal loan and loan insurance for college or university education in the psysical and biological sciences, mathematics, and engineering; to authorize the establishment of scientific programs outside of the United States; and for other purposes.

The program outlined in the report submitted to the Senate in the form of a Senate document (S. Doc. 90, 85th Cong.) resulted in many legislative actions designed to carry out the objectives set forth in Senate Document 90. In furtherance of the program the Subcommittee on Reorganization held hearings on certain aspects of the civilian science activities, particularly as they related to the Federal Government's documentation program, and issued a summary of actions taken by the Commmittee on Government Operations and other committees of the Congress soon after the convening of the 86th Congress. This was printed as Senate Report No. 120 of the 86th Congress on March 23, 1959. Although a number of constructive actions have been taken to bring about improvement in the civilian science structure of the Federal Government and certain new agencies have been created, there still remains much overlapping and duplication among the existing Federal agencies and it is essential that the necessary reorganizations be effected without further delay.

Among the steps already taken to accomplish necessary reorganizations in the civilian science field was the appointment of a Special Assistant to the President for Science and Technology; the creation of the President's Advisory Committees on Science and Technology and on Government Organization; the Interdepartmental Committee on Scientific Research and Development, later superseded by the Federal Council for Science and Technology; the extension of the authority of the NACA through the creation of the National Aeronautics and Space Administration, and the establishment of Committees on Science in the House and Senate.

While these steps have been helpful and undoubtedly are necessary actions toward accomplishing the overall objectives of perfecting Government operations in the field of science, further consideration must be given to still existing inadequacies not only in these agencies but in other areas which must be coordinated with operations of a similar or related character and reorganized under more cohesive administrative controls.

There are approximately 50 agencies which perform some science and research activities having direct application to the overall science program of the Government. In addition to the four Presidential advisory groups dealing with science, there are three major independent science agencies or commissions, the National Science Foundation, the NASA, and the AEC, and more than 40 components of other departments and agencies which operate science and engineering programs supposedly related to the major departmental mission for which the departments were established, or for which special agencies were created. Some of these internal agencies, such as the National Bureau of Standards, Office of Technical Services in the Department of Commerce and science functions of other departments which are performing services not directly associated with the primary mission or even related functions of the departments in which they are now located. Consequently, they do not receive the technical administrative direction necessary to insuré operation at their highest potential. On the other hand, some of these internal agencies, which include the National Institutes of Health, the Agricultural Research Service, the Advanced Research Projects Agency, and the Science Advisor to the Secretary of State, perform serv-

ices which most authorities on science programs of the Government feel do have direct application to the program areas of the respective departments in which they are located and should retain their present status.

From the beginning, the committee, in its studies of these problems, studiously avoided involving the civilian science activities with the applied science and research programs of the military departments which pertain to national defense and come within the jurisdiction of other committees, or with advisory or coordinating agencies or officials within the Executive Office of the President performing high administrative and policy functions under the direction of the President.

The major objective of the Science and Technology Act of 1958, which I introduced as chairman of the Subcommittee on Reorganization and International Organizations, was to bring about, under a Secretary at the Cabinet level, coordination and centralization of those Federal activities in the field of basic civilian science, now scattered among existing departments, as well as those which had grown haphazardly following World War II.

The Subcommittee on Reorganization has continued to press for action by the Congress during the past 2 years on its original proposal to create a Department of Science and Technology. Early in the 86th Congress a bill was introduced, S. 676, to create such a Cabinet post. Hearings were held on this and related measures, during which it developed that there were so many varying points of view as to whether a Department of Science should be established and as to what Federal activities should be incorporated within such a Department, that the committee proposed that a commission patterned after the Hoover Commission on Reorganization of the Executive Branch of the Government should be created to recommend legislation designed to reorganize the civilian science programs of the Federal Government. That bill, S. 1851, Calendar No. 400, was reported favorably to the Senate on June 18, 1959, and has been pending on the calendar since that date.

According to a news release issued September 11, the British Government is now proposing to establish a Cabinet post on science. This action is strikingly opposite from the position taken by the U.S. Government, which refuses to take the lead in establishing a coordinated science program within the Federal Government. The British Science Mission, attached to the British Embassy in Washington, has secured from the Committee on Government Operations full details regarding that committee's studies and recommendations and, although our Government has failed to recognize the failings of the present program and the urgent necessity of taking aggressive and constructive action, the British have utilized the very same material to accomplish the objectives of the legislation this committee has been advocating.

It took a sputnik to get action on other areas of the original science and technology act proposed by the committee in the 85th Congress. I trust that the new moon rocket which has been successfully launched by the Soviet Union will awaken this Congress to the need for action without further delay. I realize that there is little chance to get action on the bill proposed by the Committee on Government Operations this session, but I feel that it is my duty to point up to the Senate that there is presently pending, and has been pending on the Senate Calendar for more than 2 months, constructive legislation which, had it been approved as recommended, would have placed the United States in a far more advanced position to meet the challenge of Soviet science than will be possible when the Congress reconvenes next year.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. ALGER. Mr. Speaker, those who know human and monetary values are the same, despite political slogans, will be interested in this editorial from the Dallas Morning News:

VALUED BY YARBOROUGH
(By Lynn Landrum)

Senator YARBOROUGH is proud that he and others in Congress defeated the so-called budget experts by voting to unbalance the budget to the extent of $50 million for loans to indigent colleges so that they could construct more classrooms, thereby increasing their insolvency further.

"One of the greatest deterrents to progress in our time, says the Senator, "is the so-called budget experts who know the price of everything but the value of nothing. We have defeated these so-called experts. We put human values above monetary values when we passed the housing bill with a start toward building college classrooms and proper housing for the aged."

The columntator attended classes at the University of Texas at a time when pine plank shacks were lettered instead of numbered serially. And the alphabet was barely able to take care of the structures. The columntator is unable to say that the shacks materially lowered the intellectual content of the lectures delivered in these substandard edifices. It may be that marbled halls and carved masterpieces would have feasted the mind and charmed the soul. The columntator doesn't know. At the time, the elbows of his coat and the seat of his breeches were shiny from age and use. But, inside, he took what the professor said, turned it over, tugged at the seams, sniffed it—and wondered how much of it was hand-me-down wisdom and how much was homespun truth. And that, for him, was education.

The pine boards and the leaky roof were incidental and unimportant then. They have never seemed important since—except as a sort of visible and palpable evidence that there is a limit to what the taxpayer can pay for.

Human values? Is it a human value that every dollar Senator YARBOROUGH adds to the budget deficit detracts from the columntator's life insurance values when the time comes that the widow has to live on those values?

Is it human value that every time Senator Y spends money the Nation hasn't got he increases the loss which the columntator's savings have sustained because his series E bonds won't cash out for as much buying power as the columntator put into them 10 years ago?

Is it human value that every time Senator Y gets generous with money that the Treasury doesn't have he is carrying out the policy of two enemies of the American way of life, Harry Hopkins and Joseph Stalin?

Harry the Hop said: "We shall spend and spend and elect and elect."

Stalin said: "America will spend itself into bankruptcy and fall into our hands like a ripe plum."

And Senator Y says: "We put human values above monetary values."

Ought America to play Russian roulette with national bankruptcy as the loaded cylinder?

What Is the Truth About Russia?

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SIKES. Mr. Speaker, what is the truth about Russia? What are the people like? How do they live? What do they want? Are they a menace to us? Should we suddenly change our way of thinking about them and relax our guard? How far can we trust Mr. Khrushchev?

These are hard questions to answer. There are too many conflicting ideas and reports. It is difficult to know what to believe. I am one of the increasing number who have been to Moscow. In a brief time these are things I saw.

A church built for 800, crowded to overflowing with an estimated 2,500 who filled every inch of space. They stood in the aisles and spilled out into the streets from every entrance in a drizzling rain. And this was one of three 2-hour services held during the day. This in a Communist nation where God is not recognized and there is no religion except service to the state. But here in this crowded church were no police, no visible threat to the search for God. And never have I seen more hunger for God or a greater yearning for hope of the future than in that gathering in Communist Moscow.

The service was Protestant and there was much to carry me back to childhood country services I had known in the United States. The distinguished, bearded old minister read each line of the hymns, followed in beautiful chorus by the voices of the congregation. A large communion cup was passed—it was first Sunday—with a napkin which each worshipper used to wipe the lip of the cup before passing it on. The wine was real—no grape juice imitation—and it seemed to me some parishioners took a bigger drink than custom required.

But tragedy walked heavily in that church despite its overflow crowd and the hunger for God in the faces of the people. There were almost no young people; almost no men—only women, old women. The young people have other things, other beliefs, to occupy their minds. The men are afraid for their jobs, or their standing.

The Communists oppressed all religious services at first. Not only are they atheistic, but the church in Russia was too closely associated with the ruling class. The czars were held next to God. Now the Communists allow religious services, but discourage them. As a result, Moscow which had 400 churches before the Red revolution, now has 40 with twice as many people in the city. But the training of ministers and priests is starting again.

At the other end of the scale are the children. They are being taught to live without God. Fresh, apparently happy, well fed and carefree, they looked very

much like the children of the democracies, except that most dressed uniformly and the boys wore the emblem of the hammer and sickle. For 10 years they go to school 6 days a week, with course work much more rigorous and intensive than ours. Languages, math, and science are stressed throughout. Then the good ones are screened for trade school and university, the others go into the labor force. There are no frills. The children are educated—not entertained. These 10 years are considered the equivalent of 12 of ours. In fact, some have said these 10 years leave Soviet children as well educated as junior college graduates in the United States.

The result, an indoctrinated, disciplined, and highly trained citizenry drilled for the job on hand and well prepared for it. Is this a process to be emulated by the democracies? Certainly not. But it is a process which can well get the most out of the minds and bodies of people who live in a controlled economy. Church going is a voluntary thing which has come into disrepute in Russia. Not so education. It is a fetish but a required one, which instills doctrine much more firmly than the knouts of the czars or Stalin's firing squads.

I saw the Russian Fair in New York City and I saw the U.S. Exhibition in Moscow. Both were very good exhibits. I am confident ours was well worth the money we spent. It contains some strikingly American things. One of these was the Circorama which was a circular building in which the audience was completely surrounded by a moving picture of Americana. It was a magnified and tremendously effective improvement on cinerama. A thrilling panorama of American scenes completely surrounded the audience and you had the sensation of being on a moving platform which took you from one end of America to the other. The typical American home and American automobiles were big sensations. So were many other items.

Two million seven hundred thousand people saw our exhibition in 6 weeks. Many thousands had to be turned away. Much more is known about America in Russia today as a result of the American Exhibition. To the Americans who viewed it and doubtless to many Russians it was not perfect. There were too many pictures instead of actual objects. The Russians have seen pictures of their own advanced achievements and those of the satellite nations. They are much more impressed with something they can touch and examine. I felt that our art selection as a whole was poor. In no sense did it measure up to Russian paintings at the New York Fair, and I expressed a frank dislike for some of the examples of modern art which were displayed. One of the fair officials told me he had actually seen Russians stand and look at those paintings with tears in their eyes. I told him it was enough to make most anybody cry.

There were things in the Russian fair in New York which were very skillfully interlaced with propaganda. There were folksy examples of beautiful everyday products such as laces and ceramics which appeal to nearly everyone. The first book in the Russian book section was an Orthodox Russian Bible. They stressed free medical care which touches home to every person who has paid a high medical bill in the United States. They pointed up their educational system, the existence of which many Americans are just beginning to learn.

They used an easy to reach well known New York building. Our exhibition was housed in a more inaccessible park in buildings which had to be speedily designed and built. They were striking, but they did not measure up in the eyes of the Russians to a series of unusually beautiful, permanent exhibition buildings which were designed for each of the 24 Republics in the Soviet empire as part of a perpetual fair. This would be equivalent to a fair in Washington with separate buildings to house and set forth the history of products of each of the 50 States of the Union.

The Russians have an ability to put their best foot forward and to disguise and hide the shabby facts of life which still exist for the great majority of their people. For instance they can line up almost as many jet airliners on the Moscow Airport as can be found in all the remainder of Europe or America combined. This is impressive but it does not compensate for rough, muddy roads, truck or horse drawn transportation, and slow, inadequate train service which most of the populace must depend upon.

In their battle to make Moscow the showplace of the Russian empire, they have lined a few main streets with huge, many storied, impressive appearing apartment buildings. Perhaps these are just a facade. Certainly they are not the deep solidly constructed buildings of the United States, but they are there and a few years ago they were nonexistent. Many more are under construction. But wherever you turn, just a block away still stand the poor, small, crowded structures in which most of the populace still lives, with several families taking turns at each bathroom and kitchen. Construction, which some call good and others bad, is proceeding rapidly and each day brings improvement. High rents, which are the bane of existence in so many places are nonexistent here. Rents are graduated at about 5 to 7 percent of the earnings of the tenant.

Moscow boasts a subway system which undoubtedly is the best in the world. The stations are showplaces of glass and marble. Perhaps this offers pride in communal achievement with offsets crowded living and sometimes outdoor privies and community wells.

To search out the bad and ignore the accomplishments in Russia would be foolhardy. They are making progress and their progress is accelerating. The unveiling of the MIG 15 during the Korean war was the first concrete demonstration of this progress. It astounded our aircraft designers by its capabilities and numbers. Then came the sputniks with more spectacular and equally unanticipated accomplishments. Russian diplomatic and propaganda gains have not been accidental. They are just as well planned and just as spectacular. The Russians play a shrewd, hard, patient game in which the left hand professes not to know what the right is doing.

Because Russia historically is a backward nation in which many millions live under hardship and oppression; and because we are reluctant to assoicate success with a form of government hostile to our own, we are accustomed to underestimate the Russians. We overlook the fact that they have produced many great leaders whose brilliance was lost in the nearer glitter of Western statesmen and scientists. Now we know Russia can produce great accomplishments when they concentrate on specific objectives.

Russian industry has, of course, concentrated on weapons of war, with primary stress on missiles and other new superweapons. Trucks and heavy farm equipment have had major attention. Gradually, as tooling up has progressed, there has been a shift toward production of consumer goods and export items. The fact that factories may be outdated and unsafe is of no consequence where manpower is unlimited and no value is placed on human life. Their jets may be inefficient, but they provide swift links with the farflung corners of the Russian Empire. Production all along the line is low compared with ours and methods are often crude, but there is no unemployment, and costs are unimportant to a government which owns everything. In Russia every shoulder has been put behind the same wheel. There are no dissenters. Stalin liquidated them. His successor wears a velvet glove, but it still covers an iron hand.

By our standards, the people live very poorly. Their food is principally cabbage, potatoes, and bread. Meat once or twice a week is the rule. But I did not see anyone who appeared hungry. There is a system of social security for those who cannot work. The clothing of the people is plain and unattractive. But I saw no one in rags. Cosmetics seldom are seen, and equally scarce is the hair styling of the West. Their furniture is limited and generally poor, but there are radios and a surprising number of television sets. They have commercial transportation and some freedom of movement. This adds up to a far different story than that of life under the czars. In simple truth, the Russian people—unattractive as the picture may be to us—are better off than they have ever been. They are harnessed to their wheel of life, but they are beginning to enjoy advantages which they never knew before, and they are told by the best propagandists in the world that conditions will continue to improve. Actually, Russia has always been a police state. The czars and the ruling class held the power of life and death over their frightened and miserable subjects. Stalin geared them to a specific pattern of development and intensified the power of the police. Now there is some relaxation of severity; the people breathe more easily and find it pleasing. By American standards, they still are a backward people, but they do not know anything

about American standards and have not had much chance to learn. We should give them that chance at every opportunity.

Neither they nor the satellite people will revolt. There is not anything to revolt with. There is no prospect of help if they were to revolt. Russian troops are everywhere. The puppet governments know which side their bread is buttered on and play the Communist line without deviation. Contrary to general belief, the satellite forces are not equipped with the newest Soviet weapons. There is always the chance they might go over to the other side in a real showdown. But Hungary demonstrated the chances for a real showdown between East and West are exceedingly remote, and no one wants to risk being another Hungary. As conditions improve a little—and they also are improving in the satellite nations—there is less likelihood of revolt. Hunger and misery as a cause for revolt are gradually being reduced. The people of the satellites in many instances knew better days before World War II than they have known under communism. But their conditions now are better than at any time since they came under Communist domination.

In Russia there is no private ownership of land. All land and buildings were seized by the state, without compensation to the owners. Those who resisted were exterminated or imprisoned. The former owner of the American Embassy in Moscow, now leased by the United States, was smarter than most. He traded title to his property for a visa. This procedure for communization of property was part of Lenin's hatred for all who cast a longer shadow than he, but he masked it under his interpretation of Marxism. Now there is a slight shift away from this pattern. A person who is in favor may under some conditions lease a small plot of ground to work in his spare time, or even to build a house on. Savings accounts are encouraged. Investments generally are in government bonds, on some of which 3½ percent interest is paid. Those who receive interest generally are selected by nationwide lottery. There is some installment buying, but mostly on a layaway plan in which the merchandise is held by the seller until purchase is completed.

Normally a worker progresses by accomplishing the work quotas which are assigned to him. Nearly all work is on a piecework basis. Basic salaries generally are about the same for all except highly trained personnel such as doctors and engineers. Theirs runs higher. The starting scale appears to range from less than 300 rubles per month for some unskilled workers to more than 5,000 for a few top technical and scientific people and artisans. By diligent work and by enjoying the favor of the party leaders a person may progress up the scale until he has doubled his starting salary or a little more. In the same way he can get better living quarters. Some can earn considerably more than the official scale. These include dentists, artists who are allowed to earn extra income and Communist officials.

Women workers are seen everywhere in Russia, often doing the most menial types of work. Women street cleaners appear to predominate. Others work in the fields. They appear to do the same work as men in road and building construction. Many are also found in fields requiring top skills. It is said that women doctors predominate.

Since the economy is state owned and controlled, there is no requirement to show a profit. Service therefore may be and often is poor in public places. In the hotels this is particularly evident. Redtape and regulation are rampant, and an attempt to cut through or bypass the redtape just produces additional delays. There is no other stone-faced indifference to match that of the Russian bureaucrat.

The press, the radio, and the TV are strictly controlled. There is only one line of thought, the carefully censored party line. Everything published or printed must conform.

The Russian is a reserved individual. In public he is not in any sense an extrovert. But for the most part the people give the impression that they would like to be friendly. Time after time I led off with a smile and a word of greeting to individuals. Usually, after a somewhat startled look and a delay of a second or two, there would be an answering half smile and some response in Russian. On a few occasions there appeared to be mild hostility, but no general animosity.

Movements in Russia are less restricted probably than at any previous time. You are given the idea that you can go anywhere and see anything you want. But you will find that you are being shuttled into certain carefully selected areas where you will be shown the best side of everything. If you suggest or request diversion into other areas you will begin to encounter excuses and slowdowns. If you insist on going where you are not wanted you may not be told it is impossible, but things just seem to happen to your plans. Your waiter will begin to take twice as long as he normally would to serve you. Your Intourist guide and car may become lost before you start the trip or may take an entirely different route after it is started.

It has been said many times that only a very few people in Russia are Communists. This is true and deliberate. The Soviet leaders have complete control of the masses and do not want too much competition at the top. The party pie can be sliced only so many ways. A few likely prospects are allowed to join the party, notably among the young but most people make no effort to do so. They assume government is out of their hands and none of their business.

Scattered throughout the Soviet satellites there are remnants of the former governing class and former property owners. In Russia nearly all of these were liquidated or driven out. It is terribly depressive to talk with one of these because they are people who live without hope. Most of them live from hand to mouth and know there is no hope of change for better. Their property was taken from them without compensation. Their jobs are gone. The people whom they formerly looked upon as inferiors now dictate their livelihood. They do not make it an easy existence.

All along the line communism maintains a solid grip on the countries behind the Iron Curtain. There is no reason to expect political miracles. There is no more likelihood of a quick shift in policy behind the Iron Curtain than there is reason to anticipate the democracies will turn to socialism. There are no nations which are in position to break away from Communist dictatorship. Any that try will be subjugated with varying degrees of ruthlessness. Hungary and Poland are the extremes in the way in which satellites are dealt with, but the grip of communism is just as secure in each for the time being. State socialism is an accomplished fact with which we shall have to live for an indeterminate time. Possibly as conditions improve and as the people learn more of life in the democracies they will demand and get more of the better things in life. But this will take time.

To look for a sudden overthrow of communism, supported as it is by vast military organizations which dominate a defenseless population is to refuse to look facts in the face. It is equally unrealistic to think that communism is looking for a war with the democracies. The Soviets are doing too well without a war. They will use it only as a last resort. But in the meantime they have concentrated on massive weapons of destruction and in their ability to overrun vast territories if necessary. And there will continue to be one instance after another where the Communists bite off bits and pieces of territories all over the face of the globe.

When Khrushchev said, "We'll bury you," he simply meant socialism will triumph over capitalism and that the Communist hierarchy fully believes. Whether by fair means or foul is of no consequence. With them the advantages of communism is a religion—the only religion they recognize. There is no opposition party to offer the people an alternate course. It is state socialism or nothing. The populace knows nothing about the advantages of capitalism. They get steady doses of propaganda for their system of government and against ours. Anyone who disagrees too openly finds himself in prison. A few years ago he would have been shot. That is some improvement. The fly in the ointment is the fact that conditions of the people behind the Iron Curtain are improving. It is hard to argue with even a little success when we have nothing else to offer them.

Now this final word. To return to the democracies is like a breath of fresh air. Not only do you see the difference; you feel the difference. Instinctively you find yourself taking a closer look at America and all that it offers to each of us. The important thing is that America not forget its own objectives, its own capabilities, its own accomplishments. When the great Franklin D. Roosevelt said, "We have nothing to fear but fear itself," he might well have included this new threat from a new ideology. America is

far, far ahead in nearly all the things which make for good living and provide opportunity for the individual. If we falter now, it will be our own fault. There may well be a requirement for belt tightening. Competition from abroad, both in trade and in world leadership is certain to increase and to become more difficult to meet. We must be geared to take these in our stride by dedication to our ideals and by renewed determination to preserve them. Unlimited resources still lie within our reach. We stand at the threshold of a rich civilization which, with proper guidance, can become a universal civilization. Our system demonstrably works better for the good of the greatest number. The American ideal, remote for many, yet attainable, beckons to all mankind.

The President of Rutgers University Calls for an Educational and Cultural Commission in New Jersey

---

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, New Jersey's quest for culture was discussed by the New York Herald Tribune in an editorial on September 14, 1959, with particular reference to a speech given by Dr. Mason W. Gross, president of Rutgers University of New Jersey, at the annual meeting of the Constitutional Convention Association of New Jersey.

The editorial writer advises us that—

It's perfectly true that few New Yorkers find it necessary to cross the Hudson on purely intellectual pursuits.

And makes the further point that—

New Jersey's trouble seems to be that it lies between two of America's most flourishing cultural centers, New York and Philadelphia.

The New York Herald Tribune editorial concludes by saying that—

We hope Dr. Gross succeeds in transforming New Jersey into a cultural hotbed. We will watch him with sympathy and anticipation from our own oasis.

What provoked this and other editorials was the proposal by Dr. Gross that an educational and cultural commission be established in New Jersey, to advise New Jersey in its quest for culture. In an effort to obtain some background information on what such a commission might accomplish I have turned to a New York State proposal for a cultural commission. New York Assemblyman Bentley Kassal in an illuminating letter in the New York Times of June 22, 1959, declares that—

For the past 3 years, as a member of the State legislature, in cosponsorship with Senator MacNeil Mitchell, I have introduced bills aimed at creating a New York State Arts Council. * * * It was my intention to have the State appropriate $500,000 for the encouragement and support of cultural activities after a similar sum has been raised by voluntary contributions.

Assemblyman Kassal goes on to say that—

It is intellectual blindness to deny the government role in cultural matters. With a constantly shrinking workweek, and an inevitable increase in leisure time, ways must be found to channel people's spare time and energy into constructive activities.

The development and growth of New York as a cultural center must redound to the benefit of its citizens. If we wish to retain the television industry, aid in the production of apparel and architectural designs, increase tourism and travel to the State, it is necessary that we help New York become the cultural center of the world. * * * The Governor himself recognized this urgent need in his annual message to the legislature this year and it is hoped that this partnership of government and private citizens will shortly bring fruit in the creation of a New York State Arts Council. I feel that this should be one of the keystones in any program for future governmental action.

Here, then, we come to the heart of the matter. Dr. Gross would like the State of New Jersey to take its proper place in the front rank of those four or five States which are culturally and educationally among the top in the United States. He has called for the establishment of a temporary educational and cultural commission, similar in a number of respects to the Mitchell-Kassal plan which has so interested Gov. Nelson Rockefeller that he recognized this urgent need in his annual message to the legislature this year, according to New York Assemblyman Bentley Kassal. Governor Rockefeller is, I think, a very competent judge in these matters, since the Rockefeller family has done as much for the advancement of education and the arts in the United States as any family in the country.

I am happy to be able to say that New Jersey Assemblymen Charles E. Farrington and Francis J. Werner have sponsored legislation similar to that which has been developed by New York State Senator MacNeil Mitchell and Assemblyman Bentley Kassal.

I include here the New York Herald Tribune editorial, the letter to the New York Times, the speech by Dr. Mason W. Gross, and the legislative measure offered by New Jersey Assemblymen Farrington and Werner for the information of my colleagues:

[From the New York Herald Tribune, September 14, 1959]

NEW JERSEY'S QUEST FOR CULTURE

While it's perfectly true that few New Yorkers find it necessary to cross the Hudson on purely intellectual pursuits, none of us had ever thought of our fair sister State of New Jersey as a cultural desert, a wasteland of the arts. Yet that, more or less, is how Dr. Mason Gross, president of Rutgers, described it in an address which urged, as first steps toward improvement, creation of a State study commission and voter approval of the $66,800,000 higher education bond issue in November.

It's too early to tell whether Dr. Gross' appraisal of current cultural conditions is going to spread consternation in the Amboys and alarm in the Oranges. New Jersey's trouble seems to be that it lies between two of America's most flourishing cultural centers, New York and Philadelphia (yes, Philadelphia). Dr. Gross does not indicate in what numbers or with what frequency these two founts are visited by intellectually parched Jerseyites. In any case, he would prefer to see replenishment available closer to home.

As for the "shockingly low public commitment to culture" that Dr. Gross decries in New Jersey, it is, alas, no monopoly of the Garden State. Confidentially, we sometimes wonder whether the finer things of life aren't stuck permanently in the Lincoln Tunnel or some place. In any case we hope Dr. Gross succeeds in transforming New Jersey into a cultural hotbed. We will watch him with sympathy and anticipation from our own oasis.

[From the New York Times, June 22, 1959]

FOR STATE ARTS COUNCIL—PARTNERSHIP OF GOVERNMENT AND INDIVIDUALS FAVORED

To the EDITOR OF THE NEW YORK TIMES:

On June 17 you printed an editorial entitled "A Commission on the Arts" in which you commend the role of the Federal Government in the area of the arts. Lest there be any misunderstanding as to the role of State governments in the arts—not only for the sake of the arts but also for the general economy of the State—certain facts should be noted.

For the past 3 years, as a member of the State legislature, in cosponsorship with Senator MacNeil Mitchell, I have introduced bills aimed at creating a New York State Arts Council. This was not intended to deny the responsibility of individuals to support cultural pursuits. My purpose was to supplement this support by the active participation of government.

It was my intention to have the State appropriate $500,000 for the encouragement and support of cultural activities after a similar sum has been raised by voluntary contributions. Rather than discourage private support, such a promise of additional help might well be a spur to individual contributions.

It is intellectual blindness to deny the government role in cultural matters. With a constantly shrinking workweek, and an inevitable increase in leisure time, ways must be found to channel people's spare time and energy into constructive activities.

The development and growth of New York as a cultural center must redound to the benefit of its citizens. If we wish to retain the television industry, aid in the production of apparel and architectural designs, increase tourism and travel to the State, it is necessary that we help New York become the cultural center of the world. We have the brains, we have the talent, and we have the money. If we merely add the will, we can achieve the results.

The Governor himself recognized this urgent need in his annual message to the legislature this year, and it is hoped that this partnership of government and private citizens will shortly bring fruit in the creation of a New York State Arts Council. I feel that this should be one of the keystones in any program for future governmental action.

BENTLEY KASSAL,
Member of the Assembly.

NEW YORK, *June 18, 1959.*

SPEECH BY DR. MASON W. GROSS AT CONSTITUTIONAL CONVENTION ASSOCIATION ANNUAL MEETING, PRINCETON, N.J., SEPTEMBER 12, 1959

During the past few weeks you members of the Constitutional Convention of 1947 must have had many opportunities to recall the furious heat and mugginess of that historic summer in New Brunswick. It is a pity that you are unable to devise any constitutional provisions covering the matter of New Jersey's weather, but with that exception, today, 12 years later, you must still find ample

reason to congratulate yourselves for what you did accomplish. No one expects a constitution to solve the problems of a State, but what one can hope for it is that machinery for settling those problems can be set up in orderly, clear, and simple terms. To this clarification and simplification you made tremendous contributions. The people of the State of New Jersey are greatly in your debt, and as their self-constituted spokesman for this evening, I express to you our thanks for what you accomplished on our behalf.

The weather is not the only important topic on which the constitution is silent. Despite the fact that my distinguished predecessor, Dr. Robert C. Clothier, was the presiding officer of the convention, on the subject of higher education in the State the constitution has nothing to say. This is not in itself surprising, but it is worthy of note that higher education does receive explicit attention in the constitutions of some of our States. In Michigan, for example, the regents of the University of Michigan are set up by the constitution as a fourth arm of the State government, on a par with the executive, legislation, and judicial branches. This status undoubtedly helped the university to grow to its present position of eminence amongst the world's great universities by giving it prestige and strengthening its autonomy. However, today in Michigan there are two other huge public universities, Michigan State and Wayne State, which have also developed great strength. Michigan State is still a division or responsibility of the State department of agriculture, and it is a valid question whether the preeminence of the University of Michigan constitutionally is as important in the struggle for budgets and appropriations as a victory over Michigan State in football, I must apolog'ze for my uncouthness in even mentioning football here in the Princeton Inn 2 weeks before the great day.

I personally believe that it is probably just as well that your draft of a constitution did not include any provisions for higher education. From 1947 until today, and for the foreseeable future the picture of higher education in New Jersey involves so many changing factors that the time is not yet ripe for drawing up in the quasi-permanent language of a constitution a system of education institutions comparable to the system of courts. What I do find interesting, however, is that apparently the question of including some provision for higher education did not even come up, although the very fact that other States had such provisions would have constituted adequate justification for at least a brief discussion.

This, I believe, can be construed as one of the many indications that in 1947 the people of New Jersey in general, and even their ablest leaders, did not consider the question of public, tax-supported higher education as one of the more important questions facing the State. In 1920 80 percent of the college students resident in New Jersey received their college education outside of the State, and even in 1947 the percentage must have been about 60. Today it is about 50 and falling and like a falling barometer this is a sign of trouble. But in 1947 we could still think in terms of the great educational centers of New York and Philadelphia as solving New Jersey's problem, together with the apparently endless stream of colleges and universities both public and private, stretching through New England, New York State, Pennsylvania, and even further, all eager to enroll New Jersey students. This eagerness was perhaps less apparent in 1947 than it was both before and after, because of the hordes of GI-bill students, but everyone thought of that situation as being temporary, and ignored it in long-range planning. Furthermore there were many private institutions within the State able to take up the slack. There were six State teachers colleges, and the Newark College of Engineering, and the State had just designated Rutgers as the State university, an instrumentality of the State for providing higher education. Surely there was no problem.

Now I promise you that I am not going to give you tonight the kind of pep talk that I expect to give every other night between now and election day, on the necessity for passing the college construction bond issue. Let me point out here that today's problem could have been viewed in the flesh in 1947 had we known where to look. Then it was the nurseries, the play schools, and the kindergartens; today it is the high schools; and tomorrow it will be the colleges. But we did not see it as problem in 1947, and today it is with the most extreme reluctance that we are at long last beginning to face it.

To me the fascinating and at the same time discouraging thing about this problem in New Jersey is the fact that for the next several years our situation will be worse in at least one respect than it will be for the other States in the Union. Only New Jersey has been so uniformly dependent on other States for the education of its citizens. No other State comes even close to New Jersey in the percentage of its students who go out of State for their education. And now that the colleges and universities outside the State have made it quite clear that while they still hope to take as many, and possibly even more, New Jersey students than they have taken in the recent past, they cannot possibly keep up with the birth rate, and New Jersey will have to take over. It is for this reason that the public colleges in New Jersey must expect doubled enrollments in 1965 rather than in 1970, the date fixed for most other States.

Now I would like to suggest to you that this educational dependence is only one form of dependence on other States, and that while it is obvious that we can no longer remain in a state of educational dependence it will soon be realized that other forms of dependence are just as serious. I am thinking principally of what I may call the cultural dependence of New Jersey on her neighbors, and primarily on the cities of New York and Philadelphia. Let's face it—if New Jersey is educationally impoverished and in debt, she is culturally almost bankrupt. I may be ignoring some local activities, but in general it seems true to say that there is no legitimate theater, and even very little popular theater except for the summer re-runs; there is absolutely no opera and no ballet; most of the effort at symphonic music fall far short of professional standards, and there is no effort at publicly supported chamber music. Exhibitions of first quality of painting or sculpture are at a minimum, and even local shows designed to encourage genuine developing talent are few and far between.

One must give credit where credit is due, and I would be the last to underestimate the work of many individuals in the State, both in official and in private capacities, who have worked hard to develop cultural programs. The State library and the State museum, the Newark Public Library, and the Newark Museum, the universities and colleges, all have done what their budgets would permit, and it has been imaginative and good. In many cities private groups have organized concert programs, which have helped to fill the gap, but in most cases the gap reappears only too obviously when the out-of-State orchestra or virtuoso has left town. Still the herculean effort made by some few of our fellow citizens indicates that there is a real felt need for something more.

Many answers are given when one begins to deplore this situation. The first always is—New York and Philadelphia. But this is no real answer. In fact for the bulk of our people it is no answer at all, and for those who have been able to profit from the cultural life of the neighboring metropolises, the opportunities are becoming increasingly difficult as transportation becomes more and more clogged, and costs in general mount. It is obvious that it is much easier to sit at home and watch TV or tinker with a hi-fi set.

Another answer is that there is no demand for culture in New Jersey. This is like saying that there is no overwhelming demand for school among our 8-year-olds. I would point out that there is an increasing demand for the approximations to culture—TV, hi-fi and stereo, radio and the movies, and paperbacks. It is on this kind of base that a true cultural structure can be built.

But just consider what an appalling thing it is to believe that there is no demand for culture. Mr. Whitehead defined culture as "activity of thought and receptiveness to beauty and humane feeling." A society without culture is a society without either a mind or a soul, a society which tends to man's physical desires only while his wits become dull and his feelings are desensitized. In such a society there is no joy in living and no tragedy in dying. We flee from the cities where there is no point to life, only to discover that in the suburban developments life is just as weary, flat, stale, and unprofitable. If we really believe that there is no demand for culture in our society, then let us at least give up all this nonsense about slum clearance and urban renewal, for all that can mean without culture is that we are building more spacious but equally tasteless jails.

Hobbes once described the life of man without culture as "Solitary, poor, nasty, brutish, and short." It will no longer be solitary, except in a spiritual, sense, nor will it be short, for we have learned only too well how to prolong it, except when crime intervenes. But poor, nasty, and brutish it will inevitably be.

The degree of culture which any community achieves can be measured in terms of its commitment to "activity of thought, and receptiveness to beauty and humane feeling." Or—to put it the other way around—the degree of brutishness in a community can be measured in the same terms. What is being measured is the extent to which the community, in its institutions, its investments, and its communal behavior, publicly and expressly fosters and cherishes these cultural values. For one community to defend itself by arguing that its members can find cultural opportunities in another community, is for the first community to brand itself as impoverished and sterile and on its way to becoming a slum.

It is obvious that education and culture are closely intertwined. Where the cultural commitment is low, the educational performance will be low also. Where educational dependence is permitted, cultural dependence will be justified and tolerated. Where activity of thought is held in low regard all the other educational and cultural values will suffer. In fact, a community with low cultural achievements simply cannot know what good education is.

And this is where I come in. As a university president my first and last obligation is to insure the highest quality of educational performance at the university. As president of the State University of New Jersey I must hope that our graduates, having been educated in our cultural traditions as well as in some special branch of knowledge, will be able to carry forward and enrich the culture of our State, our cities, and all our communities. But if there is no demand for culture in the State, then there will be no demand for this kind of education; in fact there will be positive and definite opposition to it. Or if educational dependence is accepted, then we will be told that the students who want that sort of education had better go to Harvard or Oxford, because a State

university is supposed to be doing something entirely different.

I have said that where there is no commitment to culture there can be no understanding of education. If I may refer to Mr. Whitehead again, after having given the definition of culture which I have been using here, he goes on to say: "What we should aim at producing is men who possess both culture and expert knowledge in some specialized direction. Their expert knowledge will give them the ground to stand on, and their culture will lead them as deep as philosophy and as high as art." Of the two aims which Mr. Whitehead here suggests, culture and expert specialized knowledge, the latter is so much the easier to grasp that most people would accept it as the whole of education. I suppose that the commonest conception of a college or university is that it is a training school, designed to prepare recruits for preexisting jobs or professions. Fashions change as to which are the more important jobs for which the bulk of the students should be trained. Not long ago it was business, because America was business. Now it is physics, because of sputnik.

This may be somewhat absurd, but the basic point is still true, that at the core of one's education there should be some specialized body of knowledge or some special skill. This should be developed not in a narrowly practical sense but with its fullest implications for society and for the advancement of knowledge. And it is correct to think of colleges as the places where this kind of specialized learning can be acquired.

But an equally important role of colleges and universities is to preserve the values which civilization has so laboriously achieved over the centuries and to transmit them by way of the students to the future.

These values are enshrined in literature, ancient and modern, in art and music, in historical documents, in the great monuments of philosophy and religion, in the fantastically successful history of science, in law and political science, and in the records of how our forefathers struggled to achieve and to preserve these values.

WE ARE SUCCESSFUL IN KNOW-HOW

Much of education is properly concerned with the question "How?" And I suggest to you that the strongest evidence that our educational institutions have been fabulously successful in that area is that we could almost consider know-how as our national motto. But equally important in education is the question "Why?" And here we are not in the realm of techniques but the realm of values. It is the characteristic of a slave or a robot merely to know how to achieve a given objective. It is the defining characteristic of a free man to be able to discriminate among ends and to choose that which he values most.

Great teachers are not men who have mastered all the rhetorical gimmicks and can put on a good show. They are men who themselves feel so deeply the values they are trying to communicate that they actually communicate by contagion before the student fully grasps the explicit meaning. It is in this way that the values of civilization are transmitted from one generation to another. But the great teacher will not remain or thrive except in a university which he feels has the same deep commitment to culture that makes life meaningful for him. And at the next remove, the university itself cannot preserve this deep commitment unless it finds itself in a society which has some commitment to these cultural values. Without that cultural support the same activities will take place on the campus, many of the same people will teach many of the same courses, and outwardly all will appear serene. But the contagion will be gone, and the culture will be shallow and superficial.

NEW JERSEY A DEBTOR STATE IN HIGHER EDUCATION

I have thus far tried to point out a few things about our State. In the first place I have reminded you of what the State department of education has amply demonstrated, namely, that New Jersey is a debtor State so far as higher education is concerned, but that the time is coming when she will have to pay her debts. I have indicated that there is a shockingly low public commitment to culture and the lasting values of civilization in the State, and that New Jersey has acquiesced in a condition not merely of educational dependence but also of cultural dependence upon her neighbors. I have further tried to point out that cultural dependence is really a contradiction in terms, and that where there is no commitment to culture in a community, there soon appears to be no reason for continuing to live in that community—a fact which the planners of urban redevelopment do not seem as yet to have taken sufficiently into account (Newark seems to be an exception to this). And as president of your State university I have tried to show you that educational values and cultural values are interdependent, and that where there is no community or State commitment to the public support of cultural values, the scheme of educational values and educational performance will necessarily run the risk of becoming shallow, superficial, and false. I could also argue, of course, the converse of this proposition and demonstrate that where the educational program is shallow and superficial there will be no enduring and self-perpetuating understanding of culture and the values which our civilization has struggled for so long to achieve.

I believe that this situation is very serious indeed. We have heard critics of our State claim that she is only the bedroom to some other States. One has said that New Jersey as a State is simply not a viable entity. And up and down the State we find both the State government and local governments wrestling with the fact that so many of our cities are sinking into slums and that drastic and frightfully expensive action is needed. And we hear that "there is no demand for culture in New Jersey."

NEW JERSEY NEEDS SOME SELF-RESPECT

New Jersey intrinsically has so much to offer her citizens that it is a tragedy that this negative attitude is predominant. What we so desperately need in the State, and especially in the urban areas, is a sense of self-respect amounting to pride. But one cannot take pride in a drab and meaningless jungle of buildings. It is perhaps ironic that what we can legitimately take pride in is our splendid new superhighways, which take one from one end of the State to the other, or in one door and out the other, as rapidly and smoothly as possible. The corridor State is another of our nicknames.

The trouble is that one cannot take pride in oneself and at the same time admit that it is an integral part of one's program to sponge on one's neighbors. The permanent debtor is not a proud figure nor can he muster up much self-respect. His situation becomes desperate when his creditors begin to turn their backs on him.

I believe that we have reached the point in New Jersey where it is becoming increasingly clear that something must be done. The problem is: what to do and how to do it. Many people in many parts of the State are tackling parts of the problem. The economic and physical aspects of community renewal are under close study in many areas, and the acute nature of the problem of higher education has won widespread recognition—enough I hope to insure passage of the bond issue. I do not believe, however, that we will come anywhere near the solution of our problem until we recognize that a healthy community is one where not only are the physical and economic wants of the citizens provided for, but their spiritual needs also. We must become culturally self-sustaining.

URGES CULTURE COMMISSION

As a first step, marking the public and official recognition of this crisis, I would like to see the establishment by the appropriate authority of a group to study the situation and make recommendations—call it temporary educational and cultural commission.

I would like to see such a commission undertake a study of at least the following areas:

1. The population problem confronting the existing colleges and universities for the next 15 years at least.

2. The adequacy of the existing physical facilities as well as those which the bond issue will provide.

3. The adequacy of existing curricula to the needs of the people of New Jersey.

4. The general financial health of our educational institutions as compared with those in other States.

5. The apportionment of funds for the natural sciences as compared with the social sciences, the arts, and letters, for both instruction and research, and including adult education.

6. The availability of cultural facilities throughout the State—theaters, concert halls, galleries, museums, libraries, etc.

7. The extent to which cultural facilities have been considered in connection with the various urban renewal projects underway or proposed throughout the State.

8. Methods of financing cultural projects.

9. The possibility of developing community cultural centers, perhaps in conjunction with a growing program of 2-year community colleges.

10. The general interrelationship of cultural and educational programs.

I could easily add to this list, but it would be unnecessary, because any commission which got this far into the problem would discover the other areas for itself. What is more, I believe that if the commission really sought out what was being done in other States and communities in this country, it would soon grow very optimistic about what could happen in New Jersey. In any case, I am sure that the report of the commission would be an eye opener for us all.

To suggest the appointment of such an ad hoc commission is not to imply that the existing institutions do not know what they are doing. We at the university would, I am quite sure, welcome such a study, if only because the objective evaluation of our work by an impartial group of citizens could only be helpful to us.

May I be so bold as to ask you, a group which has already done so much to revitalize the State of New Jersey, to give this suggestion some thought and to discuss it with your neighbors. I am really disturbed by the staleness of the air around us. We seem to have so few fresh ideas, so little cultural inspiration, to sharpen our minds and brighten up our spirits. The era of educational and cultural dependence is working itself out to its own drab and flat conclusion, and the word renewal is on everyone's lips. What is desperately important is that any real renewal shall be a renewal, and not just a superficial rearrangement of the old tired elements. I believe that New Jersey is ripe for such a renaissance, and only needs guidance of the sort that a responsible commission could

give it. With this guidance I am tremendously optimistic that we can do the job.

ASSEMBLY No. 535

An Act establishing a State Art Commission in the State Department of Education and prescribing its powers and duties

Be it enacted by the Senate and General Assembly of the State of New Jersey:

1. The State Art Commission is hereby created in the State Department of Education, which shall consist of fifteen citizens of New Jersey, to be appointed by the Governor, by and with the advice and consent of the Senate, and the following shall serve as members ex officio:

The Commissioner of Education, who shall be chairman;

The Commissioner of Conservation and Economic Development;

The president of the New Jersey State University;

The State librarian; and

The director of the division of the State Museum in the State Department of Education.

2. The term of each member of the commission, other than the ex officio members, shall be 8 years, except that the terms of one-third of the members first appointed shall be 1 year, and that of one-third shall be 2 years. All vacancies on the commission shall be filled by the Governor, with the advice and consent of the Senate.

3. The members of the commission shall serve without compensation, but shall be paid all actual traveling and other necessary expenses incurred in the performance of their duties.

4. It shall be the duty of the commission to undertake studies of, and make recommendations relating to, the adoption of appropriate methods by the State and the counties and the municipalities of the State for encouraging creative activity in the performance and practice of the arts and the stimulation of greater participation in, and appreciation of, the arts by the citizens of this State and the use of the arts in the best interests of the State and Nation. In the selection of subjects to be studied and in the formulation of recommendations, the commission may obtain the advice of any interested and qualified persons and organizations.

5. The commission shall make recommendations in writing to the Governor with respect to such studies.

6. The commission shall have power to adopt its own rules of procedure and to prescribe regulations for the submission to it of all matters within its jurisdiction. The commission shall appoint an executive secretary.

7. The State Department of Education shall furnish such offices for the commission as shall be required, and shall also furnish to it such clerical and other assistants as it may require and fix the compensation of the persons so employed.

8. The expenses of the commission and the compensation of employees shall be paid out of appropriations to be made to the State Department of Education.

9. This Act shall take effect immediately.

What Would Khrushchev Do if He Had 60 Billion Loaves of Bread To Spare?

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. NEUBERGER. Mr. President, Congress has just completed action on the extension of Public Law 480, the program under which our Government makes available to underdeveloped nations the products of America's agricultural abundance.

During Senate debate on this proposal, an effort was made, under the leadership of the distinguished Senator from Minnesota [Mr. HUMPHREY], to expand and broaden this beneficial program. I was pleased to join in supporting this effort. Channeling of our surplus commodities to peoples of the world not so fortunate as to possess the ability to produce sufficient food to care for their own needs is a great humanitarian goal.

In a September issue of Reporter magazine there appeared an excellent article on this subject entitled "Too Much Food in a Starving World" written by Karl E. Meyer.

Mr. Meyer makes a cogent argument for a food-for-peace plan which will transcend the concept of surplus disposal. He states, with regard to such a program:

The difficulties and limitations of the program are obvious, and they have been stressed enough by those who regard our unwanted food as a mixed blessing. What hasn't been given equal stress is the enormous potential for human good that lies locked in our storage bins. Isn't it worth wondering what Mr. Khrushchev might do if he had 60 billion loaves to give away?

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD for the information of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOO MUCH FOOD IN A STARVING WORLD—WHAT WOULD KHRUSHCHEV DO IF HE HAD 60 BILLION LOAVES OF BREAD TO SPARE?

(By Karl E. Meyer)

"I would like to see him go into our great farmland and see our farmers, each one operating on his own, not regimented." (President Eisenhower.)

What may impress Mr. Khrushchev most during his brief visit to Iowa is the insistence of the American farmer on producing more food than his Government wants him to—a form of hardy independence that any Soviet planner might envy. What may amaze our visitor even more is that the administration regards vast food surpluses as a kind of calamity, a painful embarrassment to leaders intent on budgetary tidiness.

Many American taxpayers are also amazed. At last count, the Government's investment in our surplus supermarket is $8.8 billion—indeed, the cost to the Treasury for just keeping the unwanted surplus has soared beyond $1 billion in the past year, and will probably reach $1.4 billion by 1961.

The food molders; the world is hungry; the question is self-evident: Why can't the United States turn its burden into a bounty and help banish want from the world? And even leaving moral considerations aside, the problem is especially pressing because of the changing nature of the Soviet challenge, as epitomized by Mr. Khrushchev's visit to this country.

This is the background for a debate linking food surplus with foreign policy that has been engaging the Capital, if only on a sporadic and desultory basis. The chances are excellent that the tempo of debate will quicken, for three reasons. First, Senator HUBERT H. HUMPHREY—who is volubly tenacious, whatever his other merits or failings—has seized on the issue for proposing an ambitious food for peace plan aimed at turning our abundance into a more useful national asset.

Secondly, the administration, in part because of the Humphrey offensive and partly because of proselytizing from within, has moved a quarter step away from its previous policy of more or less hoping that a providential swarm of locusts would solve the present surplus problem. Mr. Eisenhower, too, has taken up the Food for Peace slogan, and even Secretary of Agriculture Benson has adopted a more stoic view of the abundance that is the despair of his department. Mr. HUMPHREY could hardly improve on one of Mr. Benson's recent statements: "We look upon our agricultural abundance, with all the problems it involves, not as a burden but as a blessing. This blessing, if wisely used, can and will make a substantial contribution to the solution of the great problems of our time arising from hunger, insecurity, and fear of war.

The third reason, however, is perhaps the most important. It is simply that for better or worse our food surpluses seem to have become a permanent problem for the American economy, and unless we are to suffocate in a blanket of plenty, some orderly solution must be found. Consider one statistic. Experts calculate that our current wheat production alone—Mr. K will probably see part of it being harvested—will be about 1.1 billion bushels. Of this, around 600 million bushels will be sufficient for domestic needs, leaving an excess of 500 million bushels, or more than enough to choke up the port facilities of most underdeveloped nations if it were merely given away. In comparison, this year's food grain production in India is estimated at about 273 million bushels. And that for India (with a population of 400 million) is a record crop.

LOAVES AND FISHES

The extraordinary productivity of the American farmer is the indisputable first cause of our embarrassment of food riches. In most of the countries of Asia, including vast stretches of Mr. Khrushchev's homeland, the problem is still to goad the farm population to adopt modern methods for better production, and to soften an obdurate conservatism. The problem in the United States is of quite another order. With admirable efficiency, the American farmer quickly acquires the newest skills, uses the best chemical fertilizers, plants the latest hybrid seeds—and increases the incidence of ulcers in Mr. Benson's department.

A few figures illustrate the phenomenon. In 1820, the average American farmworker produced enough to supply the needs of 4.1 persons; by 1940, the figure was 10.8 persons, and by 1956, it jumped to 20.8 people. The productivity of the American farmer has thus grown more since 1940 than it did in the previous 120 years.

Two reasons help explain why. Coupled with the wartime exhortations to increase production has been a technological revolution in agriculture which has consequences that are awesome and still only dimly understood. New chemical fertilizers and hybrid seeds have achieved marvelously fecund results. According to data gathered by Cargill, Inc., a major grain-trading firm, corn acreage has declined more than 25 percent since 1930, but the production of corn has climbed from 2 billion bushels to nearly 3.8 billion, or from 20 to 52 bushels an acre.

It becomes apparent that the surplus problem would not necessarily be solved if all the marginal and less prosperous farmers were coaxed to the cities. The less successful farmers amount to 56 percent of our farm population, but account for only 7.1 percent of total farm sales. In other words, if our farm population were cut in half over night, the Government's storage bins would probably still be bursting.

The situation is rich in ironies. Ezra Taft Benson, perhaps the most frugal minded member of a penny-pinching Cabinet, has

spent more in 6 years than the combined outlays of all previous Secretaries since the post was created 97 years ago. Mr. Benson's critics take cruel delight in the figures: he has spent about $31 billion, as against a total of $27.6 billion for all his predecessors.

No small part of this money has been used for the wholly unproductive purpose of just storing the unwanted food. Last year, the Department of Agriculture paid 60 private firms more than half a million dollars each in storage fees. The total payments to these companies exceeded $119 million, with the largest check going to the C-G-F Grain Co. of Fort Worth, Tex., a tidy sum of $14,787,434.06. In addition to the private companies, a bureaucracy of 6,300 Government employees is needed to supervise the storage of surplus. Aside from some 237,000 storage bins scattered through 23 States, 225 Liberty ships lie at anchor along both coasts with about 43 million bushels of wheat in their holds.

The prosaic tables of the Commodity Credit Corporation—keepers of the surplus supermarket—fail to communicate a vivid idea of our overflowing larder. Perhaps an interesting calculation made not long ago by the Magazine of Wall Street puts it in the simplest terms. Before this year's crops, each American family had an investment interest of $131.89 in surplus commodities and owned 14 bushels of wheat, 21 bushels of corn, 300 pounds of grain sorghum, a fifth of a pound of tobacco, a peck of soybeans, and a bushel of barley. According to a cereal-chemistry analyst in the Department of Agriculture, a bushel of wheat can yield more than 60 loaves of bread. With our present wheat surplus at well over a billion bushels, we could therefore produce upwards of 60 billion loaves—or 25 loaves for every person on the planet. And with his year's anticipated surplus alone, another 13 loaves could be piled on for good measure.

A FOUNDATION HAS BEEN LAID

There is, however, an enormously complex process involved in taking a bushel of wheat from a government granary and turning it into bread to be used somewhere else. Problems of world trade, transportation facilities, currency, contracts, and political considerations all intrude. Nonetheless, since 1954 this country has learned to master some of the difficulties involved and has already used vast quantities of unwanted food to good purpose.

This has been done under Public Law 480, a program relatively unsung because its title is deadeningly impersonal and its proclaimed object—"surplus disposal"—inspires neither affection nor respect. Originally it was conceived as a stopgap instrument for disposal of a temporary surplus. But the surplus seems to have become a permanent feature of American agriculture, and so has the law. Each year, it has been renewed, and each renewal has seen an enlargement of its scope.

The breadth of the law is expressed in its three titles. Title I authorizes the sale of up to $1.5 billion a year in surplus commodities for local (or "soft") currencies, and specifies various ways in which the money paid for our food can be used. The second title permits the donation of food to meet emergency calls, at the rate of $250 million a year. Under title III, the Government is authorized to barter surpluses for strategic materials, to use foodstuffs in the United States for school-lunch programs and for feeding the needy, and to give food to nonprofit voluntary agencies for overseas relief programs.

To date, the value of programs undertaken through Public Law 480 exceeds $7.6 billion, and last year alone up to 30 percent of our total agricultural exports moved under contracts made possible by the law. The diverse projects realized through the law make an impressive and instructive list. Just a partial catalog would include:

Item: Some $814 million received from the sale of food for soft currency has been committed to such projects as extending the railroads of Brazil, building a hydroelectric plant in Iceland, aiding the irrigation of Israel, expanding a cement plant in Thailand, erecting bridges in Paraguay, financing low-cost workers' housing in Greece, clearing the way for farm-to-market roads in Colombia, setting up an agricultural credit system in Ecuador, and fostering an industrial complex in Austria which includes iron, steel, textiles, paper, and chemicals.

Item: In addition to providing food for more than 14 million American schoolchildren, 4.5 million needy families, and 1.4 million persons in charitable homes, surplus stocks have been distributed to more than 100 million people overseas through 22 voluntary relief organizations and such official agencies as UNICEF.

Item: Under the 270 market-development programs made possible by the law, about 18 million people have seen 31 trade exhibits in 15 countries. Other funds have gone to distributing cheddar cheese in Brazil, ice cream bars in Yugoslavia, and nutritional advice on using the soybean in Japan—and inevitably, money has also been used to celebrate the pulchritude of various "queens" and "maids" who lend their talents to furthering commodity sales.

Item: Food sales have paid the expenses of 2,687 individuals in educational exchange programs. Money has been allotted in Austria, Colombia, and Turkey for textbook translations. Workshops and chairs in American studies are being established in foreign schools under a program just underway.

Item: Unwanted surpluses valued at nearly $1 billion have been bartered abroad for strategic materials—ranging from antimony to zinc, from cryolite to muscovite splittings—that are needed in this country.

Item: About $490 million worth of food has been granted since 1954 to help alleviate distress in 36 countries. In Tunisia, an emergency work program employing 40,000 persons has been made possible through a grant of $3.3 million of surplus wheat—with the food providing part of the wages.

What makes the record of achievement particularly remarkable is that it has taken place under—or rather, in spite of—an administrative procedure that might baffle the most determined applicant. "It is a remarkable and shameful fact," Senator HUMPHREY has pointed out, "that no one is really in charge of the store that sells or otherwise distributes billions of dollars worth of surplus agricultural commodities. There is literally no one in high authority in the entire Government who devotes full time to the administration of Public Law 480."

All told, nine major agencies are involved in administering the law. Sitting atop this bureaucratic jungle-gym are an Interagency Committee on Agricultural Surplus Disposal and an Interagency Staff Committee on Surplus Disposal. The program thus appears faceless as well as nameless; two coordinating committees rouse neither enthusiasm nor esteem. In practice, nearly everybody in the nine agencies has a veto and no one below the President can remedy cases of administrative arteriosclerosis. Negotiations for agreements can be long, frustrating, and at times acrimonious. The efficiency of the American farmer finds scant imitation in the program designed to distribute his products abroad.

A SLOGAN IS BORN

Yet there is general agreement in Washington that Public Law 480—warts and all—has been an instrument for good, both in human terms and in helping development on a modest scale overseas. No one wants to scuttle the program, least of all with vaster surpluses in prospect next year. Instead, the debate in the Capital centers on what form the program should take.

Senator HUMPHREY and his supporters believe Public Law 480 should be renamed, put on a permanent basis, given more purposeful direction, and enlarged in scope. The White House, on the other hand, apparently wants to renew the program for 1 year pretty much as it is—with a little brighter cellophane packaging, tied up in a ribbon reading "Food for Peace." The major new ingredient in the administration proposal is a plan for encouraging the creation of national food reserves abroad, so that countries now vulnerable to famines could have a food bank to draw on in lean years to come. But the law, in its essentials, would remain the same.

Underlying the administration's public position is an anguishing dialectical dilemma that a connoisseur like like Mr. Khrushchev might appreciate. On the one hand, it is a fixed article of faith in Secretary Benson's Department that surpluses are a transient phenomenon, the legacy of foolish past policies which could be removed if the Democrats in Congress passed the Benson farm program undiluted. But on the other hand, Congress remains unrepentant, the administration's remedies that have been applied simply haven't worked, and the surplus stores continue to swell. Thus, the White House has become an unwilling recruit in the Food for Peace ranks, and has swallowed its dogmas to the extent of conceding that the surpluses are not always necessarily a burden but can sometimes be a blessing.

The exact story of how Mr. Eisenhower placed his seal of approval on the slogan "Food for Peace" forms one of those minor semicomic episodes which enliven life along the Potomac. One knowledgeable Washingtonian did a little detective work and put together this chronology of events:

In his farm message to Congress on January 29, the President first promised to explore the possibilities of food for peace. The words were apparently stuck in at the last minute by a Presidential speechwriter. Other members of the White House staff, not knowing the source of the language, placed frantic calls to the Department of Agriculture asking what was up. Agriculture, meanwhile, was making the same urgent queries at the White House. C. Douglas Dillon, then Under Secretary of State for Economic Affairs, ordered his staff to find out how the phrase crept in. Ten days later the answer was found. It seems that a lower echelon official in Agriculture had offered the suggestion over the phone to a White House aid, who in turn had persuaded the speechwriter to insert the phrase. Five days later, the Department of Agriculture took to a White House meeting four papers suggesting what the President might have meant. The result was that on April 10 Mr. Benson announced that he was calling a food for peace conference of wheat-exporting countries. Thus, in a familiar Washington cycle, a seed planted by a ghostwriter sprouted into a conference which then appointed a committee which presumably will produce a report—a wan bloom for a ghostwriter to press in his memory book.

In a moment of becoming candor, one high official in the Department of Agriculture explained what was behind the game of appearances. "Put that pencil down and listen a minute," he said. "There are certain common conceptions which we all believe in: Christianity, motherhood, the family, and food. Those are things that folks everywhere understand. When you have food, you don't damn it. You just don't damn food."

THE HUMPHREY PLAN

On this point, Senator HUMPHREY and the administration are wholly in accord. In his food for peace plan, prepared after extensive hearings and cosponsored by 15 other Democratic Senators, the purpose is proclaimed in a might paean which serves as the preamble to his bill:

"Because of the increased productivity made possible by science and technology, there is now, for the first time in history, no reason in physical scarcity for the continued existence of hunger anywhere on this earth. * * * The Congress * * * declares it to be the policy of the United States to move as rapidly as possible in cooperation with other friendly nations toward putting its abundance of food and fiber more effectively in the service of human need."

Basically, the Humphrey plan would switch the emphasis from surplus disposal to an affirmative approach, commit the country to a long-term program at a slightly stepped-up rate, and provide for administrative invigoration under a Peace Food Administrator. The title of that office, incidentally, is a typical Humphrey touch; the Senator has turned the name of the old War Food Administrator of wartime days on its head. As the Minnesotan conceives the job, the Peace Food Administrator would preside over a 5-year program permitting the sale of surpluses at the rate of $2 billion a year, compared with the present limit of $1.5 billion. The Administrator would report only to the President and would be given authority to chop through the bureaucratic underbrush to insure that the food ended up on somebody's plate.

Senator HUMPHREY's provisions for the international food for peace bill would enable the Administrator to strike a variety of bargains. As in the White House plan, he could provide grants of food to fill up national food reserves. But he could also agree to 10-year programs of long-term supply contracts for our unwanted produce. In addition, the Humphrey legislation would create whole categories of new uses for the soft currency paid for our food.

Two aspects of the Humphrey plan have drawn administration fire. First, the Department of Agriculture stoutly dissents from the view that there is any need for administrative reform. According to Assistant Secretary Clarence L. Miller, the present program "is now effectively coordinated." Secondly, embodying the long-term principle in the structure of the law runs squarely against the official doctrines of Mr. Benson's Department. Thus Mr. Miller warned Congress that the 10-year feature of the Humphrey plan "will tend to create the unfortunate impression that surpluses will be with us for at least that forward period."

On both counts, however, Mr. HUMPHREY can quote from a series of studies made of Public Law 480, including several by committees appointed by the administration itself. The latest is the report of the Draper committee, presented to the White House on July 13, which concluded: "While the present large surpluses may, for a variety of reasons, be reduced or eliminated in the years ahead, this does not seem likely in the near future. Since surpluses can be expected for some time, their value for development purposes should be realized to the fullest extent possible."

In its overall survey of our economic assistance program, this Presidential group further believed "that more effective use can be made of our surplus * * * by changes in administrative arrangements to coordinate more effectively the use of these commodities and local currency sales proceeds with other economic assistance programs." This should include, the committee suggested, the assigning to a single agency more flexible authority for programing the local currencies we acquire. Mr. HUMPHREY might well ask if the administration reads its own reports, which, like the surplus, seem to grow every year.

The issues at stake in the debate over food for peace are essentially the same as those in the general debate on foreign aid. Like other economic-aid programs, Public Law 480 was conceived as a short-term, emergency measure. But like the others, it has become permanent in all but name. Senator HUMPHREY is asking that the bans of permanence be read, and the common-law reality be legitimized by putting the program on an orderly institutional basis.

Does it make sense to continue our aid programs on a year-to-year legislative basis, as if Mr. Khrushchev were apt to take one look at Main Street in Des Moines and suddenly call off the cold war? In the case of food, as in other foreign-aid programs, a long-term program makes a good deal of sense. For one thing, it would encourage the kind of continuity and purposeful direction so notably absent from our sprawling foreign-aid apparatus. For another, it would enable consuming countries to count on an assured supply of American foodstuffs in their long-term development plans. This could provide an incentive for the expansion of port facilities and transportation in countries where limited facilities now limit purchases of our unwanted food.

Moreover, the food for peace program must be seen as a supplement to other aid programs—not a complete aid program in itself. An Embassy official from one food-buying country has this to say: "More food? We'd rather have dollar loans, so that we could buy more industrial equipment. Anway, are the soft-currency loans we get really an addition to our economy? We have all the local currency we need. But won't there be a tendency to consider food sales as a form of aid, even as a substitute for aid, in Congress?" But this tendency certainly constitutes a less formidable danger than it once did, if only because so many traditional isolationists from the farm belt have come to recognize their own vital self-interest in any program that can be counted on to absorb significant amounts of this country's farm surpluses.

Mr. HUMPHREY has rallied a good deal of support—both in Washington and elsewhere—behind his plea for a long-term approach. There is another side of the problem, however, on which there is far less agreement. What will the effect of a stepped-up program of food sales be on existing market patterns of the world? It is on this point that the State Department has centered its opposition to the Humphrey plan. Other food-producing countries, some of which even have surpluses to worry about, are understandably nervous at the prospect of low-cost bargains from our supermarket wiping out their hard-currency markets—solving, as they see it, our surplus problem at their expense.

Mr. HUMPHREY replies by pointing out that Public Law 480 sales have simply not, as some feared, amounted to a dumping program. So far, the surpluses distributed have become additional food supplies, and have not markedly displaced purchases from other food-producing countries.

Still, an expansion of our food program could pose grave dangers for a world market already in precarious balance. There is no clearinghouse of non-Communist nations where the needs of food-producing and food-consuming countries can be integrated in an orderly way; indeed, Secretary Benson's impromptu five-nation Food for Peace Conference held in Washington last May was something of a surprising departure for an administration which has resisted a multination approach to world food problems. As with other foreign-aid measures, many feel that the need is to internationalize as well as institutionalize existing programs.

The difficulties and limitations of the program are obvious, and they have been stressed enough by those who regard our unwanted food as a mixed blessing. What hasn't been given equal stress is the enormous potential for human good that lies locked in our storage bins. Isn't it worth wondering what Mr. Khrushchev might do if he had 60 billion loaves to give away?

Rights and Responsibilities

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks I include the following article by Mr. Gus Tyler, director, Training Institute, International Ladies' Garment Workers Union, AFL–CIO. It appeared in the April 1959 issue of the AFL–CIO American Federationist:

RIGHTS AND RESPONSIBILITIES

(By Gus Tyler, director, Training Institute, International Ladies' Garment Workers Union)

The protection and progress of the worker on the job must remain the broad continuing base of effective trade unionism. But if this bread-and-butter duty is not to deteriorate into business unionism or worse, if it is not to result in an uninspired, even corrupt, leadership with inert, even fictional, membership, then the trade union needs a greater goal than the contract, a broader religion than the dollar sign.

It must be concerned with industry as a whole, with the economy, with the nation, with democracy. The social view has a double value. It makes the union an integrated and contributory force in the community, and it raises the spiritual level of both the leadership and the rank and file.

The American economy of the second half of the 20th century is much too much of a legislated economy for the unions to believe that they can defend the economic status of their workers solely through contract.

SPECIAL PURPOSE

In its political work the trade union must place primary emphasis on social purpose rather than personal power, on program rather than patronage.

This is not only morally desirable; it is also the most realistic way to proceed, because the only way a trade union leadership can deliver the votes of its membership is by convincing its membership that a program of a candidate is desirable.

The key to those votes is understanding. The workers must know why they should vote, for what they should vote and for whom they should vote. Concentration on the political education of the worker would not only keep labor politics on a high plane but also revolutionize American politics. by teaching millions of voters that politics is a struggle of ideas and ideals and not just a contest among labels, faces, names, and prejudices.

The modern union needs professional leadership in the same way that modern government needs professional guidance. Finding the proper relationship between professional administration and democratic control is a necessary part of a new philosophy which seeks unions conducted along efficient, ethical, creative lines within the framework of a vigorous democracy.

The structural devices for democratic direction and control must vary from trade to trade, union to union, but the form is less important than the spirit—namely, professional performance under democratic controls.

UNION SECURITY

From the point of view of both servicing the member and maintaining civilized industrial relations, the union security clauses with their predictable flow of income through dues are highly desirable.

However, because of the large sums of money involved, because they are to be held and used in trust for the membership and because dues payments are obligatory, there must be public accountability of union finances.

Preferably, this should be complete and voluntary. Failing that, it should be compulsory under legislation that allows freedom of action for the union while protecting the membership against theft, misappropriation or malfeasance.

Unions require autonomy—in structure, in policy.

Autonomy is necessary because of the wide variety of circumstances in the crafts, trades and industries to which different unions must make adjustment. It is also required because of local customs, ethnic attitudes, traditions.

The labor movement in recent years has felt the need to modify the old concept of autonomy. This feeling arose from the fear that the good name of labor would be blackened by the behavior of some unions and unionists.

RESPONSIBILITY

Although labor as a whole had no legal responsibility for every part thereof and lacked the constitutional means of correcting the behavior of any part thereof, it nevertheless recognized that it had a collective responsibility for each of its constituents before the public. This realization created a concept of modified autonomy: If you want to carry the family name, you must not disgrace the family. A minimum standard of conduct is established and the ethical codes are enforced with warnings, requests for reform and ultimate expulsion.

As quasi-public institutions, deeply and immediately affecting the public interest, unions cannot hope to escape and should positively seek some degree of public regulation. They should demand a body of public law that would make union officers accountable not only to the membership but to the public for proper handling of finances and conformity with a union's democratic constitution.

REGULATION

The alternative to proper legislative regulation of unions is no legislation. This is acceptable and feasible if there is no misuse of funds or power by trade union leadership. But so long as there is any sizable or well-publicized abuse—a probability made more likely in the absence of public regulation—the national temper will ultimately turn against unionism to demand not just that the abuses be eradicated but that the unions themselves be destroyed.

Can these six strands of proposed policy be woven into a pattern of balanced rights and responsibilities?

A union has the right to protect, advance and champion its dues-paying members against all and any. But it has the responsibility to understand how its activities affect the total society of which it and its members are a part.

A union has the right to security, a union shop and a regular income. But it has the responsibility to guarantee internal democracy and to provide a proper accounting of its funds.

CODE OF ETHICS

A union has the right to autonomous action. But it has the responsibility to join with its fellow unionists to establish and enforce a collective code of ethical, democratic and socially minded behavior.

A union has the right to develop methods and personnel that will provide a professional level of operation. But it has the responsibility to place this professional machinery under democratic controls.

A union has the right to political action. But it has the responsibility to turn its political power to high social purpose.

A union has the right to free action within a democracy and to establish legal status. But it has the responsibility to work within that democracy to define and regulate its legal status so as to give further strength and moral purpose to democratic society.

The Red Willow Dam

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks, I would like to discuss briefly Red Willow Dam and Reservoir near McCook, Nebr. First authorized 15 years ago, the project was reauthorized last year and first construction funds were appropriated this year.

When Red Willow dam is finally built, it will be a tribute to the combined and sustained efforts of countless people in the McCook area in our State and here in Washington. There were untold numbers of men and women involved in this long struggle. A number of their names come to mind readily, but there were too many who worked too long and too hard to eulogize them individually now.

The fight for Red Willow was long and the obstacles numerous, but we have finally won that fight and construction seems to be only months away instead of the far-distant dream which it has been over the years.

For my part, I have fought vigorously for this project. Cooperating with our two Senators from our State of Nebraska, we got the reauthorization legislation enacted last year. In this we received strong support from the Secretary of the Interior and the President of the United States. All agreed and understood that Red Willow is an integral and vital part of the Frenchman-Cambridge project in Nebraska.

It was with this understanding that we once again appealed to the Congress this year for funds for construction of the project. This appeal met with sympathetic understanding from both the House and Senate Public Works Appropriations Subcommittee. For this, we owe much gratitude to the effective backing we received from the Honorable BEN JENSEN, of Iowa, the ranking minority Member of the House Committee. Without his support we could not have won our fight.

This year's victory, however, does not end the story. Only when Red Willow stands a complete project; when the waters of Red Willow Creek are stored for the use of mankind rather than permitted to run riot to destroy men and their works, only then will the story be fully told.

When it is told, a myriad of names of many fine men and women will stand out in bold letters for the great service they have rendered their area, their State, and, in fact, their Nation.

I am proud to have been of some service in getting this story written.

The Late Honorable Thomas H. Burke

SPEECH
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. METCALF. Mr. Speaker, it is always difficult to appropriately mark the passing of a friend. This is particularly true of Tom Burke, who spent his life fighting effectively for liberal and humanitarian programs.

When I first met Tom, he was a legislative representative of the CIO. As a member of the Committee on Education and Labor, I worked with him for years. I admired and respected his ability, diligence and devotion.

A former member of that committee, Tom was chairman of the Subcommittee on Federally Impacted School Areas in the 81st Congress. His was a leading role in the enactment of one of the programs most important to education in this country, Public Laws 815 and 874, under which Federal aid goes directly to local school districts for construction, maintenance and operation—including textbooks and teachers' salaries—in areas of Federal impact, such as military bases or Indian reservations.

In the 8 years that these laws have been on the statute books, the Federal Government has spent more than $901 million on 4,506 projects to build classrooms to house more than 1.3 million children. More than 768 million Federal dollars have been appropriated for operation and maintenance of schools in 3,546 districts with a total enrollment of 8.6 million children.

Although he will be remembered longest for his work on behalf of the Nation's schoolchildren, Tom Burke was also particularly active on laws relating to accident prevention, industrial safety and equal pay for equal work for women.

Tom leaves his widow, two sons, three daughters—and a grateful Nation.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PERIODICAL READING ROOM

Congressional Record

United States of America — PROCEEDINGS AND DEBATES OF THE 86th CONGRESS, FIRST SESSION

Vol. 105 — WASHINGTON, WEDNESDAY, SEPTEMBER 30, 1959 — No. 167

Appendix

NOTICE

The last issue of the daily Congressional Record for the first session of the Eighty-sixth Congress will be published not later than Monday, October 5, 1959. It is requested that copy and proofs of speeches withheld for revision, or extensions of remarks as authorized by either House, be submitted to the Government Printing Office or to the Congressional Record Clerk, Statuary Hall, Capitol, before that date.

By order of the Joint Committee on Printing.

CARL HAYDEN, Chairman.

Endorsements of Work of Senate's International Health Study

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on the work of a Senate subcommittee of the Committee on Government Operations in its international health study.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

ENDORSEMENTS OF WORK OF SENATE'S INTERNATIONAL HEALTH STUDY

I appreciate the confidence which the Senate kindly demonstrated in work in which I am privileged to serve as chairman when it approved on September 9, Senate Resolution 176. This resolution provided for an additional $10,000 for a subcommittee of the Committee on Government Operations for the conduct of its international health study.

This study was originally authorized under Senate Resolution 347, 85th Congress. It was extended under Senate Resolution 42 of the 86th Congress. Now, this modest additional sum will be provided to enable us to carry on our work.

It is a work which, has met with general approval throughout our Nation.

Virtually since the establishment of the health study in August 1958, an unending volume of congratulatory messages have poured in to the subcommittee. Hundreds of these commendations have covered not only approval of the study in principle, but approval of its work in practice.

These kind commendations have come from eminent doctors, researchers, deans of medical schools, editors of medical publications, biologists, chemists, and others.

I have now compiled some of these commendations and wish to share them with my colleagues.

OUR APPRECIATION OF TRIBUTES FROM CONGRESS

The quotations which follow refer to sentiments from the American public in general and from the medical profession specifically.

An additional entire section could have been prepared in terms of the kind reception which has been given to our study by Members of the Senate and House of Representatives.

In particular, we have welcomed the reactions which have come from the two most distinguished experts in Congress in this field. I refer to the senior Senator from Alabama [Mr. HILL], dean of the Senate's work in this area, and the able chairman of the House Appropriations Subcommittee for the Department of Health, Education, and Welfare, the Honorable JOHN FOGARTY.

I could cite as well messages from other Members of the Senate. No Member of Congress has given us more encouragement than our able colleague from Oregon [Mr. NEUBERGER], who, down through the years has devoted himself so ably to the cause of advancing medical research.

FIVE PUBLICATIONS DUE IN NEXT MONTH

I should like to make a few additional points with regard to this study:

Thus far we have issued five committee publications. By this time, next month, I believe that we may have released an additional five publications; and before the end of this year perhaps still another five publications.

These various booklets cover a vast array of topics in international medical research and medical assistance. Often, they bring together data for the first time ever presented by a congressional committee.

The reception to these publications, in particular, has been unanimously favorable. Quotations from some of those comments will be found in the paragraphs which follow:

Very shortly, we are sending to the Government Printing Office the sixth print in our series. It is entitled "Health in Laos—Background Information on Medical Problems in an Underdeveloped Country."

This particular print symbolizes the speed and care with which, I believe, the subcommittee has addressed itself to urgent problems of America's international health program.

Let it be noted that the subcommittee did not actually commence operations on this study until mid-October 1958. Since that time the factual record will show that the subcommittee has covered about as broad a range of activity as any subcommittee with comparable resources with which I am familiar.

I mention this not for any personal reason; nor do I cite the endorsements of the subcommittee for any personal reason.

A TRIBUTE TO THE SENATE

This is a team effort—involving six members of the subcommittee and the staff.

We have all been working together harmoniously to get the facts and present the facts.

So, I collect these commendations with humility and not to draw attention to any one individual. Rather I seek this means of paying tribute to a body which does deserve tribute, namely, the Senate itself and the committee process itself.

I present this material in effect, so that the public will see what I for one believe is substantive congressional work of a caliber which all men of good will can and will approve, irrespective of partisan or other factors.

Often, we legislators read and hear criticisms of the Congress and of its committees.

Here then are views of a different kind from highly responsible Americans. And they are views on an all-important subject—human health.

Since much of this correspondence which will be quoted has been sent to us in confidence, it is necessary to withhold the identity of the individuals who sent the commendations. I have, however, used a brief descriptive introduction to denote the background of the individual who has written in.

Finally, let me note this fact: It is not the purpose of this subcommittee in its study to analyze specific health legislations that is not in our jurisdiction.

Rather it is the standing jurisdiction of the Senate Committee on Labor and Public Welfare.

RECOMMENDATIONS TO BE PRESENTED IN JANUARY 1960

But it is safe to say that out of this Government Operations subcommittee will come recommendations on the basis of which important health legislation can be formulated and advanced.

Already the Senate has enacted into law a number of recommendations which I personally as an individual Senator, rather than formally as subcommittee chairman, have submitted.

I believe, too, that in the 2d session of the 86th Congress, certain subcommittee recommendations which we will formally make, as a body, as of January 1960, will likewise be introduced and, I hope, ultimately enacted into law.

When the Senate Rules Committee considered Senate Resolution 176, the chairman of the Committee on Government Operations [Mr. McCLELLAN] sent to it a detailed memorandum setting forth some of the facts with regard to the broad nature of the subcommittee's work. I have taken a few pertinent excerpts from that memorandum and attach them to these quotations.

There follow now:

1. The excerpts from the memorandum sent to the Rules Committee, describing some of the work of this subcommittee.

2. The excerpts from a few of the many messages of approval which have come to the subcommittee.

EXCERPTS FROM MEMORANDUM OF AUGUST 25, 1959, PRESENTED BY THE COMMITTEE ON GOVERNMENT OPERATIONS TO THE SENATE COMMITTEE ON RULES, SUMMARIZING THE WORK OF THE SENATE INTERNATIONAL HEALTH STUDY

1. The subcommittee is engaged in as what has been described as the most "comprehensive such study of international health ever undertaken by a congressional committee."

It is necessarily comprehensive because the goals set forth in the authorizing resolution were both broad and diverse.

In seeking to fulfill these goals the subcommittee naturally has had to secure expert scientific judgment throughout the United States and the world.

2. This judgment has now been received by the subcommittee in length, diversity, and high quality.

The subcommittee has received well over a thousand helpful letters as reports from medical specialists and other scientists alone. This is in addition to a still larger number of messages from interested laymen.

The experts' correspondence includes innumerable detailed suggestions, often in the form of 5 to 10 pages single space memorandums. These have come from such diverse and highly respected sources as—

1. Deans of medical schools throughout the United States and foreign countries.

2. Winners of the Nobel Prize in chemistry, physiology, and medicine.

3. Officers and committee chairmen of the American Medical Association, and of many specialized medical groups in fields such as petdiatrics, cancer, heart disease, etc.

4. Officers and committee chairmen of scientific organizations at home and abroad in such fields as biology, chemistry, biophysics, biochemistry, etc.

5. Presidents and other officers of American pharmaceutical companies.

6. State health officers and other medical experts of the 50 States of the Union.

7. Ministers of health of foreign countries.

8. Presidents of medical academies and secretaries of medical associations abroad.

9. Editors of American medical journals.

10. Officers of American voluntary organizations engaged in medical research and assistance.

11. American Ambassadors stationed overseas.

12. Presidents of American scientific research foundations and institutes.

13. Heads of rehabilitation centers throughout the United States.

14. Presidents of American businesses with extensive health programs overseas.

And others.

This wealth of analytic material represents, in the subcommittee's judgment, a tremendous asset. The analysis of this correspondence, to be followed by the formulation of recommendations, is necessarily a time consuming and complex task. It is, however, a task which should prove extremely rewarding to the Congress and to the American people.

3. Within the year since the setting up of the study the subcommittee has been engaged in other specific health tasks as well. Thus:

(a) It will be recalled that in November-December 1958, the chairman of the subcommittee personally held conferences in nine European countries with medical leaders.

(b) Here in Washington there have been literally scores of informal conferences with individual medical experts and representatives of Federal agencies.

(c) In addition, 2 days of formal hearings were held on July 9 and 16, 1959. At that time, outstanding experts testified on more than a dozen types of medical problems.

(d) To date, the subcommittee has issued five separate committee prints. These have not only been well received, but in at least one instance two entire printings have been entirely exhausted in supply. Indeed, if all of the bulk requests for other prints had been approved, virtually the total supply would be exhausted today.

COMMENDATIONS OF SENATE INTERNATIONAL HEALTH STUDY RECEIVED IN CORRESPONDENCE

The winner of a Nobel prize:

"It is a source of great encouragement to me to find that in recent years some Senate investigations are being conducted with such high standards of judgment and values as those maintained by your own subcommittee and a few others. * * *

"The corrected (material is) being returned today to (your subcommmittee staff) whose intelligent and helpful cooperation I much appreciate."

The president of an organization providing international health assistance:

"I cannot commend too highly the efforts of your committee in promoting greater interest on the part of the U.S. Government in international health and medical research."

The editor of a Minnesota medical journal:

"The thoroughness in which you have gone about compiling information and getting advice in connection with your subcommittee is indeed commendable. One can never tell where a good idea will come from, and the more sources the more likely a well prepared program."

The editor of a nationwide medical journal published in New York:

"I think the subcommittee should be congratulated on the fine work they are doing in the field of international medical research."

The president of one of America's greatest petroleum corporations:

"I heartily endorse the study that your committee is making, looking, as I understand it, toward a higher degree of coordination between various organizations, both governmental and quasi-governmental in these fields."

A researcher in a major U.S. corporation:

"I would like to take this opportunity to commend you and your committee most highly for the uniformly excellent, valuable, and interesting publications which have appeared to date."

A member of the faculty of a major American medical school:

"I would like to take the opportunity of congratulating you on the very high caliber of the publications which have so far been made.

"I have found these of very great interest and of assistance to me in the teaching of international health in this school. I would be very happy if you would continue to send me all of the publications of your committee. I can assure you that none will be wasted."

The dean of a school of public health:

"I am in receipt of your committee report on the status of world health, and wish to congratulate you upon the excellence and conciseness of this report. It is a most valuable document, demographically and epidemiologically.

"Our school of public health plans to incorporate this material into our regular instructional program, and for this purpose would very much appreciate receiving 100 copies of the report.

"Again may I express our thanks for an excellent and useful document."

The dean of another school of medicine:

"I want to thank you for sending me your comprehensive report, 'United States and the World Health Organization,' which I have read with profit and pleasure. It gives a clear and lucid exposition of the workings of an organization which is most important to the well being of our United States. I agree with your 10 principal findings and particularly with your statement on page 4 where you say 'Only when the highest echelons of government take a deep and continuing interest in health problems can further substantial progress be made.' "

A faculty member at Harvard Medical School:

"I should like to compliment the subcommittee on its excellent work and hope that these views may be of assistance to it."

A director of research at the University of California Medical Center:

"Let me congratulate you and your committee on important work well done."

A superintendent of a board of recreation in a New Jersey community:

"I have just finished a quick reading of your Committee Print No. 5 on Cancer. I believe that you and the members of your committee are to be congratulated on the splendid job you have done with this report."

The minister of health in a Mideast nation:

"It is a source of continuing pleasure and inspiration to observe the expanding interest which the Senate of the United States and, particularly, the Subcommittee on Reorganization and International Organizations is taking in problems of international health."

A dean of veterinary medicine at a Midwest university:

"I personally feel that your proposed committee print on veterinary medicine is an excellent idea, one of great challenge and one that will be very beneficial in informing the public of the many and varied facets of veterinary activities."

A Federal research official:

"May I take this opportunity to congratulate you on the splendid work you are doing in advancing all phases of international relations and especially in the health field."

An officer of the International Hospital Federation:

"Your personal interest and leadership and that of your colleagues on the subcommittee of the U.S. Senate is inspiring and should do much to advance further our common objective of a state of good health which we desire for all mankind."

A distinguished physician at the Mayo Clinic:

"I have read with a great deal of interest and considerable care the outline which you sent me concerning the Committee on Reorganization and International Organization.

"The author of the outline certainly has a very comprehensive knowledge of the problems involved and if the outline could be followed the results would make a notable contribution to the organization of governmental or quasi-governmental agencies in the field of international health."

The dean of a Pacific coast medical school:

"I have reviewed the material which you sent concerning Senate Resolution 347 (for the international health study). I believe that the objectives of this */* * legislation are sound.

"Best wishes in your efforts to move forward with legislation which will further enhance these objectives."

A vice president of an American pharmaceutical company:

"After looking over your subcommittee's program, we think it excellent."

The executive director of a medical institute:

"I wish to congratulate you and your staff on the excellent report 'International Medical Research.' I was particularly impressed with the succinct, but well-rounded, outline."

An officer of the American Psychiatric Association:

"You are certainly undertaking a broad-based and very important investigation and I can assure you that the American Psychiatric Association will aid this project in every way possible."

The dean of a Southwest school of medicine:

"The timely purpose of your committee in focusing attention upon the variety of organizations which are participating either in international medical research or international medical service programs is to be commended."

The dean of a west coast school of public health:

"All of us are deeply grateful to you for providing us the initial committee print, itemizing as it does so very effectively so many of the contributions of international medical research. This is a most exhaustive and valuable opinion."

A distinguished Canadian neurologist:

"I am writing to let you know how much we feel that your work is appreciated. I believe that your approach to the problem of understanding between the West and the East is very sound and most promising for the future. I would like to have you know that we who are engaged in scientific pursuits and medical research are thoroughly back of you in this undertaking and will give your firm and energetic support."

A Minnesota expert on children's problems:

"Thank you very much for the three initial publications issued by your committee. They were very well done and contain a lot of basic material about health in the world."

The executive secretary of a Minnesota voluntary health agency:

"The first report of a study of international health and medical research was most impressive and I must commend you and your subcommittee on the excellent preparation and material. This report should certainly have an extremely wide and receptive audience. I would be grateful if your office could send me an additional six copies which I would distribute from here."

Three citizens in Palo Alto, Calif.:

"We wish to congratulate you for your service to mankind and to the Nation in attempting to promote coordinated further research into cancer and heart disease, and to the cause of world peace by enlarging the area of cooperation between scientists and governments of Communist nations and our own. This is a particularly valuable work of statesmanship and one for which the American people owes you a debt of gratitude."

A distinguished leader of the American Medical Association:

"For myself, the members of the committee * * * and the council * * *, I wish to express appreciation of your invitation to make recommendations concerning international health research and assistance programs in which the United States participates. As I am sure you are aware, the American medical profession is firmly convinced of the worth of such projects, since new discoveries in medicine are never the exclusive province or property of one nation, and from the standpoint of expressing the true American spirit of cooperation and helpfulness. * * *

"I wish to assure you again of the committee's great interest in your study and its appreciation of your desire to make certain that health research is conducted efficiently, economically, and with a view to the ultimate improvement of the health, not only of our own citizens, but of our fellow men throughout the world."

The secretary general of a medical association in the Far East:

"We received two prints sent me by your heartful kindness such as namely 'the Status of World Health' and 'International Medical Research.'

"It was very effective and usefulness for us.

"We also knew your plan of studying international health, current congressional activities of interest especially to establish a National Institute of International Medical Research.

"How brilliant plan it is.

"I suppose perhaps so many existing human pain and suffering by numerous ailments shall be reduced or eradicated by your Senate's new activities."

The dean of a Midwest medical school:

"I most certainly highly approve of the preliminary work plan for the study of international health programs.

"As a former (officer) of the Association of American Medical Colleges' Committee on Foreign Medical Education, I was struck by the many governmental and nongovernmental agencies involved in international health programs.

"I believe the committee will be able to accomplish a great deal in redefining our many programs and offering us better information."

The Fight in 1959 for Adequate Water Resource Development

EXTENSION OF REMARKS

OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. MAGNUSON. Mr. Speaker, the President's record of never having had a veto overriden by the Congress finally fell before a determined effort to get along with the task of developing our Nation's water resources.

It has been said that the difference between an Old Guard Republican and a "Modern" Republican is that the former believes as a matter of principle that nothing should be tried for the first time, whereas the latter believes as a matter of principle that a new idea should be tried for the first time, but now is not the time.

Whichever faction the administration belongs to has made little difference as in 4 years out of 7 White House policy has been "no new starts" on flood control, navigation, power generation, and reclamation projects.

Even a presputnik fourth-grade child could figure out that even though the administration in 1953 took over a going program for the orderly development of our water resources, if we never started any new projects to replace those which were completed, this important national effort sooner or later would come to a halt.

After months of hearings—over 800 witnesses were heard by the House Appropriations Subcommittee alone—and deliberation by both House and Senate, the Congress in mid-August passed a $1.2 billion public works appropriation bill.

Nine days later the President vetoed the bill. In his veto message he singled out for criticism 67 unbudgeted projects, 67 new starts added by the Congress. In typical modern Republican fashion, he implied that these might be all right in the future "at the proper time," but that now was not the time. He was concerned not so much about the impact on the fiscal year 1960 budget—an additional cost of about $50 million—as on the total $800 million cost he said would be necessary to complete all of the new projects.

In all too familiar fashion, the President used some debatable arithmetic to arrive at the total future cost of $800 million. Careful analysis shows a future impact closer to $500 million. Thus, for example, the largest single project, the Allegheny River Reservoir in Pennsylvania, already was under construction but had been held up by litigation which the Supreme Court recently ended. Its cost, $113 million, should not be called a new start. Three of the projects carrying a total future cost of $49 million had not yet been authorized by law, and therefore the appropriation would lapse. Six small reclamation loans were included in the total of $17,100,000—since this money would be repaid, it should not have been counted. One item of $59,607,000 for the Trinity River powerplant in California was recognized as necessary in the President's veto message but counted in the total nonetheless. Nine of the projects, all small, would be completed in 1 year, and thus have no impact on budgets after 1960, the ones the President was concerned about. The elimination of these 20 projects and other similar adjustments brings the total down to about $500 million.

The real controversy, then, boiled down to an argument over whether Congress should appropriate money to start 47 new projects having a total impact on

budgets beyond the current one of $500 million. Most of these 47 projects were small ones. The largest has a total estimated cost of $71,400,000; only one other would cost more than $50 million. Thirty-three would cost less than $10 million. All told, they represent an increase of approximately 10 percent over the total cost of all projects in the President's budget. In fiscal year 1960 we will complete 40 projects with a total cost of $300 million. Should these be replaced with new starts, or should the national program be allowed to taper off? This was the essential question before the Congress.

On September 2 the House failed by 1 vote to override the veto. A determined House Appropriations Committee, not willing meekly to rubberstamp the Presidential dictate nor to abandon the policy of starting new projects to replace those completed, quickly reported out a new bill with all controversial projects left in but with a 2½ percent reduction across the board for all projects, old and new. The 2½ percent cut guaranteed that the total spending for public works in fiscal year 1960 would be no more than called for in the budget.

The President quickly vetoed the new measure, as expected.

On September 10 the House, by a vote of 280 to 121, and the Senate, by an equally decisive vote of count of 73 to 23, voted to override the veto.

The measure became law without the President's approval.

The Rich Richer and the Poor Poorer—Increase Disparity Demands a Moral Revolution

---

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following article by Mr. Samuel Jacobs, appearing in the July-August 1959 issue of the Humanist magazine.

The concluding paragraph of Mr. Jacobs' challenging article presents a clear picture of the scope of the task confronting our Nation:

The world needs a revolution, not just to oppose communism but to help create human dignity and freedom. It needs the kind of revolution that can be fashioned in schoolrooms, factories, and mills. This is the kind of revolution that Americans know a great deal about. But, if it is to take place, it must begin with a revolution in our own thinking that will make Americans aware of the vital role that we can play in creating a worldwide upsurge in human accomplishment. In economic terms, such a revolution in our thinking is essential if the American giant is to reach his full strength for the economic job that must be done to help set the people of the world free. There is still time for us to wake up to our opportunities, but there is no time to spare.

Here is the full text of the article:

THE RICHER RICH AND POORER POOR—INCREASING DISPARITY DEMANDS A MORAL REVOLUTION

(By Samuel Jacobs)

The American people went into the Marshall plan easily and naturally. The appeal was simple and fitted American humanitarian impulses, particularly because the plan served primarily countries that suffered from a war in which we had been on the winning side.

Compared with the job of economic development in the countries of Asia, Africa, and Latin America, the European problem was an easy one. The countries involved had already been industrialized; they needed only to be rebuilt. Their cultures were technological and thus similar to ours. The intricate structure of attitudes, motivations, and behavior patterns needed for 20th century industrial living was in place, complementing our own, matching our readiness to give with a readiness to receive.

In the short time that the plan was in operation, the recovery was rapid. In Germany it was even dramatic and somewhat startling. It was clear that our international aid program was related to something that worked.

For the countries whose problems of economic emergence now confront us, what has to be done is infinitely more complicated. The cultural difference between them and us is much greater; so is the difference in living levels. For instance, while the per capita income in the United States during the 1952–54 period was 3½ times as high as in Germany, it was 8 times as high as in Brazil and more than 9 times as high as in Japan.

The median per capita income for 54 countries of the world studied by the U.N. for the 1952–54 period was approximately $445, about a fourth of the income in this country at that time and approximately what it was here a hundred years ago. Only Venezuela, Argentina, and Israel, of all the countries of Africa, Asia, and Latin America, were above the worldwide median.

In the fact of these differences, the task of helping to raise living standards in these countries is big enough in absolute terms; raising them faster than we raise our own, to narrow the gap between us, provides a problem in economics and a challenge to international morality that are indeed intimidating.

Far from yielding to time and the effort that has already been made, the gap between the industrialized and the nonindustrialized countries is widening, and particularly the gap between the United States and most of the rest of the world. In 1938 this country had about 6 percent of the world's population and about 26 percent of the world's income. By 1949 our share of the population had increased to 6.5 percent, but our share of the income had jumped to 41 percent.

In Asia, on the other hand, the share of the world's population had declined somewhat, from 53 percent in 1938 to 52 percent in 1949. However, in the same period Asia's share of the world's income had declined from 17 to 11 percent.

In Africa the story was a little different, but the ending was very much the same. That is, while the share of the world's population increased from 7 percent in 1938 to 9 percent in 1949, the African share of the world's income dropped slightly.

THE EFFECTS OF AUTOMATION

The trend toward richer rich and poorer poor—certainly as far as relative position is concerned—has been continuing. Dr. Kingsley Davis recently pointed out that "15 of the richest industrial countries in 1938 had an average per capita income roughly 10 times that of the 20 nonindustrial countries. In 1952–54 the same industrial countries had an average per capita income about 11 times that of the same nonindustrial countries."

It is not in relation to industrialization alone that the problem presents itself. In agriculture too there is a problem to be met, and it is not being met well. Last December the Foreign Agricultural Service of the U.S. Department of Agriculture reported that the world's agricultural production has been barely keeping up with the increase in population. Surpluses here are matched by deficits in other places.

Technological developments in American industry promise that the gap will continue to widen. American industry is adopting automation. Production is increasing, while hundreds of thousands of our workers are being set free to do other things. (It is not yet at all clear that we shall have the wit to put these people to work producing other things; there is still the possibility that these displaced workers will constitute a large group of permanently unemployed, making no contribution in the economic system of America. Nevertheless, the concern in other countries, both the industrialized and the nonindustrialized, with the consequences of this new industrial revolution in America is great.)

Recently, UNESCO's International Social Science Bulletin[1] devoted an issue to "The Social Consequences of Automation." From the many statements of concern with what is happening as a result of automation, it is hard to select the quotes that typify the rest. However, the following statement by the leader of the Yugoslav delegation to ECOSOC may serve:

"The new technological revolution which is now taking place before our eyes will not, of itself, contribute toward a more balanced economic development of the world. Automation and nuclear energy, these two main achievements of contemporary technology, are already being applied in the developed countries on an ever-increasing scale. The increase in the productivity of labor achieved through the introduction of modern technology, is assuming sometimes overwhelming proportions. * * *

"All this new technology is concentrated in the countries which have already the highest income, the largest capital formation and the highest productivity of labor.

"Automation and modern techniques, which are used in the developed countries, enable these countries to reduce constantly their production costs and at the same time to expend mass production in unheard-of proportions. This obviously places the economies of the countries which are making efforts toward an overall economic development in an ever more difficult position. This new disadvantage can no longer be met in underdeveloped countries by the old devices of pressure on wages.

"In other words, this development of technology is a new element which tends to widen the already existing gap between the developed and underdeveloped areas of the world."

Last October, Prime Minister Nehru of India complained to the joint conference of the international development finance agencies that, in the developed countries, "The pace of progress through the development of science and technology is tremendous," while for countries like India "it is a struggle for survival."

But not only the underdeveloped countries like Yugoslavia and India are concerned. The same concern is felt in countries that are definitely our technological contemporaries, if not our economic equals. Take Sweden, for example.

Over the past 80 years or so, the growth in Sweden's national income has been most

---

[1] Vol. X, No. 1, 1958 (UNESCO Publications Center, 801 3d Ave., New York)

impressive. The increase in per capita income resulting from the more rapid increase in income than in population has, in percentage terms, exceeded ours by a considerable margin. In 1952–54 Sweden stood next to Switzerland, with the second highest per capita income among the countries of Europe—at about 50 percent of the per capita income in the United States.

Now, Swedish observers view American technological development with deep concern. To change over to automated production methods as in this country would be tremendously expensive. Corporations like General Motors and United States Steel can take these huge outlays in their colossus-like stride. But few other countries of the world can marshal the great sums, which flow so readily in America, to pay for rapid automation of industry. Even Sweden will find it hard to keep up with American progress and may have to see the gap, which it has worked so hard to narrow, widening again.

And if this is true of Sweden, how much more is it true of the countries of Africa, Asia, and Latin America?

POPULATION PRESSURE

Obviously, the problem is not alone with the economic factor; the population problem is one side of the coin, the other side of which is production of goods and services. That the rich get richer while the poor get children may be an inelegant way of saying it, but it does express one of the crucial realities in the international economic development problem.

Whether or not the Malthusians are right about the inadequacy of the world's resources for larger populations, there is an inescapable, Micawber-like arithmetic that must be taken into account in considering the immediate increase in per capita incomes. It confronted America in the late 1700's, when population increased rapidly through immigration, and the national income increased slowly, if at all, held down by the suspension of trade during the Napoleonic Wars, among other things. It implacably confronts the emerging countries of the world today. As Dr. Davis put it in the comparison referred to above, "Over the period covered, 1938 to 1952–54, the population of the 15 industrial countries rose by 7.6 percent; that of the nonindustrial countries by 10.7 percent. If the rates of human multiplication had been reversed, national income remaining the same, the gap between the two groups in per capita income would have been narrowed rather than widened."

The problem can be put simply in this way: only when the increase in production is greater than the increase in population can living standards rise. For many years American output of goods and services increased by about 4 percent per year, and population increased by about 1.5 percent per year. Under these circumstances, part of the increase in production could be diverted into new plant and equipment, seed for even further increases, and still leave plenty of room for an increase in the production of consumer goods to take care of the increase in population and to increase living levels for everybody.

This nice fat margin of production over population increase is not typical of the world, however. For example, in Brazil the increase in production has been approximately as high as ours. However, the population increase has run at approximately 3 percent per year. In this kind of situation, a country is lucky to hold its own. Any effort to get ahead of the game may result in lowering living standards for at least a time, and governments fall for less than that.

Last November, Brazilian spokesmen proposed that the Latin countries, whose average per capita incomes at the time averaged $312 per year, embark on a drive to raise those incomes to an average of $480 by 1980. With population increasing at an average rate of 2 percent per year, to accomplish this goal would require a production increase of 4.5 percent per year, a truly heroic effort. Success in such an undertaking would require large foreign loans, increased private investment, control over inflation, and increased exports to Russia and China. It will be interesting to see how the drive works out, if it is indeed undertaken.

The investment in plant and equipment to bring about any such goal as Brazil is discussing would have to be great. It has been estimated that the underdeveloped countries of the world ought to be increasing their capital investment at the rate of 10 to 12 percent per year to get a proper hold on the problem; it is actually running somewhat less than half that amount. Some years ago the U.N. estimated that to raise the per capita incomes of the underdeveloped countries by 2 percent per year would require that these countries get $10 billion per year from outside their own resources, $3 billion of it in grants. This would work if these countries made much better use of their own savings than they now make and it would double their living standards in 35 years.

A complicating problem, however, is the fact that in some countries the rate of population increase may well become greater over the years immediately ahead. In India, for example, the rate of population increase today is about 1½ percent per year, not a high rate as rates go. However, this rate of increase is so low because the death rate is so high. With better sanitation and improved economic conditions, the death rate can be expected to go down and the population can be expected to increase still faster. Further, the U.N. said recently, in the countries in which the birth rates are now high, the trend is toward even higher birth rates, so a decline in death rates will have truly explosive effects.

Left to itself, the population problem will naturally come under control, but very slowly. In Europe the death rate went down for more than 50 years before the birth rate began to fall. Even though whatever happens, happens faster these days than it used to, it is doubtful that the natural decline in birth rates will do very much to solve the problem in the near future.

What the United States can do to help with this problem in the very short run is hard to see. But certainly whatever can be done to encourage the educational efforts now underway in many of the countries that have this problem must be done.

AMERICAN FEARS

In the meantime, the voices of despair are heard in America. In August of 1958, for example, a distinguished U.S. Senator took the floor to argue that the American people would not stomach (his phrase) an extended program of international aid to the underdeveloped countries of the world. The President has long argued that the burden of the cold war makes it impossible for us to do more than we are doing. Read the statements; what they amount to is that the world must first disarm. Then we must reduce taxes—and that on corporations and high incomes—before we can do more than we are now doing.

It is on this basis that the proposal to set up the Special U.N. Fund for Economic Development (SUNFED) has been kept in deep freeze for 8 years. Since our objection was based on our plea that we couldn't afford to contribute to it, the proposal has even been denied the opportunity of proper debate, in which its merits and demerits might have been worked out. Yet in recent months the United States has agreed to go along with a small-sized fund, intended to keep the underdeveloped areas safe for American private investors who, however, at least so far, have been able to find plenty of opportunity to use their money at home in highly profitable ways.

The approach we take to this problem persuades the American people to an irrational fear that we have not the economic strength to hold up our end of the job that has to be done. Americans are persuaded that we are too poor to contribute our share; a great many people really believe that economic disaster will result from our making a contribution to world economic development commensurate with the size of the job that must be done.

But even more persuasive than the predictions of domestic debility are the recurring recessions and the economic insecurity that they induce. Even in so-called prosperous times, the Government's official list of the economically distressed areas contains the names of many of the country's populous industrial and mining centers, many of them embracing large cities and a wide radius of the surrounding country. In more congressional districts than the American people are aware of, hundreds of thousands of American workers are counted as persistently and continuously unemployed. Even when the rest of the country is doing well, no one knows when jobs will be available for these men and women. And in many areas it is not difficult to relate unemployment to economic competition from abroad, or to draw the lesson that this is what aid to economic development abroad may mean for other areas of our own country.

Certainly to a worker whose unemployment compensation benefits have been cut off because he has been unemployed too long, for whom there is now nothing left but welfare as long as the welfare funds hold out, it makes sense to believe that charity ought to begin at home. To the 9 million families in which someone was unemployed some of the time in recent months, to the businessmen whose stores have closed during the same period, and to the many millions who learn from the experiences of these people, the arguments against international aid must sound impressive. At best their experience leads them to listen sympathetically to the arguments for caution and contriction rather than for courage and imagination. Since we have never allowed our people to understand how rich this country really can be, it is hard to convince them that, at worst, an adequate international program would only slow down somewhat the rate at which our economy is becoming even richer and fatter.

HOW RICH WE COULD BE

Here is one way to show what is happening.

In 1957, the high per capita income of this country resulted from the fact that the average employed person produced at the rate of $6,500 per year, a truly impressive output of goods and services. A conservative private research organization has published an estimate that, in effect, forecasts production in 1975 at the rate of $9,500 per employed person (at present prices), a most impressive increase, yet based on truly conservative assumptions. The increase in per capita income and in living standards that can result from even this increase in ability to produce is tremendous, if we have the wit to keep the production going. In other words, according to this research service, in 1975 our gross national product could reach $835 billion instead of the $440 billion of 1957, an increase of more than $20 billion per year.

How conservative this estimate is, is shown by the conclusions reached in the recent Rockefeller report that in this country "a growth rate of 5 percent is possible if we realize fully our impressive opportunities for economic expansion. If the problems of growth are formidable, we have also found the impetus to our economy enormous". (vol. 4, p. 64.)

A growth rate of 5 percent would give us an output of approximately $1,100 billion in 1975 instead of the $835 billion estimated in the forecast referred to above. What a tremendous burden of guilt must be ours as we face the people of the world, knowing how little we are doing compared with what our resources permit us to do.

Now, the UN estimate of the amount of outside capital required by the underdeveloped countries worked out to about 2 percent of the annual production of the industrialized countries at that time. If we were now to accept the responsibility for contributing 2 percent of our total production to international development—approximately $9 billion per year—this large sum would be no more than half the potential increase in our output during the first year. If the arrangement were kept up, in 1975 the production per employed worker available to us for our own use on the basis of the more conservative estimates would be $9,300 instead of the predicted $9,500. We would have increased the domestic benefits of increased producing power by 43 percent instead of the predicted 46.

Indeed, there is poverty at home, and we must take steps to eliminate it. In 1957, about 6½ percent of American families had incomes of less than $1,000. A total of nearly 25 percent of our families had incomes below $3,000. Past studies indicate that if the figures were available to measure the cost of the "City Worker's Family Budget," they almost certainly would show that the average family income, $4,971, was not enough to pay for this far from ideal level of living.

Certainly by far the major part of this increase in per person production ought to go into raising the living standards of these low income families. More money ought to go into health, education, and many other services. But this increase in the gross national welfare need not be given up in order to help the emerging countries.

Certainly our ability to provide food for our people, schools for our own children, factories for our growing labor force would in no way be endangered. Yet what a force on earth America might become, what a stimulation to the solution of the world's economic difficulties could be accomplished.

A MORAL REVOLUTION

Compared with the Eisenhower proposal of $4 billion for international aid, both military and economic, in 1960, a proposal to lift the aid $9 or $10 billion seems fatuous. Even well-intentioned liberals smile in indulgent disbelief when this proposal is made publicly. Yet our inability to create such a program, if we are indeed unable to do so at this time, is not the result of economic conditions. It is not because our soil will not produce or our factories are inadequate to the job. The problem is more difficult than that, and the work to be done is more difficult than the simple task of inventing new machinery, devising new technologies, and harnessing new sources of power.

To do the job, the American people must create a revolution in their own thinking. They must refuse to go on living under the false pall of insecurity and the fear of their own good impulses that now determine policy in the field of international aid. They must come to understand how much America could produce for our own and world consumption if our economy were set free to do the job. They must demand to be told what ways of housekeeping must be installed so that the productive power of America may be geared up to the needs of the world, instead of being kept cramped and constricted while a world of people go in want for lack of what we will not produce. They must then insist that these new housekeeping methods be incorporated into national policy.

The failure to solve this problem not only cheats us of billions of dollars' worth of production we ought to have for our own use and enjoyment, for the elimination of widespread poverty in our own Nation; it also discredits us doubly in the eyes of the world—for our failure to recognize our opportunities to assist with the job of economic development, and for our inability to solve the housekeeping problems on which full employment and continued economic growth depend.

There is one American product that we have ready for instant export: universal public education, the magic ingredient of our own phenomenal growth. The effect of this ingredient in stimulating economic development was described recently to a regional conference of the AHA by Theodore W. Schultz, of the University of Chicago economics department, who pointed out that approximately 50 percent of the economic growth that took place in this country after 1870 was to be accounted for by our investment in our people, by the money spent on education and on health, and particularly on the former.

Had we endorsed SUNFED when it was first proposed 8 years ago, the investment in the people of the underdeveloped countries in health, education, and economic plant would now be 8 years ahead of where it now is, for that is what the plan called for.

The world needs a revolution, not just to oppose communism, but to help create human dignity and freedom. It needs the kind of revolution that can be fashioned in schoolrooms, factories, and mills. This is the kind of revolution that Americans know a great deal about. But if it is to take place, it must begin with a revolution in our own thinking that will make Americans aware of the vital role that we can play in creating a worldwide upsurge in human accomplishment. In economic terms, such a revolution in our thinking is essential if the American giant is to reach his full strength for the economic job that must be done to help set the people of the world free.

There is still time for us to wake up to our opportunities, but there is no time to spare.

Izaak Walton Conservation Director Urges Preservation of Vanishing Shoreline

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. NEUBERGER. Mr. President, an excellent and informative article appears in the September issue of Outdoor America, official publication of the Izaak Walton League, entitled "Save Our Shorelines." The author of the article is Joseph W. Penfold, of Washington, D.C., the able conservation director of the Izaak Walton League of America. Mr. Penfold sets forth the basic reasons why we must preserve our vanishing seacoast in parks and reserves and recreation areas before it is too late.

Mr. Penfold argues thoughtfully and persuasively in favor of adoption of S. 2460, which has been introduced in the Senate by a bipartisan group of Senators, among whom I am happy to be, headed by the very able senior Senator from Montana [Mr. MURRAY].

I ask unanimous consent, Mr. President, that the article by Joseph W. Penfold in Outdoor America be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAVE OUR SHORELINES

(By J. W. Penfold)

"The last 5 miles of undeveloped beach between Miami and Dayton," reads an ad in the Wall Street Journal, "$1 million down; the balance on easy terms."

"National Steel Co. Lets Contract for $100 Million Steel Mill on Indiana Dunes," is a recent eye-catching headline. "Area had been sought for public park."

And a few random samples from the news:

Reports show attendance at National and State park areas up 14 percent above last year's record high.

A Pennsylvania park developed to handle 5,000 people was swamped with 250,000 over the July Fourth weekend.

"As a result of action to abolish the State park strip along the Overseas Highway," comes another plaint, "before very long, there won't be one spot along the 100 miles of Florida Keys where a fisherman can launch his boat without paying tribute to some developer."

Items bearing the same message, in endless variation, can be found in the press almost every day, in almost every section of the country which boasts of ocean- or lake-shore frontage. In the aggregate, they—both the number and urgency of the cases of local crisis—add up to a frightening conclusion: Our shorelines are vanishing in a tidalwave of urban sprawl.

Demand for water frontage—acute almost everywhere—has reached a peak in Florida, where bulkhead, dredge, and fill replace the natural shorelines with barren canals, boat slips, and the stench of stagnant water. That such "improvements" may destroy the breeding and nursery grounds for important commercial and sport fishes and obliterate winter feeding areas of hard-pressed waterfowl populations disturb the developers not one whit.

Nor will the trend be reversed. The pressures on our shorelines arise naturally from growth. But the need for wise development is snatched as a shield by the fast-buck operators. And thoughtful Americans thus must seek means whereby the public values may survive in a trend which reflects burgeoning populations, improved standard of living, and a yen for the outdoors.

There can be but one answer and it's not a new one in any sense. The Indiana Dunes presents the classic case:

Over 40 years ago Stephen Mather, first National Park Service Chief, urged that the 30 miles of Indiana Dunes along the Lake Michigan shoreline be designated for preservation in the National Park System. He foretold that except as it was so, it would be lost to the public in the years to come.

In the early 1950's, the Izaak Walton League's Indiana Division tried to set aside the dwindling dunes, preferably as a State park, but found little support from a still apathetic public.

Today conservationists, faced with overwhelming odds, are attempting to save the last 4-mile stretch not already lost to industry and city growth. We are apparently too late to save it all; a steel mill is under construction; the beach and dunes area—which could serve recreation needs of the new mill's workers, their families, and countless other new residents—has now been whittled down to 2 miles.

Just 2 miles. Not much—but doubly valuable because of it. Perhaps this small remaining fraction of what was once a glorious public potential can be salvaged if public officials display the vision the situation demands.

There are, fortunately, men of good will who are determined that the sad tale of Indiana's Dunes will not be repeated again and again throughout the country.

Within the past few months the administration sent to Congress a rather sharply reduced version of a bill to do something about our fast-vanishing shoreline. It would provide authority for the Secretary of the Interior to establish three national shoreline recreation areas not to exceed 100,000 acres in total, and an authorization to spend up to $15 million for the acquisition of lands. The areas to be selected were not named.

Senator RICHARD L. NEUBERGER, of Oregon, demonstrated bipartisan recognition of the problem by introducing the measure at the administration's request. Senator GORDON ALLOTT, of Colorado, cosponsored it.

This bill (S. 2010) was so patently inadequate, however, that key Members of Congress who had given the problem thorough study appraised it as hardly a start on the task of preserving examples of superlative shoreline for the public.

Senator JAMES E. MURRAY, of Montana, chairman of the powerful Interior Committee, Senators CLINTON P. ANDERSON, of New Mexico; PAUL H. DOUGLAS, Illinois' determined fighter for the Indiana Dunes, and NEUBERGER joined forces to prepare a broader, more comprehensive bill. Introduced on July 29 as S. 2460, Senators MOSS, of Utah; KEFAUVER, of Tennesssee; MANSFIELD, of Montana; RANDOLPH, of West Virginia; LANGER, of North Dakota; MCNAMARA, of Michigan; GRUENING, of Alaska; HART, of Michigan; MCCARTHY, of Minnesota; GREEN, of Rhode Island; ENGLE, of California; BIBLE, of Texas; BYRD of West Virginia, and MUNDT, of South Dakota, joined as cosponsors.

At almost the same time JOHN DINGELL, of Michigan, LEE METCALF, of Montana, and JOHN SAYLOR, of Pennsylvania, were introducing similar bills (H.R. 8445, 8449, and 8519) in the House. WAYNE N. ASPINALL, of Colorado, House Interior Committee chairman, has expressed a favorable attitude and called for departmental reports on the bills.

The 10 shoreline recreational areas that would be authorized under the bill would be established as described and pictured on these pages. [Illustrations not printed in RECORD.]

The legislation itself is simple in the extreme:

1. It authorizes the Secretary of the Interior to "take appropriate action toward the establishment of national shoreline recreational areas," following recommendations by the National Park Advisory Board, consultation with the Governor of the State concerned and public hearings in the area.

Objections raised on grounds that the measure places too much power in the hands of the Interior Secretary seem to be based on imperfect understanding.

Congress can be trusted to study each area carefully before the original bill is passed. Public hearings are required. And routine appropriations processes offer Congress an annual review of land acquisition programs in each authorized area.

2. It provides for the establishment of the basic regulations for their administration. Recreation uses which have been traditional in the areas will be continued, such as fishing, hunting, and water-fowling.

3. It provides for assistance to the States (up to one-half the cost, subject to rather stringent regulations and appropriations) in the acquisition of State-managed shoreline areas which are best suited for inclusion in the State park systems.

4. It provides for thorough study of potential areas by the National Park Service, with the cooperation of the appropriate State, to determine if they warrant establishment either under the national or State park systems.

5. It authorizes funds up to $50 million for acquisition of the national areas, $10 million for assistance to the State acquisition programs, and a nominal sum for the necessary study of additional areas. Funds are anticipated to be spent over a series of years.

The scope and purpose of the program has been most dramatically expressed in the slogan coined by Senator DOUGLAS: "S.O.S.—Save Our Shorelines."

The legislative sponsors, the administration, the Isaak Walton League, conservationists, and the public know that to save anything of our heritage for ourselves and the generations to come we must act.

May we all have the courage to act promptly and vigorously.

Political and Economic Developments in Korea

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on the political and economic developments in Korea.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On May 14 last I rose in this Chamber to discuss certain ominous political developments in the Republic of Korea. I pointed out that the South Korean Government had shut down the Catholic-sponsored newspaper, Kyung Hyang Shinmoon, which had been critical of President Syngman Rhee's regime. I inserted, along with my remarks, editorials and signed articles from the Washington Post and Times Herald, the Christian Science Monitor, and the Commonweal which likewise expressed serious misgivings about various efforts of the Korean Government to silence or obstruct political opposition.

I had hoped that my modest statement, together with constructively critical editorial comment in this country, would encourage the millions of Koreans who are earnestly working and praying for the full fruits of genuine political democracy and sustained economic development. I even harbored the hope that some steps might have been taken to lift or ease some of the present restrictions against the opposition Democratic Party in Korea.

But my hopes, I regret to say, have not been fulfilled. The opposition newspaper closed down last April 30, under an official charge of "treason," is still silent. An AP dispatch dated September 8 from Seoul stated that the Kyung Hyang Shinmoon "lost its second legal battle in 10 days against Government action suspending its publication. The Seoul Appeals Court at a 3-minute session declared the suspension order was constitutional. The publisher announced he would appeal to the Supreme Court." (Washington Post and Times Herald, Sept. 9, 1959.)

In addition to the restrictions on free political debate and activity which I mentioned in my May 14 comments, I would like to point out that the South Korean Government has erected further barriers to the civil liberties of its people.

In my earlier comments I referred to the three restrictive laws adopted by the Korean National Assembly last December 24, adopted incidentally while members of the Democratic Party were physically restrained by the Government from entering the chamber. These laws, designed to restrict the opposition party and to perpetuate the party in power, have not been repealed. Under the so-called local autonomy law, which gives President Rhee the "right" to appoint local officials, 559 elected mayors and other administrators will be replaced this month by Presidential appointment. Previous to the enactment of this law, these officials were elected by the people they represent.

Further, the New York Herald Tribune of May 20, 1959, reported the Korean Government "warned political parties may well be outlawed if they fail to submit reports to the Government on political activities. A Government memorandum said political parties should notify the Government 10 days in advance of any political gathering and submit a report on the result of such a meeting within 5 days after it is held." This appears to be a clear attempt to intimidate if not to destroy the Democratic Party.

Mr. President, democratic government requires understanding tolerance and self-discipline. I do not want to be placed in the position of glibly recommending that every government be patterned after the American form. But I submit that the minimum requisite for democratic development is the right of an opposition party to exist, to publish its views and to organize freely. I submit that this basic right is seriously compromised in the Republic of Korea today.

If I believe in free political debate in Korea, I believe in the same right here. In this spirit I recently included as an extension of remarks two views on the Korean situation which are somewhat different from my own. One was a report, "Korean Comeback", by Ernest K. Lindley, which appeared in the August 3 number of Newsweek. I agree with much of this statement, but I was frankly in error when I said that "the Republic of Korea has attempted to work within the framework of the 1948 Constitution." The three restrictive laws passed by the National Assembly on December 24, 1958, violate the spirit if not the letter of the Constitution. And the restrictions on freedom of the press and on assembly also violates the spirit of the Constitution. I also said in my introductory remarks to Mr. Lindley's report: "I have spoken out on certain actions in the Republic of Korea which were not compatible with a free society. Evidence of strong-arm tactics by the majority party cannot be excused or ignored."

Later I inserted in the RECORD an article which appeared in the August 19, 1959, number of the Christian Science Monitor. It was written by Robert T. Oliver and entitled, "South Korean Skies Clear." This article paints an encouraging picture of economic development in Korea. This was a source of gratitude to me. But after it appeared in the RECORD I was informed by several reliable sources that the article was seriously inaccurate.

I feel an obligation to set the record straight and note certain facts about the Korean economy which do not correspond to the picture portrayed by Mr. Oliver.

With respect to the economic prosperity of the Korean farmer, as cited by Mr. Oliver, between June 1957 and July 1959 the prices which Korean farmers have received for their grain have declined approximately 38.3 percent, while over the period from December 1958 to the present, the prices of goods which they must purchase to live have risen approximately 17 percent. Today the Korean farmer is worse off than he has been at any time since 1955. To counteract the plight of the Korean farmer, the Government has found it necessary to establish a grain exchange program under which they can convert ther rice holdings for other grain, in-

cluding wheat flour, available from Government stocks..

Regarding the prosperity of Korean industry, let me refer you to a report of the Pusan Chamber of Commerce published in April or this year. A survey conducted by 12 of the chamber's field investigators, covering 1,112 plants and employing about 28,000 workers, shows that only 30 percent of the plants were working full time, that 14½ percent had suspended operations completely and that the remainder were working only part time. Subsequent investigation revealed that these adverse conditions of the industrial manufacturing phase in the Korean economy are confined not only to the Pusan area, but were also found to be present in the entire field of Korean manufacturing industry. The April 1959 issue of the Korean Chamber of Commerce lists on page 43 the following relevant data on this subject. Of a total of 45 classes of businesses, covering 5,251 industrial establishments 2,261 or 43.1 percent were in full operation; 1,465 or 27.9 percent were operating on reduced schedules; and 1,525 or 29 percent of these plants were completely shut down. The factors which brougt about the reduced operations of these facilities are given in the report as follows:

1. Lack of credit: 50.8 percent.
2. Lack of effective market: 27.7 percent.
3. Difficulties encountered because of excessive taxes: 9.6 percent.
4. Power shortage: 1.8 percent.
5. All other causes: 10.1 percent.

A recent official Republic of Korea Government survey places unemployment at 6 percent of the total population, which would yield a figure of about 1.3 million. Since the government survey makes no allowances for underemployment, particularly, underemployment in rural areas, this figure understates substantially the real facts. Trained American observers estimate total unemployment as being in excess of 2 million. When one considers that the total ROK active work force is probably not more than 8½ to 9 million, we see that roughly 22 to 25 percent of the active work force is totally unemployed.

Next, let me make a few observations on the much-advertised stabilization program in Korea which was designed to cure her inflationary ills. In this connection, I would like to summarize very briefly the results of a recent staff study by Robert F. Emery of the U.S. Federal Reserve Board. According to Mr. Emery, the three Korean stabilization programs have been only partially successful. The real aim of price stability, he says, has been achieved. But this has been partially fortuitous since there has been a significant increase in agricultural output each year. Some objectives of each program, he adds, have been achieved, but these have tended to be in the minority. Although Korea, in the opinion of Mr. Emery, has succeeded in obtaining greater price stability, there still exists major economic problems. One is the attainment of economic self-sufficiency and independence from U.S. aid. Another obstacle to self-sufficiency, he notes, is the difficulty of expanding export markets. There is a great need, he says, for the Koreans to come to terms with the Japanese on many problems since Japan is the natural market for many Korean products. For economic progress, it will also be important, says Mr. Emery, for Koreans to provide an attractive climate for domestic and foreign investments with economic stability through appropriate monetary and fiscal policies.

In an interview given in the Far Eastern Economic Review for March 1959, Mr. In Sang Song, Minister of Finance of the Republic of Korea, reaffirms most of Mr. Emery's conclusions, although the Minister is not quite as optimistic of Korea's future as the American observer. Thus, the Minister, when asked to estimate the period within which the Republic of Korea might reach self-sufficiency, stated: "On present assumptions, it is very hard to say. If I am obliged to answer, I would say that self-sufficiency is very hard to envisage in the foreseeable future."

In a recent editorial the Korean Republic, the official Republic of Korea English language newspaper, comments as follows: "Every Korean economic official, every American aid administrator, and every Korean import-export trader is aware that foreign trade imbalance is this country's primary problem. For the moment, balance is achieved through help from America. But that is an expedient and a temporary one. Unless something is done, the day will come when Korea's modernized economy will stand on the brink of ruin because it cannot buy what is required to keep the wheels turning." Incidentally, Korean exports during the past year fell more than 30 percent.

These few facts clearly indicate that economic developments in Korea are not quite so encouraging as Mr. Oliver would have us believe.

With respect to Mr. Oliver's statement that educational developments in Korea have been most encouraging in recent years, it is true that the Korean school situation has improved tremendously since 1953. But it must also be pointed out that much of the credit for this development is the result of American Army efforts in building schools in Korea, of the ICA training program for primary and secondary schoolteachers, and finally and perhaps most importantly, of the heroic sacrifices of Korean parents in behalf of their young ones. This Korean parents do at considerable cost and hardship to themselves and their children since education in Korea has not infrequently deteriorated into what we Americans would call an unconscionable extortion in which even the poorest of peasant parents are victimized by avaricious school officials.

Finally, I would like to say a word about our foreign aid program in Korea. As a strong supporter of development loans, technical assistance and economic grants, I am deeply concerned that our aid program be administered as efficiently and honestly as possible. We have an obligation to the American taxpayer as well as to the ordinary Korean citizen for whom the aid is intended.

Since our aid program started in 1953, we have allocated more than $2.8 billion for Korean economic aid. Considering the need and the threat, this great sum is not out of line. But we must ask ourselves whether this aid is being efficiently and honestly administered. We must ask whether any of it is being diverted for illegal purposes, purposes for which it is not intended. With this in mind, Mr. President, I intend shortly to devote myself to a thorough study of our aid program in Korea.

In conclusion I want to make it abundantly clear that I have long admired the courage and steadfastness of the brave and patient Korean people. They have suffered great hardships both at the hands of the Japanese and the Communists. They deserve the best that this troubled world can offer. They deserve security, political and economic security.

At this point, I include the following supporting documents along with my remarks: an editorial from the official Republic of Korea English language newspaper, the Korean Republic, entitled "Know-How of Trade," which appeared on August 21, 1959; an article, "South Korea's Economic Future—Self-Sufficiency 'Unforeseeable,'" which appeared in the March 26, 1959, Far Eastern Economic Review; and the conclusion of a staff study by Robert F. Emery of the Federal Reserve Board, "The Korean Financial Stabilization Programs," August 25, 1959.

[From the Korean Republic, Aug. 21, 1959]

KNOW-HOW OF TRADE

Technical assistance granted under the American aid program has been highly important to Korea. Many U.S. technicians have come here to teach and to work with their Korean counterparts. Hundreds of Koreans have been sent to the United States and other countries to study at universities, in technical institutes, and with various industries.

As foreseen by William E. Warne, the former UNC Economic Coordinator, results have been gratifying. Best of all, this is a project that will pay increasing dividends as the years go by. The skills imparted and absorbed will not disappear, but will be passed on to others and will contribute to the technical base that Korea must have for its modernization.

With the financial stringencies of the 1959–60 American aid year, technical assistance may be cut slightly. But both Americans and Koreans are determined to maintain the program at maximum intensity, and even to augment it in certain categories.

One of these is the area of international trade, where Korea has much to gain but very little experience to work with. Before the turn of the century, this was the "hermit kingdom," and trade outlets to foreign lands were frowned upon or forbidden entirely. China was the only exception, and that country had its own difficulties with the "barbarians" from European civilizations.

Then came the Japanese occupation period. Any Korean goods that went beyond the borders of Japan were handled by the Japanese. Korea had no chance to acquire the slightest know-how about foreign trade. The Japanese were succeeded by the American military government, and no sooner had we regained sovereignty than we were plunged into the tragedy and destruction of the Korean war.

From 1953 until a year or so ago, all energies had to go into reconstruction and rehabilitation. There was neither time nor opportunity nor exports for foreign markets.

Now, however, we are entering upon a new era. Some of our industries will produce exportable surpluses—textiles, flatglass, household utensils, and handicrafts, for example. In good harvest years, rice will be available. Korea is rich in minerals that await exploitation and the development of foreign markets.

Every Korean economic official, every American aid administrator, and every Korean import-export trader is aware that foreign trade imbalance is this country's primary economic problem. For the moment, balance is achieved through help from America.

[From the Far Eastern Economic Review, Mar. 26, 1959]

SOUTH KOREA'S ECONOMIC FUTURE—SELF-SUFFICIENCY "UNFORESEEABLE"

Question. How would you sum up the results to date of the U.S. aid program to Korea, Mr. In?

Answer. It is quite good so far. The first stage, of course, was relief; most of the money in the beginning was spent on disease control and similar objectives. The second stage was to rehabilitate the facilities that had been destroyed—factories, schools, hospitals, and so on. That stage was completed last year. Everything except housing is now above its prewar 1949 level. The third stage, from 1958, was economic development. The United States and the Republic of Korea have agreed to establish a long-range economic council to build up the Korean economy.

U.S. money has throughout been used to procure raw materials, equipment and services, and the Korean currency, which has been produced in the form of counterpart funds, has been used partly for military support, partly for rehabilitation and economic development.

Question. What is the total sum received so far in U.S. aid?

Answer. Approximately U.S.$2,000 million.

Question. And it has been slightly lower in the last year or two?

Answer. It reached a peak of $323 million in 1957. Last year the total was $215 million, and for 1959 it will be $210 million.

Question. It is envisaged on both sides that the U.S. aid program will gradually taper off?

Answer. The purpose of both Governments is to make the Korean economy viable and self-supporting. First of all the objective is to produce more goods internally in order to decrease expenditure on imports, for example, of cement, cotton yarn, textiles, flat glass, and paper.

Question. Are you already self-sufficient in those commodities?

Answer. Almost, but not all. We can now export glass and cotton textiles, but in the others we are not quite self-sufficient. In the future, if we get a fair entry into world markets, I am sure we shall be able to export quite considerable quantities of cotton textiles.

Question. Which markets do you have in mind, Mr. In?

Answer. Last year we sold about U.S.$1.5 million worth of cotton yarn to Hong Kong and sheeting of similar value to the United States. Our major market would be south Asia, especially Burma, Thailand, and Vietnam.

Question. You are confident of gaining entry to these markets in spite of competition, for example, from Japan and Hong Kong producers?

HOPES FOR TEXTILE EXPORTS

Answer. Yes, we have after all two particular advantages. Wages are low in the Korean industry in the first place, and it is equipped with very modern plant from the United Kingdom and the United States, in the second place.

Question. You believe that in quality and price your products have a good chance?

Answer. Yes, our quality matches that of our competitors, and our prices are competitive, we believe. One problem is the question of using American imported agricultural surplus raw cotton. The U.S. authorities object to this cotton being used in export goods.

Question. They wish you to replace such cotton by private purchase. Is this already being done, in fact?

Answer. We are still discussing this problem, and the two countries are approaching basic agreement on the matter. Another difficulty is that our industry is still enjoying a growth in domestic consumption. Manufacturers are reluctant to develop the overseas market in this context, regarding it as too risky. We have, you see, little experience of foreign markets.

Question. Is any action being taken at Government level to promote exports?

Answer. Well in the first case we subsidize the foreign exchange to meet the difference between the domestic price and the export price. Secondly, we have sent joint trade missions of Government and commercial representatives to Vietnam and Thailand. But this program is not yet active, and we shall be sending more missions shortly.

Question. Can we return to the question of the long-term importance of the U.S. aid program, Mr. In?

Answer. Yes. U.S. aid to Korea will undoubtedly decrease year by year, not necessarily gradually. I would put it this way, that the trend is downward. Now our balance of payments position is very unfavorable, and to fill the gap we must export more. There is a great potential in several fields. We have good mineral resources—tungsten (though the world market is depressed at the moment), graphite, phosphor, iron ore, and anthracite coal. Japan should be a big market for these minerals.

Then there is fish and marine products. The China proper market has been lost, but we should be able to increase our shipments of aga-aga and other fish products to overseas Chinese communities in Singapore, Malaya, and other south Asian countries. Already we are exporting dried fish, and Japan should be able to take some raw fish. Handicrafts is another potential, particularly for the North American market.

Question. Are you also relying on higher rice exports?

Answer. Rice is a major export item. We tried last year to sell abroad 200,000 metric tons, but succeeded only in exporting 5,000 tons to the Ryukyu Islands. Japan should be a major buyer, but she has long-term arrangements with other southeast Asian countries. Next year we expect to export rice to Japan, Israel, and the Philippines.

Question. You have the same target of 200,000 tons for 1959?

Answer. Yes. That would bring in some US$30 million.

Question. Are woolen textiles another potential export?

Answer. The emphasis now is on the domestic market, but there is enough capacity for internal requirements, and with ultramodernized German machinery installed in Taegu we will soon be able to export.

Question. To which markets?

Answer. To those which Hong Kong serves. Our wage levels should make us competitive in those markets.

Question. At the moment you import all your wool tops?

Answer. We are now importing some raw wool from Australia, but a wool-top factory is to be built soon, and from 1961 or so we shall not need to import wool tops any more.

Question. Going back to the broader question, Mr. In, how long do you think it will take for Korea to become self-supporting?

Answer. That depends on two other questions: How long will the present military tension last? When will divided Korea be unified? At the moment we spend 36½ percent of our budget on defense, and as long as that is necessary we shall need some outside assistance. North Korea, on the other hand, has hydroelectric power, iron ore, and better quality bituminous coal. A steel industry could be developed there on a large scale. South Korea has the labor resources, but the North has the natural resources and fuel.

Question. Assuming no change in these factors, what is your estimate of the period within which self-sufficiency might be reached?

Answer. On present assumptions it is very hard to say. If I am obliged to answer, I would say that self-sufficiency is very hard to envisage in the foreseeable future. We have 630,000 soldiers in this country, the third largest army in the world. Given the continuance of military tension, U.S. military aid should go on.

Question. I would like to ask about the question of inflation, Mr. In. For the past 2 years you seem to have been rather successful in holding prices down. Is this likely to continue?

Answer. In 1955 we agreed with the United States that if prices rose by more than 25 percent the hwan would be devalued. A financial stabilization program was drawn up. In fact the money supply increased markedly at the end of 1958, but prices remained stable.

This was partly because of the rise in production and the supply of commodities, and partly because of the new confidence in the stability of the hwan currency. Savings have risen considerably over the last 2 years, and we are confident this trend will continue.

Question. What is the position of foreign investment in Korea, Mr. In?

Answer. We welcome it. A foreign investment encouragement law has been submitted to our Congress, drafted by U.S. experts, and we had hoped it would be passed by the end of last year. But there has been some delay. It will be enacted very soon. It opens the door wide to foreign capital, and contains three major elements: (1) Guaranteed remittance of profits and interest in foreign exchange; (2) certain guarantees against expropriation; and (3) taxation incentives of 3- to 5-year tax holidays.

Question. There is no limit to the percentage foreign holdings in a new company?

Answer. None.

Question. And no restriction on the employment of foreign staff?

Answer. No.

Question. Do you have significant inquiries from potential overseas investors now?

Answer. Many offers have come, but mostly people are awaiting for the new law to be passed. There is interest in goldmining, stevedoring and manufacturing by U.S. concerns, and also some inquiries from Germany and Austria.

Question. Do you attach any hopes to increased tourist trade in Korea?

Answer. We are already earning considerable foreign exchange from U.S. forces in Korea, and now my Government has agreed on a basic policy on tourism. A new Tourist Promotion Institution will soon be set up.

Question. Is not the exchange rate a handicap for tourists?

Answer. There is no chance of changing the official rate of 500 hwan to one U.S. dollar. Actually the exchange rate has a triple meaning—for imports, for ICA-financed goods and for changing money for the U.N. forces here. We intend to maintain the official rate.

Question. But the new import tax effectively changes the rate as far as imports are concerned?

Answer. The minimum for ICA and Korean foreign exchange imports is now effectively 650 to 1, yes.

Question. Finally, Mr. In, it is sometimes said by economists that a country in the position of Korea would do better to invest its money in raising the quality, quantity and grading of its agricultural and primary products than by trying to industrialise too fast. What is your comment on that?

Answer. Our growth of population cannot be supported by agriculture alone. A country like Korea, with 30 million people—22 million in the South and 8 million in the North—must be industrialized.

Question. Thank you very much, Mr. In.

The Korean Financial Stabilization Programs

(By Robert F. Emery)

The three stabilization programs have been only partially successful. The general aim of price stability has been achieved, but this has been partly fortuitous since there has been a significant increase in agricultural output each year. Some aims of each program have been achieved but these have tended to be in the minority.

Nevertheless, the programs have been useful in that they have highlighted certain worthwhile aims which might have been largely ignored otherwise. In addition, the programs have provided a framework for continuous review and revision of the plans to achieve stability. It is quite likely that less stability would have been achieved in the absence of the programs.

Although Korea has succeeded in obtaining greater price stability, there still exist many serious economic problems. A major one is the attainment of economic self-sufficiency and independence from U.S. aid. This will be difficult to achieve unless the large military force is reduced to moderate size. Another obstacle to self-sufficiency is the difficulty of expanding export markets. There is a strong need for the Koreans to come to terms with the Japanese on many

problems, since Japan is the natural market for many Korean products. For economic progress, it will also be important for Korea to provide an attractive climate for domestic and foreign investment, with economic stability maintained through appropriate monetary and fiscal policies.

These goals will not be achieved overnight. As U.S. aid declines—it probably reached its peak in 1957—Korea will be forced to take steps to become increasingly self-sufficient. The recent achievement of relative price stability has already been helpful in increasing time deposits and creating funds for investment. This in turn should help promote increased investment, leading to higher exports and increased output in general. While the volume of U.S. aid will probably continue to decline, Korea will undoubtedly continue to receive technical assistance from the United States as the country continues to work toward economic self-sufficiency and a higher standard of living.

A Look Ahead at Federal Welfare Legislation

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, I include as part of my remarks a speech I was privileged to deliver at the northeast regional conference of the American Public Welfare Association on Friday, September 11, 1959, held at the Ambassador Hotel, Atlantic City, N.J.

The speech follows:

A LOOK AHEAD AT FEDERAL WELFARE LEGISLATION

(Speech delivered by Representative FRANK THOMPSON, JR., Member of Congress, Democrat of New Jersey, to Northeast Regional Conference of the American Public Welfare Association, Ambassador Hotel, Atlantic City, N.J., September 11, 1959)

In his fine book, "The People, Yes," Carl Sandburg included a vignette from our pioneer past which, it seems to me, is especially appropriate for this occasion. He pictures an early sodbuster in Kansas, leaning on his gatepost, studying the horizon and trying to understand "why God ever made the grasshopper and why 2 days of hot winds smother the life out of a stand of wheat and why there was such a spread between what he got for grain and the price quoted in Chicago and New York."

A newcomer drove up in a covered wagon asking, "What kind of folks live around here?"

"Well, stranger," the sodbuster replied, "What kind of folks was there in the country you came from?"

"Well," said the newcomer, "they were mostly a lowdown, lying, thieving, gossiping, backbiting lot of people."

Said the sodbuster, "Well I guess, stranger, that's about the kind of folks you'll find around here."

But as the dusty gray stranger had just about disappeared beyond the horizon, another wagon drove up.

"What kind of folks live around here?" the driver asked.

Again the sodbuster countered, "Well, stranger, what kind of folks were there in the country you came from?"

"They were mostly a decent, hardworking, law-abiding, friendly lot of people," was the reply this time.

"Well," said the sodbuster, "I guess, stranger, that's about the kind of folks you'll find around here."

I like to think that you as welfare administrators and social workers and I, as a politician, have in common an abiding and unconquerable faith in people, however tired, despairing, or hostile they may be when they come to us. Both of us know when we go to work each morning that the day will bring to us people with new problems—very human problems having to do with their own individual well-being. Mine may come in the form of a crudely scrawled letter, laboriously written in pencil on grubby paper, asking why an orphaned grandson raised by his grandparents from a baby, is not entitled to social security benefits under the law? Or why a needy family which moved from one State to another in search of a job, has been denied assistance? Or, on the other hand, perhaps it is a neatly-typed letter from an irate taxpayer demanding to know why his good tax money is being spent to support the shiftless, the lazy, and the no good.

It is an ancient and honorable battle in which we are engaged, each in his own way. For centuries there have been those who have said that providing education for the common people would give them false notions of their own importance; that the proper treatment for those who have fallen on hard times is a debtor's prison; or that the people are a "great beast." Others in our own generation have—in the name of some people's republic—exploited human weakness and misery as an instrument for the advancement of the state.

May I say right here that I am profoundly aware of the statesmanship your organization has shown through the years in providing legislators with the necessary facts, and the even more necessary goals for better welfare legislation. I know that, for almost 30 years the American Public Welfare Association has been providing forums such as this one to consider the social and economic needs of people, and creating a climate for Federal, State, and local cooperation to meet these needs. I know that the really remarkable advances in public welfare during this period can usually be traced to the deliberations, and the action of this organization. Starting in 1930, at a time when public welfare was still viewed with suspicion, its support contributed to the first Federal emergency relief bills in 1933, and to the Social Security Act in 1935. Through the years since that time, even though the headlines shifted from relief programs to the threat of war, to war itself, then to unprecedented prosperity and foreign policy, you have continued to provide often-unheralded leadership in the sacred task of promoting the general welfare.

Your leadership, and your advice, has led to the expansion and the liberalization of our social security system so that now 9 out of 10 of the working people of this country are provided with its protection. Your wisdom has led to a new program of benefits for the disabled and the social security benefit structure has been revised upward to bring it more in line with the needs of people in an expanding economy.

But I know you would be the first to say that we have only begun to meet the total problem which faces us in this area. There is no better illustration of this fact than the subject you have chosen for me, "A Look Ahead at Federal Welfare Legislation."

Because I know I am addressing a group of professionals, I do not at this time propose to deal with such subjects as revised matching formulas for the Federal-State public assistance programs or the precise amount by which social security benefits should be increased, as important as these matters are. I know your program is sound in these respects.

Rather I would like to look briefly at what seems to me to be the most important immediate issue and then to look further ahead at some of the upcoming problems which we as legislators and you as public welfare people must be thinking about.

Right on our doorstep is the problem of the continuing growth in our population. We can, in the years immediately ahead of us confidently predict that there will be more marriages, more babies, more school children, more disabled or chronically ill persons, and more old people. By 1965, it is reliably estimated, our population will have grown by 16 percent, or 26 million people. And it will have grown especially at the younger and older ends of the age scale. The number of people in the age group past 65 is increasing at the fastest rate. It is expected to be 25 percent larger in 1965 than it was in 1955. During the same period, the number of children under 15 is expected to increase by 17 percent. In contrast, the number of people between age 15 and 65 is expected to increase by only 13 percent during this decade. This means that there will have to be more medical, educational, and welfare services—more schools, more child services, more hospitals, more nursing homes, and other specialized institutions. It means the social welfare services—public and private—must expand at least 15 percent in the next 10 years if we are merely to maintain our current level of services in proportion to population.

You are already aware of the dimensions of some of these problems. Of immediate concern is the problem of providing better health care for all of our people and particularly for our aged. In his testimony before the Committee on Ways and Means of the House of Representatives in July of this year, Prof. Wilbur J. Cohen, representing the American Public Welfare Association, pointed out that, more and more, the new applications for old-age assistance come from persons who, although they are receiving social security benefits, cannot meet their medical requirements with this limited income. As a result, medical care payments in public assistance in 1958 are estimated at $400 million.

Then he listed the following cold, hard, facts:

The number of aged persons is increasing over a thousand each and every day. Both the number and proportion of the aged in the population is increasing.

Since 1947–49 the overall consumer price index has increased about 24 percent. Medical care costs have risen over twice as fast—49 percent. But hospital room charges have risen 105 percent—and are continuing to increase.

Hospital room rates have increased 71.2 percent from 1948 to 1956, while all medical care costs increased 31.7 percent. Private expenditures for hospital services have increased from 1 percent of per capita disposable income in 1948 to 1.16 percent in 1952, 1.33 percent in 1954, and 1.43 percent in 1956—a 43 percent increase from 1948.

In 1955 public and private expenditures for hospital care in all general and special, short- and long-term hospitals was $4.3 billion, of which 26.6 percent came from general tax sources. If mental and tuberculosis hospitals are included, the total expenditures reached $6 billion, and the portion coming from tax sources was 43.8 percent. From these figures, it can be seen that the issue is not whether public funds shall be used to finance hospital care but in what manner and to what extent.

This is a matter upon which I need your advice. I am, of course, aware of the advantages of using the method of social insurance to meet these needs in the manner

set forth in the Forand bill. And I am impressed with the way the American people—who are sometimes accused of being overly addicted to buying now and paying later through installment plans—have in their social-security plan endorsed the method of accepting a regular reduction in their take-home pay to provide for themselves in the future. An important feature of the Forand bill, in my opinion, is the fact that it uses this method so that the cost of health protection in retirement is paid during the individual's working lifetime rather than during the period when he is retired and, therefore, living on a reduced income. The bill has the further advantage that the costs of protection are related to ability to pay, whereas most private voluntary health plans must use a flat rate which increases with the number of dependents. Thus, in a voluntary plan an individual with several dependents, but an income of only $2,400 a year, pays a higher premium than does a single individual with no dependents earning $4,800 a year. From a social point of view, this is not only undesirable, but unnecessary. And by applying the tested social concept of social insurance the Forand bill would adjust this inequity so that the $2,400-a-year man with several dependents would pay just half of the amount required from the single man earning $4,800 a year. Moreover, the cost of this protection would, under the Forand bill, be shared equally by the employer.

But I must say, honestly, that I need your advice on one point which troubles me. There is, I believe, considerable evidence that we have not yet solved the problem of good hospital utilization. Responsible hospital administrators and some members of the medical profession are concerned, I know, with the fact that present prepayment plans have sometimes resulted in an overuse of hospital facilities for relatively minor ailments. I hope there will be careful study of this matter, with some imaginative thinking, so that the beneficial purposes of the Forand bill will not be frustrated by the possible overuse of our critical short hospital facilities.

We are just beginning to understand the possibilities of what I believe you refer to as progressive patient care. In brief, as I understand it, its purpose is to put the right patient in the right bed by providing short-stay hostels for elderly patients undergoing examination but not requiring expert nursing; convalescent facilities for patients who have not recovered enough to return to their own homes but do not require full-time care; the development of out-patient geriatric clinics in close association with hospital departments of physical medicine, and to put more emphasis on home care programs.

Private nursing homes, I understand, have been increasing rapidly, usually without any formal affiliation with community hospitals, often with inadequate supervision, inadequate diets, no physiotherapy, and medical care only on the basis of immediate need. You know better than I do whether we have the kind of nursing homes we need to provide the nursing home care described in the Forand bill.

We need more experience with home-care programs, such as the one developed at Montefiore Hospital in New York City, under which the patient who no longer requires hospital care but needs continuing medical, nursing, and related services is transferred to his home while the hospital continues to supply medical service at any hour, social service, nursing care through the visiting nurse service, housekeeping service is necessary, and transportation for treatment at the hospital at greatly reduced costs.

We need to construct more chronic disease hospitals which would serve as centers for professional and public education, for research, for training professional and auxiliary personnel, and for the development of administrative leadership, as well as for the care of patients. Such hosiptals could be designed to provide rehabilitation, including therapeutic or curative workshops, and as a center for convalescents and home-care activities.

I hope that the public welfare legislation of the future will take account of some of these problems. And I hope that interest in building better nursing homes, and better chronic disease hospital centers can be aroused at the community level, because some of the legislation needed to help build the kind of medical plant I have described is already on the statute books in the form of the Hill-Burton hospital construction program.

Looking to the long-range future, with which I am especially concerned today, I would like to speak very briefly of the new problems and the new opportunities which will call upon your courage and imagination—and the courage and imagination of the Congress—if we are to build the kind of public welfare program which America deserves.

One of these problems arises from the increasing mobility of our people. Surveys by the Census Bureau show that 9 out of 10 Americans have moved at least once during their lifetime and that 1 out of 5 change their residence every year. They are moving west; they are moving from farms to cities; and they are moving from the large cities to the suburbs. Although social mobility is one of the finest aspects of American life, I do not need to tell you that it also creates some problems. This is an area which the Federal Government has largely ignored. Meanwhile, the vestiges of the Elizabethan poor laws which at this very time, are denying a full measure of aid and comfort, are taking their toll of many needy people.

Your proposal that the Federal Government should participate financially only in those assistance and other welfare programs which are available to all persons within the State who are otherwise eligible without regard to residence, settlement, or citizenship requirements would help to solve some of these immediate problems. But I think you will also agree with me that more cash alone will not do the job. We must also have more trained people to assist these unrooted and dispossessed families in the adjustments they must make by reason of their mobility. And, most important of all, perhaps, we must overcome a natural tendency at the Federal level in our prized State-Federal system of government, to overlook our responsibility for the rights of those modern pioneers who cross State lines in search of a better life.

In particular we must be concerned with the migrant agricultural workers—who are responsible for the full vegetable counters in our supermarkets. I am glad to know that the Honorable HARRISON A. WILLIAMS, Jr., of New Jersey is chairing a subcommittee of the Senate Committee on Labor and Public Welfare, which is conducting hearings on this important and complex problem. Moving from crop to crop to make a living, they often live in a shadowland which denies regularized schooling to their children, the rights of establishing residence so that they can vote and qualify for welfare services, or the kind of community life which most of us enjoy.

By far the greatest challenge to our social thinking of the future, in my opinion, can be stated, however, in just one word—automation. A recent study by the National Planning Association sees automation as the key to the greater productivity we need to meet the competition from Communist countries, as well as the "higher living standards and easier life that our people are demanding." But automation also bids fair to produce the kind of severe resettlement problems which plagued 17th and 18th century England following the enclosure movement. We can also anticipate that, over the next 5 or 10 years, the great changes of automation to come will produce a surplus of job-seekers and that, as this study points out, "not only individuals but entire communities may be bypassed * * * if automation makes it cheaper for industries to build whole new plants than to remodel exsiting ones." The study further states:

"Since the need for labor will not be so great, these plants can move away from areas

"Since the need for labor will not be so where the labor supply is large; and as nuclear power develops they will no longer be tied to existing power sources * * * whole communities may need assistance if their inhabitants are not to become victims of the age of automation."

Welfare planning for the future, therefore, must take account of the fact that industry, too, is increasingly mobile; that our present unemployment insurance structure is totally archaic under such circumstances; that even the much-needed Federal help for the general assistance program is only a stopgap measure in alleviating the need arising from these sweeping changes. It calls for programs for retaining of workers in the new skills of the age of automation and an increase in the number of teachers of these news skills; it calls for new concepts in community planning and for a better understanding of resettlement techniques and opportunities; and, finally, it calls for a reassessment of our social security, unemployment, retirement, and disability programs to eliminate the discouraging gaps into which so many of our workers fall.

Labor Secretary James P. Mitchell and Health, Education and Welfare Secretary, Arthur S. Flemming, have, as you know, been calling for the employment of older workers. Yet the Federal Government itself does very little to train or employ older workers. Without positive steps to enable older workers to find employment on a fair basis with other workers, these words of the Federal officials fall pretty flat.

Dr. Harry J. Johnson, president of the Life Extension Foundation, points out that other countries do not have our type of mandatory retirement programs because "Other nations do not feel they can face the industrial consequences of shelving a large segment of their most productive people when they are still able to work."

The chairman of the National Committee on the Aging, G. Warfield Hobbs, points out that half of the country's 9,000 scientists and 32,500 engineers over 65 are retired and he comments that "We talk of educating youngsters in science but we overlook those we already have."

At the present time, even if a Federal employee wants to work past his mandatory retirement age and is capable of doing so he finds that he cannot because of the narrow restrictions imposed by the very officials of the Federal Government who have been busily exhorting private industry to set an example in the employment of older workers.

Senator PAT MCNAMARA, chairman of the Subcommittee on Problems of the Aged and Aging, has been holding some very productive hearings in Washington. The subcommittee says, in its summary of expert views, issued recently, that—

"If a man has the misfortune to lose his job at the age of 45 or over, his chances of finding new employment are slim. * * *

"If the Federal Government does not pursue a policy of making possible full employment, or almost full employment, we will be wasting our human resources. This is both foolish and destructive. Older workers who are willing and able to work have a legitimate claim to employment, and have every right to governmental recognition of this claim."

Charles O'Dell, director of the department of older workers of the United Auto Workers, AFL–CIO, and formerly special assistant on older worker programs to the Under Secretary, Department of Labor, told Senator McNAMARA's subcommittee that "the Secretary was unwilling to contemplate legislative measures but was greatly interested in educational measures to do something for the older worker."

That is exactly the point I have been making.

To my mind, one of the most challenging aspects of this new age for our public welfare people and our legislators alike, is the prospect of increasing leisure time. The National Planning Association's study predicts that "the 3-day weekend, or the 3-month vacation" may be a reality within the next decade. It adds that this additional leisure, unless we learn what to do with it, may well tend only to increase the individual's "sense of insecurity * * * isolate him psychologically, create problems which he is unprepared to face and drive him to socially harmful actions." For, as David Reisman has held, "many Americans look on additional leisure as a threat, a problem, a burden, or hazard."

In contemplating these new problems let us remember the ringing words of Franklin D. Roosevelt when, in the face of similar problems he took the position that "the only thing we have to hear is fear itself." I hope our thinking is big, creative, and broad in its scope. For it may well be that we have somehow stumbled into an era which can produce not only fearful bombs, or rockets to the moon—but also can provide the means of combating those ancient enemies of all mankind—hunger and disease.

Those of us who carry the conviction that our people can be trusted—that they are mostly a decent, hardworking, law-abiding friendly lot of people if they have a chance to be—must look forward to the opportunities for a better life offered by this new age. Our concept of appropriate welfare measures has been remarkably expanded at this point in history—from the beggar waiting outside the castle; through "Christmas baskets for the poor"; through grocery orders and bundles of clothes on a more or less orderly basis; to the increased dignity of cash relief, and primary reliance on social insurance.

With Federal leadership, and with your sustained efforts and concern, I believe our concept of the appropriate scope of welfare programs will be expanded to include not merely the attainment of adequate food, shelter, and medical care, but also those other aspects of the better life which includes the right to live with meaning rather than merely to exist. On this note, I would like to close, as I began, with another quotation from Sandburg's "The People, Yes."

"The people so often sleepy, weary, enigmatic, is a vast huddle with many units saying:

"'I earn my living. I make enough to get by and it takes all my time. If I had more time I could do more for myself and maybe for others. I could read and study and talk things over and find out about things. It takes time. I wish I had the time.'"

College Daze

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Plainfield Courier-News of Wednesday, September 9, 1959. Because of the interest all of us have that our children will have the advantage of a college education, I was interested to note in this article what the National Defense Education Act is doing for these young folk. With the ever-rising cost of education which would certainly burden parents or perhaps even make it impossible for them to make a college education available for their children, it is heartening to know that more and more students are taking advantage of assistance offered through loans under this act.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLEGE DAZE

If you haven't seen a college bill in the last few years, you're in for a shock.

According to the National Education Association, college expenses doubled between 1940 and 1950 and will double again by 1960.

Today, the NEA tells us, it costs between $1,800 and $2,600 to send a teenager to a privately supported school and the tab for 4 years of undergraduate education can easily total $10,000.

Even live-at-home students attending public colleges spend an average of $625 a year, not counting clothing.

Because of this high cost of education more and more high school graduates and college students are expected to look for assistance from loans made under the National Defense Education Act of 1958.

On the basis of a review of loan fund applications made to the U.S. Office of Education, colleges and universities expect nearly 121,000 students to apply for loans under the NDEA during the 1959–60 school year. They are expected to apply on the average for $500.

Those seeking loans apply directly to the institution. The loan repayment period begins 1 year after the student has completed full-time study. The loan carries interest of 3 percent on unpaid balances over a 10-year period.

Without the help of these student loans, many young people desiring a college education but whose family cannot afford the full amount, would be unable to obtain this higher learning.

Testimonial to Hon. Charles A. Wolverton, Former Congressman From the First Congressional District of New Jersey

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. CASE of New Jersey. Mr. President, the people of the First Congressional District of New Jersey gave Charles A. Wolverton a memorable testimonial dinner earlier this year. Former Congressman Wolverton, the dean of New Jersey legislators, who served for 32 years in Congress, retired at the conclusion of the 85th Congress. Back in April, 1,500 of his friends gathered in Camden Convention Hall to thank him for his years of devoted service.

It is hard for me, who served with Charlie Wolverton for even a handful of these years, to believe that he is really gone. Former Congressman Wolverton will never say goodby to his people, to their problems, and to the needs of his area, no matter how many farewell dinners may honor him.

I ask unanimous consent to include in the Appendix of the RECORD an article from the Camden Courier-Post which describes this dinner, as well as a partial text of Charles Wolverton's remarks at this dinner.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Courier-Post, Camden, N.J., Apr. 16, 1959]

FIRST CITIZEN—1,500 HONOR WOLVERTON AT DINNER

(By James M. Neville)

The First Citizen of South Jersey was honored Wednesday night at a memorable dinner by 1,500 friends in Camden Convention Hall.

Charles A. Wolverton, 78, of Merchantville, the dean of legislators who served 32 years in Washington from the First Congressional District, said, "This is the first time I've had a testimonial dinner. I'll never have another, so here's my chance to talk."

Wolverton already had been given a painting of himself. He also received three plaques. His high achievements in the public interest had been cited by colleagues in the House of Representatives.

THANKS FRIENDS AT DINNER

"First, I'd like to express the feeling in my heart tonight, and my deep appreciation for all your attendance here.

"I'm indebted to you also for the honor and privilege you have accorded me to represent your district in the Congress of the United States, which is, numerically, the largest in the entire State, and I have served for the longest period in the history of New Jersey.

"The privilege which you have given me is enhanced by the importance of the times during which I served—32 years, nearly a third of a century—in the administrations of five Presidents—Coolidge, Hoover, Roosevelt, Truman, and Eisenhower.

"During the same time, I have served under seven House Speakers—Longworth, Garner, Rainey, Byrnes, Bankhead, Rayburn, Martin, and Rayburn again, then Martin and then Rayburn again."

SERVED IN VITAL ERAS

"The period between 1926 and 1958 was one of the most important, historically, in our Nation.

"Import because it registered a distinct change in many of our traditional policies of Government, particularly in the years following the depression of 1929.

"All this necessitated legislation, national and international, and created an intense program of scientific study and research.

"When we realize the magnitude of it all, is it any wonder that I contemplate the participation of my own membership in the Congress which permitted me to have a small part in helping the formation of such policies? I have a feeling of gratitude to the citizens of the district which embraces Camden, Gloucester, and Salem Counties for having me serve."

CLOSE CONTACTS WITH LEADERS

"My services have enabled me to have close contact with the leaders of other nations—Stalin, Nasser, Nehru, Prime Ministers, and Cabinet Ministers of practically all of the European countries, Near East, Far East, and countries of the Orient.

The former Congressman related an incident 3 years ago in Moscow during a reception he attended which was hosted by Molotov, then in high favor with the Soviet.

"As he approached me, he noticed I had a glass of tomato juice in my hand; laughingly, he said, 'Why drink that? Why don't you drink something like this?' and he pointed to the spirits or wine in his glass."

TELLS OF PLUGGING CAMDEN

"I replied, 'because I always have sober judgment when I drink tomato juice. And, furthermore, I drink it because we make it in Camden, the city from which I come.' Molotov then said, 'Oh, yes, Camden. You make many things there.'"

Wolverton said it was very pleasing to have this acknowledgment of Camden, along with many other similar experiences in foreign lands.

"And tonight, with this splendid demonstration of friendship upon your part, I am deeply touched. I feel overwhelmed.

"This is, indeed, a distinguished gathering. As I realize the character of the people who are here I feel a just pride. I honestly feel unworthy of it all. I can only say from the depths of my heart: I thank you."

PRAISED BY VAN ZANDT

An earlier speaker, Congressman JAMES E. VAN ZANDT, Republican, Pennsylvania, referred to Wolverton as "a distinguished American." The Congressman said that speaking at the dinner on behalf of his colleagues in the House for 21 years "is one of the highlights of my own congressional career."

"The curtain has descended on the legislative life of one of the greatest Members in the history of the House of Representatives," Representative VAN ZANDT stated.

"In his 32 years, his record of legislative accomplishments is almost unbelievable."

PROTECTED PUBLIC

"It includes the Securities Act of 1933 and subsequent laws pertaining to securities and the securities markets for the protection of the investing public. Also the Federal Power Act of 1935, the Federal Communications Act, the Natural Gas Act, the Civil Aeronautics Act, various railroad retirement acts, the Unemployment Insurance Act and the Transportation Act of 1940."

VAN ZANDT stressed the religious side of Wolverton.

"Charlie is a deeply religious man but never imposes his beliefs on others, nor condemns those who do not follow in the accepted pattern of a Christian way of life. He is my type of American."

LAUDED BY M'CORMACK

Congressman JOHN W. MCCORMACK, Democrat, of Massachusetts, majority Speaker in the House of Representatives, said the retired Congressman "is my dear and valued friend." MCCORMACK has served 31 years in the House.

"Charlie is truly one of the outstanding Americans in our time—one of the most trying in history. His perception, his courage and his refreshing independence has brought the respect of all who know him."

Harry W. Pierce, president of the Camden County Chamber of Commerce, in the opening remarks, said, "We are here tonight to honor our former Congressman, to show how much we respect him and love him and our deep gratitude for his many years of service.

"We welcome him back to take his place of usefulness in our community."

MANY TELEGRAMS RECEIVED

Pierce said a sheaf of telegrams had been received from friends far and wide of Wolverton, including special greetings from President Eisenhower, Governor Rockefeller, of New York, Governor Meyner, and Vice President NIXON.

Pierce, chairman of the board of New York Shipbuilding Corp., presented Wolverton with the chamber of commerce award plaque "for outstanding and distinguished citizenship who has given unselfishly in the development and growth of the community and its people."

A Courier-Post plaque award, with an editorial on Wolverton set in bronze was presented by James M. O'Neill, executive editor.

A third plaque award was presented by the pharmacists of Camden County "for interest in the advancement of the small businessman and Camden County" by Herman Rappaport.

A painting of the honored guest by Albert Sandecki, of Haddonfield, was presented by the artist.

Mrs. Dora E. Rose was given a dozen of red roses by Sam Fulton, toastmaster "from her many, many friends." Mrs. Rose served as secretary for Wolverton for many years.

The Reverend Donald C. Bakely gave the invocation. Miss Evelyn Rote sang the national anthem. Entertainment was provided by Mendel Tubis and his orchestra and Edward Roecker sang several songs.

EXTRACTS FROM ADDRESS OF CHARLES A. WOLVERTON, FORMER MEMBER OF CONGRESS, AT THE TESTIMONIAL DINNER GIVEN IN HIS HONOR AT CONVENTION HALL, CAMDEN, N.J., APRIL 15, 1959

Mr. Toastmaster, distinguished guests, and my friends, I am deeply touched and overwhelmed by this great demonstration of friendship from so many citizens from every part of the First Congressional District, and by the kind thoughts and friendly words that have come from so many distinguished friends by telegram and letter.

I honestly feel unworthy of it all. I cannot find words that will enable me to adequately express my feelings, nor my appreciation. I can only say from the very bottom of my heart, I thank you.

The citizens of this congressional district have honored me beyond my due. For 32 years they have given me the privilege of serving them in the Congress of the United States. If I have done well, then, I would like you to know that your many kindnesses, your many evidences of friendship, and your expressions of confidence throughout the years have been a constant inspiration to me to put forth my best efforts. I thank God that with the inspiration you have given, and the help that has come from Him, my service may have been of some help, even small, in promoting the welfare of the people of this congressional district and the people of our Nation in general.

And in expressing my appreciation for your attendance here this evening may I also express my very great appreciation to my long-time and close friend, the Honorable JOHN MCCORMACK, the distinguished majority leader of the House. No one knows better than I do what it has meant for him to leave his important duties and come this long distance to be here this evening. JOHN, I can never forget it. Your attendance this evening seals forever in my memory the genuine friendship that existed between us during all the years we have served together in the House. Although the center aisle of the House may have divided us in political affiliation, it has never separated us in our friendship, and often has not separated us even in our political thoughts and acts. Long life to you, JOHN. I trust that your past honors, which you justly deserve, will be but the forerunner of even greater honors to you in the future.

And, to you, JIMMIE VAN ZANDT, I likewise wish to express my deep and sincere appreciation for your presence here this evening and the kind words you have spoken. Your forceful and dynamic personality has always been an inspiration to me as it has been to the other Members of the House on either side of the center aisle. Your service to our country, both in times of peace and of war, make you one of the most distinguished Members of the House. Your courage and zeal in fighting at all times for the cause of right and justice to all has made you outstanding. We cannot have too many like you in the public life of this Nation.

And, now I wish to express to our distinguished former Governor Alfred E. Driscoll my appreciation for his presence tonight. I know of no man in private life more sought after as a public speaker. Even tonight before coming here he addressed a distinguished audience at the Einstein Medical School of Research in Philadelphia. He is always on the go, and, yet was willing to come here. I can truly say my heart leaped with joy when I learned he would be here and address us. There is no man whom I have met through my years of political activity for whom I have a higher regard. His honesty, integrity, and zeal in the common good should be an inspiration to all. He was a great Governor and as time goes on this fact will be more and more realized and acknowledged. Men of the calibre of Governor Driscoll are few and far between. We need today and always will need men of his stature and vision and sincerity in public life.

And, may I take time to express to my friends both in and out of the chamber of commerce, my appreciation for your efforts to make this occasion the great success it has been. Your task has been no easy one. There have been a myriad of details that had to be met and arranged. Each has been performed in faultless fashion. I wish I could thank each of you by name, but please realize each of you that I thank you each and every one most sincerely for the part you have taken. And, likewise to my friend, Eddie Roecker, and the musicians who have provided such delightful music, I thank you—you were wonderful.

Tonight, as I look out over this vast assemblage I see the men and women who are not only prominent, but useful citizens in their several communities. The men and women who recognize they have a responsibility toward their fellow men beyond being merely a good citizen. The men and women who do things to promote the general welfare.

This is, indeed, in the very fullest meaning of the words, a distinguished audience. I see here those who are active in the business, financial, industrial, educational, religious, and charitable activities of this Congressional District, and those who are actively affiliated with both political parties. As I realize the character of the people who are here I feel a just pride.

I am, indeed, indebted to each of you not only for your attendance here tonight but for the honor and the privilege you have accorded me to represent this district in the Congress of the United States. It has been a great honor and privilege to be the Representative of this particular district, the largest numerically in the entire State, and for a longer period than anyone else in the history of the State, a district that contains industries whose names are known throughout the world. As an illustration there comes to my mind an incident that occurred at a reception I was attending in Moscow, about 3 years ago, given by Mr. Molotov, who at the time was in high favor. As he approached me he noticed that I had a glass of tomato juice in my hand; laughingly, he said, "Why do you drink that? Why don't you drink something like this?" looking at his own glass of wine or spirits. I replied, "Because I always have sober judgment when I drink tomato juice. And furthermore, I drink it because we make in it at the Campbell Soup Co. in the city of Camden, from

which city I come." "Oh, yes, and you make a great many other things there in Camden."

The service that you have enabled me to have as a Member of Congress, has brought many experiences and close contact with the leaders in other nations that have been most rewarding: Stalin in Russia, Nasser in Egypt, Nehru in India, Prime Ministers and Cabinet Ministers of practically every European country, also in the Arabic nations of the Near East and Far East, and countries of the Orient, including Korea, and its President, Syngman Rhee, the leaders in Japan, the Philippines, Australia, New Zealand, the Presidents of South American countries and Africa, and, never to be forgotten, my personal interview and discussion with Pope Pius concerning communism.

The privilege which you have given me is greatly enhanced by the importance of the times during which I have served—32 years, nearly a third of a century. It has covered the administrations of five Presidents—Coolidge, Hoover, Roosevelt, Truman, and Eisenhower. During the same time, I have served under seven Speakers of the House—Longworth, Garner, Rainey, Byrnes, Bankhead, Rayburn, Martin, and Rayburn again, Martin again, and now Rayburn again.

This period of time between 1926 and 1958 has been one of the most important in the history of our Nation—important because it has registered a distinct change in many of the traditional policies of our Government. It constitutes an epoch in our national history.

Just to note a few: First, a recognition of Federal responsibility for the individual welfare of our people in time of national distress. The recession of 1929, with its disastrous results, was the cause that led to this great change of policy, which in the past had left the people to shift for themselves and business likewise. The WPA, often ridiculed, but yet a most necessary innovation to save our people from starvation; and then Federal guarantee of bank deposits. If this had been in existence at the time the depression broke, it would have prevented most of the financial distress that resulted. And then there were many kinds of financial aid to business and helpfulness assistance to low-income groups to promote home ownership. And then there was also all the regulatory legislation that brought control or regulation of monopolistic enterprises, legislation to improve health conditions, including Federal participation in the cost of constructing hospitals and other similar facilities. And with the advent of remarkable progress in science there came the necessity to regulate and control even the use of the air for communications by radio, television, and/or aviation. And now, following the discovery of atomic energy, there has come even the necessity to regulate and control of outer space.

All of this has necessitated legislation, national and international, and created an intense program of scientific study and research. When we realize the magnitude of it all, is it any wonder that as I contemplate the participation on that, my membership in the Congress had permitted me to have, even the small part, to help in the formulation of these policies, that I have a feeling of intense and everlasting gratitude to the citizens of this congressional district for having permitted me to serve in the Congress. I know no words that could adequately express my gratitude.

And tonight, with this splendid demonstration of friendship upon the part of the citizens of this congressional district, my cup of happiness is full and running over. I thank you—I thank you—and may God's richest blessing be with and abide with each of us and our beloved country in the days and years to come.

Final Report to the People

EXTENSION OF REMARKS
OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mrs. DWYER. Mr. Speaker, the 1st session of the 86th Congress was filled with contraditions.

Its overall record was uninspiring; yet, it produced some notable and far-reaching results.

The session lasted longer than any peacetime session in 19 years; yet, it put off until next year so much controversial business as to assure that the presidential election year of 1960 will be one of the stormiest in congressional history.

The majority party in both Houses of Congress began the session with majorities of almost 2 to 1; yet, most of the major legislative issues were shaped by a united minority party acting in concert with a great President and an aroused public.

KEEPING PEOPLE INFORMED

In this, my final report to the people, I shall summarize briefly the highlights of this congressional year as they appeared to me and as they concerned the people of Union County. I have found, in company with many of my colleagues here, that this yearend summary is a valuable way to carry out my promise to keep the people of Union County informed of the activities of their Representative in Congress.

For me, the session ended in a dramatic and significant way.

Shortly after 4:20 a.m., Tuesday, September 15, the final two rollcall votes were cast in the House—votes which, incidentally, kept my voting participation record at 100 percent.

In view of the arrival of Soviet Premier Khrushchev just a few hours later that day, the two bills—both of which I supported—were especially symbolic. One provided funds for the mutual security program, the military and economic foundation of free world strength, and the other extended the life of the Civil Rights Commission, a guardian of the rights and freedoms that belong to all our citizens, regardless of race, religion, politics, or national origin.

These votes, I hope, expressed for Mr. Khrushchev at least in part the American ideal of freedom at home and freedom abroad.

WELCOME TO AMERICA

Immediately after voting, I raced to Washington National Airport and caught a 5 a.m. flight to Idlewild International Airport—just in time to welcome to our country another arrival from Soviet Russia, this one a victim of the tyranny and oppression of nearly 16 years in a Siberian slave labor mine.

For me, it was a heart-warming way to conclude the congressional year, the final event in a yearlong struggle to reunite a Hillside father with the son he thought had died at the hands of the Nazi invaders of Poland in 1940.

Despite the happy ending, the legislative record of the first session was a hodgepodge of successes and failures.

The two chief successes—budget reduction and labor reform legislation—account for the characterization of the session as the year the people spoke and the Congress listened.

The year did not begin this way. The big Democratic majorities opened the session with promises of huge spending programs to lift the country out of a recession than even then—as President Eisenhower had predicted—was rapidly ending.

A BALANCED BUDGET

The session closed, nevertheless, with a balanced budget in sight and with Administration spending requests cut by about $1.3 billion, though the House earlier had trimmed an additional billion dollars which the Senate later restored.

The reasons: a vigorous economic recovery and record high employment which made many proposed programs unnecessary, hundreds of thousands of letters and telegrams demanding that wasteful spending be stopped, and a series of courageous Presidential vetoes which blocked excessive spending.

The same kind of public insistence accounted for passage, too, of an effective labor reform bill. Repeated disclosures of corruption, abuse of power and disregard of union members' rights made it impossible to ignore the public demand for legislation to clean up certain elements in the labor movement.

REMOVING THE MILLSTONE

The law signed by the President is a sound one. No decent union or honest union official will be hurt or handicapped by it. On the contrary, the constructive efforts of the AFL-CIO and many individual unions to make of the labor movement a more effective and responsible vehicle for the welfare of working people should be greatly strengthened. Racketeers and unprincipled bosses have hurt labor. This law will help free labor of a heavy millstone around its neck.

I hope that responsible labor leaders will think twice before making a political issue of the labor reform measure. The Landrum-Griffin bill was first passed by the House, 303 to 125, and later in modified form by the Senate, 95 to 2, and again by the House, 352 to 52. On all the votes, a majority of both parties supported the bill.

Moreover, union members and the general public will wonder about opposition to a bill which, for the first time, provides enforceable guarantees of members' rights. The future of American labor, after all, depends on the respect and cooperation it earns from the American people as a whole.

Among other accomplishments of the first session, all of which I supported, were these:

A good housing bill which will bolster a vital part of our economy.

HELP FOR THE NEEDY

A comprehensive rewriting of veterans' pension laws which adjusted benefits more closely to needs and provided benefits, for the first time, to needy widows and orphans of World War II and Korean war veterans.

Stronger Federal prohibitions against mailing pornographic literature and increased penalties were approved by the House.

An immigration law which will make it easier and faster for American residents to be reunited with their families.

A new cooperative health and hospitalization insurance program for Federal employees.

Increased appropriations for health and medical research in the fields of cancer, heart, and cardiovascular diseases—the principal causes of death—as well as other serious diseases. This bill also included funds for research into cystic fibrosis, a deadly disease that strikes particularly at little children. Since this is a matter of special interest with me, I worked closely with Appropriations Subcommittee Chairman FOGARTY to assure sufficient funds for this important work.

STATEHOOD FOR HAWAII

Statehood for Hawaii, our 50th State, which formally entered the Union on August 21.

Continuation of the Interstate Defense Highway program at a somewhat reduced level.

An increase from 3¼ to 4¼ percent in the interest rate ceiling on Government savings bonds—to help do justice to the small bondholders and to encourage this more desirable way of financing the national debt.

Provision for more loans for small businesses.

Increased price supports for already-glutted markets in wheat and tobacco—which an ill-advised Congress approved—were stopped by Presidential vetoes. I voted against these bills.

Both my committees were active this year. The Intergovernmental Relations Subcommittee, of which I am ranking minority member, continued its lengthy investigation of the waste and inefficiency in the billion-dollar programs involving sales of cotton and other agricultural surpluses.

We are hopeful that our recommendations will help save millions of dollars for American taxpayers.

MAKING A LAW

The subcommittee's most satisfying accomplishment was final passage of a bill, cosponsored by Chairman FOUNTAIN and myself, creating an Advisory Commission on Intergovernmental Relations. We are confident that the Commission can contribute greatly to improving Federal-State-local relations and placing them on a more logical, efficient, and economical basis. I found it most satisfying to have been a part of this legislation from its very beginning—our nationwide hearings, the drafting of recommendations and a bill, the joint House-Senate conference and then final passage in both Houses and on to the White House for the Presidential signature making it the law of the land.

The Banking and Currency Committee was just as busy. Two measures stand out: First, the passage of a housing bill that conformed, after two Presidential vetoes, with the major provisions I recommended in my minority report to the first bill, especially a new program of loans to encourage the construction of special low-rent housing for elderly people; and second, the authorization for United States participation in the Inter-American Development Bank, which will make loans to Latin-American countries in an effort to raise living standards throughout our Western Hemisphere.

UNION COUNTY IN WASHINGTON

The interests of Union County also figured in the record of the 86th Congress' first session:

After unnecessary delay, Congress granted consent to an interstate compact creating the New York-New Jersey Transportation Agency, which will provide for coordinated use of existing commuter facilities in the metropolitan area, and will prepare a long-range plan to help solve the commuter crisis.

Congress appropriated funds which, I expect, will complete the two huge navigation projects in our area: The deepening of the Arthur Kill Channel for larger oceangoing vessels, and the vertical-lift railroad bridge over the channel between Elizabeth and Staten Island. I supported both projects in testimony before the Appropriations Committee.

Progress was also made in meeting some of the post office needs of the county. The Post Office Department, at my urging, provided new buildings for Mountainside and Berkeley Heights, and approved a substation for the Bayway area of Elizabeth. In addition, I secured the personal cooperation of the Postmaster General for a review of Union County facilities and assurance of early action on the more important requirements.

REPRESENTATION DAY BY DAY

But most of the congressional business affecting Union County consisted of the day-by-day activities involved in representing a growing, diversified, articulate congressional district—one of the largest in the country.

Helping people through the often tangled procedures governing social security, veterans' benefits, immigration, the military services, and cooperating with labor leaders, union members, business and professional people and others in their relations with the Federal Government—this is a large part of a Congressman's work and the source of some of the most satisfying things I have been able to accomplish.

There are obvious gaps in this review of Congress' record. Those gaps tell the story of Congress' failures. And they foreshadow a 1960 session of crowded legislative calendars and intense controversy.

For instance, despite the pressing need to raise the unrealistic limit on earnings allowed for recipients of social security, and the dozens of bills—including my own—to increase these limits, no action was taken. Likewise, no education legislation of any significance was passed this year, in spite of Russian progress and our own very apparent shortcomings. Nor was civil-rights legislation passed, or an adequate bill approved providing necessary authority for long-term debt management.

The issue of nepotism in the staffing of congressional offices, which created such a scandal earlier this year, has not been satisfactorily resolved. And the question of excessive noise from jet aircraft at the Newark Airport, about which I testified before a House committee, must be settled properly.

COSTLY FAILURES

On two problems in particular congressional inaction was costly: the failure to revise the tremendously expensive and wasteful farm program, and the failure to help commuters by amending last year's Transportation Act to require greater consideration of the public interest before passenger trains are allowed to be removed.

Both these situations demand early attention from Congress next year. Fortunately, I have obtained assurances from the House Interstate and Foreign Commerce Committee that my commuter bill will be considered as soon as the Senate acts on Senator CASE's companion bill.

It is becoming all too obvious that further efforts to reorganize and streamline the Defense Department are urgent, and legislation to accomplish this has already been offered. Major tax changes will also be proposed.

No final action was taken this year on the fair trade bill; changes in the unemployment compensation laws were sidetracked, minimum wage legislation bypassed, and medical care for the aged postponed.

Some of these bills are essential; some very desirable, especially if conditions and budgets permit; and others are merely controversial.

All of them, however, guarantee a lively 2d session for the 86th Congress.

During the period Congress is in session, it is impossible to be in Union County as much as I would like. But I know you expect me to remain on the job here in Washington on a fulltime basis. As in past years, this session demonstrated again that anything less than fulltime attention is simply not enough. There is no time for other jobs or outside interests.

BACK AT HOME

From now until Congress reconvenes next January, I shall be spending most of my time in Union County, meeting and talking with as many of my constituents as possible, learning what you think about the great issues facing our Nation, studying local needs, and helping wherever possible with problems you or your neighbors may have with the complex Federal Government.

It has been a great privilege to represent you at the seat of our Nation's Government, and I deeply appreciate the confidence you have placed in me. I look forward to continuing this work next year; to exchanging ideas and views with you through your letters, your replies to our opinion survey, and my report to the people; and to serving you in every way possible, both in my Washington and Elizabeth offices.

One last word: there may be a few duplications in the lists we are using to send this report to you and your neighors. If you receive more than one copy, please overlook it; it is unavoidable. Also, if

you do not now receive my report to the people regularly, and wish to do so, please let me know. Thank you very much.

Colombia's Success Impresses U.S. Experts

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. SMATHERS. Mr. President, recently the New York Journal of Commerce carried a story written by Mr. John F. King of their Washington bureau which should have particular interest for all of us.

It tells of the financial success story now being written by the Government of Colombia. One year ago, the article says, Colombia's economy was in a shambles as a result of the disastrous rule of the dictator government of President Rejas Pinila, who was overthrown in 1957.

But today, due in part to an austerity program, the nation is financially stable. Full credit is due to the government of President Alberto Lleras.

The program has greatly reduced the nation's commercial debt outstanding in 1957 and has boosted gold and dollar reserves from $87 million to $207 million. Under the program, Colombia has become completely self-sufficient in sugar and cotton.

Most important, all of this was accomplished while the world price of coffee—on which Colombia must depend for 85 percent of her foreign exchange income—was in a long decline.

This is an inter-American success story in which we can all take pride.

I ask unanimous consent to have this article inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMIC REFORM MAY WIN U.S. CREDITS—COLOMBIA SUCCESS STORY IMPRESSIVE

(By John F. King)

WASHINGTON.—A number of financially troubled Latin American countries might profit from reading the economic success story being written by the Government of Colombia.

This is the view of U.S. international finance experts, well educated in Latin America's money problems of the past few years, who are now talking with a Colombian loan mission about new credits for the country's growing industry.

Just a year ago, Colombia's economy was a shambles, wrecked in 5 years of mismanagement by the dictatorial government of President Rojas Pinilla, who was overthrown in early 1957. Today, thanks to close observance of an austerity program drawn up by the International Monetary Fund, Colombia is back on its feet.

REAL WELCOME

The performance of the government of President Alberto Lleras has been so remarkable, in fact, that for the first time in recent memory Washington is genuinely welcoming an economic mission from Latin America.

The Colombian delegation, headed by National Bank Chief Ignacio Copete, is seeking development credits. But the development projects Colombia wants financed are not the grandiose programs usually associated with the term "economic development."

What the Colombians want is capital equipment, on shorter term credit, to maintain and upgrade existing transport, communications, and power installations, plus equipment for a modest expansion of Colombia's small but growing industry.

This is not to say Colombia has no ambitions for bigger undertakings. A blueprint for long-range development was drawn up in collaboration with the World Bank some years ago and it is still the hope of the Colombian Government that bolder steps in this direction may be made.

NEW CONCEPT

But Colombia's economic planning today has taken a new turn. Instead of hydroelectric projects and the like, the Government's planning centers on budget control and cost accounting.

The Government's new planning office, under the able direction of youthful Jorge Franco, who also is a member of the mission here, constitutes a new concept in Latin American government. Its aim is to bring an end to economic policy improvisation and make economic stability the hallmark of the country, not a rare and phenomenal occurrence.

The more spectacular type of economic development will be possible eventually, but priority goes to the more immediate goal of economic stability, Colombia's planners maintain.

Coupled with the moratorium on politics worked out last year between Colombia's two major parties just prior to the fall of Dictator Rojas. Mr. Franco's brand of planning has helped the country achieve the main objectives of stability over the past year.

CLEARING DEBT

It has seen the reform program of import, credit and foreign exchange restriction clear up all but $50 million of the $400 million in commercial debt outstanding in 1957 and boost gold and dollar reserves from $87 million to $207 million. Reserves were $300 million when the Rojas regime took over in 1953.

Moreover, the program has seen Colombia within the last year become completely self-sufficient in sugar and cotton, formerly big drains on Colombian foreign exchange, and resume its exports of cattle and textile products.

All this was done, it is emphasized, when the world price of coffee, which still accounts for 85 percent of Colombia's foreign exchange income, was in a long decline.

RESERVES HIT $210 MILLION

BOGOTÁ.—The Banco de la Republica (Colombian Central Bank) reported that its reserves climbed to $210 million as of August 31, 1959.

Official figures also showed a favorable balance of trade for Colombia totaling nearly $23 million.

Observance of National Wine Week—A Quarter Century After Repeal

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CLEM MILLER. Mr. Speaker, I should like to invite the attention of the Members and the Nation to National Wine Week, October 10 through October 17, which this year also marks the silver anniversary of the Wine Institute in California. It signifies also the passing of a quarter of a century since the repeal of prohibition.

Wine growing is an essential outlet for an important portion of the fruit crop of the Nation. There are 543 bonded wineries throughout the country operating in 22 States, and these crush about 1½ million tons of grapes each year. The principal growing areas lie through California, the Pacific Northwest, the States surrounding the Great Lakes, including New York, and in the Southeastern States.

Winegrowing is essentially a farmer's occupation, conducted by and for farmers. It is estimated that at least 75 percent of the fruit crushed by wineries is a direct farmers' operation, and that only about 25 percent is handled on a commercial, arm's-length basis. In their work our winegrowers are the most painstaking of dedicated taskmasters. Winegrowing is an important element in the farm economy.

California long has been proud of its table wines, the production of which is particularly important in the north coast district which I represent. The Sonoma-Mendocino area and the Napa Valley are two of the four fine dinner-wine districts linked around San Francisco, the wine capital of America. The others are the Livermore-Contra Costa and Santa Clara-San Benito-Santa Cruz areas. These areas are noted particularly for their red and white dinner wines but also produce excellent sparkling wines and appetizer and dessert wines. Last year these wine districts produced 49 percent of California's table wines and 1.2 percent of the State's dessert wines.

I should like to invite particular attention to the vineyards to the north because it is here that I am primarily concerned—in Sonoma and Mendocino Counties and in the Napa Valley. The vineyards lie in serene valleys stretching along both sides of the Redwood Highway. As in other coastal districts, many of the vineyards also form orderly patchwork on the hillsides—a situation suited particularly to the growing of premium quality red and white table wines. This picturesque region each year draws hundreds of thousands of visitors who come to enjoy the warm hospitality of the winegrowers.

Winegrowing is the oldest farm industry in California. For many decades it was the most important of the State's many agricultural industries. Today grape growing ranks second among all California crops and is our No. 1 food crop. The industry is rooted in the Spanish colonization by the Franciscan fathers. As each new mission was established, vines were planted as one of the first steps in transforming a wilderness into a civilization. Padre Junipero Serra, who established Mission San Diego in 1769 and planted wine grapes there, discovered that California was especially favored for winegrowing. Descendants of the wines planted by the missionaries still are bearing. Derived from Spanish grapes which reached California via

Mexico, the variety was called the Mission grape.

In the early 1830's choicer grape varieties were brought from Europe to Los Angeles. Within a generation wine growing was the principal industry of the Los Angeles district although the area has long since lost that association. But the great change from the Mission grape to finer, pedigreed European varieties occurred a generation later and was brought about by Agoston Haraszthy. This Hungarian nobleman, since called the father of modern California viticulture, first grew new European varieties in San Diego in 1849. In 1857 he established his Buena Vista vineyard near Sonoma, north of San Francisco. As did other immigrants with wine growing backgrounds, Haraszthy realized that California was a wine land of bright promise. Here was little of the excess of cold or sun, or hailstorms, or severe mildew, or other factors often troublesome in European wine districts. In 1861, under commission from the State of California, Haraszthy went to Europe and brought back more than than 100,000 cuttings of about 300 varieties of grapes, all choice wine types. Haraszthy's bringing of these parent vines was followed by the great modern expansion of the industry.

In 1874 the dread insect pest of the vine, phylloxera, struck a crippling blow to the California wine industry. Another virulent scourge wiped out vast vineyards in the Anaheim district of southern California and won the name Anaheim disease. Vineyards of that district were never replanted. But research learned that the European vines could be made safe from phylloxera by grafting them to hardy native American vine roots. Mass replanting was accomplished and the production for wine continued upward. In 1912 U.S. production of wine reached a preprohibition peak of 56 million gallons, with 90 percent of it from California.

Today, a quarter century after repeal and the rehabilitation of the vineyards, laid fallow by prohibition, the demand for California wines has more than doubled. Approximately 125 million gallons a year now are consumed. Much of this increase can be attributed to grower advertising and education programs carried on for the industry by the Wine Advisory Board and the Wine Institute with headquarters in San Francisco.

I am sure my colleagues will want to join with me and the people of my district and my State in our observance of National Wine Week, honoring the oldest farm industry in California.

Tribute to Walter Lee

EXTENSION OF REMARKS
OF
HON. JAMIE L. WHITTEN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WHITTEN. Mr. Speaker, the retirement of my good friend, Walter Lee, is a real loss to the Congress. Never have we had a more capable, affable, and conscientious man to handle the highly complex matters which come before the Judiciary Committee.

I first knew Walter Lee when he was an outstanding public official in Mississippi many years ago. Then, as now, he reflected credit to himself in his handling of any job. Through the years we have been close personal friends. While we lose him here, it is Mississippi's gain, for he and his wonderful family are returning to Jackson to make their home.

We wish for him many happy and fruitful years in that fine city, Jackson, in what to me is the finest State, Mississippi.

Tenth Anniversary of Dr. Konrad Adenauer's Assumption as Chancellor of German Federal Republic

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. WILEY. Mr. President, when the Chancellor of Germany, Dr. Konrad Adenauer, had arrived at his 10th year as Chancellor of the German Federal Republic, the President of the United States and Secretary of State Herter forwarded to him certain telegraphic messages. The telegrams express my own personal sentiments. I am happy to ask that they be inserted in the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

His Excellency Dr. KONRAD ADENAUER,
Chancellor of the Federal Republic of Germany, Bonn:

On the 10th anniversary of the assumption of your duties as Chancellor of the Federal Republic of Germany, I send most cordial personal greetings. On behalf of the American people I congratulate you for your historic contribution not only to the affairs of your own country but to those of the European community as a whole. Through your dedication and inspiring leadership, the Federal Republic has risen out of the chaos of war to a position of influence and responsibility in the community of free nations. Moreover, there has been developed in Germany a government guided by the principles of democracy and motivated by a sincere desire to play a positive role in the great movement toward European cooperation and integration. Your effective work in developing understanding between our two peoples has also been a contribution of major significance. It was a most valued and enjoyable opportunity to confer with you in Bonn recently, and I wish you many more productive years in the interests of your own country and those of the free world.

With assurances of my continued esteem and friendship,

DWIGHT D. EISENHOWER.

SECRETARY OF STATE HERTER'S MESSAGE TO CHANCELLOR ADENAUER

As you complete your 10th year as Chancellor of the Federal Republic of Germany, I wish to convey to your heartiest congratulations for a decade of fruitful endeavor for Germany and the free world. In the face of great odds you have guided the material and spiritual restoration of your nation on the path to peace and freedom. I wish you the best of health and strength. I shall continue to rely on your close and friendly cooperation as we seek to realize our common objectives.

The Fight in 1959 for Effective Water Pollution Legislation

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BLATNIK. Mr. Speaker, effective control and abatement of water pollution is essential if our Nation is to continue to grow and prosper. Once a plentiful resource, water has become and will become in the future more precious than any other single resource we have.

By 1980 reliable experts predict that the demand for water, caused by increasing population and expanded industrialization, will equal the available supply of 600 billion gallons a day. It is obvious that within the next two decades we will be unable to waste a single drop of the water supply which is so essential to the Nation's economy, public health and security as well. Polluted water, Mr. Speaker, is wasted water and we must therefore begin now to provide the necessary facilities to prevent this waste.

Three years ago a Federal grant-in-aid program was instituted providing $50 million each year to the Nation's communities to assist them in the construction of sewage treatment plant facilities. As a result of this program construction of such facilities has increased 75 percent over the average construction level of the previous 5 years. While this is great progress, we are still falling behind in sewage treatment plant construction at the rate of approximately $200 million a year. For this reason I introduced H.R. 3610, which would provide an additional $50 million a year for community grants-in-aid. Experience under the existing program shows that for every Federal grant dollar, 4 local dollars are invested in construction. Thus, the additional Federal aid provided for in my bill would boost construction to the level necessary to provide the needed facilities.

On June 9, 1959, H.R. 3610 passed the House overwhelmingly. Late in the session the Senate passed an amended version providing only $80 million a year for the next 10 years rather than the $100 million figure provided by the House. Because of the lateness of the session it was impossible to arrange a conference and so the measure will go over until next year, when early in the session the conferees will meet and iron out the differences between the House and Senate bill. Passage of this legislation by the House and Senate by overwhelming votes in both bodies indicates a recognition on the part of this Democratic Congress of the seriousness of the water-pollution

problem and an acceptance of the responsibility in meeting it. This was all the more significant, Mr. Speaker, when you consider the adamant opposition of the administration and the Republicans in Congress to adequate pollution-control and abatement legislation. While professing to be against water pollution, the administration and its spokesmen oppose every measure designed to solve the problem. They attempt to sidetrack effective legislation with unworkable gimmicks, such as the telephone-tax rebate scheme which actually was advanced by the administration subsequent to the repeal of the tax by the Congress.

In an almost Alice-in-Wonderland setting, Mr. Speaker, we heard administration and Bureau of the Budget spokesmen oppose H.R. 3610 and offer as an alternative to it a rebate to the States of a percentage of the telephone tax if the States would divert these funds to treatment plant construction, although the administration required no assurance from the States that the funds would be used for this purpose. This is not a new administration proposal, but it is almost unbelievable that they persist in advancing it after the telephone tax upon which it is based has been repealed.

Another roadblock gimmick advanced by the Republicans in the House, after even they rejected the administration's proposal, was the proposition that any Federal grants in the future must be contingent on a matching State grant. After what must have been a diligent search, the proponents of this proposition cited the Federal aid highway program as a precedent. They conspicuously failed to mention the Hill-Burton hospital construction program, the Federal-aid airport program, school construction in federally affected areas, slum clearance and urban renewal, and flood prevention and watershed protection programs, all of which provide Federal grants-in-aid to communities without the requirement of State matching grants.

This proposal is obviously a back door attempt to kill the existing Federal grant program by attaching to it a condition precedent which everyone knows has not been met in the past, and there is no assurance it will be met in the future. Mr. Speaker, in spite of outright opposition and outlandish counterproposals, the Congress was able to pass an effective bill. The details will be worked out as stated above and I want to assure you and the Nation that this Democratic Congress will not give up in its attempts to solve the serious problem of water pollution.

Report to the Voters of the 10th Congressional District of New York

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mrs. KELLY. Mr. Speaker, the 1st session of the 86th Congress convened and adjourns with war clouds engulfing the entire world. The density of the clouds fluctuated with the actions of the leaders of the Kremlin. As heavy and ominous as the clouds were with the appearance of the sputnik and lunik, and the Soviet moon shot, they increased with the overt, aggressive actions of the Soviets in the Middle East, the Far East, Tibet, Latin America, Central America, including Cuba, in Europe again with the Berlin impasse, and once more in southeastern Asia—Laos.

A diminishing of the war clouds followed appeasement of the comrades in the Ministers' meeting, a pending but never accomplished summit meeting, and finally plans for an exchange of heads of state.

Thus, it can be said with no exaggeration that Congress met and adjourns in one of the most trying times in the history of the United States.

The international outlook for the Democratic-controlled Congress was not made felicitous by the Republican-controlled executive branch of the Government. Congress convened labeled by President Eisenhower, in his role as leader of the Republican Party, as being controlled by political radicals, spendthrifts and gloomdoggiers.

Bear in mind that when Congress convened, President Eisenhower, in his state of the Union message, promised "a sensible posture of defense against the growing might of the Soviet Union," and in the next breath he warned we must "guard against feverish building up of vast armaments." The observing public saw Congress placed publicly between the horns of the dilemma.

Congress was faced with the problem of meeting the Soviet menace, of placating the administration in its request for the highest budget in peacetime, of grappling with a $9 billion interest on the national debt, of increasing the limit on the national debt, and of passing a Mutual Security Act. Domestic issues became secondary and/or dependent upon the cost of meeting the Soviet menace, balancing the budget and controlling inflation.

The entire policy of the Republican administration was in a state of fluctuation. A cooperative state of mind and action on the part of Democratic legislators was tried to the point of frustration. President Eisenhower requested legislation and then vetoed bills because they were too much or too little. Most of the bills passed to date have been cut below the President's recommendations.

The visit of the Soviet Premier is repugnant to me because no credence can be placed upon the word of a Mikoyan, a Kozlov, or a Khrushchev. The gain, if any, does not outweigh the loss of trust by our allies, the creation of more apathy and misinterpretation by Americans, causing a quasi-insecurity among free people everywhere, and the propaganda use this visit will be made of in Moscow and other capitals inimical to the U.S.S.R. All of this created confusion in Congress on legislation without positive leadership from the executive branch.

Adherence to the absolute moral principles upon which our country was founded should dissuade us from conferring respectability and legitimacy to the dedicated enemy of free men and free institutions.

The reversal of policy and the confused and confusing pattern of weak Executive leadership has, in effect, pulled the rug from under the Congress. Despite this background, the record of the 86th Congress, 1st session, has made history on the positive side of the ledger, thanks to a strong and dynamic Democratic leadership.

The total request for authorization presented to Congress by President Eisenhower was $80-odd billion. That which was finally appropriated by the Congress was over $78 billion. Congress reduced about $2,580 million from the President's request. In spite of this there will be a deficit of $12 billion. This does not include the near $8 billion interest on the national debt. In line with the same financial difficulty, the General Accounting Office which reviews all Federal spending is investigating the $60 billion to $125 billion reported obsolete surplus military material property of the armed services. The sale or relocation of this material should certainly cut back Federal spending in the years to come.

INTERNATIONAL

FOREIGN AID

Looking back over more than a decade of foreign aid, several major trends can be observed. A reduction in the mutual security program has been made possible by closer congressional scrutiny of the many detailed items that go into the foreign aid package, by more careful administration resulting from tighter ground rules written into the law, by the improved economic position of many aid recipients chiefly in Western Europe. These nations are able to carry all the costs of their economic development and almost all of their military responsibilities.

Within the program itself three major shifts in emphasis have taken place. First, the percentage of total aid that goes into nonmilitary—or economic—projects is greater. Military equipment can be shipped abroad very rapidly. But economic aid cannot be shipped. It must be transplanted through people and existing institutions. Adaptation to changing economic circumstances is relatively slow. Corresponding changes in social outlook, in values, and in institutions must be made if economic assistance is to have any firm roots. Although we now give aid in one or several forms to almost every country outside the Iron Curtain, it must be done at a rate that can be absorbed by the recipient. Hence, we have been moving into projects that are modest in their capital requirements.

A second shift has been away from outright grants of money to loans. The Development Loan Fund, created in 1957, is an instrument of our aid program that has made possible this change. The greater use of loans places on the borrower a responsibility for more careful planning of the use of the money and for devising means to repay the loan through improved tax systems. These loans are repayable in local currency. It is quite possible these repayments

made in local currency will be reloaned to borrowers in that particular currency.

Finally, and perhaps most significant for the future, is the fact that more of our aid is going to non-Western countries. The newly established Governments of south and southeast Asia and of Africa are receiving technical and economic assistance. The importance of this aid lies not so much in the amounts involved as in the fields of activity for which it is used. Chief among these are agriculture, education, and public health. This is the real grassroots approach that will lay the base for future economic development.

INTER-AMERICAN DEVELOPMENT BANK

In this session Congress took an important step toward contributing to the economic development of Latin America. It authorized U.S. membership in the Inter-American Development Bank.

This new hemispheric agency will make loans in Latin America for projects to supplement other sources of credit. It will also assist these countries in formulating development programs and in engineering projects. Its technical assistance will help these nations obtain capital from other sources as well as from the Inter-American Development Bank.

CANADA

In our greater concern with situations and countries overseas there has been a corresponding neglect of our relations with Canada. Yet Canada is one of our best customers and most important allies. Two years ago, Members of Congress undertook to correct this indifference and, as a result of the Coffin-Hayes report, I introduced in the House of Representatives House Joint Resolution 254, which became Public Law 86-42. This law authorized the participation of the United States in parliamentary conferences with Canada. A Canada-United States interparliamentary group was subsequently organized. I deem it a great privilege and honor to have been appointed by Speaker RAYBURN to be the chairman of the House of Representatives delegation on this important interparliamentary group. This is the first interparliamentary group in the history of the United States.

At meetings last June, we gave attention to defense efforts and to economic and trade problems. Among the more important of the latter that we discussed were oil, copper, natural gas, uranium, lead, and zinc. Questions affecting the boundary waters between the two countries were also considered.

It was not the purpose of the meetings to solve problems between the two countries. But we did educate each other in the dimensions of the problems and the political attitudes in both countries that affect solutions. All of us who participated gained a new insight into the importance of keeping problems between the two countries under constant study. I look forward to the meetings to be held in the United States next winter.

NATIONAL

NATIONAL DEFENSE

With Russia's recent announcement of a stepped-up military program, it is more important than ever for the United States to maintain its military forces, develop new and superior weapons, and to provide manpower for our Armed Forces. The Democratic Congress, recognizing the U.S. position of world leadership, authorized a defense program which not only meets the present need, but, from the economic viewpoint, curbs unnecessary spending. Under the defense appropriation, new emphasis was given to research and development and our missile projects. The question raised by many is the overemphasis on the deterrent power with a weakening of brush-fire capability.

The general defense appropriation was $39,228,239,000, in comparison to an appropriation of $39,602,827,000 last year. Allocation of funds were made as follows: Air Force, $17.2 billion; Army, $9.2 billion; Navy, $11 billion; operations of Department of Defense, $1.3 billion.

In order to maintain our Military Establishment at 2,520,000 men, the draft laws, including those pertaining to doctors, were extended to July 1, 1963, by Public Law 4.

Our future security, from a military standpoint, is to the greatest extent based upon missile development. During the last session of Congress a new agency called the National Aeronautics and Space Administration was created to coordinate and direct missile development. This agency is now in full operation and is doing everything possible to close the missile gap between the U.S.S.R. and the United States. At this session, under Public Law 45, the Congress appropriated $485,300,000 for the work of this agency in the coming year. The largest single item provided for is $70 million to be utilized for research into the problem of manned space flight.

Other laws enacted which relate to national defense and internal security are:

Public Law 149: Authorizes a $1.2 billion program of construction projects at Army, Navy, and Air Force installations here and abroad in accordance with our modified continental air defense plan.

Public Law 23: Provides $110 million for construction of modern amphibious warfare vessels and landing craft. This will permit greater utilization of new operational concepts developed by the Marine Corps.

Public Law 50: Under this law the Atomic Energy Commission is to embark on a $229.9 million new construction program. Much of this will be devoted to the civilian atomic power program.

Public Law 89: The Renegotiation Act was extended to December 31, 1961. Under the administration of this act excess profits on defense contracts should be recovered.

Public Law 155: Strengthens control of officer personnel of the Regular Armed Forces by providing for involuntary retirement.

Public Law 96: Extends to August 1, 1963, the special enlistment program provided by section 262 of the Armed Forces Reserve Act of 1952. This is the program which permits an 8-year enlistment by boys between 17½ and 18½ years of age, 6 months of which is active duty, the remainder being spent in the Reserve.

GOVERNMENT REORGANIZATION

By virtue of action of the 86th Congress, the territories of Hawaii and Alaska were admitted to statehood. This action overshadows all others in the area of governmental reorganization. The admission of the new States was long awaited and, I am sure, was welcomed by all. I am confident that both of the new States will take their place, with the other 48, in contributing and participating in the economic and social growth of the United States.

The Senate rule to close debate was amended to require a two-thirds vote of those present and voting, instead of two-thirds of the full membership. This important change will be most helpful in preventing extended filibustering when matters such as civil rights are being considered.

Public Law 238: Increased to $3,000 the limit on claims which the Government may settle administratively.

Public Law 209: Under this law an award known as the National Medal of Science was established. It is to be awarded to individuals making outstanding contributions to national security and public welfare.

NATIONAL ECONOMY

To meet the highest peacetime budget ever presented to Congress and at the request of the President, it was necessary to authorize a permanent national debt limit to a total of $285 billion. A temporary increase of $10 billion, making a total of $295 billion, was authorized to June 30, 1960. These increases were necessary to continue our defense and foreign aid programs without drastic and crippling reductions in national spending for roads, housing, and the general public welfare. The President's promise of a balanced budget has not been fulfilled. The Congress, however, in attempting to curb inflationary trends, made cuts in most of the financial requests made by the executive. This is but another example of this Congress' determination to take up the reins of leadership where they were dropped by the President.

There were no important changes in the income tax laws other than a new tax imposed on underwriting profits and investment income of life insurance companies.

The 52-percent corporate income tax rate and the existing schedule of excise taxes on alcoholic beverages, cigarettes, automobiles, parts and accessories were continued. There was, however, a reduction in the transportation tax from 10 to 5 percent and the tax on local telephone calls was repealed. Both of these changes will become effective June 30, 1960.

At the beginning of the session, the President requested a 2-cent-per-gallon increase in the Federal gasoline tax. The Democratic Congress found that our Interstate Highway program could continue with little or no increase in the tax. Under constant threat by the administration of discontinuance of highway construction, we had no choice other

than to yield and vote a 1-cent-per-gallon increase, which will remain in effect for 22 months, until July 1, 1961. Two billion dollars has been appropriated for Federal aid to highway construction for the fiscal year ending June 30, 1961.

PUBLIC WORKS

The President's second veto of the public works bill was the first of his vetoes which the Congress overrode. This worthy bill, which earmarks $24 million for improvements to New York Harbor and the Hudson River, is based on a minimum domestic spending level and will not have the inflationary effect claimed by the President.

More adequate airport facilities have been guaranteed by the passage of Public Law 72, which extends the Airport Act to June 30, 1961, and authorizes $126 million of Federal grants to States on a 50–50 matching basis. This is particularly important to modernization of airport facilities in the heavily trafficked New York area.

HOUSING

After two vetoes by the President, a compromise public housing bill was enacted. The bill authorizes expenditure of $1 billion, of which $50 million is earmarked for loans to aid housing for elderly persons. This excellent provision was one of those objected to by the President. It was only after a hard fight by the Democratic congressional leaders that the President consented to this provision. A total of 37,000 new public housing units are authorized by the bill.

SMALL BUSINESS

A bill to increase the lending authority of the Small Business Administration from $500 million to $575 million was passed by the House and the Senate. I was particularly happy to vote for this increase, since it has always been my feeling that small business is the backbone of our country.

CIVIL RIGHTS

In the closing hours of the congressional session, the life of the Civil Rights Commission was extended for 2 more years. While I had hoped for more affirmative action in this area, no civil rights bill reached the floor for a vote. In January I will fight for a broader civil rights program and expect that this will be one of the first orders of business.

VETERANS AND SERVICEMEN

Public Law 211: Increased non-service-connected pensions of World War II and Korean veterans and their survivors on a revised scale based on need.

Public Law 99: Extends for 2 years, to July 1, 1961, the privilege of free importation of gifts from servicemen abroad.

Public Law 239: Provides grants to aid totally disabled veterans to acquire specially equipped housing.

CONCLUSION

The responsibility of serving the residents of my district for the past 9 years has been a great privilege. My office is open 6 days a week and letters sent to my Washington office receive immediate attention. My address is EDNA F. KELLY, Member of Congress, Washington 25, D.C.

During such times as Congress is not in session and I am not out of the country on matters concerning my chairmanship of the Subcommittee on Europe of the House Committee on Foreign Affairs, I am available to see my constituents personally at the Madison Club, 739 Eastern Parkway, Brooklyn, on Monday and Thursday evenings.

Common Markets Abroad and Uncommon Problems for the United States

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, I recently read a very thoughtful article by Alfred C. Neal, president of the Committee for Economic Development, entitled "Common Markets Abroad and Uncommon Problems for the United States" which will be published in the forthcoming European-Atlantic Review.

Dr. Neal discusses the potential economic and political repercussions of the European Common Market, and the little free trade area, and the interests of the United States in these developments.

Dr. Neal believes that it is in the interest of the United States to ride with these developments through at least two steps: First, the establishment of an International Development Association as an adjunct to the International Bank for Reconstruction and Development—as Senator MONRONEY has proposed and as this Congress has approved; and, second, the development of the Organization for European Economic Cooperation—the OEEC—into an Organization for Atlantic Economic Cooperation—the OAEC.

Mr. President, I ask unanimous consent that Dr. Neal's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMON MARKETS ABROAD AND UNCOMMON PROBLEMS FOR THE UNITED STATES

(By Alfred C. Neal, president, Committee for Economic Development)

The contradictions imposed by international boundaries concern us more today than ever before. Any American could go out to an airport and, in a few hours—certainly fewer hours than it takes to get a good night's sleep—could be in any part of Europe. On arrival, he would be impressed by the fact that some of the major material symbols of American life, such as automobiles and refrigerators, were nowhere to be purchased. By and large, Europe still discriminates against dollar goods. At the same time, he could buy all of the Danish cheese and a lot of other things that we want which are not available in the United States except in limited quantities because the United States imposes quotas on these products.

In another few hours from Europe he could be in one of the underdeveloped countries of Africa or the Middle East where people are trying to live on less than $100 a year per person, about one twenty-fifth of the American standard. Here one encounters incomprehensible inefficiency in government, in communications, and disease and poverty on all sides. Underpopulated and overpopulated areas exist almost side by side. Yet overpopulated areas must develop faster than others even to maintain their existing standards of living. From Western Europe, one could in another few hours be in the heart of Soviet Russia where everyone is carefully educated to believe that the capitalist system will go down and the Communist system will triumph because capitalism must choke itself on the goods it overproduces. With these diverse and contradictory conditions so close to us, it should not be too difficult to see that international relations and foreign economic policies ought to be the concern of every citizen of America. Not only in my country, but in all of our free world, more thought should be given to ways in which the economic strength of the Western World can be better organized to produce a richer life, not for ourselves alone, but for the hundreds of millions who live in the so-called underdeveloped nations of the world.

The bulk of the free world's production and wealth, and most of its scientific and technological capacity is to be found in the North Atlantic countries—the United States and Canada, and the countries of Western Europe. But there is growing concern on the part of many observers that the strength of the Western World is threatened by the development of splits, both within Europe and between Europe and the United States. The impact of the Common Market is a case in point.

In the years immediately following the war the picture we had of Western Europe was an area devastated by war, whose major industries had been destroyed and which was threatened by communism from without and within. Ten years ago anyone who suggested that Europe would become a major industrial competitor of the United States in a great many lines would have been ridiculed. Anyone who suggested that the dollar shortage might be reversed and that the United States would become concerned about its capacity to earn foreign currencies would similarly have been ridiculed. Yet these things have happened.

Western Europe, with the aid of the Marshall plan, has not only restored its industrial base, it has greatly expanded and improved it. We have only recently become aware of the fact that in the last 10 years the countries of Western Europe have been growing at a faster rate than the 3-percent rate of the United States. German production has grown, for example, at an annual average rate of 8.4 percent; France at 5.8 percent; Italy at 5.5 percent. The rapid industrial growth of Western Europe has been paralleled by a similarly rapid increase in exports and a favorable turn in its balance of payments. The gold and liquid dollar reserves of Western Europe rose from $6.2 billion at the end of 1949 to $17.6 billion at the end of 1958. In the same period, the gold stock of the United States declined from $24.6 billion to $20.6 billion.

The recovery of Western Europe has been accompanied by the growth of international agencies, the latest of which is the European Common Market. This market contains as many people as does the United States, and will produce more than half as much as we do when fully operative. It is inherently congenial to the United States, which is the largest of the world's common markets, and its creation has been the objective of U.S. policy for many years.

But the Common Market's potential economic and political repercussions may be greater in the long run than those of the first atomic bomb. The world is already on the way toward eliminating many of the

senseless political barriers to trade and to other economic influences. A common market has been organized in Central America, the countries of South America are discussing or negotiating at least two common markets in their territory, and in west Africa numerous small states have been fermenting to form some kind of economic federation of their own. I believe that we should support vigorously all such movements that are of reasonable size and consistent with the GATT.

I believe that Americans should take pride both in the fact that Marshall plan aid was an indispensable condition for the recovery of Western Europe, and that Western Europe is moving forward without developing the kind of hopeless outlook which followed the First World War and which had so much to do with laying the conditions for the second one.

Another repercussion from the formation of the Common Market has not been so favorable. Britain, the Scandinavian countries, and other European members of the OEEC not included in the Common Market face a growing discrimination against their products which will occur as the level of tariffs within the Common Market is reduced, while the common tariff against outsiders is maintained. The proposal to establish a free trade area which would include both the Common Market and the outer countries has been rejected. As a result a little free trade area has been formed among the so-called "outer seven," comprising the three Scandinavian countries, Britain, Austria, Switzerland, and Portugal.

But the formation of the little free trade area creates in turn new problems of its own. It can be welcomed as a device which can lead to the same type of rationalization and expansion which is occurring within the Common Market. But the animus behind it is somewhat different. In the minds of many of the proponents it is not something which is good in itself, but only a move to offset the Common Market and to strenghen the bargaining position of the seven with the six Common Market countries. There is no question that there is a possibility of a split developing in Europe between these two groups.

In this situation, it is the United States which, I believe, can have a decisive influence. It is not in our interest to witness a widening of the split between the seven and the six. It is not in our interest to have the Common Market disrupted or destroyed. It is in our interest to have closer economic relations both between the seven and the six, and between both of these groups and the United States and Canada. The whole economic strength of the North Atlantic countries needs to be mobilized, not only to achieve the benefits of growing prosperity to themselves, but to counter the threat of the Soviets and to do the job that needs to be done in the underdeveloped world. Under these circumstances, I think that it is imperative that the United States take the initiative in using the authority granted by the renewal of the Reciprocal Trade Agreements Act to bargain both with the seven and the six in the common interest of all three groups. The discrimination exercised by the Common Market against all outsiders could be reduced as its common tariff is reduced. Our good intentions would be demonstrated and our machinery for negotiation would be improved if we were to join the OEEC and help to convert it into an Organization for Atlantic Economic Cooperation (OAEC) which would deal with all of the major economic problems of common concern to the Western World. Any conflict within the OEEC is a conflict in which we have vital interests sufficient to justify our intervention.

We should realize that the split in Europe is dangerous from the standpoint of our economic competition with the Communist world. We must realize too that, just as Europe needed our aid in the period of its own reconstruction, we now need Europe's aid in the further task which lies before us of developing the underdeveloped world. There is danger that the Common Market countries will concentrate their own foreign investments in their own associated territories and will thereby develop a new form of empire building (which I am sure the Russians will immediately label as a "new imperialism"). There is similar danger that Britain will concentrate its own foreign investments, and those of its associated countries in the little free trade area, in those parts of the world that are of special importance to Britain, particularly in the dominions and colonies. The underdeveloped countries of the world would look with suspicion upon any such development, and could not be expected to acquiesce in it.

These dangers would be avoided if the countries of Western Europe and of North America were to join in a new multilateral effort to aid the development of underdeveloped countries and were to pool a substanial amount of the government capital available for this purpose in some such organization as the proposed International Developed Association. If this were done, the recipient countries would realize that no strings were attached which were designed to further the national interests of the capital-supplying source. Nor would they feel obligated to invite Russian or satellite participation to maintain a pretense of neutrality.

The United States has another and more selfish reason for working to avoid the split in Western Europe and to bring about a combination of effort for development assistance. That reason is that we can no longer afford to do the job alone.

There are good reasons why the United States cannot continue to carry the most of the burden of economic development assistance. In the 10 years 1949 through 1958, the United States had a balance of payments deficit aggregating $14 billion; this amount we have lost from our gold stocks or have added to the dollar balances of foreign countries and international institutions. Very nearly the same amount has been added to the gold and liquid dollar assets of the countries of Western Europe. During most of this period the United States enjoyed a seller's market for its goods and of course carried the major burden of both economic and military aid to our friends and allies throughout the free world. We were at the same time exporting private capital at a rate proportionately greater than that of Western Europe, and this is expected to continue to grow. For the 2 years 1957–58 the deficit in our balance of payments averaged more than $1.3 billion, whereas the surplus of Western Europe amounted to almost $2 billion. While I would not predict disastrous consequences from a continuation of U.S. programs of economic aid, it seems obvious that the burden of supplying aid is now resting too heavily upon American shoulders.

Is Western Europe bearing its share of the burden of development assistance and capital export? The eight Western European countries most capable of sharing the burden—Belgium, Luxembourg, Netherlands, Denmark, France, Germany, Norway, and the United Kingdom—have a population about as large as that of the United States and a combined gross national production almost half as large as that of the United States (and considerably larger if corrected for differences in purchasing power). They have gold and dollar reserves equal to 60 percent of the U.S. gold stock. It has been estimated that these eight countries should, therefore, be able to export at least approximately two-thirds as much capital as the United States. This would mean that they should increase their own capital outflow to the underdeveloped parts of the world by about a billion dollars a year.[1]

I am not suggesting that the U.S. flow of capital to the underdeveloped parts of the world be reduced, but I am suggesting that the European flow might be increased. An additional billion dollars a year of investment from European sources would go a long way toward meeting the requirement for additional investment in the underdeveloped areas to raise their rate of growth from something that is unacceptable to something that represents real progress; that is to say, enough to double their per capita rate of growth.[2]

How might this additional aid from Europe be combined with American aid in such a way as to help to bring about greater unity among the North Atlantic countries? A mechanism has been proposed and has been favorably received both in this country and in England, and I hope that it will enjoy a similar favorable reception in other areas. It is to establish an International Development Association (IDA) as an adjunct to the International Bank for Reconstruction and Development.

We need this kind of concerted approach to prevent the burgeoning strength of the Common Market in Europe and the parallel development of the little free trade area from splitting Europe apart and from further dividing Europe from the United States. The initiative should come from the United States to strengthen the mechanism for negotiation by transforming the OEEC into the OAEC. Also, through creation of a broader organization, such as IDA, Western Europe could share more fully and more in proportion to capacity the burden of developing underdeveloped areas of the world. Force is given to this suggestion by the fact that the recent Atlantic Congress of the NATO countries in London recommended action along the very same lines.

---

[1] The U.S. nonmilitary government and private capital flow to underdeveloped areas alone amounts to $3.75 billion annually. Two-thirds of this amount would be $2.5 billion annually, and the present Government and private capital outflow of these countries amounts to only $1.6 billion. Therefore, the eight Western European countries could increase their capital outflow by, roughly, $1 billion a year. (See paper by J. Herbert Furth in "Freedom of Trade and Stability of Exchange" for U.S. delegation, Atlantic Congress, June 1959.)

Editorial Comment on Senator Symington's Proposal for a Foreign Service Academy

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. SULLIVAN. Mr. Speaker, in view of the widespread interest shown by Members of Congress in an article in This Week magazine by Missouri's Senator STUART SYMINGTON proposing the establishment of a foreign service academy to train our diplomats, I am sure the following editorials on the proposal appearing in Missouri newspapers recently

will similarly be of interest to the membership:

[From the St. Louis Globe-Democrat, Aug. 15, 1959]

LET'S SCHOOL OUR DIPLOMATS

Vice President NIXON told the Russian people in his formal address in Moscow he was amazed at the number of people he met who are studying English. "What we need are millions of American students who understand Russian," he said.

The neglect of foreign languages by Americans is in part behind the proposal of Missouri Senator STUART SYMINGTON to create a school for diplomats, a foreign service academy. It would be to the State Department what West Point, Annapolis, and the Air Force Academy are to our military security.

Fifty percent of our entire Foreign Service officer corps does not have command or even one foreign language, the Senator says.

Seventy-five percent of the new men coming into the Foreign Service cannot speak a foreign language.

The U.S. Ambassador to Moscow is our only such envoy assigned to a Communist country who speaks the language of the country in which he is stationed.

By contrast, 9 of every 10 Russians sent abroad speak and write the language of the country to which they are assigned.

These are harsh and astounding truths. If this situation persists it can only happen that we will continue to lose valuable ground in international influence and prestige.

In introducing his bill to establish the diplomatic school, Senator SYMINGTON warned that Russia's foreign representatives are better trained.

"Dedicated, intensively trained representatives are at work for the Communist cause throughout the world," he said. "We have not matched this effort either in size or degree of training."

The 4-year foreign academy course would admit women as well as future career diplomats who would become eligible for the more than 8,000 jobs overseas. From starting pay of $5,200 they could work up to top bracket salaries of $37,500.

The Nation is spending $40 billion a year to bolster our military defenses, more than $3 billion annually in foreign aid.

These expenditures are essential, and equally important is it that we spend a few million dollars training our official diplomats to understand the lapguage and culture of the countries we must deal with daily.

We have been far too casual and uncoordinated in our approach to this task. Some of our Government representatives have been the cause for embarrassment with their cocktail-and-canape approach.

The American way of life is a valuable commodity in need of the world's best-trained salesmen.

[From the Mexico (Mo.) Ledger, Aug. 13, 1959]

WEST POINT OF DIPLOMACY FOR THE COLD WAR

"If we are determined to remain a free people, we cannot continue to be indifferent to the energetic and effective Communist missionaries Moscow is now sending to the four corners of the earth. Every Communist revolutionary sent out to infiltrate, divide, and conquer must be matched by a free-world advocate of 'lasting peace through justice and law'—someone thoroughly trained in the language, the economy, and the customs of the country to which he or she is assigned."

The above is from an article by Missouri's U.S. Senator STUART SYMINGTON. It was published in This Week magazine. The article is in support of a bill the Senator introduced last January for the establishment of a foreign service academy much along the lines of West Point for the Army and other similar service schools.

The Foreign Service Academy should, like the service schools, charge no tuition.

Students would be selected on the basis of merit and required to take competitive entrance examinations. The Academy would prepare young men and women to serve in any of the governmental agencies which operate overseas.

The Russians are making a planned, determined effort to develop the most linguistically proficient diplomatic corps in the world.

SYMINGTON said that our programs are "uncoordinated and casual compared to the training efforts behind the Iron Curtain. It will take years to develop a comparable task force of trained American representatives. But we can and should begin that preparation now."

The Senator's suggestion seems to us to have merit.

Why not train for the cold war?

Today we have no such preparation.

Why not prepare the country to meet such trained men from other nations—especially the U.S.S.R.?

Certainly the bill should have the fullest considreation.

We believe in preparedness in this country. Too often it has been almost too late to prepare.

However, the cold war is with us. Russia will see that it continues as long as Russia feels it is profitable to continue it.

Why not meet the Soviet on its own "hearth" and not suffer because we lack vision and are not ready?

[From the Carthage (Mo.) Press, Aug. 6, 1959]

UNITED STATES NEEDS TRAINED DIPLOMATS

Missouri's junior Senator has come up with a solid suggestion which has more merit than 90 percent of the legislation passed by Congress.

Senator STUART SYMINGTON suggests the creation of a Foreign Service Academy—a sort of "West Point for diplomats"—to put a little steel and a little "smart" into our often sluggish and ill-trained Foreign Service. In an article appearing in This Week magazine, a Sunday metropolitan newspaper supplement, the junior Senator declares, "We now have three schools—West Point, Annapolis, and the Air Force Academy—which prepare our youth for a possible hot war. Surely, we can afford one which will equip them to serve their country in the cold war in which we are now engaged."

He suggests students be selected on a merit basis and be required to take competitive entrance examinations. The Academy, he says, would prepare young men—and women—to serve in any of the governmental agencies which would operate overseas. He urges the curriculum include not only basic college courses, but also instruction in the language, culture, history, and economy of foreign countries.

SYMINGTON embodied his plan in a bill, S. 15, which he introduced in the Senate last January 9. He accompanied the proposed bill with a thumbnail report on Russian activities in the field of diplomatic training.

The rumored presidential candidate told his upper House colleagues 1,000 young Russians are enrolled in the Soviet Institute of Foreign Relations, supervised by their Ministry of Foreign Affairs, in a 6-year study course. "As a result," says SYMINGTON, "9 out of every 10 Russians sent abroad read, speak, and write the language of the country to which they are assigned."

By comparison, SYMINGTON points out, American diplomats are inadequately schooled in the language and culture of the country in which they work, they live an isolated life among other Americans and are virtually uninformed about local developments around them.

"Asians," he says, "have a new phrase: the 'Golden Ghetto.' To them it means the plush places where American diplomats and other representatives hold their cocktail parties, dinners, and other social events." He cites statistics which show 50 percent of the entire Foreign Service Officer staff lacks a speaking knowledge of any foreign language and 75 percent of its new recruits are in similar shape.

"Llewellyn E. Thompson, U.S. Ambassador to Moscow, is the only U.S. Ambassador in a Communist country who speaks the language of the country to which he is assigned," SYMINGTON declares.

"The ultimate future of the world," the Senator concludes, "whether it is to be free or slave, will not be settled on the battlefields, but rather in the minds of men. Dedicated, well-trained representatives are at work for the Communist cause all over the world. We have not matched this effort, either in size or degree of training."

This writer agrees, mainly because of a frightening little personal experience. After successfully passing the tough battery of preliminary examinations for entry into the Foreign Service, he was not contacted for 6 months, then summoned peremptorily from his home in Carthage to Chicago for a final oral quiz before a three-man board of examiners composed of a full consul and two vice consuls.

The consul asked one question: He said, "What, in your opinion, is the basis of U.S. foreign policy as applied to Communist countries?" The writer began a detailed explanation of the factors which he believed influence American policy in Europe, in the Balkans, and in several sections of Asia, but the consul shook his head. He shook it several times and declared the whole thing could be summed up in one word. This floored the writer.

Finally, the writer asked, "Well, what is it, then?" The full consul drew himself up, glanced at his subordinates and announced smugly, "Containment."

The writer came home, figuring anybody who can sum up the U.S. view of the Red world in one word shouldn't be a mere consul—he should be God.

[From the Columbia (Mo.) Daily Tribune, Aug. 3, 1959]

A FOREIGN SERVICE ACADEMY

Senator STUART SYMINGTON spoke out in an article in This Week magazine on behalf of a measure now pending in the Congress, Senate bill 15, which would provide for the establishment of a national academy to train young men and women for the Foreign Service. When he introduced the measure last January 9, Senator SYMINGTON said: "The ultimate future of the world, whether it is to be free or slave, will not be settled on the battlefields, but rather in the minds of men," and there has been much in the international picture since that time, particularly in the last few weeks, to support that statement. In Moscow, in Geneva, and elsewhere around the world, day by day, decisions are being made which will affect the future of the whole world for many years to come. We work with frantic speed and the expenditure of billions in treasure to build our defenses for tests which may never come, but we do little to prepare our future representatives at world conference tables for negotiations which we know are inevitable—which even now are underway.

We have, as the Senator points out, three academies, the Military Academy at West Point, the Naval Academy at Annapolis, and the Air Force Academy at Colorado Springs, to train future leaders for the three military

services. His bill, Senate bill 15, contemplates establishment of a fourth, a foreign service academy, tuition free and with entrance based upon competitive examinations, for young men and women who wish to prepare for the Foreign Service. In addition to the basic college course, it would offer instruction in the language, culture, history, and economy of foreign countries—a background to provide intelligent communication and understanding of the nations with which we have to deal.

The cost of this move toward international understanding and peace would be trivial compared with what we are spending for education for war. We agree with Senator SYMINGTON'S summation of the problem in his magazine article. He wrote: "If we are determined to remain a free people, we cannot continue to be indifferent to the energetic and effective Communist missionaries Moscow is now sending to the four corners of the earth. Every Communist revolutionary sent out to infiltrate, divide, and conquer must be matched by a free world advocate of lasting peace through justice and law—someone thoroughly trained in the language, the economy, and customs of the country to which he or she is assigned. Tomorrow is too late. We must start today to train our people to merchandise the most valuable commodity in the world—the American way of life, with its individual dignity and its investment in freedom."

Progress of Mental Health Treatment in Nebraska

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HRUSKA. Mr. President, the care and treatment of mentally ill is one of the chief health problems and concerns in America. It is in this area that large expenditures of funds and talent are being made.

Happily, much progress is being made. One of the outstanding examples thereof is found in the State of Nebraska, which embarked upon a meaningful and effective program about 10 years ago.

It was my privilege as chairman of the county commissioners to have participated in the beginnings of this program. It required the cooperation of a great many officials and agencies including the University of Nebraska, the board of control, the County of Douglas, the U.S. Public Health Service, the medical profession, and a host of others.

The program was directed to providing early and concentrated treatment, and at the same time to train skills at all levels to enable achievement of that program.

According to U.S. Public Health reports, my native State of Nebraska stood second in the Nation in reducing the number of patients confined in mental hospitals. In 1955 the patient population in Nebraska mental hospitals stood at 4,800. Last year it was down to 4,200. This splendid record was excelled only in our neighbor State to the south, Kansas.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD an editorial in the September 14, 1959, issue of the Omaha World-Herald setting out the high spots of this splendid, promising achievement.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIX HUNDRED FEWER PATIENTS

For many years the patient population in Nebraska's mental hospitals crept upward at the rate of about 100 a year. No end seemed in sight, and no solution—except the building of more additions to the three hospitals.

In the early 1950's, the State embarked upon a program of intensive treatment, rather than mere custodial care, for the mentally ill. This led to the opening, late in 1954, of the Nebraska Psychiatric Unit, on the grounds of the University of Nebraska College of Medicine in Omaha. The unit was designed to coordinate the work of the mental hospitals, to screen many of the patients scheduled to be admitted, and to provide early and concentrated treatment in many cases.

The results of the program are now apparent.

In 1955 the patient population in Nebraska mental hospitals stood at 4,800.

Last year, according to reports of the U.S. Public Health Service, this was down to 4,200.

According to U.S. Public Health Service reports, Nebraska stood second in the Nation (Kansas was first) in reducing the number of patients confined in mental institutions.

Had the old rate of increase continued, Nebraska would now have 300 more, rather than 600 fewer, mental patients in its hospitals, so the total reduction might be stated at 900.

Since it costs about $1,000 a year to keep a patient in an institution, Nebraska is making a saving of $900,000 a year in custodial cost. This, of course, is not the whole story. Where the breadwinner in a family is confined, the public often must support a family as well.

The dollar saving, of course, is not the most important one. How much the Nebraska program has paid off in alleviating human anguish cannot be measured.

The program is only well underway. Further gains may be expected. But the people of Nebraska may well feel proud of what has already been accomplished.

Amphibious Demonstration Landing at Erie, Pa., July 22, 1959

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a report of an amphibious demonstration landing at Erie, Pa., July 22, 1959, in connection with the opening of the St. Lawrence Seaway and the now historic Operation Inland Seas under the direction of the U.S. Navy.

It was my privilege to accompany Rear Adm. E. B. Taylor, U.S. Navy, commander of Task Force 47, on the U.S.S. *Willis A. Lee* and witness part of the demonstration.

The U.S. Navy marked the opening of the St. Lawrence Seaway with its now historic Operation Inland Seas by directing a naval task force of 28 warships and 7,500 men into the Great Lakes during the month of July 1959 for amphibious assault landing demonstrations and port visits. In command of Task Force 47 was Rear Adm. Edmund B. Taylor, U.S. Navy, aboard the destroyer leader U.S.S. *Willis A. Lee*—DL–4.

It was fitting that the seaway's opening should be celebrated by a visit of sailors, marines, and ships of our Navy. This was the first appearance of U.S. warships in the lakes, since Commodore Oliver Hazard Perry built and launched his own ships on the spot in 1813. The opening of the Great Lakes has created a tremendous inland sea of some 75,000 square miles and in effect extended the U.S. coastline by more than 3,000 miles.

An amphibious operation, one of the most complicated military maneuvers, is defined as "an attack launched from the sea by naval and landing forces embarked in ships and craft, involving a landing on hostile shores." The organization which conducts such an operation is called the amphibious task force.

For the demonstration landing at Erie, Pa., on July 22, the amphibious task force commander was Capt. R. B. Derickson, Jr. U.S. Navy, commander of amphibious squadron 8, embarked in the attack transport U.S.S. *Cambria*—APA 36. With the task force commander in his command ship was the landing force commander, Lt. Col. W. E. Antley, U.S. Marine Corps, in command of the U.S. Marine Corps 2d Battalion, 6th Regiment of the 2d Marine Division.

Many months of planning went into the operation leading up to the demonstration on Erie's Presque Isle beach. Early in the spring of 1959 Navy and Marine officers visited each port of call in the Great Lakes, speaking with civic leaders and port authorities. Captain Derickson and Lieutenant Colonel Antley met with the mayor of each city that had been selected for an amphibious demonstration.

Simultaneously, officers and men of underwater demolition unit 2, more familiarly known as frogmen, operating from the high speed transport U.S.S. *Kleinsmith*—APD 134—and, from a submarine, were conducting underwater reconnaissance missions for intelligence purposes. Accurate hydrographic information of the landing beaches prior to landing is essential. This includes the beach slope, type of bottom, location of natural and manmade obstacles, mines, surf conditions, and existing currents. This information was passed to beachmasters, boat coxswains, and commanding officers of landing ships. While operating in beach surf zones the frogmen were able to gather other vital information regarding the location of coastal defense and antiboat guns, "enemy" fortified installations in the

immediate beach vicinity and the accessibility of the beach for tracked and wheeled vehicles.

As a result of the visits made in the spring of 1959, five cities were chosen for amphibious assault landings: Chicago, Milwaukee, Cleveland, Erie, and Rochester.

For the assault demonstration, seven ships provided by the amphibious force, U.S. Atlantic Fleet, which is commanded by Vice Adm. George C. Towner, U.S. Navy, landed 1,500 marines of the 2d Battalion, 6th Marines, from Camp Lejeune, N. C. To provide realism to the landings, hypothetical military situations were developed. Five small independent countries, bordering on the Great Lakes, friendly with the United States and Canada, were tottering from internal disorders created by anti-Western rebels. Each of the five countries had asked for U.S. help.

The problem at Erie, the country known as powershovelland, was to rout the enemy and return control of the city to its citizens.

With H-hour approaching, the transport group of the task force arrived off Erie's Presque Isle beach and prepared to land the landing force. Meanwhile ships of the gunfire support group and aircraft from the landing force aviation group continued last minute bombardment which theoretically had been taking place for days. The landing site was systematically bombarded to destroy specific installations, defenses, and troop concentrations which would interfere with the landing.

On the shore, immediately behind the enemy held beach, some 30,000 spectators had been gathering since the previous evening to witness the historic amphibious assault.

About 3,000 yards off the beach, the attack transport U.S.S. *Cambria*—APA 36—the command ship of the amphibious task force, commanded by Capt. E. C. Finney, U.S. Navy, stood by to debark her troops. Her troops capacity is 1,386 men, or 1 Marine battalion. Captain Derickson directed the operation from *Cambria*.

Lying just to seaward of the *Cambria* the attack cargo ship U.S.S. *Oglethorpe*—AKA 100—commanded by Capt. C. W. Flenniken, U.S. Navy, began her primary mission of delivering the marine heavy equipment to the landing beaches. This ship's amphibious lift capacity is 9,755 tons.

On either side of *Cambria*, two landing ships tank, U.S.S. *Terrebonne Parish*—LST 1156—commanded by Lt. Comdr. E. E. Sullivan, U.S. Navy, and U.S.S. *Suffolk County*—LST 1173—commanded by Lt. Comdr. P. E. Lowen, U.S. Navy, prepared to launch amphibious vehicles loaded with marines, through their huge bow doors. Also in the task force were the landing ships dock U.S.S. *Donner*—LSD 20—commanded by Comdr. Homer Tolivaisa, U.S. Navy, and the U.S.S. *San Marcos*—LSD 25—commanded by Comdr. J. J. May, U.S. Navy. The LSD's have a large well deck which is used to transport preloaded troop equipment in landing craft. The craft are launched through the ship's stern by flooding the well deck. This is known as ballasting down. On their afterdeck the LSD's have a helicopter platform from which two troopcarrying helicopters can be operated.

Directly off the beach about 2,000 yards the seventh ship in the amphibious task force, U.S.S. *Kleinsmith*—APD 134—commanded by Lt. Comdr. P. A. Schwemley, U.S. Navy, acted as base ship for underwater demolition team personnel, the frogmen who conducted underwater reconnaissance and demolition missions. She also marked the line of departure which was the seaward end of the boat lanes.

An underwater demolition team boat from the *Kleinsmith* approached the beach with swimmers on a mission of searching out and destroying underwater and beach obstacles which might interfere with the approach of landing craft. Using evasive tactics to avoid enemy gunfire, the UDT boat utilized a rubber boat tied alongside for casting the frogmen. Each swimmer carried several packs of high explosives used to destroy obstacles on the beach.

After planting their explosive charges, the frogmen swam seaward for pickup by boat. Each man was snared by a recovery loop attached to the speeding boat. This maneuver calls for the utmost in precision timing and physical strength.

While the frogmen carried out their part in the operation, a squadron of A4D Sky Hawk jet aircraft from Marine Air Group 14, Cherry Point, N.C., maintained a protective air patrol over both the task force and landing beach.

As the UDT boat returned to its ship, landing vehicles tracked—LVT's—loaded with marines, prepared to form the first wave to hit the beach.

In order to further prepare the beach area for landing, destroy enemy defenses, and neutralize the defenders, a simulated tactical atomic bomb was detonated over the beach. The planners had settled on an airburst in order to accomplish maximum effect and preclude the possibility of creating residual radiation which deny the beach and surrounding area to our troops. The bomb was delivered by the smallest of all atomic bombers, the A4D Sky Hawk, on a low altitude bombing maneuver. These maneuvers are known as over-the-shoulder or loft bombing and were developed to enable high speed aircraft to deliver weapons from low altitude to escape enemy radar, and to afford the pilot and aircraft a reasonable chance to get away from the effects of the atomic blast.

Following the A-bomb explosion, HUS marine helicopters, in vertical assault, began lifting assault troops from the flight decks of two dock landing ships. Continuous waves of helicopters landed marines behind the enemy shore defenses. Others helo-lifted vehicles, equipment, and supplies ashore.

During normal vertical assault operations, HUS helicopters operate generally from an amphibious assault ship, an LPH. The LPH is designed to transport and operate helicopters, to provide servicing and maintenance facilities for them, and living accommodations for that portion of the battalion landing team based aboard. The HUS can also operate from many other types of amphibious ships such as the LST and LSD used in the landing at Presque Isle.

The first wave of marine landing vehicles tracked personnel—LVTP 5—hit the beach according to plan just 45 minutes after the invasion began. These amphibious vehicles swim at 6 knots and their tracks provide them with the means to ride over partially submerged reefs and obstacles offshore. On land an LVTP can travel at 30 miles per hour and traverse obstacles which would normally stop wheeled vehicles. They are provided with .30-caliber machineguns and are capable of carrying 35 fully equipped troops. Overhead cover keeps the seas and spray out, and gives protection from flash and radiation of atomic weapons.

The second wave, consisting of landing craft vehicle personnel—LCVP's—dropped their ramps and discharged their troops on the beach. The marines advanced rapidly, taking advantage of such meager cover and concealment as the beach afforded. An enemy pillbox which had not been destroyed by bombing and naval gunfire opened fire on the invading troops. An officer of the landing force signaled for a flamethrower attack on the pillbox, and in seconds it was destroyed.

Wave after wave of landing craft surged shoreward, carrying first the assault troops, and then heavy equipment including tanks and bulldozers. The newest and most powerful antitank weapon, the ONTOS, sped from a landing craft into the surf and onto the beach. In addition, LCU landing craft disgorged marine M–48 tanks into relatively deep water along the beachline. These tanks can wade through about 8 feet of water when prepared for this type operation. The M–48 tank mounts a 90-millimeter gun and weighs less than 50 tons. Two machineguns: a .30-caliber machine gun mounted coaxially with the 90-millimeter gun and a .50-caliber machinegun on a cupola mount for use against ground and air targets add to its firepower.

Last to come ashore was a utility landing craft—LCU—with a Marine Corps Honest John rocket and launcher. The Honest John rocket is the longest range artillery weapon used in the Marine Corps, propelling a 2½-ton projectile over 15 miles. It is simple in design and simple to operate. It has considerably more battlefield mobility than conventional artillery and one round can deliver on a target the demolition effect of hundreds of artillery shells.

With the arrival of the Honest John, the landing was completed. Having established their beachhead, the marines set up a command operations post and informed the amphibious task force commander that the beach was secured.

With the scheduled waves on the beach, the nonscheduled waves commenced their landing, followed by the general unloading of logistic support, rations, ammunition, gasoline and oil,

and other material necessary to maintain the landing force on the beach.

Naval activity on and immediately seaward of the beach is heavy and must be controlled by a coordinator, the beachmaster and his beach party team. He is a naval officer trained in boat control, ship to shore communications, and the various forms of liaison which direct the amphibious operation from water to land. This is the final link in the Navy's chain for getting the marines ashore.

Included in the beach party team at Presque Isle were 30 sailors of Beachmaster Unit 2 from the naval amphibious base, Little Creek, Va., who brought to the beach such traditional naval skills as visual signaling, seamanship, and boat handling, salvage and repair. Landing ships and craft were constantly on the move bringing in additional troops, supplies and equipment. They landed at designated off-loading sites marked by range markers and flags and when safely unloaded retracted from the beach to reload in the transport area.

To assist him in controlling this traffic, the beachmaster was in communication by radio, semaphore and flashing light with the boat group commander, primary control vessel, and ships in the transport area. By means of these communications, landing ships and craft with their embarked troops and equipment were beached at the right place and at the right time.

Attached to the beach party team was a salvage section composed of 1 officer and 12 sailors of the amphibious Seabees. It was their job to salvage damaged and swamped landing craft during the operation, in order to keep the beaches clear for oncoming boats and landing ships.

The beachmaster and his beach party team with its varied skills is prepared to assist in beach defense if required. Every man is combat equipped and trained in basic landing force tactics.

The amphibious task force at Presque Isle demonstrated its capability to prepare the beachhead with naval gunfire, air bombing, rocketing and strafing, prior to landing the landing force. It then supported the force ashore with air and naval gunfire; and finally provided continuous logistic support during the entire amphibious operation.

The demonstration at Presque Isle was an example of the balanced fleet concept of the Navy. Combatant ships to carry the offensive war away from the United States and to the shores of the enemy; amphibious ships to transport and land the landing force and to maintain them at the objective; fleet aviation to protect the task force and provide close air support to the landing force; and landing forces of Marines, armed, trained, equipped, and ready to be committed to preserve the peace we have fought so hard and long to win.

Although a campaign of peace and good will, history will record Operation Inland Seas as a naval operation ranking in significance with Commodore Perry's actions in Lake Erie on September 10, 1813.

To paraphrase Commodore Perry—we have met the people of the Great Lakes and we are proud to have had the opportunity.

The Public Works Veto

EXTENSION OF REMARKS
OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. ELLENDER. Madam President, my attention has just been called to an editorial by Mr. David Lawrence in a recent issue of U.S. News & World Report. That editorial is so biased and contains so many inaccuracies that in my humble judgment an answer is required.

Madam President, I ask unanimous consent that the pertinent portion of that editorial be placed in the RECORD, together with a reply which I will prepare.

There being no objection, the pertinent portion of the editorial and the reply were ordered to be printed in the RECORD, as follows:

IRRESPONSIBLE GOVERNMENT

(By David Lawrence)

By overriding the President's veto of a bill to provide more than $1 billion for various public works projects, Congress in the last few days has dramatized for the Nation the irresponsibility of our present-day Government.

Many meritorious provisions are contained in this particular bill, but 67 projects are included which have never been passed upon by the Bureau of the Budget or given the necessary study by the Army Engineers, who usually examine in advance all such proposals. The President pleaded in vain that these 67 projects be eliminated now and examined later.

Why, then, did more than two-thirds of the Members of both Houses of Congress vote to enact the bill anyway?

Only because selfishness apparently reigned supreme, as considerations of local politics seemed to replace the courage that statesmen ought to exhibit in dealing with the national interest.

Worst of all, however, the country was given an exhibition of disorderly government—a species of legislative anarchy.

Time and again Congress has felt the "lure of the pork barrel" as Members from one section are bludgeoned into voting for bills that benefit another section in order to get support for their own projects.

The remedy, of course, is to amend the Federal Constitution to permit the President to veto any item in an appropriation bill so that it would require a two-thirds vote to enact into law any single provision to which the Executive, as the representative of the national interest, takes exception. New Jersey, for example, has such an article in its constitution, and it is working well.

This reform has long been advocated by Senator HARRY BYRD, of Virginia, Democrat, and many other experienced legislators. But it doesn't seem to catch the fancy of the modernists or the so-called liberals who prefer the reactionary practices of the past.

The record of the two parties, moreover, on the public works bill tells a story of the failure of the majority party in Congress. Thus, the Democrats in the House voted 260 to 5 in favor of the measure, while the Republicans voted 116 to 20 against it. In the Senate, the Democratic majority likewise voted to override the veto.

That's the way the two major parties lined up on the issue of fiscal responsibility and orderly government.

REPLY TO MR. LAWRENCE

I was much disappointed to read the editorial by Mr. David Lawrence in a recent issue of U.S. News & World Report entitled "Irresponsible Government." The first portion of that editorial dealing with the action of the Congress in overriding the President's veto of the public works appropriation bill displays what in my judgment is a threefold lack of knowledge on Mr. Lawrence's part of the subject matter about which he was writing.

The principal fields in which Mr. Lawrence's homework is deficient are (1) The program itself. That is, the objectives, accomplishments and present posture; (2) the 67 individual projects that were the subject of the veto; and (3) primary responsibility in this field, that is, the President vis-a-vis the Congress.

This year as in previous years, the Senate Appropriation Committee's reports and labor debate on the bill discuss the overall program and the urgent necessity for the continuation of the program on a long-range, well-planned basis.

Of course, Mr. Lawrence is entitled to his own views as to whether or not the Federal Government should participate in such programs as resource development. But to my surprise, this question is not even considered by Mr. Lawrence. In fact, he says, "Many meritorious projects are contained in this particular bill, but—," and then he launches into an attack on the 67 unbudgeted new starts.

The point he completely misses is the fact that most of the meritorious projects to which he refers were in fact started by the Congress in previous years—just as these 67 projects are being started this year—and were the occasion for sharp rebukes of the Congress at that time by the President. It is apparent, then, that next year when the President recommends funds for the continuation of these 67 projects they will have reached a new plateau and will themselves be classified as meritorious under Mr. Lawrence's reasoning process.

What is more, Mr. Lawrence would lead the reader to believe that the 67 unbudgeted projects have never been presented and passed upon by the Bureau of the Budget or given the necessary study by the Army Engineers who usually examine in advance all such proposals.

In this contention Mr. Lawrence has made two grievous errors: (1) That was not the reason for the President's veto. He should have read the veto message. (2) With respect to the 52 Corps of Engineers projects in the bill, in each and every case the Corps of Engineers testified as to an engineering capability for construction, which means that these projects had been given the necessary study by the corps. Also in connection with the authorization of these projects the appropriate reports of the Corps of Engineers were referred to the Bureau of the Budget and to other interested Federal agencies in accordance with procedures existing at the time of submission of the respective reports. Each of the 67 projects has been studied by the Corps of Engineers or the Bureau of Reclamation, as the case may be, and considered by the legislative committees of both Houses of the Congress, or has been specifically authorized in a law signed by the President. By and large, planning funds for these projects were recommended by President Eisenhower and the Bureau of the Budget for planning, either in the current or prior fiscal years.

I repeat: If Mr. Lawrence had read the President's veto message he would have found that the question raised was entirely a matter of timing rather than of the merits of the projects.

Before discussing the justification in this particular case I think it is interesting to note that the Congress has always reserved

to itself the field of internal improvements. This is especially true of waterway improvements. The Congress acts in this area under its commerce, war, Federal property, and general welfare powers. Indeed, the Supreme Court of the United States has said: "It is for Congress alone to decide whether a particular project, by itself or as a part of a more comprehensive scheme, will have such a beneficial effect on the arteries of interstate commerce as to warrant it. That determination is legislative in character." (*Okla. v. Atkinson*, 313 U.S. 508, 527; 1941.)

In connection with the Senate's consideration of the second public works appropriation bill, I provided the Senate with a critique of the President's veto message. It is surprising that Mr. Lawrence did not acquaint himself with the facts in this case before undertaking his editorial.

I would not expect him to read the 3,200 pages of testimony taken by the Senate subcommittee of which I am chairman over a period of several months prior to its decision on this bill. I do not suppose he even glanced at the last hundred pages or so which are devoted entirely to testimony by the Corps of Engineers with respect to unbudgeted new starts recommended by Members of Congress and outside witnesses. Nevertheless, he sets himself up as some sort of authority in this field.

If we had felt that he had the time to review this testimony or any portion of it, he would have found a detailed justification for every project. In each case he would find that the engineers testified that they could economically and efficiently use at least the amount of money provided in the vetoed bill.

Mr. Lawrence seems to take the position that the President alone should make the decision as to whether or not there should be any new projects and to make the individual selection of such projects as may be recommended.

Certainly if Mr. Lawrence intended that any serious study or consideration be given to (a) a determination of whether there should be new projects, or (b) which ones should be started, he does not really contemplate that the President would do this job. He has in mind the delegation of such authority to some bureaucrat in the Bureau of the Budget or other branch of the executive department who is probably totally unfamiliar with the problems involved.

He refers to the overriding of the veto as a "species of legislative anarchy." Certainly Mr. Lawrence has a better understanding of our Government than is implied in that phrase.

Under our Government the President has the responsibility of submitting an executive budget to the Congress. The Congress has the constitutional responsibility of examining and approving or modifying the recommendations of the President.

It was certainly within the President's constitutional authority to veto the public works appropriation bill or any other bill. It is also within the constitutional prerogative of the Congress to reconsider the bill in the light of the Presidential veto.

If Mr. Lawrence now believes that the Congress must approve every proposal submitted by the President his philosophy has changed completely from the days when he criticized the dictatorship of President Roosevelt.

If the Congress is to be accused of anarchy because once in 6½ years they override a Presidential veto, one could easily conclude that in Mr. Lawrence's opinion a considerable saving could be accomplished by eliminating the legislative branch of the Government and turning the workings of our Government over to a nameless, faceless group of bureaucrats who would rule our country by executive fiat, beyond the reach of private citizens.

Public Power a Yardstick of Fair Electricity Costs for All America

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WOLF. Mr. Speaker, I am shocked by the propaganda campaign for private electric power companies have been carrying on in nationally circulated magazines.

A recent advertisement asks the question, "How much is public power costing the people of your State?"

The answer to this query is quite simple: Nothing. Federal funds invested in the development of our national hydroelectric resources are not costs charged to the American taxpayer.

Before any such project is approved by the Congress, it must pass rigid examinations which prove that benefits to be derived will exceed costs. They are, if you please, our Nation's investments in the full use of our natural resources, which in every case are self-liquidating from the sale of wholesale electric power.

Such projects produce electricity at wholesale costs which are less than half those the power companies formerly demanded. They are also a competitive influence, a yardstick by which the American people are able to measure the fair costs of electricity, even outside the areas of Federal power development. This competitive influence spreads like the ripples from a stone dropped in a pond. All America now benefits in some substantial degree from lower rates created by this competition.

I should like to rephrase the power companies' question and ask, "How much is propaganda advertising costing America's independent electric light and power companies, and how much is it costing their rate-paying consumers?"

The costs of a national advertising campaign designed to discredit our national resource policy and indirectly to question the integrity of all Members of Congress who during the past half century have supported our great Federal power program, are not so easy to determine.

When the Federal Power Commission rapped the knuckles of a group of 76 power companies last July 15 for including the costs of politically inspired propaganda advertising in their retail power rates, it listed the contribution made by each of the companies.

These companies paid a whopping $1,286,083.15, or an average of nearly $17,000 each, for just the 1957 advertising campaign. How much has the 1958 campaign cost? And how much is the 1959 campaign costing?

The answer, based on the 1957 figures, would be millions.

I submit that the power companies should not be denied the right of freedom of expression. Let them have their say. I would like to see them build their business and promote their own services by positive, constructive advertising. But, so long as they engage in a campaign which nurtures doubts and fears in the mind of the American people then I want to see these millions spent from their own funds, and not handled as operating expenses which are deducted from income for income tax purposes on the one hand and added to their consumers' electric bills on the other.

Aggressive Secularism Seen Undermining Nation

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. BEALL. Mr. President, during the recent annual meeting of the American Bar Association in Miami Beach, His Excellency John J. Wright, bishop of Pittsburgh, Pa., delivered a most challenging and thought-provoking address.

This address was presented at the red mass which was held in conjunction with the meeting and which was attended by approximately 1,500 registrants, including Justices of the Supreme Court of the United States, high officials of the Federal and State Governments, and leading lawyers of this country.

An account of Bishop Wright's remarks was printed in the Voice, the publication of the diocese of Miami, and I ask unanimous consent that this article be reprinted in the Appendix of the CONGRESSIONAL RECORD.

There being being no objection, the article was ordered to be printed in the RECORD, as follows:

AGGRESSIVE SECULARISM SEEN UNDERMINING NATION

The solemn gathering for the red mass, offered for the members of the bench and the bar, permits me to serve as spokesman for those who bear witness to the law of God in speaking to those who are privileged to write, interpret, or apply the law of the land.

There was a time in our country when any dichotomy between the law of God and the law of the land was rarely real and never intentional. It was assuredly never as systematic as developments under the influence of aggressive secularism have sometimes made it seem.

Quite the contrary, those who bore witness to the law of God were wont to preach and to pray for enthusiastic, wholehearted obedience to the law of the land, because in so doing they were logically and loyally defending the civil corollaries of their sacred teachings.

At the same time, those whose public duties bound them to the enactment, interpretation, and enforcement of the law consciously sought to promote piety and virtue, not merely to define the limits of the law's negative interest in these, and did so convinced that thus they best served the civic common good and the rights and needs of human personality adequately considered.

PRUDENT REALISM

Our forefathers, for reasons of prudent realism, provided in their constitutions for

the separation of the organized church and the organized state; but their idealism, even in temporal matters, was informed and inspired by the Judaeo-Christian tradition, and especially by the influence of Revelation as transmitted by the church; and so there is reflected in the basic laws which they wrote a blend of divine faith and human wisdom, a happy medley of the hopes of earth and the will of heaven.

The U.S. Supreme Court, speaking by Mr. Justice Brewer, on one occasion declared in remarkably direct terms the religious, indeed, the organized Christian character of the American tradition within which the law of the land became an effort by positive human legislation to apply the broad precepts of the law of conscience and the law of God, unto the service of virtue and the perfection of personality.

The Court said: "If we pass beyond these matters to a view of American life as expressed by its laws, its business, its customs, and its society, we find everywhere a clear recognition of the same truth. Among other matters, note the following: The form of oath universally prevailing, concluding with an appeal to the Almighty; the custom of opening sessions of all deliberative bodies with prayer; the prefatory words of all wills, 'in the name of God, amen'; the laws respecting the observance of the Sabbath with a general cessation of secular business and the closing of courts, legislatures, and other similar public assemblies on that day; the churches and church organizations which abound in every city, town, and hamlet; the multitude of charitable organizations existing everywhere under Christian auspices—these and many other matters which might be noticed add a volume of unofficial declarations to the mass of formal utterances that this is a Christian nation."

IMPORT OBSCURE

So far the words of the Court; nor is their import obscure. Without prejudice to the strict religious tolerance that obtains for all faiths, without disparagement of the notable influence on our national life of the devout members of other faiths; this Nation was considered in its inspiration and its life a Christian Nation.

The traditional habits of mind and attitudes of our people, as well as their institutions and laws, were those which have been developed under the dominance of the Christian faiths, embryonic in the promises made to Israel, born together with the church on Pentecost 2,000 years ago, and coming to maturity with a strength so vital that it communicated itself to the cultures of those peoples who once made Europe great and America possible.

The men who most contributed to the early building of our Nation feared God. They did so with a holy and a wholesome fear, and because they did they wrote into the preamble of the constitution of my own native State, typical of that of many, devout words of homage to their Creator, with a recognition of their dependence on Him and an explicit prayer for His direction in the mighty task of building their Commonwealth.

FOUNDERS FEARED GOD

They feared God, and so they did not talk glibly of a mere freedom to worship God, a freedom which they had scant intention of exercising or implementing. Rather, they wrote in the second article of their Constitution words of right, but also of duty. They said: "It is the right as well as the duty of all men in society publicly and at stated seasons to worship the Supreme Being, the great Creator and Preserver of the universe."

Such men feared God. They would have found unintelligible the suggestion that there is and need to be no connection between the law of God and the law of the land, between personal morality and civic public virtue.

Every American who walks in their tradition and who is in his right mind, acknowledges that morality and legality, like church and state, have separate areas of competence, separate formalities and separate sanctions; but the legislators, justices and lawyers who fashioned our basic legal traditions would have been appalled by the contention, now so often, so glibly, and so effectively advanced, that such separation means divorce of the law of the land from the law of God, and that religious morality and civic virtue spring from totally distinct and completely separate, if not mutually antagonistic, sources.

LAW OF THE LAND

Nothing could be further from the mind of the men who wrote the basic laws of our States, the Founding Fathers who placed the Bible, God's law, on the very rostra where they took their oath to defend the law of the land. They would have had no trouble defining blasphemous or vicious as applied to efforts to represent them as indifferent to the relation of civil obligation to moral duty, the law of the land to the rule of reason and the rule of reason to the law of God.

They would have resented as fraudulent the current kind of censorship by exclusion, thought-control by silent, carefully editing, reflected in a paperback edition which purports to offer collegians and others the basic thought of Thomas Jefferson and yet edits out all the characteristic references to God, to virtue, to morality and to the blessings of religion which the author of the Declaration of Independence made so frequently.

Fortunately the bench and bar are not yet without men who dare—and the word "dare" is needed—to speak in the spirit and accent of the founders and fashioners of our legal heritage, as did that Protestant judge on the west coast who recently braved the wrath of the new secularists, and incurred it, by suggesting from the bench that a Catholic boy would improve his regard for the law of the land by increasing his respect for the law of God and his consequent attendance at Sunday mass.

INSURGENT SECULARISTS

The Catholic bishops of America have drawn the fire of the insurgent secularists, and some of their own, because of their defense of the traditional American concept of the sovereignty of God over church and states alike, the concept of the necessary relation between all ultimately valid laws and the postulates of the law of God.

Sometimes criticism of the Catholic bishops for their opposition to the spirit of secularism has come from surprising, even disappointing, quarters. But equally often, there is consoling evidence that in the appeal for the spiritual philosophy of the Founding Fathers, Protestants and Catholics can and do speak as one. Nor are they alone.

For example, when the Catholic hierarchy issued its collective pastoral on the damage of secularism in the national life, Dr. Eugene Carson Blake, an executive of the Presbyterian Church in the United States, made it clear that his coreligionists, whatever their positions on other and secondary matters, would stand together with us in what he called the "common fight against the inroads of humanistic secularism and the attacks of atheistic communism" which would "undermine the spiritual foundations upon which our freedoms, civilization, and our culture necessarily rest.

STANDARD OF MORALITY

Those foundations have always included the recognition that there are not two standards of morality. There is only one. It is God's standard. That standard is the norm and rectitude, righteousness, and justice. That single standard covers all man's relations to God, to himself and to the world about him.

It applies to every conceivable situation in life—in the home, in business, in the school, in the political field, or in the field of entertainment. The thoughts of men are many; the will of God is one—and so by its very nature, God's standard precludes that duplicity which not only tempts man to live his life on two levels, one of morality, the other of legality, while beguiling him into thinking that this can be done without any compromise of moral principles.

Such a two-faced way of living explains the scandalous anomaly evident at times in our national life of paying lipservice to God while failing to honor His claims in daily life. Of such a way of life, the God is neither Jehovah nor Jesus Christ; it is Janus—and we do well to pray earnestly and resolve mightily that we will always be at one in repudiating the two-faced god of the pagans.

That God's standard has disappeared more and more from our national life is due, as the Catholic bishops and the Presbyterian moderator both bear witness, to that totalitarian secularism and practical atheism which rule out all idea of the sovereignty of God.

Against such lamentable pretensions we must bear, in season and out, uncompromising witness to God's dominion over all the works of His hands, ourselves and our societies included. We must be vigilant and prompt to affirm the sovereignty of God and His place in human affairs wherever opportunity presents. Where there is talk of the service we owe anything less than God, we must recall the principle by which St. Joan resolved every question pertaining to rival loves and loyalties: The Lord God must be first served.

TEMPORAL AFFAIRS

The undermining of the standard of God's law in temporal affairs has been further hastened by the denial or neglect of the primacy of the spiritual, with a consequent debasing of human personality and degrading of human society. Ours is in large part a technical civilization, a know-how rather than a know-why civilization, and, therefore, one in which material and mechanical values inevitably tend to dominate thought and action. Excessive emphasis on know-how to the exclusion of speculation on know-why have produced the cult of the body, the predominance of the material, the worship of the gadget, an indifference to the spiritual, and a repudiation of the moral.

We may note this in professional discussions, especially those pertaining to sociology, medicine, and politics. Take, for example, the question of social disease which touches on all three. It offers an obvious example of how medical treatment on the material level alone, scientific techniques of know-how without reference to moral considerations of know-why, are woefully inadequate as means to the protection or the perfection of persons.

Obviously in the case of the treatment of social disease, the problem is never purely scientific—and neither can the solution be. These actions and the offenses involved are never merely legal questions; they always include moral elements that are at the heart of the matter.

NEOSECULAR APPROACH

And yet, in Social Medicine, a publication of the New York Academy of Medicine, I read this significant paragraph typical of the neosecularist approach:

"Not long ago health administrators thought that if only some excellent curative agent were available to treat venereal disease

cases, the problem could be solved fairly promptly. Now penicillin is providing more satisfactory treatment than the most sanguine might have dared hope, and yet we find that instead of diminishing, the venereal disease rate is rising. Recently the venereal disease director of one of our best State health departments said that he is convinced that the problem is much broader than that of treatment alone.

"There must be a concerted assault on all aspects of the situation if effective control is to be secured. Treatment must be pushed as completely and carefully as possible. There must also be an attack by all community agencies which can help to remove conditions leading to promiscuity. Sex education must be improved and decent recreational opportunities made available. Home ties will have to be strengthened, prostitution repressed, and intensive efforts made to rehabilitate socially those now engaged in prostitution and perversion."

MORAL CONSIDERATIONS

Now what all of us, you and I, should find discouraging, what, as a matter of candid fact, we should find downright dishonest in this paragraph, as in the whole report, is the studious avoidance of the use of the word "moral." There is talk of "family relations," "prostitution," numerous other notions all involving morality, moral codes, moral judgment, moral relations, moral questions—but a careful and surely not accidental omission of the word "moral." The omission is significant and I am afraid it is symptomatic. It is also fatal, fatal not merely to morality, but in final terms, to the work, prestige, and interest of medicine, sociology, and law.

It exemplifies that repudiation of the primacy of the spiritual which is the unhappy byproduct of a know-how without know-why civilization, and of the effort to divorce the laws and procedures of the land from the law and the providence of God.

It should be our common concern to give the lie to any such pretense of the independence of valid legal philosophy from moral philosophy, and divorce of valid human law from the ultimate law of God. For all human laws, whether ecclesiastical or civil, have their source in God's law; otherwise they are meaningless. All human sanctions ultimately depend for their force and their meaning on the sanction of the conscience that is sensitive to the law of God.

The appeal to that conscience must be made by both the teachers of the law of God and the practitioners of the law of the land or all law is in peril. So intimately bound up with one another are the laws of the land and the law of God, that he who mocks the one, undermines the other—while he who serves either becomes the noble servant of both.

NOT TWO STANDARDS

The spiritual foundations upon which Western civilization rests have always included the recognition that there are not two standards of morality, the bishop stressed. There is only one. It is God's standard.

"This standard," he said, "precludes that duplicity which not only tempts men to live his life on two levels, one of morality, the other of legality, but beguiles him right into thinking that this can be done without any compromise of moral principles.

"Such a two-faced way of living," he said, "explains the scandalous anomaly evident at times in our national life or paying lipservice to God while failing to honor His claims in daily life. Of such a way of life, the God is neither Jehovah nor Jesus Christ; it is Janus—and I pray that we will always be as one in repudiating the two-faced god of the pagans."

Highlights of Congressional Activities of the 86th Congress, 1st Session

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

THE NEW CONGRESS

Mr. WATTS. Mr. Speaker, the convening of the new 86th Congress on January 7 saw the division between the parties more pronounced than it has been since the early days of the Roosevelt ian era—the New Deal. In the House of Representatives the division was 282 Democrats to 153 Republicans; in the Senate 62 to 34.

PROGNOSTICATIONS AND PREDICTIONS

It was a field day for the political analysts. Their predictions as to what might be expected because of the lopsidedness of the membership were as numerous and varied as their reasons for the cause of the Democratic trend. Dire and somber were many in their forecasts, anticipating a spendthrift and wasteful Congress; others, just as dour and gloomy, anticipated traveling over wide-open roads toward the welfare state. Others, concluding that the Democratic trend evidenced the public's dissatisfaction and disclaimer of the administration's policies—which placed greater importance upon strengthening and restoring the economy of foreign countries than upon clearing the stagnant and polluted economic waters at home—predicted aggressiveness in meeting and dealing with our own domestic problems.

FACTS AND REALITIES

As the session unfolded, it became evident that the 86th Congress was solid and substantial. Although the existence of a divided government substantially hampered the legislative efforts, the calendar of achievements emphasizes the basic reality that the Congress was a most productive one in terms of National needs. In meeting many of the domestic demands, the administration offered nothing other than an adamant and negative attitude—but the Congress, through appeasement methods, was able to get through a program adequate to meet the requirements on a temporary basis.

Unfortunately, in the field of agriculture, which has always been looked upon as the barometer of our economic life—and of first importance to Kentucky and the Sixth Congressional District—progress was stymied due to this no progress attitude being implemented by the veto power of the President.

THE WORK OF CONGRESS

The Congress remained in session for 251 days, adjourning September 15. This represented the longest session since 1951. There were 13,837 measures introduced; 2,237 measures reported, and approximately 289 public and 185 private bills enacted into law. To record its proceedings over 18,810 pages of the CONGRESSIONAL RECORD were used.

COST OF GOVERNMENT

Government operating costs, like the cost of living, went up. And, while the Democratic Congress acted with alacrity to dispel the stigma which the administration so avidly attempted to affix to it—spendthrift and wasteful—the final sums appropriated represented the largest peacetime expenditure fiscal year in our history. Yet, the end result reflected approximately $1.9 billion less than the moneys the President originally requested.

As in recent previous years, analyses of the contemplated "costs" disclose that well over one-half the operational moneys required and appropriated were for military and defense purposes:

Analysis of appropriations

Appropriated—86th Cong., 1st sess.	$72,978,000,000
Less deficiencies incurred in fiscal 1959	2,765,000,000
Appropriations for regular operations, fiscal 1960	70,213,000,000
Less:	
Defense Department, operations	39,223,000,000
Military construction	1,364,000,000
Mutual security (military and defense activities)	2,100,000,000
Total security, military needs and activities	42,692,000,000
Balance, other than military and defense activities	27,521,000,000

INTERNATIONAL AFFAIRS

Dominating the administration's idea of importance was its program calling for continuation of the so-called mutual security program—foreign aid for rehabilitation and development. While substantially reducing the money request of the President for these programs' operations, the moneys authorized and appropriated by Congress were, in its opinion, adequate for the needs.

In addition, the Congress authorized participation by the United States in the Inter-American Development Bank, established primarily for the purpose of bettering the economic positions of the nations of the Western Hemisphere, and to strengthen their trading potentials in the international field.

Further, the Congress authorized increased subscription for U.S. participation in the International Monetary Fund, and the International Bank for Reconstruction and Development. These organizations are comprised of friendly nations, and have for their purpose and objective the stabilization of the various monetary systems, and providing a source of money for repayable long-term loans for eligible reconstruction and development projects.

ON THE HOME FRONT

Fiscal management: Following the urgent request of the administration, the Congress authorized an increase in the debt limit of $2 billion, which fixed the limit officially at $285 billion. In addi-

tion, it provided for a temporary increase of $10 billion to $295 billion, expiring June 30, 1960. In this connection, it is interesting to note that the interest cost of carrying the national debt has increased about 40 percent since 1953, the latest estimate being about $9 billion in interest in 1960.

Statehood: Provided for, contingent upon its acceptance, the Territory of Hawaii to be admitted to the Union as the 50th State.

Labor-management relations: Enacted an effective law to close the door of opportunity for unscrupulous persons preying upon honorable labor, management, and the public. In view of recent actions taken by certain labor leaders, the effectiveness of the law is already being evidenced.

General: Although confronted with stubborn opposition, the Congress was able to provide in a limited way for the continuation of housing, airport, health, and water-conservation Federal-participation programs.

The Congress provided for a supplementary financing program to provide moneys to defray the cost of continuing work on the Federal Interstate Highway Systems.

Authorized 43 new atomic-energy projects.

Increased lending authority of the Small Business Administration; authorized the Federal Reserve Board to lower reserve requirements of member banks; limited holding-company control of savings and loan associations; and expanded the lending and borrowing authority of national banks.

Extended the life of the voluntary home mortgage credit program, which assists buyers in small communities to find financing; raised limitations on expenditures under the special school milk program; extended for 5 years programs for training public health personnel and advanced training for professional nurses; extended for 4 years the Federal air pollution control program; and provided for a health insurance program for Federal employees.

GROUNDWORK FOR FUTURE ACTION

This Congress did not complete action on every proposition before it. No Congress has ever been able to do this in any one session. Even though the session has ended, the Congress endures. The problems that have not been settled will be carried over and considered the next session.

Groundwork for consideration of many issues has been laid through committee hearings, and so forth. During the interim, before the convening of the next session, committees will explore many important areas; principal among these will be made by the Ways and Means Committee respecting our present tax structure and the administration of our social security laws.

Further exploration of the field of agriculture will be made and it is hoped that from these will be devised new approaches to the many problems incident to the welfare of our farmers. Also, we are hopeful that time will see a mellowing of certain attitudes, so that agriculture might receive more friendly and sympathetic consideration.

This Congress has rendered effective service commensurate with its obligations to the Nation. Of course, of prime importance, and of great concern to me, are the specific needs of our own congressional district. The call upon me by individuals of our district has increased with each session. I received over 15,000 communications, and have been able to assist many of you with your problems. It is a genuine satisfaction to be of help, and to witness your interest and understanding in our democratic processes, in which we all place our hope.

Public Law 480 Operations Are Becoming Too Much Like Alice in Wonderland for Comfort

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Journal of Commerce and Commercial of August 20, 1959:

OUR KIND OF PEOPLE

"It really looks as though the Americans are going to extend Public Law 480 once again." The Mad Hatter laid down his newspaper and stared fixedly over his bifocals at Alice.

"Is that good?" Alice asked.

"Yes and no. I daresay the Americans think it's good. It means they can trade more of something they don't want and can't use for more of something else they don't want and can't use. Sometimes I suppose it's better to have more of something else than more of just plain something."

"Stop. You're talking in circles again," Alice said sharply. "What has all this nonsense got to do with Public Law—what was it?"

"Four eighty. Let me explain this: The Americans grow a lot more wheat than they can eat or sell; other things, too, but let's take wheat. The Government buys what they can't use or get rid of. It's been doing that for years. Now it has so much wheat and other crops there's hardly any place left to store it. Soon there'll be no room for people."

"Dear me. Why don't they stop growing so much wheat, then? Or people?"

"I knew I should have never broached this subject to a woman," the Hatter said angrily. "That's very complicated, I'm talking about Public Law 480. Under Public Law 480 the Government can dispose of some of this by——"

"Dispose of it? Does that mean give it away?"

"Well, no. They give some away, but they can't give it all away. Like I said, it's very complicated. Some North American farmers still sell their wheat overseas. So do some other countries. But the American Government pays very high prices for the wheat it buys; it does that to keep prices up. So if it gave away all its wheat, prices would break because nobody is going to buy anything he can get for free. Then the farmers and other countries producing wheat would be very angry. They are angry anyway, of course."

"Then you mean they sell it?"

"Well, yes, by which, of course, I mean no. Let's say the Americans 'sell' $100,000 worth of wheat they don't want to Wamaria; you remember Wamaria? Splendid little country. Well, the Wamarians either pay for it in metals or in $100,000 worth of their own currency, the wampa."

"Oh, this is beginning to sound very tiresome," Alice said impatiently. "Then the Americans do sell it. What's so unusual about that? They can use the metals or go out and spend the wampa someplace else."

"Not so fast," the Hatter said, raising an admonishing finger. "Not everything is as simple as it looks. The Americans don't need or want Wamarian metals any more than they want or need their own wheat. So far as the wampa is concerned, it isn't worth much anyplace outside of Wamaria; it isn't even worth much in Wamaria. Do you follow?"

Alice looked thoughtful. "It is beginning to sound interesting, now."

"Yes, and what happens is, instead of just being stuck with surplus wheat the Americans are now stuck with metals they don't want, with wampa, or both. Sometimes, though, they'll use some of the wampa to build, say—a road in Wamaria. Then they'll loan or give the road to the Wamarian Government."

"That is very curious," Alice replied. "Now let me think. If they want to give Wamaria wheat, why not give them that and forget the road? Or if they want to give them a road, why not build the road and forget the wheat? Why make it so complicated?"

"You just don't know the North Americans, my dear. To know them is not only to sympathize with them, but to like them. Whether they sell their wheat is of no importance to them. What is important is to get rid of it; and, in the process of getting rid of it to look like they're selling it. Remember, appearances are very important in North America."

"Still, it still makes some sense," Alice said. "I suppose they put all those wampa aside for a rainy day; then when they need them they'll spend them."

The Mad Hatter laughed uproariously. "Indeed they won't. Yes, they accumulate them, just like they accumulate wheat. But the only way they got any wampas out of Wamaria was promising that they wouldn't spend them, except when and if the Wamarian Government said it was OK, and that will probably be never."

Alice sighed again, smoothed down her dress and looked dreamily up into the trees that arched above the garden. "You know what, Hatter," she said after a minute, "I think I'd like North Americans. They sound like our kind of people."

A Report to the People

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, I again take this opportunity of reporting to my constituents, the people of Berks County, the 14th Congressional District of Pennsylvania.

PURPOSE OF REPORT

This report summarizes my activities during the 1st session of the 86th Con-

gress, the position I have taken on important issues coming before the Congress, and the record of the Congress itself. It supplements my radio broadcasts, news reports and newsletters.

COMMITTEE WORK

I have served on the Interstate and Foreign Commerce Committee and the Committee on House Administration. The Commerce Committee has wide jurisdiction over transportation, communication, public health, railroad retirement, and matters affecting Federal regulatory agencies. I am also a member of the Health and Safety Subcommittee.

BILLS INTRODUCED

Bills I introduced call for improvements to the Social Security Act, an increase in benefits under the Railroad Retirement Act, to improve the unemployment compensation system, to broaden representation on the Federal Reserve Board, and to expand the public health training program. Other bills I have introduced are to prevent wholesale abandonment of passenger train service, to limit publishers' second-class mail subsidies, to provide a health benefits program for retired Government employees, to encourage the hiring of middle-aged and older workers, and to increase earnings of the social security trust funds.

BOOSTING BERKS

Berks countians are particularly interested in the many Federal projects and programs in our area, all of which directly benefit our local economy and our people.

Each month an estimated 24,000 Berks County residents receive social security benefit checks totaling $1.5 million. Thousands more receive railroad retirement benefits and veterans' pensions. Unemployment compensation also helped several thousand unemployed Berks workers and their families.

Federally guaranteed home loans have been obtained by many Berks residents. Small business loans have been made to a number of firms to improve and expand their business. Efforts of local leaders to bring new industry into Berks County have had my full cooperation. Planning and construction work on several federally assisted highway projects has moved forward.

In Reading, the Walnut Street urban renewal project has become a reality, while the Cherry and Court Streets projects are moving ahead in their planning stages. The Reading Housing Authority's aged housing project has been approved. All are being assisted by Federal funds. The new $650,000 Naval and Marine Corps Training Center in Reading will soon be dedicated, while ground has been broken for construction of the National Guard Armory in Kutztown. $275,000 in Federal funds will go for construction of a new terminal building at the Reading Municipal Airport.

A number of Berks' townships and boroughs have received Federal funds for planning construction of sanitary-sewer systems and water-supply systems. Berks' industry continues to receive a considerable amount of defense contract and subcontract work.

RECORD OF THE FIRST SESSION

The 1st session of this Congress was characterized by the consistent refusal of the President and his administration to meet Congress halfway in working out the type of legislative program in the best interests of the American people. The use and threat of the veto, made real progress on many of the most important issues difficult and often impossible.

For example, Congress was forced to pass three housing bills—two vetoed. The unbroken string of 145 Eisenhower vetoes was finally broken when both the House and Senate overrode his second veto of the public works appropriations bill.

Like most Congresses, much of the work of the first session will not bear fruit until next year. Some worthwhile legislation was enacted during the 1st session of the 86th Congress. In many areas, partial action was taken by either the Senate or the House. In others, little progress was made. Each of these categories of legislation are discussed below.

CONTROL OF CONGRESS

Despite the largest paper Democratic majorities in the House and Senate in two decades, the actual margin of control on most issues in the 86th Congress has been in the hands of the administration, aided by a coalition of Republicans and conservative southern Democrats. The coalition relies on the veto power of the President and the ability of the conservative majority on the House Rules Committee to prevent many major legislative proposals from reaching the House floor for debate.

This combination has blocked enactment of such vital measures as aid to education, area redevelopment, civil rights, improved unemployment compensation standards, and amendments to the Employment Act to promote price stability. Also a more adequate housing and urban renewal program, an expanded water pollution control program, community facilities legislation, a Youth Conservation Corps, a hospitalization and medical insurance program for social security recipients, natural resource development, and many similar types of programs essential to the well-being of our people.

ADMINISTRATION FISCAL POLICIES

The last fiscal year ended with the largest peacetime deficit in our history—$12.5 billion, despite the fact that the 85th Congress reduced the administration's spending requests by over $5 billion. The 1st session of the 86th Congress cut President Eisenhower's budget by $1.8 billion.

The cost of living stands at a record high. Effects of the economic recession are still being felt in hundreds of communities throughout the Nation. Unemployment continues to be a major economic problem.

The national debt has risen to $290 billion, an increase of more than $20 billion since President Eisenhower took office. Interest on the national debt has increased sharply because of the hard money, high interest rate policies of the administration.

The annual cost to the American taxpayers of these policies is an estimated $10 billion over pre-Eisenhower years in higher taxes, higher payments on homes, cars, business loans, and other items bought on credit. Hard money policies have raised the interest rates on business loans and Government bonds to their highest levels since the 1930's and continue to be the major inflationary force in our economy.

Hard money has made it more difficult for many small businesses to borrow for expansion purposes and is a big factor in causing higher local and State taxes. Many State and local governments have been forced to curtail needed public works, school construction, and other essential projects. Our rate of economic growth has been sharply curtailed as a result of these administration economic and fiscal policies, while the Soviet Union exceeds our rate of growth by an ever larger margin.

Past efforts in Congress to conduct a full investigation of administration fiscal policies have been blocked by the conservative coalition. Renewed efforts must be made in the next session for such a probe. I believe the people are entitled to know the facts about these financial dealings which are harmful to all but a small minority of citizens.

One of the most important victories in this session of Congress was the rejection by the House by a 2 to 1 vote of the administration's request for an increase in the legal ceiling on long-term Government bonds. Interest on series E and H savings bonds owned by millions of Americans was properly raised. I saw no good reason why interest rates on bonds bought by the average citizen should be so much less than those held by big financial interests. Congress did, however, stand firm against lifting the long-term bond rate which has already reached the record high in 35 years, but the President is pressing hard to increase these already high interest rates.

UNFAIR DOUBLE STANDARD

While paying record high interest to large banks and insurance companies which purchase Government bonds, the administration has been borrowing from the social security trust fund at abnormally low rates of interest. Under this double standard, the people who have paid into the trust fund are being short changed by $260 million a year or $750,000 a day.

This loss would help pay the cost of needed improvements in the Social Security Act. The administration has regularly opposed liberalized amendments to this law. Its fiscal policies actually rob old folks of social security benefits to which they are justly entitled. I have introduced a bill to require the Government to pay the social security trust fund a comparable rate of interest to that which it pays big financial interests. This would put a stop to this shocking double standard.

CONGRESS VERSUS IKE

In the more partisan atmosphere of the session, a number of bitter fights between Congress and the administration developed. Among the victories scored

by Congress were the rejection of the President's request for an increase in the bond interest rate ceiling, the refusal to consider his request for another increase in first-class postal rates, and the overriding of his veto of the public works money bill.

Congress also ignored the President's opposition to the water pollution control program, rejected his proposed cutback of the Federal school aid program in districts affected by governmental installations, and scaled down his request for increased Federal gas taxes.

LABOR-MANAGEMENT REFORM

In the last Congress I strongly supported the Kennedy-Ives labor reform bill. It was defeated then by the coalition of Republicans and southern Democrats.

There was virtually no difference in the anti-racketeering provisions of the Kennedy-Ervin bill passed this year by the Senate, the House committee bill which I supported, the Landrum-Griffin bill eventually passed by the House, and the final conference version finally enacted into law.

I opposed the substitution of the Landrum-Griffin bill for the committee bill because I felt that a number of its provisions were overly restrictive and punitive. Several sections of the bill would have made it virtually impossible for unions to organize in backward areas of the South, thus affecting the competitive position of northern industry and northern workers who enjoy decent labor standards.

The conference committee headed by Senator KENNEDY made some 15 changes in the Landrum-Griffin bill, removing many of the most objectionable features which would give unfair competitive advantages to southern industry. Because I felt that reform legislation was necessary, I voted for the final conference version of the bill enacted into law.

Here is a summary of other major legislation enacted by the 1st session of the 86th Congress, legislation of general interest which had my support and vote:

MEASURES ENACTED

Hawaii was admitted as our 50th State.

An omnibus housing bill was finally passed, providing public housing units, an aged housing loan program, continuation of the urban renewal program, the college housing program, and the FHA loan-guarantee program.

The Federal Airport Act was extended.

Health insurance was provided for Federal employees and their families, with the Federal Government paying part of the premium cost.

Increased funds were voted for hospital construction and for medical research on cancer, heart disease, and other killing and crippling diseases. Funds were provided under the Hill-Rhodes Act for public health education purposes.

The Renegotiation Act was extended for 3 years, providing for the recovery of excess profits on defense contracts.

Corporate and excise tax rates were generally extended. The tax on local telephone calls was repealed and the transportation tax on persons reduced from 10 to 5 percent, both effective on June 30, 1960.

The draft law was extended for 4 years, although I personally favored only a 2-year extension and a study as to how military manpower could be better utilized.

At the administration's request, the national debt ceiling was raised to $285 billion, with a temporary increase to a $295 billion ceiling.

The uninterrupted construction of the 41,000-mile Interstate Highway System was assured by enactment of a temporary 1-cent-per-gallon increase in the Federal gasoline tax. I opposed the President's request for a 5-year 1½-cent-per-gallon increase and supported the compromise measure only as a last resort to prevent the stoppage of the highway program because of the anticipated deficit in the trust fund later this year.

Funds were provided for our National Defense establishment and for continuation of the mutual security program. Participation in the Development Loan Fund, the Inter-American Development Bank, and increased subscription in the International Monetary Fund and World Bank were authorized.

The air-pollution control program, of importance to Pennsylvania and other industrial States, was extended for 4 years. I was selected by House Speaker SAM RAYBURN to serve on the Senate-House conference committee on this legislation. The public health traineeship program was extended for a 5-year period.

Temporary Unemployment Compensation Act benefits were extended for 3 months to jobless whose State payments expired before April 1, 1959.

The Federal Credit Union Act was broadened and liberalized.

The non-service-connected veterans' pension program was revised to base the amount of pensions on need. While agreeing with many of the provisions of this bill, I could not support the fundamental changes which it makes in the entire pension system. The new law also ignores what I believe is the need for a separate pension program for World War I veterans. However, World War II and Korean widows were made eligible for pensions on the same basis as World War I widows. The new pension levels will not reduce the pension of any veteran now on the rolls, but will apply to those becoming eligible for pensions after July 1, 1960.

PARTIAL ACTION

Partial action was obtained on other important legislative proposals during the first session.

Area redevelopment legislation to provide Federal loans and grants to economically depressed sections of the country was passed by the Senate, approved by the House committee, but is stalled in the House Rules Committee.

A comprehensive civil-rights bill has been reported by committee, but is also blocked by the Rules Committee, as is a Federal school-aid bill for construction of needed classrooms and to improve teachers' salaries. A Federal-aid school-construction bill has been approved by a Senate committee.

A bill to amend the Employment Act of 1946 to promote price stabilization and a bill extending coverage under the unemployment compensation system have also been stalled by the Rules Committee.

A measure to establish a Youth Conservation Corps to work in national parks and forests has been passed by the Senate.

The "health for peace" bill has also been passed by the Senate, as has legislation to curb monopolistic bank mergers, and a bill to provide GI educational, home purchase, and rehabilitation benefits to post-Korean veterans. A bill providing home rule for residents of the District of Columbia was also approved by the Senate.

The House has passed bills to tighten the postal laws against obscene material, to reduce the cabaret tax from 20 to 10 percent, and to permit tax reductions of up to $2,500 a year for self-employed persons who set aside part of their income annually for voluntary retirement plans.

Other measures approved by House committees included a bill to provide grants to local communities and nonprofit agencies to finance projects to combat juvenile delinquency, and a bill to establish a National Fair Trade Act.

No action was taken on bills to raise the minimum wage and broaden coverage under the Fair Labor Standards Act. Hearings were held on my public health education bill and on a proposal to provide a hospitalization and surgical insurance program for persons eligible for social security benefits. Hearings on measures to liberalize the Social Security Act will be held in the next session.

AVAILABLE FOR MEETINGS

This report obviously cannot discuss each of the measures mentioned in much detail. Other issues before Congress have not been dealt with because of space requirements. As in past years, I again welcome the opportunity to appear before any group in Berks County to speak and answer questions on any issue which may be of interest. Contact my office in the Reading Post Office Building with any such request or on any other matter with which you are concerned.

Halfway Through the Khrushchev Visit We Need To Pause and Remember the Facts

---

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Edgar Ansel Mowrer written just before Mr. Khrushchev arrived on our shores:

HOPEFUL AMERICANS NEED TO BE WARY

(By Edgar Ansel Mowrer)

Every human being is interested in the hope for peace represented by Nikita Khrushchev's current visit to the United States. But no American should forget what Mr. K is and what he stands for. Here are a few cardinal points:

1. Despite some relaxation at home, Khrushchev is the dictator of the world's last giant empire, Russia, the most persistent and successful imperialistic entity on record, which has grown from a small 15th-century duchy to something over twice the size of the United States.

2. Soviet rulers talk anticolonialism and weep crocodile tears over the oppressed colonials, while continuing to practice colonial dominion over almost a hundred captive peoples. Some of these yearn for independence and a few, the Ukraine, Georgia, etc., have actually revolted against Moscow and been suppressed as independent Hungary was suppressed in 1956—by Khrushchev. In some of its colonies, the Baltic States, Birobidzhan, etc., the U.S.S.R. has practiced deliberate genocide by exiling and murdering thousands and replacing them with Russians.

NIBBLING EXPANSION

3. Russian policy has traditionally shunned major war, unless attacked, and expanded by nibbling its neighbors to death—the same method it is practicing today in the name of communism.

4. Czar Nikita is also high priest of communism, a worldwide conspiracy concealing

a naked love for power behind a materialistic ideology and false economics. His aims are thus conquest and forced conversion of the conquered.

5. Since, except for a few months in 1917, the Russian peoples have never known political freedom, it is foolish to expect them to be anything but the docile instruments of their Communist rulers.

6. The U.S.S.R. began its political career by betraying its allies of World War I and making a separate peace with Germany. This is in accord with Communist morality: only that is right which serves communism—whether mass murder, arbitrary rule, unspeakable cruelty, suppression of the truth, lies or deception of friend and foe. The 42 years of Soviet history are heavily strewn with the fragments of broken agreements.

7. In 1939 Stalin deliberately provoked World War II by agreeing with Hitler to divide Poland. When the two thieves fell out, Hitler attacked Stalin. Hard-pressed Britain, followed by the United States, could do nothing but welcome the U.S.S.R. as an ally and supply it with the means whereby it successfully defended itself. Yet Stalin yielded nothing of his plan to dominate and communize eastern Europe and treated his Western allies as half enemies.

BROKE PROMISES

Once he had used our common victory to snatch all he could, he coldly broke with the West, violated his promises, managed to communize Czechoslovakia, helped China go Red, supported the Red Chinese in Korea. Despite the American monopoly of the atom bomb, he refused to yield an inch of his conquests. Nowhere since 1945 (except perhaps in Greece and Austria) has communism retreated. In the last 3 years Khrushchev has openly threatened war over Suez and West Berlin.

8. Although Nikita's method of ruling differs from Stalin's, there is no evidence he has abandoned the latter's ambition of dominating the world—not indeed by open war but by threats, lies, and minor aggression (as in Laos), all smothered in the syrup of peaceful coexistence.

9. Despite Ike's invitation to visit the United States, Mr. K. still demands Western abandonment of West Berlin.

Against this background, Americans, while hoping for peace, will do well to be wary.

Spirituality and Prayer: Last Secret Weapons Against Communism

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following remarks by His Eminence, Richard Cardinal Cushing, archbishop of Boston, on the Manion Forum Network:

DEAN MANION. The Manion Forum is proud to present His Eminence, Richard Cardinal Cushing, Roman Catholic archbishop of Boston.

Cardinal CUSHING. Thank you, Dean Manion. About 100 years ago a disorderly cynical man, bitter and rebellious against society, wrote a couple of books. A gay fellow, wealthy, atheistic, revolutionary, collaborated with him.

Their names were Karl Marx and Friedrich Engels.

"The Communist Manifesto" and "Das Kapital" were the titles of the books.

Filled with the theory, and the philosophy of atheistic communism, these books became known as the bible of communism.

Marx and Engels taught that throughout history there was a struggle between the rich and the poor. It was the war of the classes.

They believed that eventually capitalism would destroy itself through warfare and economic depressions.

Refusing to await this eventuality they called upon the workers of the world to rise up against the capitalists and put an end to the existing social order by revolution. Violence was their road to success.

"Workers, arise. You have nothing to lose but your chains. You have a world to win."

Despite this vigorous appeal of Marx and Engels, the results were disappointing. Another and more practical exponent of atheistic communism was needed.

In due time he appeared. Almost 60 years have passed since has arrival. He also wrote a book and called it "What Is To Be Done?"

What was done by that writer and his followers explains our present-day crisis and affects the future of every inhabitant of this earth. When the book was published, in 1902, its author was in exile. Living frugally on small subsidies from the political underworld, dressed in a cheap suit, and scorning all the values of his middle-class heritage, this man was the self-appointed leader of a handful of outcasts.

To the property owners, capitalists, statesmen, clergymen, and generals of his day, this lawyer and his circle of impractical agitators belonged to the lunatic fringe of society.

The power elite of that day ignored his pamphlets; they didn't read his book. I doubt if many property owners, politicians, teachers, statesmen, clergymen, and generals of our times have read his book.

Yet that man and his impoverished disciples, inspired by Marx and Engels, exploited the practical, concrete ideas set forth in his book, "What Is to Be Done?" Their successors have seized two continents and set fire to all others by engineering the most skillfully executed power grab in human history.

Today, whole libraries, as well as the graves of some 20 nations and at least 40 million people, bear witness to the deadly political science of a movement whose conquests exceed the combined empires of the greatest conquerors in history and whose accelerating capability to lay waste the world is the touchstone for determining our national and even our private objectives. That lawyer's name was Lenin.

LENIN TURNED ON THE POWER

Five thousand miles and nearly six decades removed from the publication of his book, "What Is To Be Done?" Americans who never heard of Lenin must face the consequences of his indomitable will and his fearful talent.

Prior to this day the various forms of socialism were sentimental daydreams and quack experiments. But to Lenin, communism was not a crackpot idea; it was a power technique. It was more than a philosophy, it was a religion without God, a revolution without free men, a triumph of organized weapons of every category.

Under Lenin's tutelage, Communists became international conspirators and down through the years they have aspired to dominate and to rule the world.

Today they control two-fifths of the earth. They have swept beneath the Iron Curtain 900 million souls.

They libel their competitors; they poison the courts of public opinion; they blackmail governments. They belittle presidents, kings, queens, prime ministers, every one in their pathway.

And, thanks to the materialistic philosophy taught in higher institutions of learning, thanks to the apathy and indifference of the multitudes, to the subtle propaganda of an international fifth column and to unnumbered spies, pinks, reds, fellow travelers and followers of the line theorized by Marx and translated into action by Lenin in his book, the Communists have never wanted for collaborators.

They have never failed to find bankers and businessmen, professors and students, eccentrics and geniuses, traitors and sympathizers, politicians and would-be statesmen to overlok their frauds and forgeries, their lies and calumnies, their murders and slaves, their wars, hot and cold, that are part of the bloody record they have written on every page of the history of the past five decades.

And it all started with Lenin, who, weary of the talk, the debates, and the slogans, asked the question that all practical men with a purpose, good or bad, are obliged to ask, "What is to be done?"

Our position in the second half of this 20th century is the result of our failure to ask the same question, "What is to be done?" not against the upside-down social order of this country, but against one infinitely worse, communism. We baptized this conspiracy when our Government recognized it; we canonized it when we invited its leaders to our shores.

"What is to be done?" cried Lenin in his book. Communism was his answer. What is to be done, I ask, to contain, curtail, and conquer this monstrous thing? My answer must be that of a priest. Statesmen and others loyal to our tradition must answer for the political, economic, and social order of America.

What must be done? Go back to another book—the Book of the Gospels, where we will find the way, the truth, and the life. That Book contains the doctrines and the precepts of Christ just as the "Manifesto of Communism" contains the principles of communism.

Go back also to the Book of the Crucifix. That Book contains the story of a revolution by love, greater by far than the revolution by blood found in the book of Lenin.

WITHOUT SPIRITUALITY—NO MORAL LEADERSHIP

The spiritual answer to communism is the way of life taught by Jesus Christ. Those of us who are Christians must live in accord with the teachings and the precepts of the Gospel. Once we accept the Gospel, we can never be the same again.

We must be dedicated to live the life of Christ within the framework of our nature, place, and condition. Until we so live we shall not attain moral leadership in a world that lacks leadership; nor shall we give the multitudes behind the walls of slavery the hope and courage that they will never get from our boasted power and wealth.

Marx, Engels, Lenin, Stalin, Khrushchev have produced the Communist man; he is enslaved, silenced, a little better than a dumb animal.

Christ and His Gospel have produced saints; they are free, perfect men, a little less than the angels.

The Book of the Bible and the cross, carried by every explorer who set foot on the Western Hemisphere, can change the world.

Lenin realized this. When he was awaiting the summons of death and had the opportunity of reflecting on the results of his book and the revolution it inspired, in sorrow and fear he cried out:

"I have made a great mistake. Our main purpose was to give freedom to a multitude of oppressed people but our method of action has created worse evils and horrible massacres. It is a deadly nightmare to feel that I'm lost in this ocean of blood coming from innumerable victims.

"It is too late to turn back now. In order to save our country, Russia, we should have had 10 men like Francis of Assisi. With 10 such men, we should have saved Russia."

And who was St. Francis of Assisi? Everybody's saint, probably the most perfect human reproduction of Jesus Christ and His Gospel that the world has ever seen.

Mr. Khrushchev, guest of our President, it is not too late for you to turn back. That you will do so I have encouraged millions of people to pray for you and your people during your visit to our country.

At the same time, we are praying for the multitudes in your captive nations and for the unnumbered dead whom you sent to premature graves. They will become a nightmare to you as they did to Lenin, Marx, and Stalin before they died.

Time is running out. With your visit to America everything has now been tried to placate you, to convert you. You wanted this visit. All things considered it is probably your greatest victory in the cold war.

Having failed in all our efforts to satisfy you, we have turned to our secret weapon—prayer. God grant that it will be effective.

DEAN MANION. Thank you, Cardinal Cushing.

How Independent Is Peking of Moscow?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, for years American thinking on the Far East has been influenced, and in academic circles largely dominated, by a group of writers and teachers led by Fairbanks of Harvard, Lattimore, the old IPR clique, and a few others. In part, because of the volume of their writings, there is danger that their views, or perhaps I should say their "line," will come to be accepted as authoritative by the oncoming generation of scholars in this vitally important field.

The old agrarian reformer pose was demolished by the Chinese Communists themselves, but the myth that Chinese Communists are different lingers on. Their apologists are hard put just now to justify the communes within China, the confessed fakery of the great leap forward with its fake production figures, and the naked barbarism in Tibet. About the best the supposed experts can do for the moment is to take refuge in the alleged realism of the theory that we can safely rely upon Peiping's presumed independence of and even possible antagonism to Moscow.

It is important for the long future as well as for the present that the superficial scholarship of the above group be challenged now before it becomes a sort of orthodoxy. An excellent beginning has been made by Prof. Karl A. Wittfogel, a European scholar whom I first came to know in China in 1937, at a time when he too was somewhat beguiled by the proclaimed liberalism and democracy of the Chinese Reds. During the years he has studied the basic documents and deeds and based his thinking on hard facts instead of trying to adjust the facts to fit old and comforting theories. Dr. Wittfogel is director of the University of Washington's Chinese history project and author of several books, including "Oriental Despotism." In the following article from the New Leader of July 20, 1959, he analyzes the historical origins of a concept that has strongly influenced Western views of Chinese communism for many years—the notion that Mao Tse-tung's doctrine and practice deviated heretically from Moscow:

PEIPING INDEPENDENCE
(By Karl A. Wittfogel)

In 10 short years Mao Tse-tung's China has become a major power whose every move gives rise to endless speculation. Some western analysts believe that Peiping, although a primary factor in Asia, is only a secondary factor in world politics; others warn against underrating its global importance. The very argument illuminates the significance of the issue. Elementary political considerations require that we obtain as thorough an understanding of Mao's regime as possible. What are the possibilities—and the limitations—for achieving such an understanding in America today?

Understanding is an intellectual exercise that involves two interrelated yet distinct processes: factfinding and interpretation. An examination of American attempts to understand Communist China reveals that we are highly effective in gathering relevant data and highly ineffective in comprehending their meaning. Confronted with this double assessment, we are usually not too disturbed by the second stipulation (and this attitude underlines the overall problem); but we are genuinely surprised by the first. Do we not, as Americans, have special difficulties in getting the facts, since our Government, besides having no diplomatic relations with Peiping, also refuses to let our nationalists visit mainland China?

Under different conditions, this policy might indeed be a decisive limitation, but in the Chinese case its negative effect can be largely discounted because of the way in which the Communist system operates. Like other Communist states, the Peiping regime virtually controls all spheres of life, including the movements of foreign visitors and their opportunities for independent inquiry. Of course, these visitors see something—and what they see may have value—but generally they are unable to pierce the many smaller bamboo curtains that have been erected inside the big Bamboo Curtain along the territorial borders.

The Peiping government makes independent personal contacts between foreigners and Chinese intellectuals almost impossible; and its terror potential is so well recognized that even the most casual opinion is expressed with great caution. Hence the assertions made up to 1957 by a number of journalists that, to judge from appearances, the Chinese intellectuals generally liked the Communist regime were largely guesswork, and poor guesswork at that. The "Hundred Flowers" episode of May and early June 1957 showed that the majority of all Chinese intellectuals, students included, hate their rulers.

Peiping is equally determined that foreigners have only guided contacts with the Chinese toilers. In the summer of 1954, one of my friends accompanied the British mission to the Chinese mainland led by Earl Clement Attlee. Meeting him later, I asked why none of its members had commented on the collectivization that was then gaining momentum. The delegates, he answered, had wanted to see the villages, but they were kept from doing so. A Swiss journalist, Peter Schmid, who visited China in the winter of 1955–56, when collectivization had been completed, was treated with great courtesy, but he also met with stony resistance when he wished, on the spur of the moment, to make a short excursion to a village. His guide—who otherwise was most amenable—told him that such a visit could be undertaken only after official permission was obtained from Peiping, and he added almost indignantly: "I am sure, in Switzerland too, a foreign journalist cannot just go into the villages and talk with the people."

But while on-the-spot observations are restricted to the point of frustration, another type of inquiry—the critical study of Chinese Communist publications—is potentially very rewarding. The activists and officials of the Communist regime must communicate with one another, and partly and unavoidably they exchange factual and evaluative information through the press. Of course, they do this cautiously and in an Aesopian language that is supposed to inform insiders without betraying essential facts to outsiders. This, however, is no easy task, particularly when an issue must be treated concretely and in detail.

Thus, in veiled form, the Chinese Communist newspapers and magazines contain much relevant information, and this information is being most comprehensively gathered and translated outside the Bamboo Curtain by the American consulate general in Hong Kong. Systematically utilizing many dailies and periodicals—often from the far corners of the country and inaccessible to the foreign colony in Peking—this agency is assembling a wealth of data on Communist China. If the members of the Attlee mission had consulted the Hong Kong press translations, they would have been aware of the advancing collectivization and the rising bitterness in the villages which they were not allowed to observe. It is not too much to say that our Hong Kong consulate is probably doing a better job of gathering facts on Communist China than any other non-Communist organization.

But this excellent and important collection of raw material does not have the impact it deserves, since no adequate arrangements have been made to facilitate its analysis. Whoever wants to use the Hong Kong material must plow through mountains of data with only an alphabetical listing of titles to help him. Readers of the New York Times, which provides an index for everything it publishes, are better served. The same country that is willing to spend hundreds of thousands, perhaps millions, of dollars to gather vital facts is unwilling to spend $50,000 on an analytic index to aid in their interpretation.

These disparate conditions reflect a national weakness that is making serious students of American policy highly apprehensive. Henry Kissinger is convinced that our present political insecurity results from an extreme dependence on empiricism and an equally extreme avoidance of conceptual thinking. Robert Strausz-Hupé, James Dougherty, William Kintner, and Alvin Cottrell, in their recent book, "Protracted Conflict," deplore our inability to utilize large concepts in formulating long-range political strategy. I fully agree with the substance of these criticisms. But I believe that we suffer less from an absence of political concepts than from the inadequacy of those we invoke, and that we are handicapped not so much by lack of a long-range perspective as by a complacent, status quo perspective that was understandable in the 19th and early 20th centuries, but that is pathetically outmoded since the development of modern totalitarian systems of power.

The analyst who fails to distinguish between the conditions and attitudes of our multicentered society and those of the totalitarian world is like the person who fails to see the difference between a young cat and a young tiger. Such a person may note in-

teresting details of metabolism, eyesight, or skin texture; and he may even make meaningful comparisons between these features. But, lacking adequate concepts, he will not recognize the specific characteristics of the young beast of prey, which, sufficiently matured, may spell the doom of the inept observer.

Marxist-Leninist communism is a system of analytic and interpretative ideas and a cluster of organizational and strategic devices for the establishment and maintenance of total political, economic, and ideological power. The masters of the Communist apparatus-state stress power economy (internal and international) at the expense of subsistence economy. They constitute a ruling class whose proprietary and managerial control, social privilege, and ideological self-glorification surpass the prerogatives enjoyed by any other dominant elite known to man. The class consciousness of the new 'men of the apparatus" (apparatchiki) is matched, and perhaps surpassed, only by the class consciousness of the members of the totalitarian out-elite—the Communists in non-Communist countries whose hunger for total power is intensified by the difficulties they encounter.

These are elementary facts. Recalling them, we easily recognize the misconceptions that underlie certain widespread interpretations of Chinese communism. Time and again we are told that the Chinese Communists may want to assert their independence from Moscow to the point of open conflict. The upholders of this claim misjudge the primary attractions of total power, class interest and historical perspective which—despite continuous conflicts on a secondary level—unite the Chinese and Soviet Communists. Clarity on these facts facilitates the realistic appraisal of the relations between Moscow and Chinese communism, because it permits a realistic appraisal of the circumstances under which each of them operates. It exposes the fictitious nature of the argument that the Chinese Communists are conditioned to act independently of Moscow because, under Mao's guidance, they created a tradition of acting originally, and even heretically.

This argument, known as the Maoist thesis, is historical in form, but political in content. It arose, and persists, on the basis of inadequate concepts of Soviet communism (especially Leninism) and Chinese communism (especially the attitude of Mao Tse-tung). In 1948, John K. Fairbank, in his book, "The United States and China," suggested that Mao's policy, because of the special role it gave the peasants, followed the Chinese tradition of revolution rather than the Marxist. In 1951, under Fairbank's guidance, Benjamin Schwartz, in "Chinese Communism and the Rise of Mao," elaborated the thesis that Mao pursued an unorthodox (Maoist) peasant policy. And in 1952, Conrad Brandt, Benjamin Schwartz, and John K. Fairbank bulwarked the Maoist thesis further in "A Documentary History of Chinese Communism," which presents translated Communist texts in chronological order along with interpretative comments.

According to the authors of the Documentary History, Mao took his first conspicuously heretical step in a study of rural conditions in his home province of Hunan (Report on an Investigation of the Hunan Peasant Movement), which he wrote in February 1927; and allegedly he manifested his importance as an original theoretician in 1940 in his pamphlet, "On New Democracy."

In his 1927 report, so say the authors of the "Documentary History," Mao did something "no previous writer of the Marxist-Leninist school had ever conceived of." He presented as "the 'revolutionary vanguard' of the bourgeois-democratic revolution • • • the poor peasantry," rather than the workers ("Documentary History," p. 79). He thus committed "a heresy in act" toward one of the "vital core presuppositions of Maxism-Leninism" (Schwartz: "Chinese Communism and the Rise of Mao," pp. 191 and 199; cf. also p. 78).

These are extraordinary assertions. Any serious student of Maxism-Leninism knows that Lenin distinguished between several types of bourgeois-democratic revolution, and that after the Bolshevik Revolution in 1917 he devised a new type of peasant policy for the "backward" colonial and semicolonial countries of the East. In contrast to Tsarist Russia, where there had been a proletarian minority that could assume revolutionary leadership, the Communists of "backward" Eastern areas should, with Moscow's aid, rest their power strategy on the peasants or other nonproletarian "toilers," if proletarian support was unavailable. In 1920, Lenin pointed out that the new policy he was outlining was based on limited experience; and quite logically he argued for it primarily in terms of the problem of organizing revolutionary Soviets. But he did not—as Schwartz in passing remarks—only "speculate" on the possibility of Communist-led Soviets in nonindustrial areas. Far from it.

Referring to the Bolshevik experience in Central Asia, he stated as proven fact that Communists could successfully establish Soviets of peasants or toilers in "backward" colonial countries; and he insisted that, under comparable conditions, they continue to do so: In the noncapitalist colonial countries of the East, "Soviets are possible • • • they will not be Workers' Soviets, but Peasants' Soviets, or Soviets of Toilers" (Lenin: "Selected Works," New York 1943, X, p. 198; cf. pp. 236, 241, 242, 243 ff.; cf. also p. 231). Lenin's thesis was repeated emphatically by such top-ranking Comintern dignitaries as Grigori Zinoviev, G. I. Safarov, and Bela Kun. And while in February 1926 the Comintern leaders did not raise the slogan of Soviets, they went considerably beyond Mao, who credited the peasants with only 70 percent of all achievements in the Chinese democratic revolution. They called the peasants "the most important and decisive factor of the Chinese national-liberation movement" (International Press Correspondence, 1926, p. 649).

In the doctored edition of his "Selected Works" which began to appear in the early 1950's, Mao eliminated the sentence containing the 70-percent formula, obviously because he considered it too modest. Adherents of the Maoist thesis suggest that he did so because, in retrospect, he considered it too high. The arbitrariness of this interpretation is apparent when we remember the Comintern attitude in 1926-27 and a later statement by Mao, for which, by the way, he invokes Stalin's authority: "The Chinese revolution is virtually the peasants' revolution." Not 70 percent, but "virtually."

Lenin did not foresee the intricacies of the subsequent developments in large colonial or ex-colonial countries such as China and India; he did not foresee a political situation in which Communists would seize power in nonindustrial regions of a country that also possess industrially advanced regions; and, of course, he did not foresee the shifts in the interpretation of the slogan, "Peasant Soviets," that occurred during the intraparty struggle in the U.S.S.R. in 1926-27. But the gist of Lenin's 1920 directives is very clear—and very close to what supposedly is the "Maoist" position: In the nonindustrial areas of the backward East, the Communists should endeavor to seize power on a mass basis that essentially consisted of peasants or other nonproletarian toilers.

Obviously, then, the authors of the "Documentary History" are wrong when they describe the Leninist position as rejecting the idea of an eastern Communist-led democratic revolution based on the poor peasants. They are also wrong when they describe Mao's 1927 position.

In February 1927 Mao did not recommend the revolutionary policy we have just outlined, and this for good reason. Mao's Hunan report was written at a time when the Chinese Communists were maintaining a united front with the Kuomintang, and, following Moscow's orders, they were making every effort to continue it. Mao, who was then a high-ranking dignitary in the Kuomintang (and, of course, in the Communist Party), stressed the leadership of the poor peasants in the rural revolution and the importance of the peasants (70 percent) in the national revolution under a hierarchy headed by the revolutionary authorities, that is, the revolutionary Nationalist government which was heir to Sun Yat-sen's Canton regime and which was controlled by the left Kuomintang and supported by the Communists.

The authors of the "Documentary History," who consider Mao's Hunan Report a "revolutionary classic," present only one-third (the first two sections) of the document without indicating that the original text is much longer. Yet even this third makes it clear that Mao is commenting on the peasant policy of the revolutionary Nationalist government. In a later chapter which discusses local revolutionary organizations, only one party is mentioned—the Kuomintang. When both parties are mentioned, as happens once, Mao places the Kuomintang before the Communist Party. In conformity with with the Moscow-imposed united-front policy, the earlier versions of Mao's report do not refer to the leading role of the Communist Party. Significantly, the few sentences that make this claim appear first in the doctored version of volume I of Mao's "Selected Works" published in 1951.

Thus the Hunan Report does not call for Communist leadership. Nor does it try to rally the poor peasants behind the Communists by promising them land. Complying with the Comintern line and with the official policy of the left Kuomintang, Mao hailed the advance of the social and political revolution in the villages, and in this connection he was willing to use terror to the limit; but he hedged on the key economic question—the confiscation and distribution of the land. In the 1951 version of Mao's Hunan Report, we find a brief request that the land question of the poor peasants be solved. But in the earlier versions even this vague sentence is missing. More cautious than the Moscow leaders and some of his Chinese comrades, but congruent with Comintern directives not to disturb the united front with Kuomintang by promoting a drastic confiscation policy, Mao, in the original report, does not raise the land question at all.

The authors of the "Documentary History" do not comment on this crucial fact. Although they admit that in the late spring of 1927 the All China Federation of which Mao was the director, committed serious "opportunistic" errors, they do not state that on November 14, 1927—after the collapse of the united front in June-July and after the Communist-initiated autumn crop uprising—the Central Committee of the Chinese Communist Party removed Mao from the Politburo because of gross neglect of the agrarian revolution: "In the area of the [Hunan] uprising, the program of the land revolution and of the establishment of political power was never considered. The lack of such a program led the peasants to think that the uprising was nothing but Communist trouble-making. • • • Comrade Mao • • • was in fact the central figure of the Provincial Committee of Hunan. For the mistakes made by the Hunan Provincial Committee he must shoulder the most serious responsibility; and therefore he must be dismissed from his position as candidate to the Provisional Politburo

of the Central Committee" (Kuo Wen Weekly, vol. 5, No. 3, Jan. 15, 1928, pp. 6 and 7).

These developments explain why M. N. Roy, who in 1927 had visited China as a high Comintern official, could say that Mao "in the critical days of 1927 represented the extreme right-wing view of the leadership of the Communist Party." In Communist jargon, belonging to the extreme right wing of the party means pursuing the prescribed political line with utmost caution.

Roy's appraisal fits not only the Mao of the crisis situation; it is indicative of Mao's entire political behavior from 1923 to 1927, the time of the united front with the Kuomintang. Western, and even more, Asian students of Marxism-Leninism could greatly benefit from a realistic analysis of this period, which saw the first major attempt to utilize the forces of Asian revolutionary ("anti-imperialist") nationalism for Communist purposes. Mao played a prominent role in this fateful attempt; his so-called caution was nothing else than an extraordinary ability seemingly to support the Nationalist cause while actually promoting the interests of the Communists. (For a time, Mao was even acting head of all propaganda work of the Kuomintang.) Under these circumstances, it is most unfortunate, but entirely understandable, that Mao included in his "Selected Works" only two of his many writings of this period.

In their treatment of the early Mao, the authors of the "Documentary History" have distorted the historical record and contributed to significant political misconceptions about Chinese communism. Concentrating on only one of Mao's writings of this period, and then only on one-third of it, and misrepresenting both Lenin's position and Mao's policy, they have succeeded in converting a primary source of political information, namely, Mao's united-front career, into a primary source of confusion.

As just explained, the Maoist argument took as its starting point a faulty interpretation of Mao's policy of 1927. It was fortified by an equally faulty interpretation of Mao's policy of 1940 as expressed in his pamphlet, "On New Democracy."

The key thesis of "On New Democracy" is simple enough. In the middle phase of the Sino-Japanese war (after the conclusion of the Hitler-Stalin pact, which got the European war going and greatly strengthened Moscow), Mao Tse-tung, now the head of the Chinese Communists, was under less pressure to make concessions to the Chinese Nationalists than he had been in the prepact period. In accordance with Moscow's desire to protect its eastern flank, Mao maintained the anti-Japanese alliance with the Kuomintang, but he felt free to discuss the future development of China in terms of a not-yet-completed revolution. The second stage of this development was the Socialist revolution, but the first and immediately significant stage was the bourgeois-democratic revolution, which aimed at the establishment of a democracy. Challenging the political ideas of his Kuomintang allies, Mao stated that the to-be-created order would be a "new" democracy, which would come into being through a new type of bourgeois-democratic revolution. Instead of being led by the bourgeoisie, this new bourgeois-democratic revolution would be led by the proletariat and, being part of the proletarian and Socialist world revolution, it would evolve into socialism.

The serious student of communism realizes at once that the just-mentioned ideas were initiated by Lenin as early as 1905 and that after the Bolshevik revolution they were developed by Lenin and Stalin. Both men stressed two important new features—(1) the relation between the bourgeois-democratic revolution, Leninist style, and the proletarian world revolution, and (2) the supreme importance of the Leninist bourgeois-democratic revolution for the colonial and semi-colonial countries of the East, including, of course, India and China.

The authors of the "Documentary History" are fully aware of the Leninist-Stalinist origin of the theory of the new bourgeois-democratic revolution and democracy; but they claim that Mao was less well informed. Indeed, they claim that he presented this theory as his own: "as a genuinely new contribution to Marxist-Leninist theory—a contribution which had originated in China and which presumably placed its author, Mao Tse-tung, in the ranks of the great theoreticians of Marxism." They dramatize their thesis by saying that "the gesture to create a new theory re-emphasizing 'the historic peculiarities of the Chinese revolution' originated with Mao Tse-tung himself. It was a gesture with profound implications. It suggested that innovations within the Marxist-Leninist tradition could originate not only in Moscow but in other sectors of the world Communist movement as well" (Documentary History, pp. 260 ff.).

Examination of the text of On New Democracy leads to very different conclusions. It shows that Mao, after describing the Chinese bourgeois-democratic revolution as part of the proletarian world revolution states that this correct thesis of the Chinese revolution was already being propounded in China between 1924 and 1927, but that at that time the meaning of this theoretical proposition was not yet fully expounded, and consequently it was only vaguely understood (Mao; "Selected Works," III, p. 112). Thus, Mao does not claim that he created this theory in 1940, or that the Chinese Communists, who were vaguely familiar with it since the twenties, created it then. In fact, he states: "This correct thesis—of the Chinese revolution—propounded by the Chinese Communists is based on Stalin's theory." And to make his point crystal clear he reproduced two long Stalin quotations, the second tracing the key argument back to Lenin. In his concluding sentence, "From this it can be seen that there are two kinds of world revolution," Mao once more acknowledged that he received his correct thesis of the new democratic revolution and democracy from Stalin and Lenin.

The avowed purpose of the "Documentary History" is to provide textual documentation for the major developments of Chinese communism. How then do its authors deal with these passages that are so important for establishing Mao's originality—or lack of originality? Very simply indeed. They omit them. After presenting Mao's exposition of the "correct thesis," they skip over his remark that it was poorly understood by the Chinese Communists in 1924–27 and over his decisive statement that it was based on Stalin's theory. They also skip over Mao's quotations from Stalin. The passage they then reproduce begins with the words: "From this it is clear" [the official translation, as given above is "From this it can be seen"]. No reader would know from this arrangement that the summarizing phrase refers, not to Mao's presentation of the correct thesis, but to its acknowledged Soviet source.

It may be argued that On New Democracy is a long pamphlet and that therefore a selective reproduction is legitimate. This is true with one obvious qualification: The selected passages should indicate the major points of the text; and if the introductory note stresses the importance of a certain thesis, then the editors are in honor bound not to omit passages that are crucial to the validity of this thesis. Anyone may reproduce whatever he wants from Hitler's Mein Kampf, but if he claims that Hitler was not really an anti-Semite and then omits passages that prove the contrary, he would not only violate fundamental rules of scholarship, but misrepresent history as well.

The authors of the "Documentary History," who created the Maoist myth in 1951–52, had ample opportunities in subsequent studies of Chinese thought to correct their errors. But instead of doing so, they repeated their key conclusions, which, as we have seen, are in the main based on a misrepresentation of Mao's behavior in 1927 and 1940. In a review of Mao's "Selected Works" written in 1955 Schwartz failed to comment on the Hunan report, which in addition to being much longer than the version published in the "Documentary History," had been doctored by Mao in a way which made the Maoist interpretation of the report completely problematic.

In 1958 Brandt, in a monograph on the Chinese united-front period of 1924–27, repeats the claim that in the Hunan report Mao "put himself on record with a view that conflicted sharply with Moscow's" (Brandt: "Stalin's Failure in China," 1958, p. 107). And in the same year, the senior member of the group, John K. Fairbank, in a revised edition of "The United States and China," repeated the two key theses of the Maoist school. According to Fairbank, in 1927 Mao asserted the vanguard role of the poor peasants "heretically"; and in "On New Democracy" Mao "put himself on the level of Marx-Engels-Lenin-Stalin as an original contributor to Communist theory."

These faulty views have gained wide currency in the United States. Their damaging consequences are not restricted to their impact on purely academic understanding. For the political confusion they have engendered has strongly affected opinion-molders and policymakers in this country, and has thus hampered the development of a clear, consistent and farsighted policy for coping with the Chinese Communist threat. In this important respect, these views have done a distinct disservice to the free world.

It is vital to our survival that the record be set straight, and a small but growing number of Far Eastern specialists are doing just that. A realistic comparative study of the historical roots of Chinese and Soviet communism is possible. And such a study enables us to remove the widespread misconceptions regarding the character and intent of the present Chinese and Soviet regimes.

We know that Chinese Communist society, like other Communist orders, is faced with many conflicts. We know that numerous conflicts existed—and continue to exist—between the Chinese Communists and Moscow. But we know also that any analyst of these internal and international tensions is apt to misjudge their significance as long as he believes that, because of a peculiar Maoist tradition, the Chinese Communists tend to be heretically different from orthodox Communists.

This belief has supported the feeling that Mao's land policy of 1949 expressed again his inclination to be an agrarian reformer—actually, he deprived the peasants of the land newly distributed to them as soon as he was strong enough to do so. It has strengthened the view that Mao's collectivization was different because it was gradualistic—actually, the gradualistic pattern was outlined by Stalin as early as 1930, and it was put into practice in East Europe after World War II. It has encouraged the pleas for U.S. recognition of Communist China as a means of weaning Peiping away from Moscow—actually, recognition would bulwark Mao's conviction that the West is stupid and tottering and will be destroyed faster through the combined efforts of the Communist bloc. It has favored the idea that Mao was different and perhaps heretical, when in 1957 he made an analysis of contradictions under socialism—actually, this problem was comprehensively discussed in the U.S.S.R., particularly after Andrei Zdhanov's speech in 1947—and when he listed among them contradictions between the government and the people.

In the last instance Mao elaborated a point that Khrushchev had made in his criticism of Stalin on February 24–25, 1956. But Mao generalized and explained in public what Khrushchev had treated specifically and behind closed doors. Thus Mao's procedure displayed distinctive features, and this was also the case when he set out to organize supercollectives: communes.

These problems deserve the most careful consideration. But our analysis will be adequate only if we are fully aware of the conceptual and evaluative mistakes of the past and if we systematically develop the tools needed for the comparative study of Chinese doctrine and strategy.

The survival of the free world hangs in the balance today. Though this is no time for name calling, it is no time, either, for withholding vital criticism such as has been made here. It has been said that the battle of Waterloo was won on the playing fields of Eton. Today, the ideas which the scholars and opinion molders hold are no less crucial for the decisions the policymakers will make. Where, then, we may ask, are the schools, the universities, the foundations, and research centers that will determine victory—or defeat—in the present cold war?

Robert H. Goddard—House Joint Resolution 19

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include therein a recent very ably written and timely editorial, "The 40-Year Trip to the Moon," which appeared in a recent edition of the Worcester Telegram.

This editorial, commenting on the gold medal authorized by Congress in recognition of the great scientist, Prof. Robert H. Goddard, deals with significant portions of the career of this great man.

Viewing his relations with the Government in retrospect and appreciating that out of his early scientific papers published many years ago came the basic ideas that made possible the recent rocket flight to the moon, it is evident that this honor has been all too long delayed.

To send a rocket to the moon was Professor Goddard's dream. Beset by an army of incredulous skeptics and doubting Thomases, he persisted with little encouragement indeed to conduct his complex experiments.

Looking back at his sorry experiences and the shabby treatment he received from Government officials and others, one fact stands out with stark clarity—lack of vision, yes, with few exceptions, even lack of common courtesy and consideration from Government officials and the industrial and academic leaders of Goddard's day.

A crippling intolerance of his ideas faced him at almost every turn. More often than not, he was rejected and turned aside. In only a few instances was he encouraged and helped. Only his incredible courage and tenacity sustained him.

If Government officials had exhibited, even so moderately, a degree of interest in Goddard's revolutionary concepts that the Germans displayed in the few years prior to World War II, this country would, without a doubt, be so far out in front in the current missile race and in space exploration that no other nation could presently match us.

But we cannot cry over spilled milk, nor in pardonably lamenting the stupid decisions of Government officials and others that turned Professor Goddard brusquely aside when he was on the threshold of miraculous achievements. It is too late to cancel out these grotesque errors of judgment.

That they have gravely handicapped this Nation in its military posture, in national defense, and in exploration potential could never be denied. These errors have irreparably harmed American science and the national interest, safety, and well-being.

That they have given to our possible enemies immeasurable advantages which the American Nation itself should have achieved is very clear.

We can only make the best of these grave mistakes and the ghastly critical situation that has directly flowed from them.

At the same time, we should more than piously hope that such mistakes shall not be made again; more importantly, that they are not being made even now, as numerous indications suggest.

I am gratified that at least House Joint Resolution 19, which I introduced in the Congress, also sponsored by my distinguished colleague, Congressman DONOHUE, was so fittingly passed and written into law. It at least affords some measure of belated recognition for one of history's greatest men.

The editorial referred to follows:

[From the Worcester (Mass.) Telegram, Sept. 14, 1959]

THE 40-YEAR TRIP TO THE MOON

"In my experiments I generally used a powder with an energy content of 563 calories per pound. With such a propellant, it would be possible to shoot a device * * * as far as the moon." (Dr. Robert H. Goddard in his paper on "A Method of Reaching Extreme Altitudes," submitted to the Smithsonian Institution in 1919.)

It was never given this man to see his dream come true. But he knew—40 years ago—that scientists could and would land a rocket on the moon. Goddard's conviction and the basic work which he did in the field have proved to be the most important propellant of all.

While the Russians are getting credit for landing the first manmade device on the moon's surface, it is appropriate to acknowledge the man who first told us (and them) that the feat could be accomplished.

Congress has voted a gold medal in honor of the late Robert H. Goddard, and no tribute could be more deserved. As the pioneer of rocketry, he merits all the honor that we—or the space age—can give him.

Goddard was a shy man and was repelled by the sensationalism with which his theories about space flights were treated in the press. As a man of science, he was appalled at the popular distortions of his ideas and the exaggerated reports of his undertakings. He wanted a privacy he could rarely achieve, but he also wanted an acceptance of his theories that a fearful and incredulous public denied him.

Thanks to the vision and generosity of a few individuals, Charles D. Walcott, of the Smithsonian Institution, Charles A. Lindbergh, and Daniel Guggenheim, Goddard was able to carry his experiments forward on a modest scale. If he had been able to persuade the American military leaders of his time that the rocket could be utilized as an instrument of national defense, the story of World War II might have been far different. As it was, the United States did not recognize military rocketry until the Germans—by copying some of Goddard's later models—produced the V–2 weapons used against Britain.

Emerson's observation that "to be great is to be misunderstood" was all too applicable to Robert H. Goddard. But on the day last week that Congress voted a gold medal in his honor, the Strategic Air Command launched a ballistic missile which traveled 4,400 miles from California to Wake Island. On the same day, in the Caribbean, a recovery crew aboard a Navy destroyer pulled from the water a test version of a space capsule designed to carry the first American astronaut into space.

The quiet Worcester physicist whose determination and genius opened a new epoch in human history had at last beyond all question been recognized both by his Government and by science.

And the newest scar on the moon's surface is testimony to Goddard's greatest. With his rockets he launched the whole science which has produced such triumphs.

Lest We Forget

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DERWINSKI. Mr. Speaker, in view of the tremendous public interest and sincere concern that citizens across the land have displayed in the visit of Soviet Dictator Khrushchev to the United States, I enclose what I consider to be one of the most interesting and thought provoking editorials that I have seen regarding this question.

This editorial appeared in a recent issue of the Chicago Daily Calumet, one of the outstanding community newspapers in the country:

LEST WE FORGET

LEST WE FORGET—WHAT THEY HAVE SAID

Khrushchev said:

"If you don't like us, don't accept our invitations and don't invite us to come to see you. Whether you like it or not, history is on our side. We will bury you."

"If anyone thinks that our smiles mean the abandonment of the teachings of Marx, Engels, and Lenin, he is deceiving himself cruelly. Those who expect this to happen might just as well wait for a shrimp to learn how to whistle."

"The Communists will destroy capitalism, not with nuclear weapons but through the spread of the ideology. We are as sure of this as we are sure the sun will rise tomorrow. All we have to do is grease our ideology with butter."

"Communism will sooner or later rule the world. We live in the epic of revolution."

What Lenin said:

"Promises are like pie crusts—made to be broken."

"We have to use any ruse, dodges, tricks, cunning, unlawful method, concealment, and unveiling of the faith."

"We will encircle the United States which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

What Stalin said:

"Words must have no relation to action—otherwise what kind of diplomacy is it? Words are one thing, actions another. Good words are a mask for concealment of bad deeds. Sincere diplomacy is no more possible than dry water or iron wood."

What Trotsky said:

"We are in the phase of permanent revolution. It will go on, without interruption, until one side or the other is lying conquered on the ground."

What Kosiov said:

"My trip to America has only confirmed what I thought of this country before I arrived. I repeat the words of Mr. Khrushchev who asserted that 'the children of the present-day Americans will live in a Communist society.'"

What Dimitrov said:

"We are sometimes accused of departing from our Communist principles. What stupidity, what blindness * * * all the ins and outs of our tactics are directed to a single end—the world revolution."

"We must always remember that one sympathizer is generally worth more than a dozen militant Communists. A university professor, who without being a party member lends himself to the interests of the Soviet Union, is worth more than a 100 men with party cards. A writer of reputation, or a retired general, are worth more than 500 poor devils who don't know any better than to get themselves beaten up by the police. Every man has his value, his merit. The writer who, without being a party member, defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members."

What Manuilski said:

"War to the hilt between communism and capitalism is inevitable. To win we will need the element of surprise. The bourgeoisie will have to be put to sleep. So we will begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we will smash them with our clenched fist."

LEST WE FORGET—WHAT THEY HAVE DONE

Nine hundred million enslaved people behind the Iron Curtain.

Twenty-eight million in Communist slave labor camps.

Millions upon millions of innocent men, women, and children killed by Communists since 1917.

They have already enlisted the aid of 1 million Americans to Communist causes.

Four hundred and fifty American prisoners of the Chinese Reds still in the hands of Communists after 73 meetings at Geneva. We have failed to have a single American released or accounted for.

During the past 25 years the United States has had 3,400 meetings with the Communists, including Teheran, Yalta, Potsdam, Panmunjom, and Geneva. The negotiators spoke 106 million words (700 volumes). All this talk led to 52 major agreements, and the Communists have broken 50 of them. As Lenin says, "Promises are like piecrusts—made to be broken."

Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MOORE. Mr. Speaker, when it was announced that the President had invited Premier Nikita Khrushchev to visit our country I received a great deal of mail concerning the wisdom of this decision. Among the many letters I received was one from James A. McCulley, an interested and devoted citizen who makes his home in Glen Dale, W. Va., my hometown.

In this letter Mr. McCulley sets forth three points which he believes we should follow during the period of time that this man is in our country.

Mr. McCulley feels strongly upon the subject on which he writes, and I submit his letter for inclusion in the RECORD, respectfully referring its contents to the attention of my colleagues:

GLEN DALE, W. VA., *August 11, 1959.*

Hon. ARCH A. MOORE, JR.,
House of Representatives,
Congress of the United States,
Washington, D.C.

DEAR ARCH: I write to urge you to vote for Congressman LANE'S resolution which calls for the Congress to oppose officially the proposed visit of Premier Khrushchev to our country. The resolution was introduced in the House of Representatives on Tuesday, August 4. Also I would urge you to use every effort and influence at your command to stop Khrushchev's visit.

Let there be no misunderstanding as to my position in this matter. I hold that no good can come of this visit. This conclusion is based on lessons of contemporary history. To accord the Butcher of Budapest a hero's welcome, and that in effect is what is planned, would label our recent solemn proclamation of Captive Nations Week a sham and a mere lipservice. It would throw to the winds our efforts and sacrifices and expenditures of billions of the American taxpayers' money for the past 14 years—all aimed at winning the captive nations to our side.

I resent the announced plan and appeal to the press, TV, and radio by those arranging the visit, an appeal to mold public opinion so that a hero's welcome will be given the despot who but a few weeks ago boasted that he would bury American democracy and that President Eisenhower's grandchildren would live in America under communism. This kind of scheming on the part of those in Government is utterly repulsive to me as an American citizen. In American democracy government is the tool of the people. The people are not tools of the government.

I have had great respect for and confidence in President Eisenhower. In this case I believe his intentions are good and sincere, however not well founded. I believe the President has been ill-advised and misled—perhaps deliberately—by individuals in or out of Government and whose political beliefs are rooted in the ideologies of Russian communism rather than in American democracy.

If worse comes to worse and the visit takes place, then I urge the following course of action by the American people in the vicinity of Mr. Khrushchev's itinerary:

1. Desert the streets and highways while Mr. Khrushchev is in the area. This would symbolize to all that the American people want nothing to do with this murderer of millions, and that those who have made this visit possible have deserted American principle.

2. Pull the shades in all homes, stores, business houses and buildings, turn out the lights and drape the store fronts and entrances in black. This would symbolize our sorrow for the countless victims of atheistic communism which Mr. Khrushchev represents. Many of these innocent victims are relatives and friends of good American citizens.

3. Display the Stars and Stripes upside down. This would tell all that we are a disgraced nation in distress so long as Mr. Khrushchev remains within its borders.

I was quite disappointed to read that you favor Mr. Khrushchev's visit under certain conditions or with certain qualifications, details of which were not given. You have been a most capable representative for our district. I know of no one in the past who has been so capable and so hard working. I have always voted for and supported you. In some instances I may not have been in harmony with your decisions, however, I have always felt that you have had the welfare of the people at heart.

In this case I ask that you reconsider and take a firm stand against the proposed visit of the Butcher of Budapest. There are too many in this district whose relatives and friends have been murdered or who languish in prison because of Mr. Khrushchev and company.

Sincerely,

JIM MCCULLEY.

DAV Services in Kentucky

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WATTS. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Kentucky citizens has recently come to my attention. The organization rendering these services, the Disabled American Veterans, is well known to all of us, but the breadth and extent of their great humanitarian efforts apparently passes unnoticed and certainly is not appreciated to the extent that they should be.

DAV SETUP

Of the several congressionally chartered veteran organizations, the American Legion, the Veterans of Foreign Wars, the American Veterans, and so forth, which have State departments and local chapters, the DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is Bill H. Fribley, of Crestline, Kans. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is

Elmer N. Freudenberger; its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris, all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities, some 2 million, the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV National Headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization of full-time trained national service officers.

DAV SERVICE OFFICERS

One hundred and thirty-eight of them are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert to the problems of other less well-informed claimants.

The DAV national service officer in Kentucky is Mr. James M. Howard, located in the Veterans' Administration regional office, 1405 West Broadway, Louisville. Veterans' Administration hospitals coming under the jurisdiction of this office are a 350-bed general medical hospital at Fort Thomas; a 1,171-bed neuropsychiatric hospital at Lexington, a 494-bed general medical hospital at Louisville, and a 186-bed tuberculosis hospital at Outwood, Ky.

KENTUCKY FACILITIES AND SERVICES

The department commander is Mr. Troy Bowling, Lexington, Ky., and the department adjutant is Mr. Edward A. Gafford, 1908 Woodfield Road, Louisville, Ky. Mr. Gafford also is a past national junior vice commander; presently he is a member of the Kentucky State Parole Board and chairman of the Finance Committee on Employment of the Physically Handicapped. Mr. Raymond D. Webb, Louisville, an employee of the Kentucky Selective Service System, serves as the assistant department adjutant; he is a disabled naval veteran with long government service.

During the last fiscal year, the Veterans' Administration paid out $95,358,000 for its veteran program in Kentucky, including disability compensation to its 38,486 service-disabled veterans. These Federal expenditures in Kentucky furnish substantial purchasing power in all communities.

Only about 12 percent, or 4,529, are members of the 62 DAV chapters in Kentucky. This is a strange record in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of Kentucky veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimated)	72,502
Claims folders reviewed	60,418
Appearances before rating boards	40,717
Compensation increases obtained	4,743
Service connections obtained	1,526
Nonservice pensions obtained	2,162
Death benefits obtained	621
Total amount monetary benefits obtained	$2,952,001.58

These figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32; and in the central office they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Kentucky veterans, their dependents, and their survivors.

SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter. Pertinent advice was furnished to all disabled veterans, only about 10 percent of whom were DAV members, their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and business, and so forth. Helpful advice was also given as to counseling and placement into suitable, useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems. Every claim presents different problems.

VETERANS' BENEFITS NOT AUTOMATIC

Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans, not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult, too many times impossible. A Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential. The Veterans' Administration, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

PROSECUTING CLAIMS

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances, and facts, and of the pertinent laws, precedents, regulations, and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed, because most claims are not properly prepared. It is very significant, as pointed out by the DAV Acting National Director of Claims Chester A. Cash, that a much higher percentage of those claims which have been prepared and presented with the aid of the DAV, or other veterans' organization's national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

VA REVIEWS

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 2 percent—0.018—of such discontinuances and reductions have probably occurred as to disabled veterans in Kentucky, with a consequent loss of about $560,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Kentucky to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

DAV COSTS FOR SERVICES

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent, expert national service officer.

Measured by the DAV's overall cost of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating-board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection

obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

FINANCING DAV SERVICES

Evidently, most claimants are not aware of the fact that the veterans service organization receives no Government subsidy whatsoever. In the case of the DAV it is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag Department, 4,176 of whom, during the last 8 years, were Kentucky residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain the invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members, and other social-minded Americans, by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds, and by establishing special types of trust funds.

PERPETUAL REHABILITATION FUNDS

A special type of memorial trust fund originated about 3 years ago with concerned disabled veterans members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $5 per DAV member.

SUPPORTING AMERICAN ORGANIZATIONS

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Kentucky by sending in donations to the DAV Service Foundation, 1707 18th Street, NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member.

Every American can help to make our government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints, labor unions, trade associations, and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veterans organizations—United Spanish War Veterans, Veterans of Foreign Wars, the American Legion, the Veterans of World War I, the Disabled American Veterans, and the Amvets. All of America's disabled defenders, who are receiving disability compansation, have greatly benefited by their own official voice—the DAV.

Congress and the Doctor

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, many important national issues of concern to America's doctors are presently pending before the Congress of the United States. These issues range from proposals for a form of compulsory national health insurance to Federal aid for medical schools, and from tax equality for professional retirement programs to inflation. The latter—inflation—constitutes our most serious domestic problem.

In the recently completed 1st session of the 86th Congress, active consideration was given to several of these subjects. It is likely that the second session, beginning next January, will find further legislative action being taken. Accordingly, as the elected Representative of the patriotic citizens of the 18th Pennsylvania Congressional District, it is appropriate that a report of these legislative matters be made to the distinguished doctors whom I am honored to include among my constituents.

Before dealing with specific legislative subjects, I would observe that present-day conditions demand that the medical practitioner be knowledgeable on political considerations. Such factors as the numerous social programs being advocated which affect the practice of medicine, the increasing importance of the economics of medicine, the 30-year trend toward greater reliance on Government paternalism in solving human problems, and the expansion of governmental research and health regulatory activities make it imperative that every doctor keep informed on legislative issues before the Congress. It is equally important that doctors fulfill their citizenship duty by standing for principles of Government in which they believe as Americans and by supporting the candidates who stand for those principles.

It was my privilege recently to prepare a commentary for publication in the AMA News in which I urged doctors to abandon their traditional avoidance of political matters. In that article I said that awareness by the doctors of the political realities is necessary in the interest of good medicine for the benefit of our Nation's citizenry. I acknowledged that "medical doctors are fine patriotic Americans with one very serious shortcoming." The serious shortcoming to which I referred was the way in which doctors shun politics and political activities as though such things were someone else's responsibility. I went on to urge doctors "to assume their full citizenship roles with greater diligence by participating in that American institution—politics." In that article I said in part as follows:

> American physicians should acquaint themselves with the principles and the records in office of the two great national political parties. They should support with their endeavors and their resources the candidates of the party they find best qualified to assume responsibility of government at the Federal, State, and local levels. Through their daily contact with the people, doctors and other professional men are particularly qualified to understand the needs and concerns of the citizens they serve and can bring their leadership to bear in achieving meritorious national objectives.
>
> This political activity of a doctor would be in his self-interest as a citizen and even more important it would be in the best interest of our Nation and our community life across the land.

In essence, it is my conviction that the issues confronting our Nation are so crucial in terms of human welfare, the preservation of our free enterprise way of life, and the continued greatness of our Nation that America's doctors must find opportunity to become patriotic political forces so that our communities, States, and Nation can benefit from their informed viewpoints.

Among the legislative highlights of direct interest to medical practitioners on which action was taken during this past session of Congress was a bill, H.R. 10, which I was privileged to cosponsor, providing tax deferment on self-employment income paid into a restricted retirement program. This so-called Simpson-Keogh bill would remove from our Federal tax structure a present discrimination against self-employed individuals and would tend to give to such taxpayers comparable retirement opportunities with that accorded under present law to employed persons. I am happy to report that we were successful in having this legislation approved by the Committee on Ways and Means and by the House of Representatives. It is now pending before the Senate Finance Committee, and it is my hope that the legislative process on this meritorious proposal can be successfully completed next year.

Other matters of direct interest to doctors within the legislative jurisdiction of the Committee on Ways and Means on which I serve as ranking Republican member come under the

subject of social security amendments. These include old-age and survivors insurance coverage for physicians, medical and hospital care for OASI beneficiaries, and the administration of existing health and medical programs under the Social Security Act.

The question of whether or not doctors should be mandatorily brought within the coverage of the Social Security Act is a problem that the Congress has been considering for several years. Recently a number of State medical societies, including Pennsylvania, have gone on record as being in favor of such an extension of coverage. It is possible that this subject will again be before the Congress next year. It must be acknowledged that there are valid arguments representing both the pros and cons of this question.

In summary form the arguments in favor of such coverage for doctors include the facts that doctors as consumers pay at least in part the cost of covering other individuals under the act. This results because the employment taxes to some extent are passed on as a cost of doing business. If the doctor is required to pay for the protection of others under the program, he might just as well participate in the program himself. Social security benefits are tax free and as such could be an important consideration in a doctor's retirement plan either for age or disability as well as protection for his survivors.

The arguments against coverage of physicians include a recognition of the fact that doctors for the most part do not retire as early as most other groups and that they would therefore not have a reasonable expectation of recouping in benefits the amount of their tax contributions. This is a factor of increasing significance in the years ahead when the tax rate ultimately is scheduled to go as high as 6¾ percent on an annual taxable base of $4,800 on self-employed income. It will be my purpose to continue to give careful study to the relative merits pertaining to this issue so that I may properly represent the best interests of the medical profession.

The second legislative matter concerning social security that is of direct interest to the medical profession involves the so-called Forand bill, H.R. 4700, which would provide hospital, nursing home, and certain medical benefits for OASI beneficiaries. This legislation was the subject of public hearings by the Committee on Ways and Means this past July. During the course of these hearings the Medical Society of the State of Pennsylvania was ably represented before the committee by a distinguished general practitioner from nearby Indiana, Pa., Dr. Daniel H. Bee, who is chairman of the board of trustees of the State society.

Dr. Bee properly expressed concern over the efficacy of handling the medical care problems of the aged through Federal intervention, the effect such a program would have on existing voluntary health insurance plans, the impact of the proposal on individual initiative and self-help and the possible disruptive consequence to the all-important physician-patient relationship. Dr. Bee pointed out the great progress we have made in our State of Pennsylvania in providing medical care for our aged and he called attention to the fact that in our State no aged or indigent person has gone without medical care providing he seeks this care from his physician.

In a speech in the House of Representatives which I made on August 27, 1959, on this subject, I called the attention of my colleagues to the progress that the medical profession working in conjunction with the insurance industry is making "to assure adequate medical care for all our citizens on a nondiscriminatory basis and within the framework of our free enterprise system." I went on to say:

> This progress is being made without subjecting the medical profession to domination by the dictates of Government bureaucracy and without launching our Nation on the discredited path of a system of national health insurance. It is encouraging to me that our citizens dealing on the basis of free enterprise have made the progress that has been achieved in meeting their medical and health needs by individual and collective initiative without reliance on Government paternalism.

I am confident that further consideration of the Forand bill will be before the Committee on Ways and Means and the Congress next year. It is important that those who do not believe that H.R. 4700 represents a workable solution to medical care needs for the aged should develop appropriate alternatives. It will, of course, be my purpose next year to continue my endeavors in cooperation with the medical profession to guard our citizens and Nation against the disastrous consequences of compulsory national health insurance.

In November of this year the Subcommittee on the Administration of the Social Security Laws will conduct a public hearing on the manner in which the social security disability program is being administered. It is likely that medical organizations will be represented by spokesmen at these hearings.

Other important legislative highlights in the past session of Congress included an expanded program of nursing home development with the Federal Housing Administration guaranteeing up to 75 percent of private loans for construction of proprietary nursing homes. A health insurance program for civilian Federal workers was also approved. The Medicare program of treating qualified dependents of military personnel in civilian hospitals was also approved. For fiscal year 1960, $400 million was authorized for the National Institutes of Health and an augmented Hill-Burton program of Federal aid for hospital construction was also authorized. With respect to international implications of medicine the Senate approved a $50 million annual program for international medical research, and it is likely that this proposal will receive House consideration next year.

The foregoing summary calls to the attention of the medical practitioners in the 18th Pennsylvania Congressional District some of the legislative considerations before the Congress. It is my hope that during the adjournment period and during the legislative session next year I will have opportunity to discuss these matters and other national issues with the distinguished members of the medical profession in my district either individually or at meetings of their respective county medical societies. It is my hope that by working together in this way for the betterment of our citizens' health and the improvement of the medical services available to them, we can contribute to soundly conceived medical progress.

In closing, Mr. Speaker, I would like to give deserved praise to the great contribution the doctors in my district have made to the public advancement through their professional service and through their selfless contributions to community welfare. The role of a doctor is one of great responsibility, and I am proud of the manner in which the members of the medical profession in my constituency have without exception wholeheartedly and capably fulfilled that responsibility.

Water Recreation Facilities in Colorado

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. CARROLL. Mr. President, water recreation facilities are precious in Colorado. We are far from the great oceans and natural lakes of this country. Many of the big water bodies we have in Colorado are manmade.

For this reason we perhaps relish and cherish water sports and water recreation in Colorado to a greater degree than the areas blessed with abundant water.

The sport of water skiing, for example, had its American introduction at Sloan's Lake in Denver many years ago.

A Coloradan who deserves a full measure of credit for development of Colorado water recreation facilities is R. James Malloy of 811 South Gilpin Street, Denver.

Jim Malloy, an employee of the U.S. Bureau of Reclamation, working through private citizen organizations on his own time, has devoted virtually all his after-work hours to development of new facilities for boaters, water skiers, swimmers, and fishermen.

Recently Jim Malloy's friends in Colorado boating organizations recommended him for the Denver Post's gallery of fame as Colorado's No. 1 sportsman for 1959.

On August 29 Jim Malloy was saluted in the Post's gallery of fame for his "successful efforts to have Cherry Creek Reservoir developed as a State recreation area."

The Post said:

Even before this project was completed Malloy was working toward the opening of other recreation sites, and some of them have been or will be opened to the public soon.

Mr. President, I ask unanimous consent that a letter of appreciation from Jim Malloy's friends to the Denver Post be printed in the Appendix of the RECORD.

There being no objection, the letter, was ordered to be printed in the RECORD, as follows:

AUGUST 10, 1959.

Mr. CAL QUEAL,
The Denver Post, Inc.,
Denver, Colo.

DEAR MR. QUEAL: We are writing this letter in appreciation of a Colorado and Denver citizen who we feel should because of his personal accomplishments in the last 4 years in the field of recreational development for the people of Colorado be given public recognition.

We refer to R. James Malloy, a respected member of practically every boating and wildlife organization in the State and who some 4 years ago was the first person to start a crusade to impound water behind Cherry Creek Reservoir. His and our dream was culminated this summer when the State parks and recreation department opened this area for the people of Colorado.

Because of the hundreds of letters he wrote to Federal agencies, State officials, and to the Colorado congressional delegation, and the many personal conferences with all concerned in pursuit of his dream that this area should be fully developed as a recreational area, he can truly be called the father of the Cherry Creek recreational development.

Coincidently with the Cherry Creek project, he had his sights on other recreational areas that he felt should be made available to the people of Colorado. After 2 years of negotiation, on April 24 of this year, he personally negotiated a contract and agreement with the Denver Water Board to open Antero Reservoir for boating and boat fishing only, with Cheesman, Gross, and Eleven Mile Reservoirs to follow next year. The operating contract between the Denver Water Board and the State parks and recreation department was signed on July 28, 1959, and Antero Reservoir should be opened for public use no later than August 15, 1959. As a result of his efforts, future years will see thousands of Colorado families enjoying these areas. For years in his talks before boating and wildlife organizations he has stressed and pleaded for more effective planning and use of Colorado's outdoor recreation resources. A recent statement we heard him make is: "Boating, fishing, camping, hiking, skiing, and hundreds of other recreational opportunities can and must be wisely developed so that present and future Coloradans can more fully enjoy their own State—the greatest State in the Union." In collaboration with Harold Lathrop, State director, parks and recreation department, and at the request of Senator Dunkley, of Denver, he wrote Colorado's boating bill which was passed by the last general assembly. He is a hunter, fisherman, boater, and water skier. We feel that he can be called Colorado's No. 1 sportsman and boater.

He is a supervisory official of the U.S. Bureau of Reclamation and he has accomplished these things on his personal time without financial remuneration from any organization.

We feel that he is a credit to the State of Colorado and the U.S. Bureau of Reclamation who employ his services.

Because of his aggressive leadership throughout the years, we recommend him to you for proper public recognition and your newspaper's "Hall of Fame" as Colorado's No. 1 Sportsman for 1959.

Sincerely,

Patrick W. Chamberlain, Representing the Rocky Mountain Boat Racing Club, Inc., Arvada, Colo.; Gene Wenzinger, Representing the Riviera Lake Boating Club, Denver Colo.; Paul L. St. Onge, Representing the Outboard Boating Club of Metropolitan Denver, Denver, Colo.; Robert T. Roath, Representing the Mile Hi Boat Racing Club, Denver, Colo.; James B. Jurgens, Representing the Inboard Association, Denver, Colo.; C. N. Centers, Commander, U.S. Coast Guard, Flotilla No. 2012, Denver, Colo.; Leon S. Brunner, Jr., Representing the Metropolitan Wildlife Association, Englewood, Colo.; Wilfred Howard, Jr., Representing the Denver Municipal Boating Association, Denver, Colo.; John L. Shumaker, Representing the Sailboat Association, Littleton, Colo.; Tris Calomino, Representing the Calomino Marine Co. and Past President, Marine Dealers Association, Denver, Colo.

The Authoritative Story of Genocide in Tibet by Communist China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the New York Times of June 7, 1959, and an epochal document on Communist genocide in Tibet prepared under the auspices of the International Commission of Jurists under the leadership of the distinguished senior advocate of the Supreme Court of India. It tells in sober terms a story of naked barbarism by the Chinese Communists seldom equaled in history. Is the world to pass by on the other side? If so, the United Nations will move a long step along the road to failure followed by the League of Nations when it ignored or merely deplored the Japanese militarists' aggression in Manchuria in 1931 and Mussolini's assault on Ethiopia a few years later.

The test is not of Red China; it long ago revealed its true character and objectives to all except the willfully blind. The test is of ourselves and the other free nations and peoples of the world. Are we content to be next?

The editorial and the report follow:

[From the New York Times, June 7, 1959]

GENOCIDE IN TIBET

The International Commission of Jurists, under the chairmanship of a distinguished Indian lawyer, can hardly be called a propaganda organ. Its findings should be accurate and impartial. After an exhaustive 2-month study of the Red Chinese assault on Tibet it has made ready its report for the United Nations and its appeal to jurists throughout the world.

The Peiping regime, it has found, has adopted a systematic policy that constitutes an attempt to destroy the national, ethnic, and religious group of Tibetans by killing members of the group and by causing serious bodily and mental harm. The Commission estimates the number of those killed thus far at 65,000.

This is a forthright charge of genocide and the Commission cites the United Nations Convention of 1948 as having been violated. Having brought such an indictment, the Commission calls upon the United Nations to take appropriate action and upon jurists throughout the world to help the Tibetan people in their struggle for freedom and justice.

In this instance the case of Tibet has been placed in a somewhat different light from that of most previous discussion. The emphasis, hitherto, has been largely political, with attention given to Red China's violation of the pledges of autonomy for Tibet and the attack on individual liberty.

The Commission broadens the whole base of the outrage. It is seen as a deliberate attack upon a whole people, a specific culture, and a human as well as political structure. The methods are simply mass murder and organized suppression. The Commission is trying to defend the right of peoples not merely to be free but actually to stay alive.

It is difficult to see how the United Nations can, in honor, ignore such a report. Certainly it must be taken into account whenever there is any discussion of the status of the Red Chinese regime among civilized nations.

SUMMARY OF A REPORT ON TIBET SUBMITTED TO THE INTERNATIONAL COMMISSION ON JURISTS BY SHRI PURSHOTTAM TRIKAMDAS, SENIOR ADVOCATE, SUPREME COURT OF INDIA

PRESS CONFERENCE ADDRESS

1. When the uprising took place in Tibet, we in the International Commission of Jurists were obviously concerned with developments taking place there. The Commission's main concern is with the legal aspects of the situation in Tibet in connection with (a) the interpretation of the position of Tibet under international law; (b) human rights to the extent that fundamental rights and freedoms of the people of Tibet are systematically violated or affected; (c) the threats of the events in Tibet to the rule of law and international peace.

2. The International Commission of Jurists has not yet commented on the situation in Tibet because it was anxious to make certain of the facts of the case. I was asked by the Commission to investigate the matter on the spot and especially the legal and human rights aspects of the case. It was with this mandate that I organized a team of experts to examine closely and objectively, as lawyers, the Tibetan situation. After 2 months of work, we have completed the preliminary part of the investigation. We have collected documents, interviewed people and reliable witnesses from Tibet, and studied the events as reported by the press and radio, including the Chinese press and radio. These materials have been turned over to the International Commission of Jurists. They have been examined and scrutinized. On the basis of this, the Commission has taken certain decisions, and I have been asked by the Commission to convey those decisions to you.

3. I would first like to give you some idea of the results of our investigation. The situation in Tibet has evoked widespread concern and sympathy all over the world. The understandable exception to this are the Soviet dominated countries and the Communist parties in Asia and elsewhere.

What is happening in Tibet is reminiscent of the conquest by some European countries and domination over Asian and African

people on the plea of bringing progress in those lands, described by complacent persons as the "white man's burden." In a sense it reminds one of the brutal suppression in Hungary. Unfortunate Tibet is presented at the same time with forced progress and brutal suppression at the hands of the Chinese Government.

4. It is not necessary to go very far into the historical background of Tibet beyond stating that from 1912 to 1950 Tibet was virtually an independent country. No Chinese writ ran in Tibet: there was no Chinese law, no Chinese judge, no Chinese policemen on the street corner; there was no Chinese newspaper, no Chinese soldier, and even no representative of the Chinese Government.

5. In 1950 China assured India that China had no intention of incorporating Tibet into China by force or otherwise and was willing to negotiate with Tibet regarding the future relationship of Tibet with China. But a few weeks later the invasion of Tibet took place—on October 7, 1950. On October 19, 1950, Chamdo in eastern Tibet was captured and on the 24th Peiping announced that the forces had been ordered to advance into Tibet "to free 3 million Tibetans from imperialist oppression."

6. As a result of the invasion, in December 1950 the Dalai Lama moved with his Cabinet to Yatung near the Sikkim frontiers where he remained until August 1951. In the meantime a Tibetan delegation had proceeded to Peiping for negotiations as a result of which an agreement was signed on May 23, 1951, which is popularly known as the 17-point agreement. Its main features were:

(1) Chinese armies were to be allowed to enter Tibet for consolidating national defense.

(2) Tibetan people were entitled to regional autonomy under the leadership of Central Peoples Government.

(3) The Central Government were not to alter the existing political system or the status and functions and powers of the Dalai Lama.

(4) Policy of religious freedom was to be carried out and religious beliefs, customs were to be respected and Lamas and monasteries were to be protected.

(5) Language and school system, agriculture, and economy were to be gradually developed and no reforms were to be carried out by compulsion.

(6) While the Chinese were to handle external relations Tibet would be free to have commercial and trading relations with neighboring countries.

(7) The Chinese Government would set up a military and administrative committee, in which "patriotic" local personnel would be absorbed, for the implementation of the agreement.

7. The dismemberment of Tibet took place in 1951, the Dalai Lama being left with authority only in the western portions of Tibet but with a Chinese general exercising effective control. In September 1954 the Dalai Lama and the Panchen Lama were invited to Peiping where they attended a meeting of the state council, at which they had to submit to a number of decisions, including the formation of a preparatory committee for the autonomous region of Tibet.

8. Two years later, in 1956, Mr. Chou En-lai assured Mr. Nehru that China did not consider Tibet as a province of China, but as an autonomous region. He also said that it was absurd for anyone to imagine that China was going to force communism on Tibet, though reforms would come progressively. They proposed, however, to postpone the reforms for a considerable time. About that time the Dalai Lama was in India, and Mr. Nehru conveyed these assurances to him.

9. In 1957 Mr. Mao Tse-tung in his so-called hundred flowers speech said that reforms in Tibet would not be introduced during the period 1958–62 and that the introduction of proposed reforms would depend on the wishes of the Tibetan people.

This in brief is the historical background.

10. After the 1950 aggression and the 1951 agreement, the people of Tibet have insisted that Tibet should continue to enjoy the same internal autonomy as before, while the Chinese talked of limited regional autonomy within the framework of the Chinese Constitution. The Chinese persistent effort has been to incorporate Tibet as an integral part of China.

Let us now turn to what happened in Tibet from 1951 onward.

11. It is stated by Tibetan sources that soon after 1951 the first impact of Chinese control was felt in the feverish construction of roads and highways. The labor for this work was Tibetan men, women, and children, laymen and monks, many of them forcibly drafted for the work. It is alleged that up to 200,000 were forced into these labor projects and about one-fourth of them are said to have died from the cold weather, hunger and fatigue. As one witness reported: "The financial and physical losses sustained by our people were great. By building the gigantic roads the economic loss sustained goes into thousands of acres of agricultural land. The Chinese destroyed agricultural lands, irrigation systems and ancient consolidated holdings by indiscriminately using the tracks in the name of highway priority. Numerous religious monuments, shrines, Mani walls and even houses of poor peasants that were in the path of the highway or road were destroyed." The systematic destruction of religious monuments and shrines for propagating communism will be dealt with later. The destruction of these and forcing the monks to forced labor shocked the Tibetans tremendously.

12. There is no doubt that since 1952 there has been large-scale Chinese immigration into Tibet, particularly in the northeast and eastern areas. According to reliable sources, about 5 million Chinese have already been settled in Tibet and some 4 million more are going to be settled. The present population of Tibet is estimated at 3 million people. The Tibetans naturally feel that as a result of this vast settlement of Chinese in Tibet, a complete destruction of Tibetan identity will be brought about in the foreseeable future. The Chinese immigrants have been brought into Tibet ostensibly for the purpose of bringing wastelands under cultivation but actually the immigration was followed by large-scale confiscation of lands and buildings belonging to monasteries and private persons, by levies of special taxes on everything the Tibetan possessed—and here the monasteries were discriminated against and subjected to exorbitant taxation—and the depletion of decades-old granaries which affected the most fundamental sensibilities of the Tibetans who regarded them as a religious-like symbol of pride and sign of prosperity.

13. The efforts by the Chinese to destroy systematically private trade and commerce will not be described in detail here but will be included in the final report. The destruction of religious freedom however requires mention. Through the Chinese press, which became firmly entrenched as the sole source of press information in Tibet, a precise and deliberate campaign has been conducted against the Buddhist religion and the lamas, and against Buddha himself. I would like to quote from a Chinese controlled newspaper published in the Tibetan language:

"Karsey Daily, page 2, dated November 22, 1958:

"To believe in religion is fruitless. Religion is the instrument of autocratic feudal lords and religion works home no benefits whatever to the people. To explain this we trace the historical background of the origin of the Buddhism. The founder of Buddhism was Sakya Muni, son of the King Sudodhana of India. His kingdom was very aggressive among all the Indian kingdoms of the time. It always used to invade the small kingdoms. It was during the reign of Sakya Muni, his subjects revolted against him and later other small kingdoms also rose against him spontaneously. As they attacked Sakya Muni he accepted the defeat but escaped amidst the fighting. Since there was no other way out for him he wandered into the forests. Having founded Buddhism he brought about a pessimism and idleness in the minds of the people, weakening their courage, and thus reached his goal of redomination over them. This fact is recorded in the history."

Those who know of the life of Buddha will see the clear intent of the press campaign.

14. Our information indicates that this attack on religion was combined with a systematic religious persecution. We have evidence of instances and cases where the heads of monasteries have been killed, imprisoned, publicly humiliated. One case in our files, for instance, refers to a very highly respected lama who was stripped, dragged with a rope over rocky terrain, as a result of which he died, his abdomen being ripped open by the dragging. In the Kham Province alone 250 monasteries were destroyed; cases have been reported of head lamas being dragged to death by horses, and a fairly large number sent as prisoners to concentration camps in China. Of seven leading lamas charged with offences which fit into the general scheme of attack on religion, only one—Zongsar Khentse Rimpoche—escaped to India. The others have all been executed or are now in prison.

15. From the beginning of the occupation in 1950, the process of indoctrination began. A number of front organizations for youths, women, and workers were set up. Several thousand persons were sent to Peiping for training in Communist ideology.

16. A curious offshoot of this indoctrination was the Mimang movement, a people's movement which started in Lhasa. Resistance to Communist occupation found its first expression in village meetings called by the Communists as part of their indoctrination and propaganda campaigns in 1952. At these meetings anti-Communist resolutions were passed and thus began a national resistance movement which became known as the Mimang movement and which spread all over Tibet. Its chief aim became the revocation of the 17-point agreement. This movement had the support of the Lukhwanga and Lobsang Tasic (Lama), the two prime ministers. The Chinese became alarmed and Mimang was ordered to be suppressed. Its leaders were arrested. The Dalai Lama was forced to demote the Prime Ministers, although they continued to function as ministers. Mr. Lukhwanga left Tibet in 1957 and has since been in India.

17. All this led to tremendous discontent and by the middle of 1956 risings began in the Khampa area situated within the jurisdiction of the Chamdo liberation committee, one of the three administrative areas set up after the 1950 occupation. This resistance spread to several areas and, so far as our information goes, is still quite active in the eastern areas, although it seems to have been suppressed in the areas round about Lhasa. Since the rebel area is mountainous and difficult terrain for the army to operate in, large-scale aerial bombing has been resorted to. In the accessible parts veritable terror has been let loose on the population. Reliable estimates of the persons killed come to about 65,000. The number of persons deported is stated to be about 20,000. These figures include the recent massacres in and around Lhasa. It is reliably reported that after the suppression of the rising in Lhasa all males between the ages of 15 and 60 have

been removed from the city to some unknown destination.

18. Coming now to the recent incidents in Lhasa, which ultimately led to the flight of the Dalai Lama, a little background to the immediate flareup may be useful. A number of incidents had happened in the last 2 years when high personages, believed not to be sympathetic to the Chinese, were invited to parties by the military commanders. These were either killed or imprisoned. This became widely known in Tibet.

19. On March 9, 1959, the Dalai Lama received an invitation from the local military commander to attend a cultural program at the military headquarters. He was asked to come unaccompanied by any of his ministers or his bodyguard, a most unusual request. In view of the stories mentioned above, as soon as the news of the invitation became known, a large number of people surrounded the Norbulinga Palace, where the Dalai Lama was in residence. This happened on the 10th. All the ministers except one gathered in the palace, the exception being a minister who was considered to be pro-Chinese and who was prevented by the people from entering the palace.

20. One Phakpala, who brought the invitation and was considered to be a Chinese stooge, was killed by the mob in the street and a few thousand people marched to the Indian and the Nepalese consulates dragging the body of this person and proclaiming, "We are not under Chinese rule; we want independence."

21. The Dalai Lama asked the people to be calm and announced that he would not go to the show. In spite of this, the people continued to stay round the palace throughout the night of the 10th.

22. On March 11, 1959, a meeting of all Government officials was called at the palace. A few pro-Chinese officials did not attend, and a proclamation was issued in the name of the Cabinet that Tibet was independent. Among the Cabinet Ministers present at the meeting were Surkhang, Neushar, Gastang, and Shasur.

These gentlemen are at present in India with the Dalai Lama.

23. On March 12, 1959, a meeting was held at Shol, below the Potala Palace. Practically the whole population of Lhasa seem to have been present. At this meeting it was decided to prepare documents regarding the claim of independence. A letter was sent to Mr. Shakabpa, which never reached him, mentioning these facts, and he was asked to announce to the world the facts of the Chinese oppression and the decision of the Tibetan people regarding independence. This meeting was almost in continuous session between the 12th and 17th of March, and the people gathered entirely unarmed. After nightfall two shells were fired on the palace, but fell in an artificial lake in front of the palace. Machineguns and firing of arms were heard. At 10:30 p.m. and thereafter the Dalai Lama and some of his party which arrived in India left the palace one by one.

24. The shells were evidently fired by the Chinese as a warning in the hope of getting the Dalai to surrender, but nothing happened on the 18th. On the early morning of the 19th at 1 a.m., a serious bombardment of the palace began. The Chinese were evidently not aware that the Dalai Lama had left 24 hours earlier. This bombardment completely destroyed the palace and the city was also greatly damaged. The estimated loss of life is about 20,000 persons. I am informed that there were sufficient Chinese troops in Lhasa at the time who could have taken perhaps milder action, but the continuous bombardment was intended to strike terror among the people.

25. Since in spite of the bombardment the Dalai Lama did not come out and surrender, the Chinese then suspected that the Dalai Lama had left and, as a result, numerous aerial search parties were sent. These planes, flying low, machinegunned groups of people wherever seen. This was done indiscriminately in many places on the possible escape routes of the Dalai Lama in the hope that the groups so attacked might consist of the Dalai Lama's party.

26. From the facts stated above the following conclusions may be drawn:

(a) From 1950 onward as a result of Chinese aggression a practically independent country is being turned by force into a province of China and the struggle of the Tibetans has been to regain their independence.

(b) Even the terms of the 17-point agreement of 1951, guaranteeing broad autonomy to Tibet as mentioned above, have been consistently disregarded.

(c) There has been arbitrary confiscation of property belonging to monasteries, private individuals, and Tibetan Government.

(d) Freedom of religion has been and is denied to the Tibetans. The Chinese authorities have been attempting to destroy the Buddhist religion of the Tibetans and their faith and also their monasteries, shrines, and monuments. A large-scale policy of Communist indoctrination and an abusive antireligious propaganda have also been launched.

(e) The Tibetans have been denied freedom of information.

(f) There has also been a systematic policy of killing, imprisonment, and deportation of those opposed to the regime. According to reliable sources the total number of persons so far fallen victims to the mass killing amounts to a colossal total of 65,000.

27. The above events establish that there has been a deliberate violation of fundamental human rights. There is also a prima facie case that on the part of the Chinese there has been an attempt to destroy the national, ethical, racial, and religious group of Tibetans as such by killing members of the group and by causing serious bodily and mental harm to members of the group. These acts constitute the crime of genocide under the genocide convention of the United Nations of 1948.

28. Upon examination of the material submitted by our investigating committee, of which the above is only a short summary, the International Commission of Jurists has decided:

(a) To publish a preliminary report, with all relevant documents and commentaries, and to distribute it as widely as possible.

(b) To communicate the report to the United Nations and other interested international organizations and agencies, requesting them to initiate such action as they might consider appropriate.

(c) To distribute the report to bar and other legal associations and faculties of law, requesting that they give it immediate publicity and support.

(d) To invite the investigating committee previously established to expand its activities under the name "Legal Inquiry Committee on Tibet" and to continue to collect and obtain evidence in the form of documents, interviews, commentaries, and statements for the preparation of the final report.

(e) To examine all such evidence obtained by this committee and from other sources and to take appropriate action thereon and in particular to determine whether the crime of genocide—for which already there is strong presumption—is established and, in that case, to initiate such action as envisaged by the Genocide Convention of 1948 and by the Charter of the United Nations for suppression of these acts and appropriate redress.

(f) To call upon the lawyers and jurists of the world to express their solidarity with and to support actively the work undertaken by the International Commission of Jurists to help the Tibetan people in their struggle for freedom and justice.

Telegram From Joe Jenness, National Rural Electric Cooperative Association

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, on September 12, 1959, I inserted in the RECORD a letter that I had directed to the Honorable Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association. At that time I promised to insert Mr. Ellis' reply in the RECORD. To date I have received no reply from Mr. Ellis; but under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a copy of a telegram that I have received from Mr. Joe Jenness, acting general manager of the above-mentioned association.

The telegram follows:

WASHINGTON, D.C., *September 14, 1959.*

Hon. RICHARD M. SIMPSON,
U.S. House of Representatives,
Washington, D.C.:

The CONGRESSIONAL RECORD of September 14 carries in the Appendix a statement by you and the reproduction of what purports to be a letter from you to Clyde T. Ellis, general manager of this association. To date we have not received the letter, but, assuming the copy in the RECORD is correct, we hasten to answer it.

Mr. Ellis is at present accompanying a Senate delegation on an inspection tour of hydroelectric power installations in Russia. He did not have an opportunity to see or know of the letter you inserted in the RECORD.

The "rumors" to which you refer have absolutely no basis in fact and are completely false. It seems to us that the "spirit of fair play" to which you repeatedly refer in your letter would have been better served had you attempted to investigate the "rumors" before you became an instrument for spreading them further. We see nothing "fair" about your letter and the innuendoes it contains, or the manner in which you made it public before we had even had a chance to see it, much less answer.

This is not a partisan organization. Members of both political parties make up its membership, its employees, and its board of directors. We are deeply appreciative of the support for rural electrification which individual Congressmen of both parties have extended. In like manner, we regret and deplore the fact that at present a few Congressmen, notably those who have repeatedly voted against measures supported by rural electric systems, seem bent on smearing this association and its employees. The creation and circulation of the unfounded "rumors" to which you refer seems to be a case in point.

We are not going to "loan" any employee to any candidate, Republican or Democratic.

Neither are we going to grant a leave of absence for any such political purpose, nor in any other way permit or condone anything similar to the "rumors" which you say you have heard. I hope this is sufficiently clear. We hope you will immediately follow through on your promise to insert this reply in the RECORD.

JOE JENNESS,
Acting General Manager.

Colorado Wheat Farmers Organize To Dispose of Crop Surpluses

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. CARROLL. Mr. President, 20,000 Colorado wheat farmers are doing something about crop surpluses.

They have organized a marketing organization called the Colorado Wheat Administrative Committee, with headquarters at 1636 Welton Street in Denver, and managed by a Colorado wheat farmer, Ted Fiedler.

The committee of Colorado wheat farmers has joined with similar groups in Kansas and Nebraska to form the Great Plains Wheat Market Development Association, which has established sales offices all over the world in an effort to market Great Plains wheat.

The farmers tax themselves one-half cent per bushel of wheat to promote sales of their wheat in foreign markets.

Colorado wheat farmers deserve high recognition for their initiative and enterprise in approaching the wheat disposal problem through their own private marketing organization, supported by a self-imposed tax.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Bill Miller on Colorado wheat farmers which appeared in the Rocky Mountain News of Denver, Colo.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE WHEAT FARMERS TURN SALESMEN
(By Bill Miller)

Colorado's wheat farmers, more than 20,000 of them, are taxing themselves and using the money to develop new markets for their product.

They have joined farmers in Nebraska and Kansas and have opened sales offices in several foreign countries.

In an all-out effort to help themselves, the farmers have decided they must become salesmen, diplomats, and public relations experts if they are to continue courting their first love—quality wheat.

These are strange and new roles the farmers are playing * * * roles that the general population, especially city dwellers, will have difficulty associating with the farmer.

MENTAL PICTURE

For the city dweller nurtures a mental picture of the farmer in patched overalls and strawhat with outstretched hand toward Washington.

Thus the farmer has been caricatured by cartoonists in the public press.

"The Government pays them for all the wheat they grow and for keeping land out of productivity. And those surplus crops * * * the Government keeps buying them and then has to pay for storage."

This is a popular lament, a litany that has been chanted over and over again, a complaint that is justified.

No one realizes it more than the farmer.

IN REAL TROUBLE

As one eastern Colorado wheat farmer put it:

"Hell, it's getting so I'm afraid to walk down the street. I get the feeling that people are pointing their fingers at me and blaming me personally for everything from surpluses to high taxes to the cold war with Russia."

Farmers and the various associations they belong to, do a lot of bickering and squabbling among themselves. But they all agree on one thing.

The American farmer, especially the wheat farmer, is in real trouble.

"We are caught in a bind," another farmer explained. "Ten years ago we were getting $2.50 for a bushel of wheat and I could buy a tractor for $1,900. Now I'm getting $1.70 for a bushel of wheat and it would cost me $2,600 to buy the same kind of tractor."

Statistics compiled by the U.S. Department of Agriculture illustrate what this farmer was talking about.

During 1947–49, the average Colorado wheat farmer, according to the Department, was realizing a 13.7 percent return on his investment. Last year that percentage had dropped to 3.3 percent.

His hourly earning was $3.34. Last year his earning dropped to $1.23 an hour.

"Yet many people insist we are getting rich by living off the Government," this farmer said. "Understand, we are not going around in rags, but a good many of us are living off our tax depreciation schedule. It's just a question of how long we can continue."

A BILLION BUSHELS

Collectively, U.S. wheat farmers grow a billion bushels of wheat each year. Right now, there are approximately 2.3 billion bushels in storage.

The annual U.S. consumption of wheat is approximately one-half billion bushels and another 100 million bushels are used for feed and seed.

Thus, if all American farmers stopped raising wheat, the surplus in storage would carry the country for 2 to 3 years.

Why not do this?

The answer is, thousands of American farmers would be bankrupt. The ensuing chaos would be felt by all Americans.

And from the wheat farmer:

"We are proud of our occupation. That's all many of us know—how to grow the best hard wheat in the world."

Despite an acreage allotment program, which has cut acreage devoted to wheat growing by one-third, farmers produce more wheat than ever. This is because the farmer has increased his per-acre yield from 12 to 34 bushels.

THEY CAN'T STOP

Thus the farmer, to make inroads on the surplus that plagues him and all of America, must either grow less or sell more.

"And we sure don't want to stop growing wheat," a farmer in the Julesburg area explained. "That's all we can grow out here. Sure, we can play around with sorghums and millet and oats, but we're lucky if we can break even on that kind of crop.

Realizing this, the Great Plains farmers are determined to develop additional markets, to show the world's population how to eat wheat, to find new uses for wheat in the United States and, most important to many, to acquaint Americans with his problems.

"We simply have to do a better public relations job," a farm leader explained.

Colorado farmers are taxing themselves one-half cent on every bushel of wheat they sell to launch this public relations program.

And they have established offices in Europe, South America, and Asia, staffed the offices with experts in the hopes of finding new customers in the world market.

Annual Report to Constituents by Hon. Stuyvesant Wainwright, of New York

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WAINWRIGHT. Mr. Speaker, this is my seventh annual report from Washington to Long Island. I submit this report at the end of each session so that our people may have a public accounting. With your permission, Mr. Speaker, I will address myself directly to the men and women of Suffolk and Nassau Counties.

This was a year of contrast. This was a big-spending Congress. It had heavy Democratic majorities in both Houses. The administration under President Eisenhower's leadership wished to steer a moderate course. The President's philosophy was to pay for the Nation's spending rather than forever ignore the national debt. Congress, not deterred by the President's position, paid little heed. To me it was encouraging to note the thousands upon thousands of letters and cards that poured into congressional offices protesting big spending.

This Congress has not been all negative. There are certain positive factors. For example, Hawaii was ushered in as our 50th State. This was an historic vote. In the field of foreign aid Congress gave the President a strong bill. Undoubtedly the subject of most public interest was labor legislation.

In my report last year I mentioned that the 85th Congress failed to give the American people a much needed labor reform bill. This year the President signed a measure essentially similar to the one for which I voted, the Griffin-Landrum bill. This will, we hope, be an effective stop to labor gangsterism. It may permit democracy within the American labor movement. Because of my vote in favor of the Griffin-Landrum labor bill certain labor leaders on Long Island refused to allow me to address the rank and file members on Labor Day. President James Carey of the Electrical Workers Union wrote me a threatening letter. The leader of the Brotherhood of Railway and Steamship Clerks has indicated that he will seek to purge me in the next election because of my attempts to curb racketeering in the labor movement.

Other important pieces of legislation were the housing and the public works bills. In regard to housing I supported

the Federal Housing Administration program for Long Island. Building is an important part of our economy and must be sustained. The public works bill, the "pork barrel" of Congress, contained a sum which I obtained for the continued dredging of Fire Island Inlet. On the other hand, it also contained many millions of dollars of unauthorized projects. Therefore, when the President vetoed the bill, I supported his veto. This was the crucial test whereby the President's banners were upheld by one single vote.

While evidence mounts daily that crime is on the increase, particularly in the major cities, Democratic leaders in Congress refused to cooperate with the Eisenhower administration in providing funds for the research and correction of this tragedy facing the American scene. Furthermore, one of our supreme advantages over the Soviet type of government is protection under that great document, the American Constitution, yet Congress failed to enact any new form of civil rights legislation at this session due to the fact that the Democratic leadership did not wish to offend the southerners.

As for public legislation introduced by me, the one that received the most comment on Long Island was H.R. 7575, designed to restrict irresponsible trading on future prices of potatoes. I do not believe that gambling of this kind is a sound practice, especially when it involves the livelihood of the producing element in this country. Amongst other legislation I initiated were bills for the establishment of a Federal Advisory Council on the Arts; Federal grants for studies of juvenile delinquency; an amendment to the Highway Act to provide not less than a billion and a half for interstate and defense highways; the encouragement of competition in procurement by the armed services; American war damage claims, the assistance of universities in marketing and retiring bonds, and H.R. 3389 for the encouragement of voluntary pension plans by self-employed individuals.

In addition to the bills which I have just enumerated, it was a pleasure to have convinced Congress to recognize Moriches and Shinnecock Inlets as Federal projects. The public works authorization bill, which includes these projects, is still pending. Despite the reported opposition of the New York State Park Commissioner, Robert Moses, I think that the program has a good chance of passage during the second session of Congress. In this same regard, certain articles which I have written about the "bridge which doesn't go anywhere"—across the Shinnecock Canal—might interest Park Commissioner Moses in supporting funds for the construction of the approaches. The beach erosion stabilization program is almost completed and should be included in the 1961 planning year for the budget. Our individual public works projects, such as Montauk Harbor, Port Jefferson Harbor, the Federal channel in the Great South Bay, Brown's River, and many others, were reviewed by Col. Charles Duke, the new Army District Engineer. He made his first tour of Long Island as my guest early this summer.

In the important field of mail service we added 10 new post offices and 3 new branch offices to the facilities of the congressional district. The branch office located in the Central Islip State Hospital should receive special note as this one turned into a personal battle with the Post Office Department which we were luckily able to win. We have extended rural free delivery to Manorville and improved services at Center Moriches, Port Jefferson, and Sayville. The continued growth of Long Island requires the continued expansion of these necessary postal facilities.

During the course of the past 7 years this report has served as a barometer in terms of predicting the economic future. These reports have been highly accurate, including a prediction of the slump of late 1957 and 1958. A significant factor in this favorable outlook is the allocation of many millions of dollars as our portion of national defense contracts. I have continually required the Defense Department to certify that Long Island get its adequate share of defense contract allocations. However, we also received more than a million dollars in house and home agency aid. The town of Huntington, as a specific case, was the beneficiary of over $600,000 for urban renewal. Perhaps not so pleasant an aspect of continued expansion and prosperity is demonstrated by the number of housing complaints handled this year. Many dozens of these cases were referred to my office, and I am happy to report that the vast majority have been successfully resolved. At the time of this report only 11 are still pending.

Not all is success. Many years ago the Bluepoint oyster and the oyster from Long Island Sound provided incomes and good living to a large number of people. The oyster is being destroyed by the starfish. Congress can help eradicate this destruction to a national resource. Yet, due almost exclusively to a lack of personal understanding on the part of key people on the Merchant Marine and Fisheries Committee, the measure has been quietly and effectively pigeonholed. In the meantime the industry perishes.

The major time-consuming operation of a Member of Congress is not legislation; it is the care of his constituents in terms of their individual requests. This office receives nearly 100 letters a day asking assistance on some matter or other. It is impossible for me to check out personally each letter. I read them all and make sure proper action is taken. This year we processed many hundreds of servicemen's and military cases as well as an unusually large number of veterans' problems. We have had over a thousand requests for different publications, documents, and surveys. We have helped in the procurement of numerous visas and expedited over 200 passport and citizenship cases. In addition, I have held almost daily meetings with constituents who come to Washington to get action. This means cutting redtape.

Two personal events are worth mentioning. First was my appointment to the Foreign Affairs Committee. This senior group is always a most sought-after billet. Also, Speaker of the House SAM RAYBURN reappointed me to the Board of Visitors of the U.S. Military Academy. This is especially pleasing in that it is not customary to reappoint Republican Members to the Board. The merit of giving a comprehensive examination for the service academies has proved its worth. A congressional district usually has one appointment to each service academy for a particular year. This year from the First Congressional District four of my applicants were appointed to the Air Force Academy, three to the Naval Academy, two to the Military Academy at West Point, and five to the Merchant Marine Academy. No other Member of Congress can boast this record.

Finally, in an effort to keep the public informed as to events here in Washington, I have continued to write a weekly news column. This is published as a public service in your local newspapers. Through the courtesy of the various Long Island radio stations I have brought you a special radio report every Sunday. At my own expense the annual questionnaire was mailed out so that your views could be obtained. This report is distributed under similar conditions. In addition, some 30 special reports have been disseminated as events occur. I have held office hours in Huntington, Long Island, and in Wainscott on alternate weekends so that those who cannot afford the trip to Washington can receive proper service.

It has been a pleasure and an honor to serve you in Congress. I hope I shall continue to be able to render you these services. Your comments, suggestions, and criticisms are always welcome. No man is perfect, myself least of all. An effective democracy must involve, by its very nature, the interest and opinions of all its member citizens.

Mr. Speaker, I thank you for this opportunity to address my annual report to the people of the First District of New York.

Legislation To Assist Areas Containing Large Portions of Federally Owned Property

---

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. CLEM MILLER. Mr. Speaker, I wish to submit for the record the following resolution passed by the Board of Supervisors of Mendocino County, Calif., in support of legislation to assist such areas which contain large portions of federally owned property:

RESOLUTION NO. 3321 OF THE BOARD OF SUPERVISORS OF MENDOCINO COUNTY, CALIF., URGING SUPPORT FOR CONGRESSIONAL BILLS S. 910, H.R. 5731, AND H.R. 6073

Whereas counties generally are having great difficulty in raising revenues necessary

to meet obligations for services required by expanding populations; and

Whereas counties having considerable Federal property within their jurisdictions find it increasingly burdensome to raise revenue required for governmental purposes by reason of the reduced tax base resulting from said Federal ownership of property; and

Whereas congressional bills S. 910, H.R. 5731, and H.R. 6073 are aimed at and would help alleviate the inequities arising from such Federal ownership: Now, therefore, be it

Resolved by the Board of Supervisors of the County of Mendocino, State of California, That its congressional representatives be, and they are hereby, urged in their respective congressional chambers to support congressional bills S. 910, H.R. 5731, and H.R. 6073; be it further

Resolved, That copies of this resolution be sent to Senator CLAIR ENGLE, Senator THOMAS H. KUCHEL, and Congressman CLEM MILLER.

Communists Talk Only When They Are Confident They Can Gain Something, and We Lose Something

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. B. H. Ridder, president of Northwest Publications, Inc., which publishes, among other things, the daily newspapers in St. Paul and Duluth, Minn. This article appeared in the St. Paul Pioneer Press of July 17, 1959—before the Khrushchev visit had been announced, although we know now that the invitation had already been extended. The analysis by Mr. Ridder, based on his conversations with informed and level-headed Europeans, was and is painfully accurate, showing again how the Soviets use talks, not to end the cold war, but to win another battle in it. Their unvarying objective is not to lessen the cause of tensions, which is their own expansionism, but to use the tensions to advance their own cause. After all, they created the tensions for that purpose. They start doing something, whether in Germany or the Middle East or Laos, which they have no right to start, in order to get us to make concessions which we have no right to make, in order perhaps to get them to stop doing what they had no business doing. It has been an obvious but alarmingly successful tactic. Why should they abandon it?

Naturally they want talks: they may be able to win and they cannot lose. Why? Because we are still not trying to win.

They are out to win a world; all we seem to want is to enjoy the world. Forces on the march regularly prevail over those seeking merely to hold a position—by giving parts of it away here and there.

That was the fatal course pursued by Athens and by Carthage at the peak of their power. Philip of Macedon and Cato and his cohorts of Rome not only defeated, they destroyed Athens and Carthage respectively; neither ever came back. Is that to be the fate of the United States while we pursue comfort and the easy way that false prophets tell us there must be somehow somewhere?

The soberly warning article follows:

ONLY SOVIETS GAIN, EUROPEANS SAY—WEST ON DEFENSIVE IN RUSS TALKS

(By B. H. Ridder, president, Northwest Publications, Inc.)

MONTE CARLO.—We have had sufficient time and opportunity to meet and assess a wide variety of public opinion as well as a small number of very well informed journalists and governmental officials, with the result that we have found a uniformity of conclusions with respect to Geneva and Russia.

The West is and has been strictly on the defensive during the last 10 years. It has been following a course of timidity and yielding to the stresses of a many-allied front with no strong dominating personality capable of assuming a united front. Every crisis has resulted from something that the Russians wanted and that we held. As, for example, in Korea or Formosa or wherever else the Russians sought expansion. It was always their move or desire to move that produced a crisis, never anything that we wanted or thought ourselves entitled to have.

In the Hungarian revolution there was a splendid opportunity created for the calling of a summit conference to avoid a world war because of our planned intercession. The Russians discuss and negotiate because that is a one-way street by which they can compromise to get what they want. They first demand everything and compromise on something, which to them is a net gain.

They create a serious crisis in order to be bought off with some tangible benefit and an expansion of their world in some direction. This is a tactic which has proven uniquely successful.

In the present instance of Berlin, they forced a crisis where no crisis had existed for 10 long years, at least no serious one. They demanded possession of the city and our complete withdrawal. We have been talking at Geneva for many long weeks. We have offered concessions, while the Russians have been adamant. The Europeans are asking, what is the purpose or advantage in making concessions in giving in a little here or there, while the Russians maintain their original position with more violence and authority than ever before. If they want to talk Berlin, why don't we talk about the occupation of Eastern Europe by Russian armies?

The answer is a simple one. The Russians will not discuss with us what they have, only what they want from us. We are not equal partners in the discussions. They are expanding by crumbling away our defensive positions.

European opinion believes that we are called to a conference by the Russians for the purpose of surrender and only for surrender. Nothing will be discussed by them unless it involves an advantage for Russia and the reverse for us.

It is reported in the press in Switzerland that when Koslov was in Washington recently some influential Senators asked him what the United States should do in order to get the Russian Armies out of Hungary, Poland, and East Germany. Koslov is reported to have completely lost his temper and told the Senators that "it was none of our business what they did in Russian territory and that we had better keep our hands off."

The question of the occupation of the satellite states is a matter of supreme importance to the whole world and not alone to the western world. If that cannot be discussed, why do we talk Berlin?

The theory that we are avoiding war as long as we talk is a fatal doctrine. We are talking only because the Russians are getting something by talking and we are losing something.

The Russians don't want war now because they will in time get everything without it. I believe that I am reporting very fairly and accurately what we have heard since we started in Europe and as a postscript, they believe that if we got real tough, the Russians would fold up their tents and steal away.

Professor Slichter Asks: "Is U.S. Inflation Inevitable?"

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the Cabinet Committee on Price Stability for Economic Growth, under the chairmanship of Vice President NIXON, in its recent reports, has reemphasized the absolute necessity for preventing further inflation. At stake are the savings of millions of Americans, as well as our competitive position in world markets.

Prof. Sumner H. Slichter, Lemont professor at the Harvard Business School, has adopted the premise that continued inflation in the United States is inevitable. The professor developed his ideas in an article which appeared in the London Financial Times on June 8, 1959. While I cannot accept his belief in the permanency of inflationary trends, he does diagnose correctly the basic cause of the problem as follows:

One of the frequent results of technological research is the creation of good opportunities for profit. But large profits encourage trade unions to make ambitious wage demands. Furthermore, large profits encourage business enterprises to make liberal concessions in order to avoid strikes.

The wage settlements made by the most profitable employers with the most aggressive unions affect the other wage settlements. The less profitable employers do not give as much as the most profitable employers, but when highly profitable concerns make liberal wage settlements, many other wage settlements are influenced. Hence, it is not surprising that the combination of thriving industrial research and aggressive unions pushes up wages far faster than the rise in productivity.

In the 10-year period 1948 to 1958 average hourly earnings of all workers in private industry rose almost twice as much as real output per man-hour. In a consolidated income statement for all American industry, wages and salaries are two-thirds of all costs—twice as important as all other costs combined. When this element in cost rises year after year twice as fast as real product per man-hour, an upward creep in the price level is obviously inevitable.

Obviously, Mr. Speaker, if costs are going to continue to rise year after year at a rate twice as fast as productivity, inflation is inevitable. It is difficult, however, to subscribe to Professor Slichter's belief that the American labor move-

ment is so devoid of statesmanship that it would continue to press for wage increases which so greatly exceed the general rise in productivity.

Professor Slichter's article referred to the problem of measuring the extent to which inflation has been a factor in the American economy. In this connection, he said:

There is no satisfactory measure of general price changes in the United States and that the published indexes have an upward bias—due to their failure to measure improvements in the quality of goods. The magnitude of the upward bias is unknown, but it is sufficient to exaggerate greatly the small upward movement of prices.

I completely concur with this statement, and I hope that the price economists in the Bureau of Labor Statistics and the Department of Agriculture will devise some formula to reflect the vast improvement in the quality of the goods and services that Americans now enjoy. For example, the cost of medical care has become an increasingly important item in the budgets of many individuals. Yet, the quality of medical care has changed greatly during the past decade. A few years ago, a physician had a stethoscope and relatively simple instruments with which to examine his patients. Today, cardiograms, X-rays, laboratory tests, and wonder drugs of all kinds are employed as standard medical practice. To be sure, they cost more, but patients lose far less time from their productive activities, to say nothing of enjoying better health and a longer life.

The price index for automobiles, appliances, and countless other durable goods has also risen, but their physical characteristics have changed so drastically that, in effect, the purchaser actually receives better values than he did only a few years ago. Even in the case of food, many housewives are purchasing packaged maid service when they buy frozen dinners ready to serve after a half-hour in the oven.

In suggesting that efforts should be made to measure the upward bias in price indexes, Professor Slichter has rendered a distinct public service.

Mr. Speaker, my chief concern with the thesis advanced by Professor Slichter lies in his belief in the inevitability of continuous inflation, and his only solution is to encourage more foreign competition. In this same article from the London Financial Times, he said:

Too much must not be expected from foreign competition, partly because American industry (particularly manufacturing industry) is low cost industry and party because of powerful protectionist sentiment that keeps duties high and puts pressure on the Government to impose quotas or higher duties as soon as a few goods enter the country.

That too much effect on American prices should not be expected from foreign competition is indicated by the fact that in 1958 American exports of finished manufactures were 2.4 times imports of finished manufactures. But on many items, especially those requiring considerable handwork, foreign producers can undersell American producers. If the protectionists can be prevented from keeping out foreign goods, foreign competition will be a useful check on rising prices here as well as a stimulus to a better allocation of capital and labor among industries, and a useful spur to efficiency. If the people of the United States truly wish to make a hard try to halt the slow rise in prices, let them begin at once a gradual program of eliminating duties and quotas.

Mr. Speaker, American management and labor, I am sure, will find ways to insure that the benefits of technology are reflected in better values for American consumers and that we may continue to enjoy our share of expanding world markets. We must not be engulfed by foreign products produced by unorganized cheap labor.

I am pleased to include Professor Slichter's complete statement, as follows:

IS U.S. INFLATION INEVITABLE?

(By Prof. Sumner H. Slichter, of Harvard University)

Two circumstances are mainly responsible for the belief that the price level in the United States is likely in the long run to be slowly rising. One is the rapid growth of technological research that seems likely to continue indefinitely. The other is that the country has a powerful and aggressive trade union movement.

The growth of technological research is a natural result of competition, since firms which neglect research are likely to find themelves handicapped by high costs and by products that are out of date. Measured by the number of specialized scientists and engineers engaged in this activity, research and development work in 1956 was 5 times as large as it was in 1930; measured by the proportion of the gross national product devoted to research, it was 13 times as large. Research increased right through the recession of 1958, and the latest McGraw-Hill survey of spending indicates that business concerns plan to increase their research expenditure by 10.7 percent in 1959 and by 17.1 percent between 1959 and 1962.

EFFECTS OF HIGH PROFITS

One of the frequent results of technological research is the creation of good opportunities for profit. But large profits encourage trade unions to make ambitious wage demands. Furthermore, large profits encourage business enterprises to make liberal concessions in order to avoid strikes.

The wage settlements made by the most profitable employers with the most aggressive unions affect the other wage settlements. The less profitable employers do not give as much as the most profitable employers, but when highly profitable concerns make liberal wage settlements, many other wage settlements are influenced. Hence, it is not surprising that the combination of thriving industrial research and aggressive unions pushes up wages far faster than the rise in productivity.

In the 10-year period 1948 to 1958 average hourly earnings of all workers in private industry rose almost twice as much as real output per man-hour. In a consolidated income statement for all American industry, wages and salaries are two-thirds of all costs, twice as important as all other costs combined. When this element in costs rises year after year twice as fast as real product per man-hour, an upward creep in the price level is obviously inevitable.

What chance is there of changing the fundamental conditions that have produced the upward creep in the price level? The chance, I fear, is only moderately good. Specialized research and development are bound to grow. But cannot union power be limited by taking away some of the extraordinary privileges and immunities that unions enjoy?

Certain unions should be deprived of the right to engage in coercive picketing for the purpose of forcing men to join and the right to conscript neutrals in trade disputes for the purpose of helping the union defeat its opponents But, though these charges would remove inequities, they would not greatly affect the bargaining power of most unions.

SHOULD UNIONS BE SMALLER?

A more ambitious scheme is the proposal to destroy the monopoly power of trade unions by breaking up unions into several parts. But breaking up unions is not a promising method of dealing with the problem of excessive union power. The only method of breaking up unions that would make much difference would be one that divided the employees in large companies, such as General Motors or United States Steel, into several rival unions.

Then the problem would be to prevent collusion among them. And even if there were not collusion, the bargaining power of the unions would still be strong—as is shown by the experience of the American Can Co. and the Continental Can Co. which bargain with the United Steelworkers in some plants and the International Association of Machinists in other plants. And breaking up unions would create new and difficult problems for there would be rivalries among the new unions that would produce irresponsible and demagogic union leadership.

SELECTIVE CREDIT RESTRAINT

Inflation could no doubt be halted by a tight credit policy that produced an appreciable amount of unemployment. But the deliberate refusal of the community to use all of its resources would be intolerably wasteful. The amount of unemployment needed to produce stable prices would vary with circumstances. In 1958, with bad weather producing a rise in farm prices, an unemployment rate of 6.8 percent did not prevent a 2.7 percent rise in the Consumer Price Index.

Moreover, general credit restraint is too sweeping a policy and impedes economic activity at too many points where restraint is harmful. It needs to be replaced with a series of selective controls on real-estate credit and short-term consumer credit, which for all their leakages are preferable under most circumstances to draconian general restraints on credits.

Must we conclude that in the long run full utilization of resources and stability of the price level in the American economy are incompatible? The answer is probably "yes"; but two qualifications are important. One is that there is no satisfactory measure of general price changes in the United States and that the published indexes have an upward bias, due to their failure to measure improvements in the quality of goods. The magnitude of the upward bias is unknown, but it is sufficient to exaggerate greatly the small upward movement of prices.

GROWING FOREIGN COMPETITION

The second important qualification is the possibility that American prices will be held down in the long run by growing foreign competition. Too much must not be expected from foreign competition, partly because American industry (particularly manufacturing industry) is low-cost industry and partly because of powerful protectionist sentiment that keeps duties high and puts pressure on the Government to impose quotas or higher duties as soon as a few goods enter the country.

That too much effect on American prices should not be expected from foreign competition is indicated by the fact that in 1958 American exports of finished manufactures were 2.4 times imports of finished manufactures. But on many items, especially those requiring considerable handwork, foreign producers can undersell American producers. If the protectionists can be prevented from keeping out foreign goods, foreign competi-

tion will be a useful check on rising prices here as well as a stimulus to a better allocation of capital and labor among industries and a useful spur to efficiency. If the people of the United States truly wish to make a hard try to halt the slow rise in prices, let them begin at once a gradual program of eliminating duties and quotas.

Rural Development

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. ALBERT. Mr. Speaker, in recent weeks several important national news media have featured lengthy articles on the rural development program. The latest in a growing list of influential newspapers and magazines recognizing and reporting on this important program is Coronet magazine, which reaches more than 3 million readers throughout the country.

Coronet's nationally known agricultural and conservation writer, Peter Farb, reports that the rural development program is sparking a "rebirth of rural towns" all across the Nation. His article is an excellent summary of a program that is receiving increasing attention in the Congress. Under leave to extend my remarks, I include Mr. Farb's article in the Appendix of the RECORD:

THE REMARKABLE REBIRTH OF OUR RURAL TOWNS

(By Peter Farb)

When Oklahoma Agricultural and Mechanical College made a study, about 12 years ago, of Choctaw County in the southeastern part of the State, it was amazed to find that the greatest single source of income there was old-age assistance and relief checks. Nearly half of the population had drifted away to more enterprising communities.

If it weren't for the local banker in Hugo, Okla., the county seat, and other energetic citizens, the sheriff's sign would today be nailed to the whole of Choctaw County. Instead, a citizens' committee undertook the colossal task of creating jobs and wealth where none existed previously.

They improved agriculture by helping the farmers switch to truck crops, set up a corporation with $50,000 working capital to build a cannery to process the new vegetable crop, and brought in registered dairy heifers from California, Wisconsin, and Minnesota. Then they set out to bring new industry into the county. A glove manufacturer agreed to locate a new factory in Hugo—but he wanted the community to provide the $200,000 building.

That was when the whole town mobilized. The owners of the projected factory site decided to contribute it outright. Two banks donated $5,000 each, and so did the electric and gas companies. Donations of gravel and lumber poured in, electricians wired the factory in their off-hours, and citizens gathered at the railroad siding in the evening to unload steel and cement blocks. As a result, the $200,000 factory was erected for only $89,000—and provided the community with a 10-year payroll of approximately $2 million.

Since then, Choctaw has added six more industries, built new churches, a modern hospital, and remodeled the shopping area. Bank deposits are up, income has soared, and young people are staying in a county that has come to life.

Many of the techniques used by Choctaw already have been duplicated by about 100 other counties in 30 States. In each county, local residents have launched what is known as a rural development program which is lifting rural areas out of the economic doldrums.

Unlike its city counterpart—urban renewal—which often requires tremendous Government loans for slum clearance, the rural development program relies mainly on the manpower, pioneer energy, and civic pride of a county's citizens.

Typical is Butler County, Kentucky. A group of farmers, businessmen and civic officials sat down together and worked out a long-range plan to improve their lot.

Now Butler County glistens with fresh paint. Bulldozers toil at reclaiming worn-out pastures; old buildings are being remodeled for use as community centers, or else torn down as fire hazards. There's a new badly needed health center, a plumbing school now teaches farmers to install their own water systems and the water supply itself is being made safer. Rev. R. L. Burnett, pastor of two rural churches, has reaped an unsuspected benefit from the rural development program. "My church attendance has increased over 20 percent," he states.

Rural areas have long been in need of rejuvenation. In 1954, a year of record prosperity, about one quarter of America's farm families still earned less than $1,000 in total income. Health conditions have often been so poor that in World War II farmers had the highest rate o. rejection from military service. Rural communities have been losing population for years, and opportunities for youth in these areas have almost been nonexistent.

Much of the current interest in rural development stems from the activities of Under Secretary of Agriculture True D. Morse, former president of Doane Agricultural Service of St. Louis, a large farm-and-town management consulting firm.

Morse was one of the originators of the rural development program idea, and first tested it in Tupelo, Miss., right after World War II. After studying the area, he concluded that the job could be done with local resources—if the whole county were effectively organized.

First, Tupelo businessmen raised $30,000 a year out of their own pockets to assist the farmers in overhauling their rickety farms. (Later they were repaid when the town's business increased almost twice as rapidly as the State average.) So dramatic was the change that delegations from hard-pressed counties in 23 States visited Tupelo, and some returned home to put similar programs into operation as quickly as possible.

One such group was from Asheville, N.C. In 1949 it retained True Morse to do the same sort of "partnership for progress" job in 16 counties in the western part of the State. Local businessmen were inspired to invest $250,000 of their own money in growth, but in return, they saw retail sales increase by 74 percent and new multi-million-dollar factories locate there. Says Morris L. McGough, executive vice president of Asheville's agricultural development council: "The communities have reached back into the past and recaptured the art of working together."

To see if the same thing could be done on a national scale, Secretary of Agriculture Ezra Taft Benson called a conference of State and local leaders in 1955. They decided to select some of the counties in the Nation that most needed rehabilitation and use them as models. Five departments and one agency of the Federal Government agreed to aid the rural development program, and Morse was named chairman of the joint committee. To date, the program has cost the Federal Government less than $7 million, approximately what it spends for merely storing surplus crops for less than 1 week.

The most remarkable thing about the rural development program is the way it gathers momentum. In Macon County, Tenn., a local committee was able to borrow about $175,000 to erect a factory, but was still $100,000 short of its goal. So about 600 farmers and local businessmen dug into their pockets and contributed the bulk of it. Additional dollars were contributed by town workers who voluntarily turned over $5 or $10 a month out of their wages. Enough money was raised to complete the factory, which now provides jobs for nearly 600 local people, with an annual payroll of about $1,350,000.

The entire Upper Peninsula of Michigan, 15 counties in all, has started its own resource development program. Each county is concentrating on the resources it most wants to develop. In some, the tourist and resort business provides the largest source of income, so motels and cabins have been remodeled and new recreational facilities constructed. In one county, more than 300 high school students were trained for summer resort jobs.

Starting a rural development program isn't very difficult. At first, all that is needed is a local leader to begin it. In Monroe County, Ohio, it was a minister, Rev. Keene Leibold. In Hardin County, Tenn., bank president, Con Welch was the sparkplug who arranged for a $40 million papermill to locate in the county.

The most important step, however, is to set up a rural development committee that represents all the economic, religious, and educational groups in the county. Then find out what's wrong in the county. What conditions can be bettered? Who can help? Often it turns out that a nearby utility industry or farm organization has been aching to improve conditions in the county all along. If your State already has a rural development program, ask the dean of agriculture at your land-grant college for technical assistance.

Finally, be sure that you've organized all the way down to the neighborhood level. Many counties have found rural development clubs successful weapons. There are 13 such clubs in Tippah County, Miss., which keep churches and school buildings in good repair; they have also constructed roadside parks. Each month, 1 day is put aside as a workday: a farm is chosen by lot and everyone works to improve it.

A strong rural development program in your county can bring about what Secretary of Agriculture Benson believes has been the program's most important contribution to rural life. "A general attitude of resignation and complacency, a feeling that nothing can be done about economic ills, has been replaced," he says, "by a new awareness of community resources, community strength, and the real possibility that incomes can be raised."

Program of Economic Aid

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. HARDY. Mr. Speaker, on September 3, appearing at page 16517 in the RECORD, I called attention to a news item carried in the press which indicated

that a program of economic aid to the members of the Central Treaty Organization for the current fiscal year had been announced by an official of the State Department on September 2. I pointed out that the foreign aid appropriations bill had not passed and suggested that if the press comments were accurate the announcement of a program was premature and improper.

I am glad to be advised concerning the actual announcement which Mr. Donald D. Kennedy made. Mr. Leonard J. Saccio, Acting Director, International Cooperation Administration, has furnished me with the pertinent portion of Mr. Kennedy's statement, which reads as follows:

At the time of the London meeting, I stated that the total U.S. economic aid in all forms to the pact members under our bilateral program for the year ending June 30, 1958, amounted to around $300 million. The total for the year ending June 30, 1959, comes to around $470 million—up over 50 percent. I mention this only to provide factual support to general statements as to our interest in and strong desire to help those associated in this organization.

Clearly, Mr. Kennedy's remarks were in connection with appropriations made in prior years. Whatever may have been the actual expenditures in fiscal year 1959, his comments would indicate that $470 million had been obligated from the fiscal year 1959 appropriation.

I am glad to have the record complete and bring it to the attention of the House.

A Special Report on the Labor-Management Reform Act by Representative Jessica McCullough Weis

EXTENSION OF REMARKS
OF
HON. JESSICA McC. WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mrs. WEIS. Mr. Speaker, millions of words have already been written about the Labor-Management Reform Act. Certainly it was the most controversial, the most far reaching, and the most important piece of legislation enacted by this 1st session of the 86th Congress.

Hundreds and hundreds of my constituents wrote me at the time this legislation was being considered, and because of its importance I submit the following report prepared by Congressional Quarterly on the major provisions contained in the bill as it was finally accepted by both Houses.

It is, of course, impossible to evaluate the provisions of this bill until they have actually been put into effect and we have had an opportunity to observe the consequences. But I am convinced that the bill will go a long way toward rooting out the corruption and racketeering which had worked its way into the labor-management relations field. At the same time, I do not believe that this bill will harm the clean, democratically run union; it will, in fact, protect and promote honest trade unionism.

Mr. Speaker, I should like to insert at this point in the RECORD the report on this legislation:

REPORT ON THE LABOR-MANAGEMENT REFORM ACT

I. BILL OF RIGHTS

Guarantees union members "equal rights and privileges" to nominate candidates, vote for union officers, participate in union meetings and caucus with other members under "reasonable rules and regulations" established by the union.

Bars unions from raising dues or initiation fees or making special assessments except by secret-ballot majority vote or, in national and international unions, by majority vote of the executive board or convention.

Bars unions from preventing a member from appearing before any governmental judicial, legislative or administrative proceeding, or from suing the union; provides that the member exhaust "reasonable" union hearing procedures for up to 4 months before instituting a proceeding against the union; bars employers from financing or prompting such suits.

Requires a union, before disciplining a member, to give him written charges, a full and fair hearing and reasonable time to prepare his defense.

Requires unions to furnish members with copies of collective bargaining contracts, and to inform members of the provisions of the bill.

Permits a union member whose rights under the bill of rights section were infringed, or who was fined, expelled, suspended, or disciplined by the union for exercising any right guaranteed him by the bill, to file a Federal civil suit for relief; makes it a crime, subject to a $1,000 fine and 1 year in prison, to threaten or use violence in order to interfere with rights guaranteed union members by the bill.

II. LABOR-MANAGEMENT REPORTS

Requires all unions to adopt constitutions and bylaws and to register them, and other information outlining their financial and organizational structure, with the Secretary of Labor.

Requires unions to file annual reports with the Secretary detailing assets and liabilities, receipts and sources, payments to any employee receiving more than $10,000 from the union, loans to union members or employees aggregating more than $250 to one person, loans to businesses and other disbursements; the information would be made available to any union member on request, and a member could sue in Federal or State court to get permission to examine records necessary to verify the reports.

Requires officers and employees of unions to file annual reports with the Secretary outlining possible conflict-of-interest payments and receipts and stock and other financial transactions of themselves or members of their family with employers or employer middlemen.

Requires employers who paid money to union members or representatives, other than ordinary wages, or to labor relations consultants (middlemen), for the purpose of influencing employees on their collective bargaining rights, to report the details of such payments to the Secretary of Labor; similar reports would be filed by labor relations consultants but lawyers would not have to report on legitimate lawyer-client relationships and payments.

Makes all the reports filed under this section public information, to be made available for inspection by the Secretary.

Requires anyone filing a report to maintain records to corroborate it for 5 years.

Makes it a crime not to file a report, to make false statements on it, or to destroy or make false entry in records required to be kept; permits the Secretary of Labor to seek injunctions and orders in Federal courts to prevent or stop violations of the reporting section.

III. TRUSTEESHIPS

Requires any union exercising trusteeship over a union local to file semiannual reports with the Secretary of Labor detailing the conditions of the trusteeship and the financial condition of the local; makes it a crime not to file, to file falsely or to destroy records; makes the reports public information.

Permits trusteeships only for the purpose of carrying out the "legitimate objects" of the union; makes it a crime to count the votes of a local under the trusteeship in a national union election unless the local's delegates were chosen by secret-ballot majority vote, or to transfer money, except normal yearly assessments, from the local to the national union.

Permits the Secretary of Labor or a member of a local under trusteeship to file civil suits to prevent violations of the trusteeship requirements; in such suits, a trusteeship would be presumed valid for 18 months from the date of its establishment, not to be disturbed except on "clear and convincing proof" of bad faith in establishing it. At the end of 18 months, it would be presumed invalid but could be extended by the court.

Elections

Requires local unions to elect officers by secret-ballot majority vote at least once every 3 years; national unions and intermediate bodies at least once every 5 years and 4 years, respectively, by secret ballot or vote of delegates elected by secret ballot.

Requires these elections safeguards: Bona fide candidates given the right to require the union to comply with reasonable requests to mail the candidate's campaign literature to members of the organization, at his expense (enforcible by civil court suit); in unions with union shop contracts, the candidate would also have the right to inspect the membership lists; candidates given the right to have observers at polls and counting of ballots; reasonable opportunity given to nominate; preservation of ballots; no use of union or employer funds to finance a candidate.

Permits the Secretary of Labor to conduct an election for recall of a union officer guilty of serious misconduct if the union did not have adequate recall procedures.

Permits a union member who claims the union is violating its own or the bill's election or recall safeguards, and who has sought remedy through internal union procedures but has not received a decision for 3 months, to ask the Secretary of Labor to seek a Federal court order for a new election or recall election under the Secretary's supervision.

Fiduciary and other safeguards

States that union officers occupy positions of trust and are obligated to handle and spend union money and property solely for the benefit of the union and its members, in accord with its constitution and bylaws.

Permits union members to sue in Federal or State courts to recover damages or ask an accounting when a union officer is alleged to have violated the trust imposed above, and the union has made no attempt to recover.

Makes it a crime to embezzle, steal, or otherwise misappropriate union funds; makes it a crime for a union officer handling union moneys not to be bonded.

Bars a union from lending more than $2,000 to any officer or employee, and from paying the fine of an officer or employee convicted of violating the bill.

Bars from union office for 5 years persons convicted of specified felonies or of viola-

tions of the reporting or trusteeship provisions of the bill; Communist Party members would be barred for a similar period. All such persons also would be barred from serving as labor relations consultants or as officers of associations or groups of employers dealing with any union. Violation would be a crime. An existing requirement that officers of unions seeking to use the auspices of the National Labor Relations Board sign non-Communist affidavits is repealed.

Outlaws payments, except bona fide wages and fringe benefits to union representatives by employers or employer "middlemen," and makes it illegal to accept or solicit such payments; outlaws truck unloading fees.

Makes it a crime to picket for the purpose of extortion.

Gives the Secretary of Labor power to investigate, with the right of subpena, suspected violation of any provisions of the bill except the "Bill of Rights" and the Taft-Hartley Act amendments.

IV. TAFT-HARTLEY ACT

Permits State labor relations agencies and State courts to assume jurisdiction over labor disputes the National Labor Relations Board decline to handle, but bars the NLRB from enlarging the categories of cases it declined to handle.

Permits the President to designate an acting NLRB General Counsel if the office were vacant.

Makes it an unfair labor practice for a union to try to coerce or threaten an employer directly (but not to persuade or ask him) in order: to get him to join a union or sign any illegal hot cargo contract; to get him to stop doing business with another firm or handling its goods; to get him to recognize a union if the NLRB had already certified another union as his workers' bargaining agent; to force him to assign work to members of one union, rather than another, in a jurisdictional dispute between unions representing his employees; to get any other employer to recognize a union not certified as the representative of his employees in an NLRB election. (Direct coercion of an employer by a union for these purposes was not previously covered by the secondary boycott prohibitions.)

Makes it an unfair labor practice for a union to induce supervisory workers or any single worker, to refuse to handle goods, or to strike, for any of the purposes outlined above. (Previously, supervisors were not covered by the secondary boycott prohibitions, and inducement of a worker to stop working was banned only if he ceased working in concert with other workers.)

Specifies that union inducement of employees not to handle work "farmed out" to their employer by a struck firm was not a secondary boycott.

Makes it an unfair labor practice for a union and employer to sign a so-called hot cargo contract under which the employer agrees not to do business with any other firm; nullifies any such existing contracts; exempts from this provision garment industry contracts barring a jobber from subcontracting work on a single garment to unorganized shops, and building industry contracts barring a firm from subcontracting work at its jobsite to an unorganized firm.

Bars organizational or recognition picketing by a union: if in the absence of an unfair labor practice by an employer, the employer already recognized another union or there had been any NLRB certification election in the previous 12 months; or if the union had been picketing for 30 days and had not asked for an election. If the union claimed its picketing was purely informational it could picket for longer than 30 days without seeking an election, provided the picketing did not cause the employees of the firm involved to stop working or prevent deliveries or pickup of goods.

Brings under the picketing and secondary boycott prohibitions of the bill and of the Taft-Hartley Act several groups of workers not previously covered, railroad, airline, farm, and local government workers.

Permits the NLRB to allow strikers fired during a strike and not entitled to reinstatement to vote in an NLRB representation election conducted within a year after the strike began.

Bars a union from picketing a retail store to advertise that the store was handling the goods of a firm the union was striking; but permits other forms of such advertising (handbills, for example) if they do not cause the store's employees to stop working or prevent pickups and deliveries.

Permits building trades firms and unions to sign union contracts in advance of a construction job, even if the union has not won an NLRB certification election or does not represent the majority of the existing or potential employees. Such contracts could require the employees to join the union within 7 days (except in States with laws barring the union shop), require the employer to hire through the union, or permit the union to set up experience and training qualifications for employees.

Activities of the Committee on the Judiciary, 86th Congress, 1st Session

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. CELLER. Mr. Speaker, during the 1st session of the 86th Congress, the Committee on the Judiciary of the House of Representatives found itself charged with major responsibility in many areas of congressional concern.

Of the 10,676 bills introduced in the House, 28.7 percent of this total was referred to this committee. Of this number, 1,002 were public bills, House and Senate, and 2,284 were private bills, likewise of House and Senate, giving to this committee 3,286 bills in all. Exclusive of private legislation, approximately 185 hearings were held on legislation pending before the committee. Seventy-six public bills were acted upon favorably by the committee, of which 44 became public laws; 29 of which are still pending before the Senate; two pending before the Rules Committee, H.R. 8601, civil rights bill, and H.R. 2739, Patent Office fees; and one pending House action on amendment proposed by the Senate, H.R. 5747, bankruptcy bill.

Of the private immigration bills, 140 became private laws; 4 are pending in the Senate; 173 individual bills were incorporated in House joint resolutions; 15 were deleted from joint resolutions by the Senate; 401 were tabled; and 49 were deferred.

Of the private claim bills, 86 were enacted into private law; and 97 are pending in the Senate; 178 passed the House.

Of major public interest are such bills as H.R. 8601, the civil rights bill; H.R. 3, to establish rules of interpretation governing questions of the effect of acts of Congress on State laws; S. 2524, relating to the power of the States to impose net income taxes on income derived from interstate commerce; S. 726, to amend section 11 of the Clayton Act to provide for the more expeditious enforcement of cease and desist orders issued thereunder, and for other purposes; H.R. 3088, to amend sections 353 and 354 of the Immigration and Nationality Act; H.R. 6118, to amend section 6 of the act of September 11, 1957—immigration and nationality; H.R. 5896, to provide for the entry of certain relatives of U.S. citizens and lawfully resident aliens; H.R. 2725, to amend chapter 3 of title 18, United States Code, so as to prohibit the use of motor vehicles to hunt certain wild horses or burros on land belonging to the United States, and for other purposes. Of these, the civil rights bill, H.R. 8601; H.R. 3 which has involved the doctrine of Federal preemption; and S. 2524, State taxation of income from interstate commerce, were probably the bills of greatest controversy. S. 2524 was enacted into law adopting the minimum exemption standard prohibiting the States from taxing income from the mere solicitation of orders to be fulfilled and shipped from out of the State. H.R. 3, enacted by the House, is pending before the Senate Judiciary Committee, and the civil rights bill, perhaps most controversial of all, is pending before the Rules Committee of the House.

A review of the activities of the subcommittees, which follows, indicates the enormous amount of work done and is evidence of the faithful performance of the individual members of the committee in reviewing and reaching decisions on the matters before them. I am grateful for the cooperation and the conscientious consideration which the members gave to this committee. I appreciate, also, the harmonious and excellent staff work which has enabled the Members to go forward vigorously in the discharge of their responsibilities.

REPORT ON ACTIVITIES OF SUBCOMMITTEE NO. 1, COMMITTEE ON THE JUDICIARY, DURING THE 1ST SESSION OF THE 86TH CONGRESS

Subcommittee No. 1 of the Committee on the Judiciary has special jurisdiction over all legislation pertaining to immigration and nationality, and jurisdiction over any legislation assigned to it by the chairman of the full committee.

In the field of immigration and nationality, Subcommittee No. 1 has acted on the following bills:

H.R. 2807 creates a single, separate, statutory form of judicial review of administrative orders for the deportation and exclusion of aliens from the United States. Aliens may seek judicial review of an order of deportation by filing a petition in the U.S. circuit court of appeals, orders of exclusion to be reviewed exclusively by writs of habeas corpus. Such orders shall not be reviewed until all administrative remedies have been exhausted. The bill provides for trial de novo of substantial claims to American nationality by persons who have been ordered deported. The bill passed the House on July 6, 1959.

H.R. 3088 amends certain provisions of sections 353 and 354 of the Immigration and Nationality Act which specify exemptions from the loss of U.S. citizenship by naturalized citizens by including parent or parents of a U.S. citizen who is or are accompanying such citizen for the purpose of remaining with him while he has his residence abroad for reasons specified in the law. Honorably discharged veterans who served

during the Korean conflict are included in the exemption from automatic loss of citizenship by reason of residence abroad, which exemption is enjoyed by veterans of the Spanish-American War, World War I, and World War II. The bill changes from 25 to 15 years the residence requirement which precludes the loss of citizenship by naturalized citizens residing in a foreign country. The bill was enacted into law on August 4, 1959 (Public Law 86–129).

H.R. 5896 reclassifies close relatives of U.S. citizens and aliens admitted for permanent residence in the United States in the preference portion of the immigration quotas and expedites reuniting of certain families. Alien adult unmarried sons and daughters of U.S. citizens are reclassified to the second preference classification; alien adult sons and daughters of aliens admitted into the United States for permanent residence are placed in the third preference classification. Immigrants registered on the consular waiting lists prior to an established date, who have a preferential quota status, and spouses and minor children of aliens admitted into the United States under the Refugee Relief Act of 1953, who have a preference status, are considered to be nonquota immigrants; accompanying spouses and minor children are held to be nonquota immigrants. Spouses and minor children accompanying fourth preference beneficiaries are included in that category. The number of alien children adopted by U.S. citizens in whose custody they remained for over 2 years is limited to two unless necessary to prevent the separation of brothers and sisters. The bill passed the House on July 6, 1959, and was enacted into law September 22, 1959 (Public Law 86–363).

H.R. 6118 extends for 2 years section 6 of the act of September 11, 1957, the discretionary authority vested in the Attorney General to grant waivers of exclusion in the case of spouses, parents, and minor children, including minor adopted children of U.S. citizens or of aliens lawfully admitted for permanent residence, notwithstanding the fact that such close relatives are afflicted with tuberculosis.

The same bill also extended the law relating to the immigration of orphans. The bill authorizes the Attorney General to investigate the facts in each case to determine the validity of the adoption and the good moral character of the interested parties.

The bill was enacted into law September 9, 1959 (Public Law 86–253).

As usual, Subcommittee No. 1 worked extensively on private immigration and nationality legislation, and the summary of that action follows:

One thousand, six hundred and ninety-five House bills, House joint resolutions, and Senate bills were referred to the Committee on the Judiciary. Of those, 140 became private laws, 4 are pending in the Senate, 173 individual bills were incorporated in House joint resolutions, 15 were deleted from joint resolutions by the Senate, 401 were tabled, 49 were deferred, and 913 are pending before the committee.

In addition, there were 5 Senate concurrent resolutions, 1 House concurrent resolution, and 1 House resolution, covering the cases of 185 aliens, which were approved by this committee.

Under the general jurisdiction of Subcommittee No. 1, the following bills were considered:

H.R. 1992 extends the application of chapter 37, title 18, United States Code, relating to espionage and censorship, to acts committed anywhere in the world by repealing section 791 of that title, which provides that the provisions of chapter 37 shall apply only within the admiralty and maritime jurisdiction of the United States, on the high seas, and within the United States. The bill passed the House on March 2, 1959.

H.R. 4154 permits the indictment and trial of an offender or joint offenders who commit offenses abroad against the United States, in the district where any of the offenders is arrested or first brought; and also prevents the statute of limitations for tolling in cases where an offender or any of the joint offenders remain beyond the bounds of the United States by permitting the filing of an information or indictment in the last known residence of any of the offenders, or in the event that the residence of any of the offenders in the United States is not known, by filing indictment or information in the District of Columbia. The bill passed the House on March 16, 1959.

H.R. 8461 amends the act of September 2, 1958, establishing a Commission and Advisory Committee on International Rules on Judicial Procedure by extending the life of the Commission for an additional 2 years, to December 31, 1961. The purpose of the Commission is to investigate and study existing practices of judicial assistance and cooperation between the United States and foreign countries with a view to achieving improvements. The bill passed the House on August 17, 1959, and was enacted into law September 16, 1959 (Public Law 86–287).

S. 355 adds a new section to title 18 of the United States Code to prohibit the use by collecting agencies or private detective agencies of any emblem, insignia, or name, or the words "national," "Federal," or "United States," or the initials "U.S.," for the purpose of conveying, or in a manner reasonably calculated to convey, the false impression that such business is a department, agency, bureau, or instrumentality of the U.S. Government. The bill passed the House amended on August 17, 1959, and was enacted into law on September 21, 1959 (Public Law 86–290).

S. 1947 (House companion bill, H.R. 7126) confers on the Customs Court the authority to appoint various clerks and other employees and to authorize the appointment of a marshal and deputy marshal, which appointments are intended to be in accordance with presently prevailing laws relating to such appointments in other U.S. courts. The bill passed the House on August 31, 1959, and was enacted into law September 9, 1959 (Public Law 86–243).

SUBCOMMITTEE NO. 2—GENERAL JURISDICTION OVER JUDICIARY BILLS, AS ASSIGNED SPECIAL JURISDICTION OVER CLAIMS

During the 1st session of the 86th Congress, the subcommittee conducted hearings on 30 different days. These covered public as well as private claims measures.

Consideration was given to a total of 327 bills and resolutions.

The subcommittee considered two bills which provided for the amendment of the tort claims provisions of title 28 of the United States Code. H.R. 6000, providing for an increase in the administrative settlement authority of section 2672 of that title, was introduced in accordance with the recommendations contained in an executive communication from the Post Office Department. The bill passed the House with the amendments formulated in the subcommittee, which provided for increasing the authority of heads of agencies to settle tort claims against the Government by payments up to $2,000. This limit was increased by the Senate to $2,500, and the House agreed to that amendment. The bill became Public Law 86–238. The other bill relating to the Tort Claims Act as now codified in title 28, was H.R. 7577, concerning the liability of Government drivers. The subcommittee held an extensive hearing on H.R. 3283, introduced in accordance with an executive communication from the General Services Administration, and related bills on this subject. The subcommittee's recommendations as to amendments to H.R. 3283 were accepted by the full committee and were embodied in H.R. 7577 which was reported by the committee. It passed the House but no action was taken in the Senate prior to adjournment.

H.R. 4821, providing for amendments to the Texas City Disaster Relief Act, was the subject of a hearing before the subcommittee. The subcommittee recommended amendments to the bill to limit the proposed changes to certain categories of claims. The bill was reported with those amendments, and the bill passed the House and Senate in the form recommended by the subcommittee. The bill became Public Law 86–381.

The subcommittee considered two bills amending section 2734 of title 10 of the United States Code concerning claims arising in foreign countries as the result of the noncombat activities of the Armed Forces of the United States. H.R. 2741 provided that the Secretary of the Treasury would have the same authority to act in behalf of the Coast Guard in the settlement of such claims as only the Secretaries of the military departments previously possessed. The bill passed the House and Senate, and became Public Law 86–223. The other bill, H.R. 2740, would increase the period during which such claims might be filed from 1 to 2 years, and was introduced in accordance with the recommendations of an executive communication from the Department of Defense. It passed the House, but no action was taken in the Senate prior to adjournment.

A bill, H.R. 470, which would permit the settlement of claims arising as the result of the use of a motor vehicle anywhere, or the use of property of the United States on a Government installation when the claims would not be cognizable under any other law, was favorably considered by the subcommittee and was reported to the House by the full committee. The bill passed the House, but no action was taken in the Senate prior to adjournment.

The subcommittee also considered a bill, H.R. 7529, which would confer jurisdiction on the Comptroller General to waive indebtedness based on erroneous payments by the Government to its employees, members of the military services, or persons formerly in such categories, when the department concerned recommends relief and collection would be against equity and good conscience. The bill was reported to the House and passed, but no action was taken in the Senate prior to adjournment.

The Committee on the Judiciary reported three bills validating certain payments to Armed Forces personnel, their dependents, or employees of the military departments. H.R. 2975 validated certain quarters allowances to civilian employees who served in London, England, between January 1, 1949, and August 16, 1958. That bill passed the House and Senate and became Public Law 86–26. H.R. 4615 validated a group of about 80 transportation requests and payments of mileage or per diem, or both, to members of the naval service for travel performed in accordance with the terms of the bill. The bill became Public Law 86–25. H.R. 8106 provided statutory authority for all temporary storage of household effects of members of the Navy under an interpretation of the joint travel regulations of the uniformed forces which was subsequently challenged by the Comptroller General. The bill passed the House, but no action was taken in the Senate prior to adjournment.

A number of bills granting relief of State or political subdivisions within States were referred to the subcommittee. Among the bills recommended favorably was H.R. 322, compensating Monmouth County, N.J., for damage to a bridge, which became Public Law 86–128. H.R. 7605, for the relief of the State of Oklahoma, which was introduced in accordance with the recommendations of the

Court of Claims in a congressional reference case, provided for the payment of $652,019.71 in settlement of the claims of that State based on the agreement embodied in a stipulation between the State and the Federal Government. That bill became Public Law 86-369.

The bill, S. 1330, providing for an additional payment of $4,000 to the city of Fort Myers, Fla., by an amendment to an act passed in 1958, was reported by the committee. That bill became Public Law 86-180. The bill, H.R. 2390, for Madeira Beach, Fla., settled the city's claim for the cost of erosion control, and became Public Law 86-353.

The subcommittee considered a number of bills which did not relate to its special jurisdiction over claims. The bill, H.R. 2725, barring the use of aircraft or motor vehicles in the hunting or capture of wild horses or burros, and similarly barring the pollution of water holes used by such animals to kill them or effect their capture, was such a bill. It was reported by the committee, passed the House and Senate, and became Public Law 86-234. A bill, H.R. 4012, providing for the observance of the centennial of the establishment of the Department of Agriculture, and the establishment of land-grant colleges, was reported by the committee after being favorably recommended by the subcommittee. The bill passed the House, was reported in the Senate, but no further action was taken in that body prior to adjournment. The subcommittee held hearings on bills concerning standards to be observed in the establishment of congressional districts, and also on bills to provide representation of indigent defendants in criminal proceedings in the Federal courts. The subcommittee had not made a final recommendation to the full committee as to these two subjects at the time of adjournment. The subcommittee also considered the bill, H.R. 8107, which was the subject of a 2-day hearing. This bill, which would have imposed criminal penalties for the use of U.S. savings stamps for trade promotion, was adversely acted upon by the subcommittee.

The following tabulation indicates the workload of this subcommittee in connections with claims against the Government:

Referred to subcommittee:	
Private, House bills	538
Private, House joint resolutions	1
Private, House resolutions	11
Private, Senate bills	23
Total	573
Public, House bills	76
Public, House joint resolutions	13
Public, House resolution	1

Public laws enacted	11
Private laws enacted	86
Bills vetoed (private)	9

Sent six private claims bills of the House to the Court of Claims by House resolutions.

SUBCOMMITTEE NO. 3—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED—SPECIAL JURISDICTION OVER PATENTS, TRADEMARKS, COPYRIGHTS, AND REVISION OF THE LAWS.

This subcommittee processes such general legislation as is referred to it and also legislation relating to patents, trademarks, and copyrights. It also has jurisdiction over the revision of the laws, classifying all laws of a general and permanent nature to the 50 titles which comprise the United States Code. In all, 161 bills were referred for the subcommittee's consideration; 18 bills were acted upon favorably; 55 bills were recommended for tabling; and 88 bills are pending. The following statement highlights some of the legislation processed by the subcommittee.

General legislation

General: The subcommittee processed H.R. 3, a bill establishing rules of interpretation for Federal courts involving the doctrine of Federal preemption. This bill, which has already passed the House, sets up a statutory rule of construction to guide the courts in future actions in construing existing statutes by providing that no act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field of law to the exclusion of all State laws on the same subject unless Congress so states or unless there is a direct and positive conflict between the congressional act and the State law so that the two cannot be reconciled or consistently stand together.

In the field of evidence, the subcommittee favorably recommended and the House passed H.R. 4957, relating to the admissibility of evidence (popularly referred to as the Mallory bill). This legislation resulted from the Supreme Court decision in the case of *Mallory v. U.S.*, 354 U.S. 449, and provides a statutory rule of evidence for the admissibility of confessions and other evidence in criminal proceedings. This legislation is written so as to protect the constitutional rights of the individual as well as the rights of society in the field of criminal law enforcement.

Another bill of major importance is H.R. 2369, introduced as the result of the Supreme Court decision in the *Yates* case (354 U.S. 298) wherein the conviction of 14 known Communists for violating the Smith Act was set aside because, among other things, of the meaning of "organize" as that term is presently interpreted in the act. The instant legislation, which has already passed the House, clarifies the term "organize" so as to mean a continuing process of organizing groups and recruiting new members for the Communist Party.

The subcommittee also processed H.R. 3216—habeas corpus. This legislation is intended to restrain the abuse of the use of this great writ in lower Federal courts by prisoners who have been convicted in State courts and who seek to have the action of the State courts reviewed and reversed by the lower Federal courts.

Other bills relating to the courts generally on which this subcommittee acted, and which have already passed the House, are H.R. 2978 (peremptory challenges) and H.R. 7559 (interlocutory relief).

Pending in the subcommittee and worthy of mention is H.R. 4186, which would permit appeals by the United States in criminal proceedings after the commencement of the trial on denial of motions to suppress evidence. This legislation is under study and the views of the Judicial Conference of the United States have been requested.

Compacts: Three bills relating to interstate compacts passed both the House and the Senate. They are H.R. 7474, reestablishing a part of the boundary line between the States of Virginia and West Virginia; House Joint Resolution 465, granting additional authority to the Missouri-Illinois Bi-State Development Agency; and H.R. 5711, which is a recently concluded compact between the States of Indiana and Illinois setting up a bi-State agency known as the Wabash Valley Commission, to develop the natural resources of the Wabash Valley area.

Pending in subcommittee is House Joint Resolution 402, which would give permission to the District of Columbia as well as the States of Virginia and Maryland to enter into a compact to regulate transportation in the greater Washington, D.C., area. Since Congress in this instance will be performing a double function (granting congressional consent to the States of Virginia and Maryland and also acting as a principal contracting party for its agent, the District of Columbia), a thorough study is being made in an effort to resolve the many practical, political, economical, financial, and other problems inherent in a bill of this nature, so that the compacting parties, in a cooperative and united way, may regulate transportation in the National Capital area.

Crimes: Among the bills of a general nature on which favorable action was taken by the subcommittee were H.R. 6817, to broaden the provisions of the Foreign Agents Registration Act; S. 1647, relating to penitentiary imprisonment; S. 1645, concerning computation of prisoner good time allowances; H.R. 6309, delimiting the restrictions on the shipment of water hyacinths; and H.R. 4386, concerning the destruction of boundary markers on Indian reservations.

The subcommittee held extensive hearings on H.R. 15 and some 38 similar bills making it a Federal offense to import, transport, possess, or use explosives in interstate commerce. This legislation was introduced as the result of bombings of schools, churches, synagogues, and public buildings in various sections of our country. While no action was taken on these measures, it should be pointed out that the text of one of the bills, H.R. 4344, formed the basis for title II of H.R. 8601 (civil rights) which was favorably reported by the full committee.

Patents, trademarks, and copyrights

Patents: The subcommittee considered H.R. 2739 which increases fees payable to the Patent Office. There has been no increase in patent fees since 1932, although salaries and other administrative costs of the Patent Office have risen considerably. It is felt that these increases will permit the Patent Office to increase its personnel and to reduce further the tremendous backlog of applications in the Patent Office. Because of the backlog, it presently takes 3 to 4 years to process patent applications.

Copyrights: The subcommittee approved H.R. 4059, which will authorize suits against the United States where the Government or its employees have infringed copyrights owned by individuals and others. Today the Government is immune from being sued although the Government employee is not. The instant legislation permits suit in the Court of Claims and exempts from liability the Government employee when he is acting within the scope of his employment.

The subcommittee conducted exhaustive hearings on H.R. 5921, which would remove the present exemption in the copyright law on coin-operated machines. The removal of the exemption would authorize authors and composers to license the public performances of songs, etc., when played on jukeboxes. Because of the great interest in this legislation as well as the many legal and practical issues involved, the subcommittee plans to give further study to this legislation before taking action in the matter.

Revision of the laws

Classification of laws to codes: The subcommittee's primary function regarding the revision of the laws is the classification of the public laws to the United States Code and the District of Columbia Code. During the first session of this Congress there have been more than 250 public laws comprising somewhat more than 500 pages in the Statutes at Large. These, together with some 75 or more laws awaiting the President's signature at the time of adjournment, will have to be examined to determine their classification to the United States Code. This work will be completed during the recess.

The laws of a general and permanent nature will be incorporated in the first supplemental of the United States Code, 1958 edition, and the laws relating to the District of Columbia will be incorporated in a cumulative supplement VIII of the District of Columbia Code, 1951 edition.

Preparation of code supplements and new edition: All the work in connection with the preparation of the new edition of the United States Code has been completed. Preparation of copy for the printer entailed the preparing of more than 25,000 sheets and more than 76,000 inserts embracing the laws enacted since the publication of the 1952 edition of the Code. This copy resulted in more than 14,000 printer's galleys which have been read for correction. To date more than 9,000 pages of proof have been received, read, and returned to the Government Printing Office, constituting all the text and the tables for the new edition. There will be almost 2,500 pages of index still to be received and read. It is estimated that the entire new edition will consist of 13 volumes and at the present date 5 volumes have been delivered by the Government Printing Office.

In connection with the preparation of the supplement for the District of Columbia Code the reports of the decisions of the Supreme Court of the United States, Courts of Appeal, and the District Courts, since July 1, 1958, have been studied in order to incorporate notes to decisions affecting the Code. All the laws relating to the District of Columbia enacted during the first session of the Congress will likewise be studied, classified, and incorporated in the next cumulative supplement.

In all the work on the new edition and supplements of the United States Code the committee has had the benefit of the excellent services of the West Publishing Co. and the Edward Thompson Co., lawbook publishers.

Enactment of titles into law: During the past 16 years the work of improving the United States Code by enacting into law the several titles of the Code has been carried on by the subcommittee. At the beginning of this Congress 15 titles of the United States Code had been enacted into law and one title was eliminated by consolidating it with title 10, "Armed Services." At the beginning of this session a bill to enact into law title 39, the Postal Service, was brought up to date and introduced. It was speedily considered for the second time by the subcommittee and ordered favorably reported to the House by the committee. This bill passed the House early in March and is now pending in the other body. It is hoped that it will be enacted into law during the second session of this Congress. During the past 3 years the staff of the subcommittee has worked very closely with the Office of General Counsel of the Civil Service Commission in the preparation of a bill to enact into law title 5, Government Organization and Personnel. This work culminated in the introduction of a bill near the end of this session. At the present time a draft report is being prepared to be circulated as a committee print explaining to the interested agencies and departments the source of each section of the revised title and explaining precisely what the intention of the committee is. This draft report will be circulated during October with the hope that the views of the executive departments and agencies will be received early during the second session so that the bill may be favorably reported.

Similarly, preliminary work has been going on for more than a year in the preparation of a bill to enact into law part II of the District of Columbia Code, entitled "Judiciary and Judicial Procedure," and has also culminated in the introduction of a bill near the end of this session. A preliminary draft of the bill had earlier been circulated to the courts, the District government, and other interested parties for an expression of views. It is hoped that this bill may also be reported favorably to the House during the next session of this Congress.

Cooperation with other committees and agencies: Throughout the year the subcommittee's law revision counsel maintains a system of cooperating with other committees of the Congress and with the other two branches of Government. Innumerable inquiries regarding the proposed classification of laws are answered and assistance given in connection with the drafting of bills, particularly those affecting titles of the code that have been enacted into law.

Summary of Subcommittee No. 3

Bills referred	169
Bills on which hearings were held	65
Bills favorably reported to full committee	19
Bills reported to House	19
Bills adversely reported to full committee	56
Bills passed House	17
Senate bills processed	2
Bills pending in subcommittee	94
Bills pending in Senate	15
Bills which became public law	6
Bills vetoed	0

SUBCOMMITTEE NO. 4—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED—SPECIAL JURISDICTION OVER BANKRUPTCY AND REORGANIZATION

The continuing increase in the number of bankruptcy cases has caused Subcommittee No. 4 to devote much of its time during the first session of the 86th Congress to the problems of simplifying bankruptcy procedures to expedite the handling of those cases. Experience has shown that the Bankruptcy Act contains a number of needless formalities and cumbersome procedures. Hearings were held on a substantial number of bills directed at those problems. They include the following:

H.R. 4340: This bill simplifies the filling of vacancies among referees in bankruptcy and in doing so will have a salutary effect on keeping calendars current. The bill has been passed by both Houses and signed by the President.

H.R. 4345: This bill eliminates the requirements that referees transmit certain papers to the clerk of the court prior to bankruptcy. This, too, has become law.

H.R. 4692: Under present law, the district judge has the responsibility for issuing orders of adjudiciation in voluntary bankruptcy cases and orders of reference in both voluntary and involuntary cases. This bill would relieve him of that administrative duty. It has become Public Law 86–64.

H.R. 4693: This bill will achieve an economy in the cost of administering the bankruptcy system by consolidating the referee's expense fund and the referee's salary fund into a single fund. It is now Public Law 86–110.

In addition to these improvements in internal administration, the subcommittee acted on a number of bills simplifying procedures for the parties to a bankruptcy proceeding.

Thus, H.R. 6816 would eliminate the requirement that proofs of claim must be submitted under oath.

H.R. 8858 would eliminate the need for the verification of pleadings under oath and thus make the procedure in bankruptcy consistent with the Federal Rules of Civil Procedure. This has become public law.

H.R. 6556 would clarify the filing time for review of orders of referees, and H.R. 7233 would require claims in chapter XIII proceedings to be filed within 6 months after the first meeting of creditors.

It has been called to the attention of the subcommittee that certain abuses have arisen in bankruptcy proceedings. The subcommittee acted favorably on a number of bills to eliminate those abuses.

H.R. 5747 strengthens the provisions of the Criminal Code in respect to the concealment of assets by individuals in contemplation of bankruptcy.

H.R. 8708 gives the referee additional authority to scrutinize the fees paid to attorneys to insure that they are reasonable and fair.

H.R. 4346 eliminates false financial statements as a bar to the discharge of an individual, nonbusiness bankrupt and thus eliminates the practice of using such statements to intimidate a debtor.

H.R. 4150 authorizes the bankruptcy court to determine the effect of discharge, upon the application of both the creditor and the bankrupt.

All of these bills have passed the House.

In order to make possible wider use of the wage earner plan type of proceeding under chapter XIII, the subcommittee approved legislation eliminating the monetary limitation and eligibility for filing under chapter XIII. This has become public law.

Two bills of major substantive consequence to the Bankruptcy Act were also considered by the subcommittee and both have passed

the House. They are: H.R. 2236 and H.R. 7242. H.R. 2236 places a 3-year limitation on the priority and the nondischargeability of taxes, H.R. 7242 is a highly complex bill which seeks to insure an order of distribution consistent with the underlying purposes of the Bankruptcy Act. Both bills are now before the Senate Judiciary Committee.

In addition to fulfilling its primary legislative responsibility in the field of bankruptcy, the subcommittee considered a number of other bills referred to it. The subcommittee acted favorably upon H.R. 2979, authorizing district court judges to appoint law clerks without first obtaining the approval of the chief judge of the circuit. This bill has become Public Law 86–24.

The subcommittee approved H.R. 4060, which relieves the Comptroller General of the responsibility for fixing the date on which the statute of limitations commences to run in certain Miller Act payments. This bill is now Public Law 86–135.

The subcommittee ordered favorably reported H.R. 5396, which authorizes the transfer of certain maritime claims between the district court and the Court of Claims. This bill has passed the House and is now before the Senate Judiciary Committee.

A very large number of holiday and incorporation bills were referred to the subcommittee and a number of these have been enacted.

A statistical summary of the work of the subcommittee during the 1st session of the 86th Congress follows;

Number of public bills referred to subcommittee	108
Number of public bills on which hearings were held	36
Number of public bills reported to full committee	40
Number of reports filed	25
Number of public bills passed House	25
Number of public bills pending in the Senate	9
Number of Senate bills disposed of	6
Number of public bills approved by the President	12

SUBCOMMITTEE NO. 5—GENERAL JURISDICTION OVER JUDICIARY BILLS AS ASSIGNED—SPECIAL JURISDICTION OVER ANTITRUST MATTERS

Subcommittee No. 5—which exercises general jurisdiction over a variety of subjects, including such topics as civil rights, the Federal judicial system, and particular jurisdiction over antitrust matters—had referred to it a total of 186 bills, 50 of which were disposed of by recommendations to the full committee. Seven bills were enacted into public law.

A total of 26 days were spent in conducting hearings on various bills referred to this subcommittee.

This subcommittee devoted considerable time to the consideration of a number of bills relating to various civil rights proposals. During the course of the hearings over a thousand pages of testimony was taken from various witnesses, including Representatives in Congress, Cabinet members, State and local officials, as well as private individuals. At the conclusion of the hearings, this subcommittee recommended to the full committee a civil rights proposal, which was subsequently reported to the House as H.R. 8601. At the close of the first session, this bill was pending before the House, as was a request to the Rules Committee for a hearing to grant a rule for consideration of the proposal.

Among the bills enacted into law was one raising the travel and subsistence allowance for Federal judges from $15 to $25 per day maximum. Another new public law defined a new official station for retired judges, and a third waived existing provisions of the judicial code so as to permit new court facilities to be constructed for the district court at Durant, Okla. Another bill enacted into public law was a Senate bill which provided for a U.S. Park Commissioner for Grand Canyon National Park. A new public law amended the existing provisions of the Federal judicial code so as to permit noncitizens the privilege of filing actions in forma pauperis. Another public law granted the consent of the Congress to an interstate compact between New York and New Jersey relating to transportation. Finally, a proposal which increased the authority of the Attorney General to acquire land adjacent to Federal penal institutions was enacted into public law.

Number of public bills referred to subcommittee	186
Number of public bills on which hearings were held	58
Number of public bills reported to full committee	50
Number of reports filed	9
Number of public bills passed House	8
Number of public bills pending in the Senate	0
Number of Senate bills disposed of	1
Number of public bills approved by the President	7

ACTIVITIES OF THE ANTITRUST SUBCOMMITTEE

Legislative

Thirty-one bills were assigned to the Antitrust Subcommittee during this session. The subcommittee considered 18 of these bills during 9 days of hearings. One bill, S. 726, was reported to the House, and on approval by the President on July 23, 1959, became Public Law 86–107.

On May 27 and May 28, 1959, the subcommittee held hearings on H.R. 432, H.R. 2977, H.R. 6049, and S. 726, bills designed to facilitate enforcement of the prohibitions of the Clayton Act against price discrimination, tie-in arrangements, mergers, and interlocking directorates. These bills changed Clayton Act enforcement procedures to make the cease and desist orders issued by the Commissions and Boards with jurisdiction under section 11 final orders in the same manner as the cease and desist orders now become final when issued by the Federal Trade Commission, pursuant to the procedures set forth in the Federal Trade Commission Act. Automatic finality of its Clayton Act orders had been requested by the Federal Trade Commission for more than 20 years.

Previous enforcement procedures of the Clayton Act permitted a defendant to engage in the same illegal practices three times before effective legal penalities could be applied as a result of action by the Commission or Board vested with jurisdiction. These procedures were changed to permit the Commission or Board's cease and desist order to become final and conclusive 60 days after its issuance, or upon completion of judicial review.

Once final, the cease and desist order is enforced through direct reference to the Attorney General of the facts of the violation. Punishment is by fine recovered in a civil action brought by the United States. S. 726 became Public Law 86–107 on July 23, 1959.

On June 25 and 26, 1959, the Antitrust Subcommittee conducted hearings on a series of identical bills, which would amend section 2(a) of the Clayton Act so as to provide for mandatory functional discounts—H.R. 848, H.R. 927, H.R. 2788, H.R. 2868, and H.R. 4530. These bills would make it necessary for a manufacturing seller to grant in good faith "a reasonably adequate" price differential to wholesalers. The bills would require such differential to be "reasonably calculated" to allow the wholesalers' customers to compete with like firms which purchase directly from the seller. During the hearings, the subcommittee received testimony from the sponsors of the bills, representatives of the Federal Trade Commission and the Department of Justice, and from spokesmen from the National Association of Tobacco Distributors, National Frozen Food Distributors Association, National Candy Wholesalers Association, National Oil Jobbers Council, and the American Bar Association.

On August 20 and 21, 1959, the subcommittee conducted hearings on two bills, H.R. 7191 and S. 753, which would authorize cooperative associations of milk producers and marketing agencies owned by such associations to bargain in concert for the sale of milk and milk products with groups of dealers, processors, or other purchasers. These bills would expand the exemption from the antitrust laws that has been granted in the Capper-Volstead Act to agricultural cooperative associations, to additional marketing arrangements by milk producer cooperatives. S. 753 had been passed by the Senate on April 30, 1959.

During the hearings, the subcommittee received testimony from the sponsors of the bills, representatives of the Department of Justice and the Federal Trade Commission, and spokesmen of the National Milk Producers Federation, as well as from representatives from a number of milk cooperative associations and independent dairies.

In September 1959 the Antitrust Subcommittee held the first 3 days of hearings on a series of bills designed to exempt from the antitrust laws a number of activities in the organized professional team sports of baseball, basketball, football, and hockey—H.R. 2266, H.R. 2370, H.R. 2371, H.R. 2372, H.R. 2373, H.R. 2374, and H.R. 8658.

During the hearings the subcommittee devoted particular attention to the problems involved in extending the antitrust exemptions for these sports to arrangements that affect other industries, particularly the broadcasting and telecasting industry. The subcommittee received testimony from several Members of the Congress, from the commissioner or organized baseball, and from representatives of television stations in Topeka, Kans., Buffalo, N.Y., Terre Haute, Ind., and New Orleans, La.

Investigative

On May 26, 1959, the Antitrust Subcommittee issued its report on the investigation it had conducted during the 85th Congress on the consent decree program of the Department of Justice. This 379-page report was based on a record of hearings which contained more than 4,500 pages of testimony from 34 witnesses. The subcommittee report was signed by Chairman CELLER and Representatives PETER W. RODINO, JR., LESTER HOLTZMAN, and HERMAN TOLL. There was also a minority report, signed by WILLIAM M. MCCULLOCH, WILLIAM E. MILLER, and GEORGE MEADER.

In the administration of the antitrust program of the Department of Justice, the subcommittee ascertained that approximately 75 percent of all equity proceedings that have been instituted by the Attorney General to enforce the antitrust laws have been terminated by negotiation rather than by litigation. Since World War II there has been a general trend toward more consent judgments, and in recent years the practice of negotiating settlements has accelerated.

As a result of its study, the subcommittee concluded that currently there are too many consent decrees accepted by the Department of Justice in relation to judicial decision after litigation. As it now operates, the report states the consent decree program of the Department of Justice results in the judicial function being superseded by an administrative procedure in which there are no rules to safeguard the public interest and the interest of parties who are not involved as parties in the Government's case.

The Antitrust Subcommittee recommended that the Department of Justice revise its consent decree procedures: (1) To provide

notice to the public of the terms of proposed consent decree; (2) to establish a waiting period between agreement by the Government and the defendant and the entry of the decree; (3) to afford private parties affected by the terms of the decree an opportunity to intervene in the Government's case in order to present objections to the court to the terms of the consent decree; (4) to require, when a consent decree is submitted to the court for approval, an accompanying written statement to be filed that sets forth the facts involved in the litigation, the defendants position, the meaning of the provisions used in the decree, and the reasons that are the basis for the Department's compromise.

To supplement its survey of the Antitrust Division's general consent decree policies and procedures, the subcommittee made two case studies. For these studies the subcommittee selected the oil pipeline consent decree, *United States* v. *The Atlantic Refining Co., et al.*, civil case No. 104060, District of Columbia, December 23, 1941, and the A.T. & T. consent decree, *United States* v. *Western Electric Company and American Telephone and Telegraph Company*, district court of New Jersey, January 24, 1956.

In connection with its investigation of the Federal Communications Commission's relationship to negotiations for the A.T. & T. consent decree, the subcommittee ascertained that the Commission had failed, despite repeated recommendations by its staff over a number of years, to investigate telephone rates or even to conduct a general telephone rate inquiry. The subcommittee noted, also, that as a result of a $65 million long distance telephone rate that had been authorized by the FCC in 1953 without a hearing, long distance telephone users may have been overcharged $159 million in the years 1955, 1956, and 1957.

To remedy this situation, the subcommittee recommended that the FCC institute "promptly a comprehensive formal rate investigation." Shortly after the report was issued, the FCC acted upon the subcommittee's recommendation. As a result of preliminary study, on July 24, 1959, the FCC ordered A.T. & T. to cut long distance telephone rates by $50 million a year.

In connection with its investigation of the oil pipeline consent decree, the subcommittee studied the effects of Interstate Commerce Commission regulation on enforcement of the oil pipeline consent decree. The subcommittee concluded that while the ICC nominally is responsible for regulation of the oil pipeline industry, in practice the industry itself decides what the ICC will do, and is able to determine the extent and character of its own Federal regulation. As a result, the interests of the general public have been subordinated to the private interests of the oil pipeline companies.

On the basis of the subcommittee recommendations, the ICC terminated two long-standing practices which have contributed materially to the orientation of its activities to the oil industry viewpoint. The ICC no longer permits personnel of the pipeline companies to work in the Commission offices in order to assist in the preparation of ICC records and recommendations. In addition, the ICC has severed its relationship, which had existed since 1933, with the Engineers-Accountants Valuation Subcommittee of the American Petroleum Institute. In its report, the subcommittee commended the ICC for these actions.

Shipping investigation

During this session, the Antitrust Subcommittee staff has continued the preliminary inquiry into antitrust problems in the operation of ocean shipping conferences. This inquiry was started on August 1, 1958. For more than 9 months staff counsel have been examining thousands of documents in the files of 60 ocean freight conferences and 8 individual U.S.-flag steamship lines.

The documents selected for public hearings by the subcommittee staff reveal business practices by steamship companies and ocean freight conferences that raise serious questions under the antitrust laws. The documents also present equally serious questions with regard to the effectiveness of the antitrust exemption provisions in the Federal maritime law, as well as the adequacy of Federal Maritime Board regulation of competitive practices in this industry.

Public hearings have been scheduled to begin in New York City in October 1959. It is expected that the hearings will be extensive and that representatives from all segments of the ocean freight industry will be called upon to testify to assure that the subcommittee receive all opinions on these vexing factual problems.

European television

On March 16, 1959, Chairman CELLER released the report on his study of television broadcasting in the United Kingdom, France, and Italy. This report, entitled "Aspects of Television in Western Europe," was based on Mr. CELLER's firsthand study in the fall of 1958 of European television operations. It supplements the Antitrust Subcommittee's investigations during the 84th and 85th Congresses of the American television broadcasting industry.

Konrad Adenauer Celebrates 10th Anniversary as Chancellor of the Republic of West Germany

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me relative to the Chancellor of the Republic of West Germany, Konrad Adenauer, who celebrates his 10th anniversary in office September 15.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

Many of my colleagues, and public officials throughout the country, including the President and the Vice President, have paid tribute in recent days to one of the great statesmen of the world, a true champion of freedom and democracy.

I refer, of course, to the Chancellor of the Republic of West Germany, Konrad Adenauer, who celebrates his 10th anniversary in office on September 15.

At this time I wish to join in the felicitations and to express the hope that God may grant Chancellor-Adenauer many more years in which to carry on his brilliant fight for peace and justice among nations.

The transformation of West Germany out of the chaos of war into a healthy and powerful nation is due in no small part to the statesmanlike qualities displayed by the Chancellor during his 10 years in office, to his rugged determination to fight for freedom for his people against all odds. Communists repeatedly have threatened to "throw the book" at this 83-year-old champion of democracy, but he has moved forward steadily, never flinching in the face of the warlike utterances from Moscow.

The Chancellor, a man of big heart, who has gained the respect of the entire free world for his unceasing efforts to atone for the crimes of the Nazi regime, takes little credit upon himself for the remarkable progress made by West Germany under his able administration.

Instead, he has shown himself not above extending thanks to others, including former enemies of his country, for the helping hands they have extended to help West Germany rise again from the ashes of total war.

During the celebration of his 10th anniversary in office, the Chancellor said of the United States: "The brotherly hand stretched out to the conquered nation made possible the restoration of the Federal Republic as a democratic and free state in the community of nations."

Here is a man whose name and whose accomplishments in the cause of peace forever will be etched in the pages of history.

The Federal Aviation Agency

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. MARTIN. Mr. President, the Federal Aviation Agency is rounding out its first year of existence. This agency is responsible for air traffic control for all civil and military flying in the United States, for the inspection of aircraft and ground equipment, and for numerous other matters of great importance affecting aviation.

I ask unanimous consent to have printed in the Appendix of the RECORD a report of the operation of this agency under the direction of Gen. E. R. "Pete" Quesada. This report was prepared by Mr. E. K. Barnes of the staff of Interavia's World Review of Aviation and Astronautics, one of the world's leading aviation publications.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE FEDERAL AVIATION AGENCY

The formation of the Federal Aviation Agency marks yet another step in both the history and the development of American aviation. The writer recently had the opportunity of visiting the headquarters of the new Agency and was given considerable insight into its development and current progress. To fully appreciate the reasons for its formation and the requirements it fulfills, it is perhaps necessary to retrace some of this past aviation history to obtain a clearer picture of the background from which the Agency was developed.

The speed of development and expansion of the aviation and air transport industries over the past 30 years has greatly exceeded the most optimistic forecasts. This is particularly marked in the United States of America where the air transport of passengers and mail has long been accepted as a necessary and permanent part of the American transportation picture. The recognition by the Federal Government of the need to provide a centralized control for the regulation and promotion of civil aviation dates back to 1926 when the first Air Commerce Act was passed. This act established an Aeronautics

Branch of the Department of Commerce, whose function was to regulate the newly developing business of air transport. The Department was authorized to license pilots, develop air navigation facilities, promote flying safety, map airways, and to furnish flight information.

By 1938 the ever-increasing popularity of travel, together with the increasing numbers of aircraft of new types and higher speeds, began to complicate the movement of air traffic in the airways. An exhaustive study of commercial aviation was made by a Presidential Commission which paved the way for the writing of the Civil Aeronautics Act of 1938. This act created the Civil Aeronautics Administration and the Civil Aeronautics Board and allocated specific responsibilities to the two branches. The Civil Aeronautics Administration was made responsible for air safety, air traffic control, operation of airways, aviation communications, and the improvement of airports. At the same time the Civil Aeronautics Board was charged with writing Civil Air Regulations, investigating accidents and regulating economic aspects of air routes and civil aviation. In 1940 certain amendments were made to the act and under the resultant reorganization the Civil Aeronautics Board remained independent while the Civil Aeronautics Administration was placed within the Department of Commerce.

At the end of World War II, it was in this framework that American civil aviation recommended its activities. The enormous advances made by aviation during and following the war rapidly became manifest. Larger and faster aircraft in steadily increasing numbers crowded into the airways and it became apparent that the air traffic control capabilities of the CAA were not designed to handle the situation. As early as 1948 the Air Coordinating Committee which had been established by the President 2 years previously in 1946, observed that "the existing techniques of air traffic control and tools available to CAA are marginal even by the pre-World War II standards." During the 1950's yet another factor arose which compounded the existing difficulties. This was the advent of jet-powered aircraft with their extremely high speeds, and requiring new techniques in air traffic control to enable them to be fitted into the overall airways traffic plan.

In order to resolve the growing problems of this crowded airspace the first step was the creation in 1957 of the Airways Modernization Board with the express purpose of speeding the necessary improvements.

In the terms of the act which created the Board it was also specified that Congress would establish an independent Federal Aviation Agency, and in 1958 legislation was passed which brought this into being. To direct this organization the President appointed Mr. E. R. Quesada to be the first Administrator of the new Agency on November 5, 1958.

Mr. Quesada had previously served as Special Assistant to the President for aviation matters and had been chairman of the Airways Modernization Board. To assist him in the task of directing the new Agency, Mr. James T. Pyle was appointed Deputy Administrator. Mr. Pyle had previously been Administrator of the CAA, a body which was absorbed in its entirety in the structure of the new FAA.

This powerful and comprehensive organization is an independent agency reporting directly to the President, and the Administrator has been given the broad powers necessary to promote the interests of American aviation, both civil and military, at home and abroad. The formation of the FAA was commenced by the transfer of the Airways Modernization Board to its control as the Bureau of Research and Development, followed by the Civil Aeronautics Administration and the safety rulemaking section of the Civil Aeronautics Board, complete with personnel, funds, and functions. Once established, on January 1, 1959, the FAA at once commenced to operate on a 5-point plan described in the following principles:

1. To regulate air commerce so as to promote its development, safety, and requirements in national defense.

2. To control the navigable airspace and to regulate civil and military flight operations in the interests of safety and efficiency.

3. To develop and operate a common system of air traffic control and navigation for both civilian and military aircraft.

4. To develop a plan for the Agency's function in the event of war.

5. To prescribe minimum standards for design, materials, and workmanship in aircraft construction and construction of other elements of aviation.

The breadth of policy embodied in this 5-point plan gives an indication of the magnitude of the problems with which the Administrator and his staff are faced. It should be emphasized that the FAA concept is one of integration of services and facilities for both civil and military aviation so that it can safely and fairly apportion the use of the available airspace to both users. There is also the necessity to both expand and modernize the Federal airways system and to control the ever-growing volume of traffic. This has become even more urgent with the introduction of high-performance aircraft into the traffic patterns, requiring more airspace than ever before.

In a recent interview Mr. Quesada explained to me how the FAA is attacking these problems. The first task is to maintain and operate facilities already in existence and by reducing the size of restricted areas to restore large tracts of airspace to public use. This was being achieved by complete derestriction of certain areas, and in certain other cases by allowing the use of restricted areas to civil aircraft when military operations were not being conducted. This was now possible owing to the closer integration between military and civil control in the FAA system. To achieve this integration new methods have been evolved. Military personnel are transferred for employment with the FAA rather than being attached for liaison. During the period of employment with the FAA the man is regarded as being an FAA employee even to the extent of being paid by the Agency and not by his parent service. By absorbing this personnel into its own structure rather than establishing liaison officers from the various services and commands, the FAA is assured of a closer cooperation without the tendency for interservice priorities to arise. Similarly the controllers on military airfields will eventually be replaced by civilian FAA employees to insure a greater continuity. In consequence military aircraft will use the airways under civilian control and with exactly the same degree of priority as civilian aircraft.

The second and largest part of the program is that of modernization of the airways; increased installation of radar and other electronic equipment, training larger numbers of traffic controllers, improving communications and developing new control procedures. This intensive research and development program is being undertaken with the target date of January 1, 1963 as the deciding factor. Mr. Quesada explained that this date represents the completion of the first stage in the modernization program and any new developments are judged on their availability for employment by that date. Any systems or ideas which may arise but which cannot be developed for employment in that time will be relegated to a long-term research program. By making this rule the FAA is assured of concentration on the present problem without being sidetracked on possibilities rather than certainties.

The third and last part of the overall program, and representing only a small proportion of the effort at the moment, is that of investigation of future developments and planning for the more distant future. This is being done with the next generation of high-speed aircraft in mind and has little bearing on the immediate modernization of the airways and facilities.

To undertake the responsibilities with which it is charged, the FAA anticipates employing nearly 40,000 personnel when fully staffed. More than 90 percent of this figure will be stationed in hundreds of FAA facilities throughout the United States and the world. Mr. Quesada went on to describe the main features of the organization and the main departmental responsibilities which have been established throughout the Agency. Four major bureaus constitute the operational strength of the FAA and their functions and interdependence can best be understood by describing their activities separately.

Bureau of Research and Development: This was the first part of the FAA to be brought into existence and consolidated the research programs of the Airways Modernization Board and the Civil Aeronautics Administration. The Bureau operates the National Aviation Facilities Experimental Center in Atlantic City, N.J., to evaluate ground navigation and traffic control equipment and procedures.

This center is the FAA's proving ground and has been established in one of the busiest traffic areas of the United States to provide a real life environment of air traffic management studies. At the same time traffic-free areas over the Atlantic Ocean provide a safe area for testing experimental devices. The development of semiautomatic air traffic control systems is one of the major tasks of this Bureau.

Bureau of Facilities: Is responsible for the installation and maintenance of all aids to navigation, both visual and electronic, in the air traffic control and navigation systems. It is also the engineering, construction, and procurement authority of the FAA. The navigation aids for which it is responsible include VOR, VORTAC, ILS, high intensity approach lights, long range and surveillance radar installations, radio ranges, air route traffic control centers and airport control towers, data processing systems, and communications. The Bureau installs these facilities and establishes the techniques to insure their continued performance and reliability. One specialized responsibility is that of planning and developing the International Airport for commercial jets, now being constructed near Washington at Chantilly, Va.

Bureau of Flight Standards: The key word of this Bureau's activities is "safety." Its activities include establishment of the standards for use by manufacturers in the design and construction of aircraft, flight testing and airworthiness certification of all civil aircraft, and maintenance standards and practices for civil aircraft. It tests and certificates the competence of all flight personnel, mechanics, and dispatchers, and sets the standards for mechanics training schools. Safety inspectors of the Bureau continually check the actual operation of commercial aircraft and their crews on routine flights. It also has the responsibility for flight checking the navigation aids, landing aids, radars, and communication systems throughout the Federal Airways Systems.

Bureau of Air Traffic Management: The function of this Bureau is the control of air traffic, writing and enforcing air traffic rules and regulations, and determining the division and use of the airspace available. It operates the 35 air route traffic control centers and over 200 airport control towers. It is also responsible for the network of communi-

cations which interlink the control stations throughout the airways system.

To coordinate and supervise the work of the FAA throughout the United States and oversea possessions, regions have been established under the control of regional administrators. These regional offices are situated in New York, N.Y.; Fort Worth, Tex.; Kansas City, Mo.; Los Angeles, Calif.; Anchorage, Alaska; and Honolulu, Hawaii. Over 90 percent of the personnel of the FAA are employed in the facilities operating in these regions.

Apart from the work of the bureaus and regional offices a number of departments exist for the planning and administration of FAA policy and for coordination with other authorities. One of the most important of these is the Office of International Coordination. Mr. Quesada is very keenly aware of the necessity of maintaining as close relationships as possible with other governments and air traffic authorities. In his view the mandate of the FAA is worldwide and any aviation developments in the United States of America are bound to affect aviation throughout the world. Similiarly the United States of America cannot afford to ignore aviation developments abroad as only through the interdependence of this technical effort can the maximum mutual benefits be obtained.

The extent to which the FAA is working to obtain this exchange of technical and operational information can be judged from the work of the International Coordination Office. Apart from supporting the aims of the International Civil Aviation Organization, ICAO, the FAA is strongly supporting the civil aviation activities of certain NATO groups and provides a full-time officer for this purpose. Another FAA officer sits on the Air Navigation Commission of ICAO and is alternate to the U.S. representative on the ICAO Council.

In order to strengthen the liaison and cooperation with civil aviation administrations of other countries a number of oversea offices have been established. There is an aircraft engineering office in Paris which assists foreign manufacturers in obtaining U.S. airworthiness certificates for their aircraft. Eight field offices in as many countries perform the necessary safety surveillance of U.S. flag operations in oversea areas and consult with and advise foreign flag operators flying to the United States in the promotion of air safety. There are also two flight inspection groups with flight check aircraft for the operational evaluation of various air navigation aids in cooperation and under agreement with other governments.

The establishment of the National Aviation Facilities Experimental Center (NAFEC) at Atlantic City, N.J., is another illustration of the agency's global thinking in terms of aviation development and safety. This modern airport is being equipped for experimental purposes with all types of new systems for evaluation by a large staff of scientists and engineers. It is the hope of the Administrator that engineers from other countries will visit this proving ground and that they will work alongside the FAA staff for as long as they are able in the development of equipment and systems.

The recent visit of a Swiss delegation to the FAA headquarters in Washington, D.C., was yet another example of this international cooperation. The delegation consisted of representatives from the Swiss Federal Air Office and from the Air Traffic Services of Geneva and Zurich airports, which are operated by Radio-Switzerland. In the course of a visit lasting a week they were shown the structure and functions of the FAA and were given considerable information on the developments which were in hand for the modernization of the Federal Airways system. The value of such collaboration is particularly apparent in the case of a small country such as Switzerland, whose airports are used by a large number of foreign flag carriers, and where the geographic nature of the country necessitates an extremely accurate air traffic control system. From this visit to the FAA the Swiss delegation were able to obtain operational information drawn from a highly complex and crowded air transport system. At the same time this exchange of information is not entirely one sided. The experience gained in Switzerland of air transport operations in a mountainous country of small area is of value and is welcomed by the FAA. The problems encountered in the siting and performance of radar, VOR's and other navigation equipment and the methods employed to overcome these difficulties are of importance throughout the world and not only from a national standpoint.

In an age when no two points on the world's surface are more than 40 hours traveling time apart, it is encouraging to see such strenuous efforts being made to expedite air transport internationally, and to bring its advantages within the reach of the greatest number of people. As the two most powerful "Air Traffic Controllers"—if they will forgive the term, in the free world today, Mr. Quesada and Mr. Pyle are to be congratulated on the vigor and enthusiasm with which they are directing the efforts of the FAA to achieve this result.

The Atlantic Congress

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. KEFAUVER. Mr. President, Mr. Harold Zellerbach, acting chairman of the board of Crown-Zellerbach Corp., and Mr. Calvin J. Nichols, director, World Affairs Council of Northern California, were delegates at the Atlantic Congress, which was held in London last June and participated in by about 650 delegates from the NATO nations.

Mr. Zellerbach and Mr. Nichols recently appeared on the "World Affairs Are Your Affairs" radio series, presented on KNBC, San Francisco. I think their discussion was a very thoughtful presentation of some of the problems faced by the free world and discussed by the congress. I ask unanimous consent that a transcript of the broadcast be reprinted in the CONGRESSIONAL RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

Mr. NICHOLS. Good evening, ladies and gentlemen. This evening the World Affairs Council will endeavor to bring you some background discussion of an important meeting which was held in London early in June of this year, the meeting of the Atlantic Congress. This is a meeting that was widely publicized in Europe but not in the United States. We have as our guest on this program Mr. Harold Zellerbach, chairman of the executive committee of the Crown-Zellerbach Corp., who was a delegate to the Atlantic Congress meeting and also a member of the U.S. National Committee for the Atlantic Congress. Mr. Zellerbach, I think our audience would be interested to know who convened this Congress, how the delegates were selected, and what its purpose was, generally.

Mr. ZELLERBACH. The Atlantic Congress was called by the NATO parliamentarians—who are members of the various NATO country parliaments and the U.S. Congress. The delegates were selected—that is, the U.S. delegates were selected by the U.S. Board of Directors of our delegation. This delegation was headed by Mr. Lewis W. Douglas, the honorary chairman, and Mr. Eric Johnston, who was general chairman. We also had a cochairman, the Honorable Senator ESTES KEFAUVER, Senator JACOB JAVITS, and Representative WAYNE HAYS. All these three Congressmen are members of the NATO parliamentarians.

Mr. NICHOLS. I think it is rather interesting that this conference was one where the delegates were not under any instructions of their governments. They were all free to speak their own minds and vote as they saw fit on the issues presented. How was the congress financed—how were the costs of this congress met?

Mr. ZELLERBACH. Well, the reason, of course, Mr. Nichols, that we could speak freely was that we put up our own money. This was all done by private funds. Therefore, it had no tinge of Government money in it and we weren't responsible for our remarks.

Mr. NICHOLS. That's a very interesting point. I think maybe the audience would be interested also to know something about the personalities that participated in that conference. I was impressed with the fact that it was opened by Her Majesty, Queen Elizabeth II; that the Prime Minister of Great Britain chose to make one of the opening speeches. And of course we had a number of other very interesting and distinguished guests—General Norstad, Dr. Mordecai Johnson, president of Howard University, Mr. Paul Henri-Spaak, Hugh Gaitskill, and any number of others. Also, the American delegation itself was an impressive list of people representing a great many fields. I suppose, Mr. Zellerbach, in selecting those delegates an effort was made to cover quite a wide range of fields. Would you like to comment on how that was done?

Mr. ZELLERBACH. People were selected on the basis of their knowledge in the particular field they were to cover at the congress. For example, I attended the economic sections of the meeting because of my own background in the business world. We had Senators and Representatives there who attended the political groups. We had military men attending the military sections. And then we had a great many educators there who attended the cultural sections. And these were selected from all parts of the United States. It was quite a broad and, to my way of thinking, a most competent delegation.

Mr. NICHOLS. How many were in the U.S. delegation?

Mr. ZELLERBACH. There were about, as I recall, 110 delegates at the meeting. There were more invited. We were supposed to have about 130. I think between 110 and 120 actually came to the meeting.

Mr. NICHOLS. On the question of fields represented—in the cultural field, for example—I think it was interesting that a number of newspaper editors, people like Cass Canfield, editor of Harper's; Palmer Hoyt, editor of the Denver Post, and others of prominent papers and periodicals in the country, were represented. Also, people of various religious faiths were represented, so there was a good cross-section. Now, let's turn, if we may, back to the question of the purpose of this conference and its theme. I wonder if you would like to comment on that.

Mr. ZELLERBACH. When I was invited to become a delegate, naturally I wanted to know the purpose of the Congress and what results they hoped to achieve from a meeting of 5 days. I learned that since NATO was strictly a military alliance and had been the

so-called whipping boy of the Communist countries—that is to say, the Western nations were accused of being warmongers—it was felt that NATO should expand its usefulness into other fields. Thus the basic purpose of this Congress was to see how NATO could be strengthened in fields other than the military over the next 10 years.

Mr. NICHOLS. By the way, I believe that all the NATO countries were represented except Iceland, and Iceland was not represented because of the fishery dispute. Of course, we had participation not only of European countries, but Canada and the United States were very much concerned and very much interested in this meeting. The Congress itself covered a wide range of subjects. As you say, the emphasis was on other than military problems. This means a good deal of concern with economic problems, with spiritual and cultural problems generally, as well as political. I think from here we ought to turn to major fields that were covered by the resolutions and the principal items that were proposed. I wonder if you would like to lead off with some comment on what happened in probably one of the most important committees, namely, the Economic Committee of the Congress?

Mr. ZELLERBACH. I should be very happy to, because after all this is something that has given business in North America, including both the United States and Canada, quite a bit of concern. We have seen the development of the European Common Market in the last few years. This has taken hold much faster than any of us dreamed it ever would. As a consequence of this, the so-called seven outer nations, or those not in the European Common Market group, are beginning to worry about the effect of the Common Market on their own economies. And the United States and Canada are a little worried as well. As a consequence, part of the work that I think this Atlantic Congress did, was to reappraise whether or not the Atlantic Community or the so-called European Common Market groups should be expanded into the Atlantic Community of Nations, including the United States and Canada and also the other outer seven group. With the rising standards of living and the breaking down of tariff barriers between the European Common Market countries, this welds 160 million people who are going to buy and need things into a common group. In other words, we have in the United States 175 million people, and we think that we have a lot of business to do here. Well, just imagine what is going to happen in Europe. We not only have the present group of 160 million in the Common Market, but then when you add double that with the seven outer fringe countries, and add United States and Canada, you can see this becomes a very potent economic market for the free Western countries.

Mr. NICHOLS. Before that, however, isn't there the danger that unless a real effort is made to bring these two groups together, you could have a situation develop where one group would be competitive with another? It seems to me that this would be one of the things that members of the Congress would be quite anxious not to have happen. As I recall, while we were meeting in London the seven countries that you refer to were actually holding a meeting in one of the Scandinavian countries at that very time. Do you think there is any danger of competition between the so-called six Common Market countries and the seventh?

Mr. ZELLERBACH. Well, yes, there could be danger if they don't get together on a common-ground basis. One of the reasons that England did not originally come into the European Common Market was that she was committed to her former colonies—the so-called United Kingdom bloc of countries. But I think now Great Britain is beginning to see the error of her ways in not joining originally with the European Common Market. I think we American businessmen have been quite apprehensive—that if this European Common Market starts to put up tariff barriers, the United States and Canada will be excluded from 160 million people, and all these people have a very high standard of living. The standards are perhaps not as high as we have here in North America, but compared to some of the underdeveloped countries very much higher. So this is also a problem.

Mr. NICHOLS. In other words, this is an area in which it is absolutely essential that all members of the Atlantic Community work together, to try to find a common solution, otherwise, you are going to have the prospect of struggles within the group, or the possibility that the United States and perhaps Canada will be left out of this kind of arrangement. What were the other aspects of the economic problem that were considered by the Congress, aside from the question of European organization and avoiding restrictive trade barriers?

Mr. ZELLERBACH. Well, part of that problem, of course, is monetary. Many of you listeners have, I am sure, been to Europe within recent years and you will remember very distinctly that every time you went into one of these countries you had to count your money at the border when you entered and when you left. Currencies were not stabilized; one year you went to France and the franc was 350 francs to the dollar, officially, and on the black market you probably got up to 400. Well, today, when you go to France the franc is stabilized at, I think, 490 and there is no black market. You don't have to worry whether or not you are getting your francs at the cheapest cost. Now, with the so-called currency barriers eliminated, as well as the limitations on merchandise that can be imported into these countries—you can see that the manufacturers who produce the best products at the lowest prices are the ones who will get the business. Therefore, if the United States with all these tariff barriers and monetary barriers eliminated, can produce products better and cheaper than they can in Europe, then we will get the business, as against having to sit on the outside if tariff barriers are erected against our industry.

Mr. NICHOLS. One of the things that interested me very much in hearing the report of the Economic Committee was the extent to which they expressed concern about the less-developed countries, that is, Asia, Africa, and so on. In fact, members of the Atlantic Community seemed to be showing considerable concern for this area of the world, much more than I had personally realized. I wonder if you would like to comment on this aspect of the work of the Economic Committee?

Mr. ZELLERBACH. Well, just suppose I quote a sentence here from the declaration of the Atlantic Congress in 1959, under the economic title—that "governments should promote the maximum economic growth and production employment and living standards and should avoid restrictive economic measures, take all feasible actions to reduce tariff barriers and maintain monetary stability." In view of the services rendered by CEPC and EEC and those one might expect from any other form of effective multilateral association, governments should work especially for an increase in the benefits of a closer economic integration. Now, substantially that takes in the underdeveloped countries—Africa, the Near East, even Asia—because these are countries where millions of people exist on the lowest living standards. And if the rest of the world—the so-called Western bloc of countries—could raise the living standards of these nations by just so much as 1 or 2 percent, just translate that into the amount of goods and services these people are going to require. That would certainly bring prosperity throughout the world.

Mr. NICHOLS. I agree, and it seems to me that there was a general recognition widely shared by all of the delegates, that you could not have a strong Atlantic Community unless you also had a strong free world. In other words, we are dependent upon achieving conditions in the less-developed countries that will make freedom a real possibility and will give it a chance to grow. The other thing that you said which interested me, and I share your opinion on this, was the great awareness on the part of delegates of the great importance Africa is going to play in the future. The success of economic programs for the development of Africa means a great deal to the future of the Atlantic Community. In this country, I have felt that we haven't yet fully grasped what is happening in Africa. In the Atlantic Congress meetings many more people were aware of this and concerned about it, and I think this is one of the things the American people are going to want to give more attention to. Suppose we leave the economic problems for the moment and turn to some of the other issues considered. Of course, as you said in the beginning, although the emphasis was not on the military, nevertheless, there was some attention given to military problems. I wonder if you would just like to comment briefly on what the Congress did in this field.

Mr. ZELLERBACH. I think the easiest way is again to refer to the declaration of the Congress in the military field. That is, forces forming the European shield should be brought as soon as possible up to the minimum strength laid down in the agreed strategic concept of NATO, that governments should give continual attention to improving the military structure of NATO, and in particular should force increasing interdependence throughout the military field. I think everybody attending the Congress agreed, that this declaration basically was a sound one, and that all NATO countries should continue to implement NATO in its military aspects, as the one area protecting us from Communist attack.

Mr. NICHOLS. This is absolutely right. This is an area we cannot afford to neglect while we look at the other problems. It was interesting, and we simply do not have time to go into it in detail here, to note that at the very time the Congress was meeting, General de Gaulle was making his announcement with respect to the French position on the use of American planes for carrying atomic weapons and, in effect, asking that they not be based there. The Congress, as I recall, at least the committee that reported on military issues, gave a good deal of attention to the importance of the widest possible exchange of atomic information among the members of the alliance. This is obviously going to require a lot more attention. The other two major fields that were covered, of course, were the political and the cultural. In the political field the overriding concern was, as I recall, that there should be a constant and increasing amount of consultation among all members of the alliance—that no country should consider "going it alone" on any plans and programs affecting any other members of the community, without advance consultations. I suppose this was a carryover from some of the concern expressed when this had not been done in the past. On the other hand, there was, as I could gather, a certain feeling that a lot had been accomplished in this direction that we shouldn't lose sight of. This had to be a continuous process. On the cultural side, there were several proposals. The declaration, again, cites the major points with which they were concerned. The Congress, of course, spent a good deal of time discussing in a pretty lively fashion the need for countermeasures in combating the Soviet ideological warfare.

There were proposals for different techniques in doing this, but this was of great concern to a number of people. There was also the recommendation that a study center be set up for the Atlantic communities as a clearinghouse and intellectual focus. Another recommendation underscored the need for further integration of scientific research and, in particular, pure research. Also, there was a good deal of talk given to strengthening the information programs of NATO itself so as to keep the public better informed on the issues before the Atlantic community and before NATO. I gather these were probably the major fields covered. Perhaps we ought to turn our attention in the short time we have left to another evaluation of this Congress. How effective do you think it was in getting active participation on the part of the delegates? What was your impression of this?

Mr. ZELLERBACH. My impression was that all the delegates were most interested and very faithful in attending their section and committee meetings, as well as the plenary sessions. I know I was there practically the entire time, and most of the other delegates were there, too. As far as the recommendations are concerned, I think these ought to be implemented through the NATO parliamentarians, holding their next meeting in November of this year. At this time, the declaration of the Atlantic Congress and what it stood for will be considered by them for future implementation by their various parliaments and by our own Congress. There also has been a suggestion that a smaller group of 100 citizens be called together next year to further go into the recommendations of the Atlantic Congress and to stay in session until they can come up with some definite, firm recommendations to the NATO parliamentarians, which they in turn will have to implement through their own governments.

Mr. NICHOLS. It is interesting to note that already the report has been made to our Congress by members of the congressional delegation who attended and even one recommendation has been embodied in a report, for example, on the mutual security bill, so gradually I think we will see some of these results implemented. Now, to summarize very briefly some of the main points in our discussion, I suppose we would agree that we were both impressed with the concern of all the representatives with increasing needs for consultation, coordination, and increasing efforts in the economic, cultural, and political fields, while at the same time strengthening the military alliance—but not putting the major emphasis on the military aspect at this time. Secondly, there was a great concern expressed for the less developed countries and a recognition that their future was a major responsibility of the Atlantic community. Also, there was a real awareness of the economic problems and the need for an integration of efforts, particularly in the European area, to avoid restrictive barriers. Also, the role of the private individual was recognized, certainly evidenced by the fact that so many private individuals participated in this conference. Lastly, I think I would have to say that I was very impressed with the amount of creative thought demonstrated at the Congress and the vitality of the ideas. This was an encouraging experiment in an international conference. Is there anything you would like to add in closing, Mr. Zellerbach?

Mr. ZELLERBACH. In closing, I would say that my fellow citizens should be very happy that we were able to participate so actively in this Congress, and that unless you, my fellow citizens, get behind this kind of work and actively support it, we are going to have more trouble combating the Communist countries and what they say about us than ever before.

Mr. NICHOLS. Thank you ever so much, Mr. Zellerbach.

PROCEEDINGS OF THE SENATE SUBSEQUENT TO SINE DIE ADJOURNMENT

ENROLLED BILLS AND JOINT RESOLUTION SIGNED AFTER SINE DIE ADJOURNMENT

Pursuant to House Concurrent Resolution 439, agreed to September 15, 1959, the Vice President, on September 17, 1959, signed the following enrolled bills and joint resolution, which had previously been signed by the Speaker of the House of Representatives:

S. 1473. An act to repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church of Plymouth, Mass.;

S. 1944. An act to amend the Bankruptcy Act in regard to the verification of pleadings;

S. 2162. An act to provide a health benefits program for Government employees;

S. 2282. An act to amend the act of July 17, 1952;

S. 2319. An act for the relief of Sergiusz Rudczenko;

S. 2362. An act to authorize the Secretary of the Army to convey to the city of Arlington, Oreg., certain lands at the John Day lock and dam project;

S. 2655. An act to authorize the Secretary of the Army to credit equipment installation costs against rental under lease to Union Township of La Porte County, Ind.;

H.R. 47. An act to amend the Internal Revenue Code of 1954 to provide a personal exemption for children placed for adoption and to clarify certain provisions relating to the election of small business corporations as to taxable status;

H.R. 3254. An act for the relief of Thomas Forman Screven, Julia Screven Daniels, and May Bond Screven Rhodes;

H.R. 4938. An act to amend the Agricultural Adjustment Act of 1938 to extend for 2 years the definition of "peanuts" which is now in effect;

H.R. 5711. An act granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes;

H.R. 5733. An act for the relief of Park National Bank;

H.R. 6059. An act to provide additional civilian positions for the Department of Defense for purposes of scientific research and development relating to the national defense, to improve the management of the activities of such Department, and for other purposes;

H.R. 6067. An act to amend section 4544 of the Revised Statutes of the United States to provide that if the money and effects of a deceased seaman paid or delivered to a district court do not exceed in value the sum of $1,500, such court may pay and deliver such money and effects to certain persons other than the legal personal representative of the deceased seaman;

H.R. 6190. An act to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes;

H.R. 6672. An act to authorize longer term leases of Indian lands on the Agua Caliente (Palm Springs) Reservation;

H.R. 7452. An act for relief of William B. Jackson;

H.R. 7476. An act to extend the duration of the Federal air pollution control law, and for other purposes;

H.R. 8385. An act making appropriations for Mutual Security and related agencies for the fiscal year ending June 30, 1960, and for other purposes;

H.R. 8392. An act to amend the District of Columbia Stadium Act of 1957 with respect to motor-vehicle parking areas, and for other purposes;

H.R. 8437. An act to provide for the reinstatement and validation of United States oil and gas lease BLM 028500;

H.R. 8464. An act to amend the act of October 24, 1951, to provide salary increases for the police for the National Zoological Park;

H.R. 8685. An act to amend the Internal Revenue Code of 1954 to provide for the Presidential appointment of a chief counsel for the Internal Revenue Service, and for other purposes; and

H.J. Res. 531. Joint resolution establishing that the 2d regular session of the 86th Congress convene at noon on Wednesday, January 6, 1960.

ENROLLED BILLS PRESENTED

The Secretary of the Senate presented to the President of the United States on September 17, 1959, the following enrolled bills:

S. 1944. An act to amend the Bankruptcy Act in regard to the verification of pleadings;

S. 2162. An act to provide a health benefits program for Government employees;

S. 2282. An act to amend the act of July 17, 1952;

S. 2319. An act for the relief of Sergiusz Rudczenko;

S. 2362. An act to authorize the Secretary of the Army to convey to the city of Arlington, Oreg., certain lands at the John Day lock and dam project;

S. 2655. An act to authorize the Secretary of the Army to credit equipment installation costs against rental under lease to Union Township of La Porte County, Ind.; and

S. 1473. An act to repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church of Plymouth, Mass.

APPROVAL OF SENATE BILLS AND JOINT RESOLUTIONS AFTER SINE DIE ADJOURNMENT

The President of the United States, subsequent to sine die adjournment of the Senate, notified the Secretary of the Senate that, on the following dates, he had approved and signed the following bills and joint resolutions:

On September 14, 1959:

S. 53. An act to amend the acts approved April 16 and June 27, 1906 (34 Stat. 116 and 519), so as to authorize the Secretary of the Interior to convey certain lands on the Huntley reclamation project, Yellowstone County, Mont., to school district No. 24, Huntley Project Schools, Yellowstone County, Mont.;

S. 252. An act to authorize Col. Philip M. Whitney, U.S. Army, retired, to accept and wear the decoration tendered him by the Government of the Republic of France;

S. 825. An act to revise eligibility requirements for burial in national cemeteries, and for other purposes;

S. 1081. An act for the relief of Arshalouis Simeonian;

S. 1164. An act to authorize the appointment of a commissioner for Grand Canyon National Park, Ariz.;

S. 1221. An act to amend the act authorizing the Crooked River Federal reclamation project, Oregon, in order to increase the capacity of certain project features for future irrigation of additional lands;

S. 1555. An act to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes;

S. 1618. An act for the relief of Matilda Kolich;

S. 1645. An act to amend section 4161 of title 18, United States Code, relating to computation of good time allowances for prisoners;

S. 1647. An act to amend section 4083, title 18, United States Code, relating to penitentiary imprisonment;

S. 1891. An act for the relief of Donald G. Coplan;

S. 1958. An act to amend section 12 of the act of March 5, 1915, to clarify types of arrestment prohibited with respect to wages of United States seamen;

S. 1973. An act to extend the validity of the passport to 3 years;

S. 2035. An act authorizing persons maintaining or defending actions in the District of Columbia on behalf of a minor to give releases of liability, and requiring persons receiving money or property in settlement of such actions or in satisfaction of a judgment in any such action to be appointed as guardian of the estate of such minor;

S.J. Res. 25. Joint resolution to change the name of Roosevelt Dam, Reservoir, and powerplant in Arizona to Theodore Roosevelt Dam, Lake, and powerplant.

On September 16, 1959:

S. 36. An act for the relief of Page A. Wilson;

S. 640. An act for the relief of Annibale Giovanni Pellegrini;

S. 667. An act for the relief of Pauline D. Kimbrough;

S. 977. An act for the relief of Nassibeh Mildred Milkie;

S. 994. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Spokane Valley project, Washington and Idaho, under Federal reclamation laws;

S. 1149. An act for the relief of Capt. Thomas J. McArdle;

S. 1171. An act for the relief of Katharina Hoeger;

S. 1575. An act to amend the act of August 1, 1958, to authorize and direct the Secretary of the Interior to undertake continuing studies of the effects of insecticides, herbicides, fungicides, and other pesticides, upon fish and wildlife for the purpose of preventing losses of those invaluable natural resources, and for other purposes;

S. 1627. An act for the relief of Mrs. Paula Deml;

S. 1637. An act for the relief of Marguerite Fueller; and

S. 2500. An act to authorize the appointment of Elwood R. Quesada to the retired list of the Regular Air Force, and for other purposes.

On September 21, 1959:

S. 335. An act to amend title 18 of the United States Code so as to prohibit the misuse by collecting agencies or private detective agencies of names, emblems, and insignia to indicate Federal agency;

S. 464. An act for the relief of Julia Mydlak;

S. 1436. An act to amend the act of June 14, 1926, as amended by the act of June 4, 1954 (68 Stat. 173; 43 U.S.C., sec. 869);

S. 1944. An act to amend the Bankruptcy Act in regard to the verification of pleadings;

S. 2181. An act to amend the Mineral Leasing Act of February 25, 1920;

S. 2208. An act to provide that Alaska and Hawaii be eligible for participation in the distribution of discretionary funds under section 6(b) of the Federal Airport Act;

S. 2219. An act to authorize appropriations for construction of facilities for the Gorgas Memorial Laboratory, to increase the authorization of appropriations for the support thereof, and for other purposes;

S. 2230. An act to amend the National Cultural Center Act;

S. 2445. An act authorizing the conferring of the degree of master of arts in education on certain students who enrolled in the District of Columbia Teachers College prior to July 1, 1958, and who, prior to July 1, 1961, are certified by the president and faculty of such college as having met all requirements for the granting of such degree;

S. 2504. An act to authorize the sale at current support prices of agricultural commodities owned by the Commodity Credit Corporation to provide feed for livestock in areas determined to be emergency areas, and for other purposes;

S. 2569. An act to amend the Atomic Energy Act of 1954, as amended; and

S.J. Res. 103. Joint resolution authorizing the National Geographic Society to erect a memorial on public grounds in the State of Virginia to honor Rear Adm. Richard E. Byrd.

On September 22, 1959:

S. 1473. An act to repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church of Plymouth, Mass.;

S. 2319. An act for the relief of Sergiusz Rudczenko;

S. 2362. An act to authorize the Secretary of the Army to convey to the city of Arlington, Oreg., certain lands at the John Day lock and dam project;

S. 2517. An act to amend section 7 of the Federal Home Loan Bank Act, as amended; and

S. 2655. An act to authorize the Secretary of the Army to credit equipment installation costs against rental under lease to Union Township of La Porte County, Ind.

On September 23, 1959:

S. 1845. An act to provide for the reestablishment of the rates of basic compensation for certain Government positions, and for other purposes;

S. 2282. An act to amend the act of July 17, 1952;

S. 2568. An act to amend the Atomic Energy Act of 1954, as amended, with respect to cooperation with States; and

S. 2654. An act to extend and amend laws relating to the provision and improvement of housing and the renewal of urban communities, and for other purposes.

On September 28, 1959:

S. 2162. An act to provide a health benefits program for Government employees.

APPOINTMENTS BY THE VICE PRESIDENT

Pursuant to the provisions of Public Law 689, 84th Congress, 2d session, the Vice President approved the appointment of the following Senators as members of the United States group to attend the NATO parliamentary conference in November, to be held in Washington, D.C.: Mr. FULBRIGHT, Chairman, Mr. WILEY, Mr. AIKEN, Mr. JACKSON, Mr. COTTON, Mr. BIBLE, Mr. JAVITS, Mr. HART, and Mr. HARTKE.

Pursuant to the provisions of Senate Resolution 196, 86th Congress, 1st session, the Vice President approved the appointment of the following Senators to be members of the Committee on Unemployment Problems: Mr. MCCARTHY, Chairman, Mr. MCNAMARA, Mr. COOPER, Mr. CLARK, Mr. RANDOLPH, Mr. HARTKE, Mr. MCGEE, Mr. PROUTY, and Mr. SCOTT.

OCEANOGRAPHIC STUDIES—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of September 11, 1959, the names of Senators SMITH and CLARK were added as additional cosponsors of the bill (S. 2692) to advance the marine sciences, to establish a comprehensive 10-year program of oceanographic research and surveys; to promote commerce and navigation; to secure the national defense; to expand ocean resources; to authorize the construction of research and survey ships and facilities; to assure systematic studies of effects of radioactive materials in marine environments; to enhance the general welfare and for other purposes, introduced by Mr. MAGNUSON (for himself and Senators SMATHERS, SCHOEPPEL, BARTLETT, YARBOROUGH, CASE of New Jersey, ENGLE, SCOTT, MCGEE, BUTLER, and HART) on September 11, 1959.

PROCEEDINGS OF THE HOUSE SUBSEQUENT TO SINE DIE ADJOURNMENT

BILLS AND JOINT RESOLUTIONS APPROVED

The President of the United States, subsequent to the sine die adjournment of the Congress, notified the Clerk of the House that on the following dates he had approved and signed bills and joint resolutions of the following titles:

On September 14, 1959:

H.R. 6781. An act to authorize the Secretary of the Interior to acquire certain additional property to be included within the Independence National Historical Park; and

H.J. Res. 281. Joint resolution authorizing and requesting the President to issue a proclamation with respect to the 1959 Pacific Festival, and for other purposes.

On September 16, 1959:

H.R. 213. An act to provide additional time within which certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees, and to permit the States of California, Kansas, North Dakota, and Vermont to obtain social security coverage, under State agreement, for policemen and firemen in positions covered by a retirement system;

H.R. 839. An act to approve an order of the Secretary of the Interior adjusting, deferring, and canceling certain irrigation charges against non-Indian-owned lands under the Wapato Indian irrigation project, Washington, and for other purposes;

H.R. 2978. An act to amend section 1870 of filing claims for credit or refund of overpayments of income taxes arising as a result of renegotiation of Government contracts;

H.R. 2987. An act to amend section 1870 of title 28, United States Code, to authorize the district courts to allow additional peremptory

challenges in civil cases to multiple plaintiffs as well as multiple defendants;

H.R. 3816. An act for the relief of Mukhtar Mohammed;

H.R. 5873. An act for the relief of Clara H. Hall;

H.R. 6508. An act to grant minerals, including oil and gas, on certain lands in the Crow Indian Reservation, Mont., to certain Indians, and for other purposes;

H.R. 6579. An act to amend the Tariff Act of 1930 to provide for the temporary free importation of extracts, decoctions, and preparations of hemlock suitable for use for tanning;

H.R. 6669. An act to amend the act of July 14, 1945, to provide that the Louisiana State University and Agricultural and Mechanical College may use certain real property heretofore conveyed to it by the United States for general educational purposes;

H.R. 7571. An act to amend section 7 of the act of July 28, 1950 (ch. 503, 64 Stat. 381; 5 U.S.C. 341f), to authorize the Attorney General to acquire land in the vicinity of any Federal penal or correctional institution when considered essential to the protection of the health or safety of the inmates of the institution;

H.R. 7744. An act for the relief of John I. Strong;

H.R. 7870. An act to amend the Revised Organic Act of the Virgin Islands, as amended;

H.R. 8196. An act for the relief of Everet Bumgardner;

H.R. 8197. An act for the relief of Lawrence M. Furtado;

H.R. 8198. An act for the relief of Martin Ackerman;

H.R. 8199. An act for the relief of James J. Manning;

H.R. 8310. An act for the relief of Joseph H. Cornell;

H.R. 8461. An act to amend the act of September 2, 1958, establishing a Commission and Advisory Committee on International Rules of Judicial Procedure;

H.R. 8575. An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1960, and for other purposes;

H.J. Res. 19. Joint resolution to authorize the issuance of a gold medal in honor of the late Prof. Robert H. Goddard; and

H.J. Res. 493. Joint resolution making a technical correction in section 5136 of the Revised Statutes (relating to national banks).

On September 21, 1959:

H.R. 163. An act to amend the Civil Service Retirement Act with respect to the crediting of service of U.S. commissioners for purposes of such act;

H.R. 616. An act to designate the dam across the Lampasas River in Texas as Stillhouse Hollow Dam;

H.R. 1455. An act conferring U.S. citizenship posthumously upon Gerardo Rafael Dobarganes y Torres;

H.R. 1499. An act for the relief of Gordon Langlands Johnston;

H.R. 1520. An act for the relief of Eva Gurman;

H.R. 1665. An act for the relief of Mrs. Vassiliki P. Theodorou;

H.R. 1701. An act for the relief of Mrs. Ellen Leschner;

H.R. 1735. An act to provide for conveyance of certain real property of the United States in Yalobusha County, Miss., to W. A. Nolen and Wiley W. Walker;

H.R. 1778. An act to amend section 17(b) of the Reclamation Project Act of 1939;

H.R. 2077. An act for the relief of Bernard Barrett;

H.R. 2090. An act for the relief of Giuseppa Ferrante (Sister Candida);

H.R. 2245. An act to amend subsection 432(g) of title 14, United States Code, so as to increase the limitation on basic compensation of civilian keepers of lighthouses and civilians employed on lightships and other vessels of the Coast Guard from $3,750 to $5,100 per annum;

H.R. 2247. An act to authorize the conveyance of certain real property of the United States to the county of Sacramento, Calif.;

H.R. 2301. An act for the relief of Mrs. Gladys M. Ellison;

H.R. 2302. An act for the relief of Agnes Lorraine Pank;

H.R. 2386. An act to direct the Administrator of General Services to convey to the city of Mobile, Ala., all right, title, and interest of the United States in and to certain land;

H.R. 2695. An act for the relief of the Inter-County Telephone & Telegraph Co., Fort Myers, Fla.;

H.R. 2946. An act for the relief of Cecil E. Finley;

H.R. 2982. An act to fix the official station of retired judges assigned to active duty;

H.R. 3111. An act for the relief of Rachel Nethery;

H.R. 3180. An act to extend for an additional 3 years the time within which the State of Michigan may commence and complete the construction of certain projects heretofore authorized by the Congress;

H.R. 3410. An act for the relief of Mrs. Leonard O. Erickson;

H.R. 3608. An act to authorize the Secretary of the Navy to acquire certain land on the island of Guam;

H.R. 3792. An act to admit the vessel *John F. Drews* to American registry and to permit its use in the coastwise trade while it is owned by Merritt-Chapman & Scott Corp. of New York;

H.R. 3801. An act for the relief of Harry and Lily Stopnitsky;

H.R. 4002. An act to authorize the use of Great Lakes vessels on the oceans;

H.R. 4134. An act to confer jurisdiction upon the District Court for the Territory of Alaska to hear, determine, and render judgment upon the claim, or claims, of Scotty James, of Sitka, Alaska;

H.R. 4603. An act to amend the Organic Act of Guam for the purpose of permitting the Government of Guam, with the consent of the legislature thereof, to be sued;

H.R. 4656. An act to amend section 401b of the act of July 14, 1952, to permit applications for moving costs resulting from any public-works project of a military department to be filed either 1 year from the date of acquisition or 1 year following the date of vacating the property;

H.R. 4714. An act to quiet title and possession with respect to certain real property adjacent to the Rocky Mountain Arsenal, Denver, Colo.;

H.R. 4839. An act for the relief of Peter F. de Ullmann;

H.R. 4857. An act to amend section 4233 of the Internal Revenue Code of 1954 to provide that the exemptions from the admissions tax for athletic games benefiting crippled or retarded children shall apply where the participants have recently attended designated schools or colleges as well as where they are currently students;

H.R. 5257. An act to amend section 1915 of title 28, United States Code, relating to proceedings in forma pauperis;

H.R. 5357. An act for the relief of Loretta F. Ossorio;

H.R. 5477. An act to authorize Maj. Gen. Bernard W. Kearney, U.S. Army (retired), a former Member of Congress, to accept and wear the Philippine Legion of Honor in the degree of commander, conferred upon him by the Government of the Philippines;

H.R. 5645. An act for the relief of Christopher J. Mulligan;

H.R. 5692. An act to provide for the establishment of Minute Man National Historical Park in Massachusetts, and for other purposes;

H.R. 5910. An act for the relief of Zelda Glick;

H.R. 6128. An act to provide for the division of the tribal assets of the Catawba Indian Tribe of South Carolina among the members of the tribe and for other purposes;

H.R. 6190. An act to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes;

H.R. 6269. An act to amend section 265 of the Armed Forces Reserve Act of 1952 to define the term "a member of a reserve component" so as to include a member of the Army or Air Force without specification of component;

H.R. 6368. An act to amend the Tariff Act of 1930 to place certain pumice stone on the free list;

H.R. 6405. An act for the relief of Vukasin Krtolica;

H.R. 6546. An act for the relief of Nancy Mae Floor;

H.R. 6672. An act to authorize longer term leases of Indian lands on the Agua Caliente (Palm Springs) Reservation;

H.R. 6720. An act for the relief of Andrew Choa;

H.R. 6733. An act for the relief of Paul & Beekman, Inc., and others;

H.R. 6809. An act for the relief of Lt. (jg) James W. Little;

H.R. 6884. An act for the relief of Mrs. Barbara May Boswell;

H.R. 6886. An act for the relief of Liliana Caprara;

H.R. 6888. An act to amend section 4132 of the Revised Statutes, section 37 of the Merchant Marine Act, 1920, section 2 of the Shipping Act, 1916, and section 905(c) of the Merchant Marine Act, 1936, as amended;

H.R. 6954. An act for the relief of Frol Martin Simonov;

H.R. 7125. An act to provide for a study of the feasibility of establishing the President Adams Parkway;

H.R. 7145. An act to amend section 35 of chapter III of the act of June 19, 1934, entitled "An act to regulate the business of life insurance in the District of Columbia," as amended;

H.R. 7225. An act for the relief of Sylvester L. Gardner;

H.R. 7256. An act for the relief of Miss Remedios Villanueva;

H.R. 7437. An act to authorize the use of funds arising from a judgment in favor of the Kiowa, Comanche, and Apache Tribes of Indians of Oklahoma, and for other purposes;

H.R. 7474. An act granting the consent of Congress to the compact entered into by the States of West Virginia and Virginia with respect to a certain part of the boundary between such States;

H.R. 7518. An act for the relief of Rudolph Rozman;

H.R. 7550. An act for the relief of Vartanouche Kalfayan;

H.R. 7629. An act to extend section 17 of the Bankhead-Jones Farm Tenant Act for 2 years, and for other purposes;

H.R. 7683. An act to provide that the tax exemption heretofore accorded the Veterans of Foreign Wars with respect to certain property in the District of Columbia, formerly owned by such organization but never used for its intended purpose, shall apply instead to other property subsequently acquired and used for that purpose;

H.R. 7857. An act for the relief of Richard C. Long;

H.R. 7935. An act for the relief of Father Kenneth M. Rizer;

H.R. 8035. An act to designate the Dyberry Dam and Reservoir, Lackawaxen River basin, Pennsylvania, as the General Edgar Jadwin Dam and Reservoir;

H.R. 8189. An act to improve the active duty promotion opportunity of Air Force officers from the grade of captain to the grade of major;

H.R. 8409. An act to extend the International Wheat Agreement Act of 1949;

H.R. 8437. An act to provide for the reinstatement and validation of U.S. oil and gas lease BLM 028500;

H.R. 8514. An act to authorize the sale of 40 acres of land owned by the Creek Tribe of Indians;

H.R. 8582. An act to authorize the San Benito International Bridge Co. to construct, maintain, and operate a toll bridge across the Rio Grande near Los Indios, Tex.;

H.R. 8587. An act to provide for the equalization of allotments on the Agua Caliente (Palm Springs) Reservation in California, and for other purposes;

H.R. 8593. An act to amend the act of June 23, 1949, as amended, to provide that telephone and telegraph service furnished Members of the House of Representatives shall be computed on a unit basis;

H.R. 8609. An act to extend the Agricultural Trade Development and Assistance Act of 1954, and for other purposes;

H.R. 8694. An act to authorize the Starr-Camargo Bridge Co. to construct, maintain, and operate a toll bridge across the Rio Grande at or near Rio Grande City, Tex.;

H.R. 8725. An act to amend the Internal Revenue Code of 1954 to make technical changes in certain excise-tax laws, and for other purposes;

H.R. 8911. An act to provide for the presentation by the United States of a statue of Gen. George Washington to the people of Uruguay, and for other purposes;

H.J. Res. 80. Joint resolution providing for the erection of a memorial tablet at Garden Key, Fla., in honor of Dr. Samuel Alexander Mudd;

H.J. Res. 403. Joint resolution granting consent of Congress to a compact entered into between the State of New York and the State of New Jersey for the creation of the New York-New Jersey Transportation Agency;

H.J. Res. 465. Joint resolution approving certain additional powers conferred upon the Bi-State Development Agency by the States of Missouri and Illinois;

H.J. Res. 477. Joint resolution relating to the exclusion of certain aliens;

H.J. Res. 479. Joint resolution relating to the entry of certain aliens;

H.J. Res. 513. Joint resolution designating the 17th day of December 1959 as "Wright Brothers' Day"; and

H.J. Res. 531. Joint resolution establishing that the second regular session of the 86th Congress convene at noon on Wednesday, January 6, 1960.

On September 22, 1959:

H.R. 2390. An act for the relief of the city of Madeira Beach, Fla.;

H.R. 2449. An act to authorize the Secretary of the Army to lease a portion of Twin Cities Arsenal, Minn., to Independent School District No. 16, Minn.;

H.R. 3030. An act to amend the act entitled "An act to authorize the establishment of a band in the Metropolitan Police force" so as to provide retirement compensation for the present director of said band after 10 or more years of service;

H.R. 3781. An act for the relief of Mrs. Anna Loftis;

H.R. 3782. An act for the relief of the estate of Willard Phillips;

H.R. 4279. An act to authorize the Secretary of the Interior to construct, rehabilitate, operate, and maintain the lower Rio Grande rehabilitation project, Texas, La Feria division;

H.R. 4938. An act to amend the Agricultural Adjustment Act of 1938 to extend for 2 years the definition of "peanuts" which is now in effect;

H.R. 5004. An act authorizing and directing the Secretary of the Interior to undertake continuing research on the biology fluctuations, status, and statistics of the migratory marine species of game fish of the United States and contiguous waters;

H.R. 5067. An act to repeal section 217 of the Merchant Marine Act, 1936, as amended;

H.R. 5431. An act to provide a further increase in the retired pay of certain members of the former Lighthouse Service;

H.R. 5733. An act for the relief of Park National Bank;

H.R. 5752. An act to provide for absence from duty by civilian officers and employees of the Government on certain days, and for other purposes;

H.R. 5896. An act to provide for the entry of certain relatives of the U.S. citizens and lawfully resident aliens;

H.R. 6067. An act to amend section 4544 of the Revised Statutes of the United States to provide that, if the money and effects of a deceased seaman paid or delivered to a district court do not exceed in value the sum of $1,500, such court may pay and deliver such money and effects to certain persons other than the legal personal representative of the deceased seaman;

H.R. 7452. An act for relief of William B. Jackson;

H.R. 7476. An act to extend the duration of the Federal air pollution control law, and for other purposes;

H.R. 7640. An act for the relief of James F. Conroy;

H.R. 7745. An act for the relief of Mrs. Willie Soher;

H.R. 7979. An act to waive section 142, of title 28, United States Code, with respect to the U.S. District Court for the Eastern District of Oklahoma holding court at Durant, Okla.;

H.R. 8305. An act to amend the Federal Credit Union Act;

H.R. 8599. An act to amend the Small Business Act, and for other purposes;

H.R. 8685. An act to amend the Internal Revenue Code of 1954 to provide for the Presidential appointment of a Chief Counsel for the Internal Revenue Service, and for other purposes;

H.R. 9035. An act to permit the issuance of series E and H U.S. savings bonds at interest rates above the existing maximum, to permit the Secretary of the Treasury to designate certain exchanges of Government securities to be made without recognition of gain or loss, and for other purposes;

H.J. Res. 310. Joint resolution to authorize the designation of the period of October 17 to October 24, 1959, as National Olympic Week;

H.J. Res. 317. Joint resolution to change the designation of Child Health Day from May 1 to the first Monday in October of each year;

H.J. Res. 446. Joint resolution to waive certain provisions of section 212(a) of the Immigration and Nationality Act in behalf of certain aliens; and

H.J. Res. 478. Joint resolution relating to permanent residence and deportation of certain aliens.

On September 23, 1959:

H.R. 47. An act to amend the Internal Revenue Code of 1954 to provide a personal exemption for children placed for adoption and to clarify certain provisions relating to the election of small business corporations as to taxable status;

H.R. 3254. An act for the relief of Thomas Forman Screven, Julia Screven Daniels, and May Bond Screven Rhodes;

H.R. 5711. An act granting the consent and approval of Congress to the Wabash Valley Compact, and for related purposes;

H.R. 6059. An act to provide additional civilian positions for the Department of Defense for purposes of scientific research and development relating to the national defense, to improve the management of the activities of such Department, and for other purposes;

H.R. 7244. An act to promote and preserve local management of savings and loan associations by protecting them against encroachment by holding companies;

H.R. 7605. An act for the relief of the State of Oklahoma;

H.R. 8392. An act to amend the District of Columbia Stadium Act of 1957 with respect to motor-vehicle parking areas, and for other purposes; and

H.R. 8464. An act to amend the act of October 24, 1951, to provide salary increases for the police for the National Zoological Park.

On September 24, 1959:

H.R. 4894. An act for the relief of the Georgia Kaolin Co.; and

H.R. 6904. An act to establish an Advisory Commission on Intergovernmental Relations.

On September 25, 1959:

H.R. 4821. An act to amend the act of August 12, 1955, Public Law 378, 84th Congress (69 Stat. 707), so as to provide additional relief for losses sustained in the Texas City disaster.

On September 28, 1959:

H.R. 8385. An act making appropriations for Mutual Security and related agencies for the fiscal year ending June 30, 1960, and for other purposes.

HOUSE BILLS DISAPPROVED

The message further announced that the President had disapproved the following bills of the House; his reasons for such actions are as follows:

On September 16, 1959:

COAL RESEARCH AND DEVELOPMENT COMMISSION

I am withholding my approval from H.R. 6596, A bill to encourage and stimulate the production and conservation of coal in the United States through research and development by creating a Coal Research and Development Commission, and for other purposes.

The Department of the Interior currently administers research and conservation programs for coal, as well as for other mineral resources. If an additional agency for this purpose were now to be created, the Department of the Interior's established interest in such matters would be diluted and the result could only be a blurring of the lines of governmental responsibility in this important area of concern.

The first Hoover Commission recommended that the various functions of the Government be grouped into major departments and agencies on the basis of purpose. The creation of a new coal research agency by approving H.R. 6596 would be a serious set-back in the progress that has been made in following the Hoover Commission recommendations for improving the organization of the Federal Government. The bill is also undesirable because it could serve as a precedent for the creation of other such special agencies.

One provision of H.R. 6596 would authorize the Secretary of the Interior to contract for coal research. This feature of the bill is highly desirable and I urge the Congress to enact legislation granting such authority to the Secretary. H.R. 3375, or S. 1362, now pending in the Congress, would accomplish this purpose, and have been endorsed by the administration to stimulate research, as well as production and conservation of coal.

On September 21, 1959:

PEONY PARK, INC.

I am withholding my approval from H.R. 3096, entitled "An act for the relief of Peony Park, Inc., and others."

The bill would direct the Secretary of the Treasury to pay the total sum of $100,706.50 to nine operators of ballrooms in Nebraska in refund of cabaret taxes paid by the claimants during the period September 1948 through October 1951.

By judicial decision the cabaret tax here involved has been held to have been properly collected from the claimants during the period covered by the bill.

Until January 1951, however, interpretation and enforcement of the applicable statute by the Internal Revenue Service were not uniform throughout the United States. Accordingly, until the interpretation of the law was clarified by judicial decision, and until enforcement of the law became uniform throughout the United States after January 1951, similarly situated taxpayers in many States were not required to pay the tax. The cabaret tax, however, was uniformly enforced within the State of Nebraska and was paid by establishments within the competitive area of the claimants. Moreover, during the years 1948 to 1950, the tax was enforced in at least 17 jurisdictions, and during the major portion of the year 1951 was uniformly enforced throughout the United States against similarly situated taxpayers.

This bill not only would refund to the nine claimants a tax which was properly collected, but it would also discriminate against many other similarly situated taxpayers to whom no relief would be granted. Furthermore, the bill might unjustly enrich its beneficiaries by refunding the cabaret tax without regard to whether the ultimate burden of the tax was borne by the claimants or passed on to their patrons.

Under the circumstances, therefore, I am constrained to withhold my approval of the bill.

On September 21, 1959:

FEDERAL BOATING ACT OF 1958—TO EXTEND

I am withholding my approval from H.R. 8728, to amend the Federal Boating Act of 1958 to extend until April 1, 1961, the period when certain provisions of that act will take effect.

The Federal Boating Act of 1958 provides for the establishment of a new system of numbering small undocumented vessels. Under the act, the part of the new system to be administered by the U.S. Coast Guard is to go into effect on April 1, 1960, at which time the authority for the existing system would be repealed. The bill would extend this effective date from April 1, 1960, to April 1, 1961.

This legislation was originally considered necessary because it had not been possible to obtain a supplemental appropriation for the Coast Guard to administer the new system. Since Congress passed the bill, however, the funds required for the implementation of the Federal Boating Act have been included in the Mutual Security Appropriation Act, 1960. Consequently, the extension of time provided in the bill is no longer needed.

On September 22, 1959:

NATHANIEL H. WOODS

I am withholding my approval from H.R. 2631, for the relief of the estate of Nathaniel H. Woods, deceased.

The bill would direct the Secretary of the Treasury to pay the sum of $13,476.50 to the estate of Nathaniel H. Woods in refund of an estate tax which was erroneously paid.

The major portion of the estate tax in question was paid in December 1951 on the assumption that the first of two wills left by the decedent was valid. The second will, under which no estate tax was due, was admitted to probate on April 16, 1953, and, after prolonged litigation, was sustained as the valid will in December 1955. A claim for refund was not filed until June 1956. It was rejected by the Commissioner and the Federal courts because not filed within the period of limitations prescribed by law.

It appears that the 3-year statutory period of limitations for filing a timely claim did not expire until April 16, 1956—3 years after the executor qualified under the second will and more than 4 months after the conclusion of the litigation upholding the validity of the second will. A protective claim for refund could have been filed at any time during the 3-year period after the qualification of the executor under the second will. It was not necessary to await the conclusion of the prolonged litigation concerning the wills. Even after the conclusion of the litigation, there remained more than 4 months in which to file a timely claim. The record in this case discloses no justification for the failure to file a claim until June 1956.

The statute of limitations, which the Congress has included in the revenue system as a matter of sound policy, is essential in order to achieve finality in tax administration. The limitation not only bars taxpayers from obtaining refunds, but also the Government from collecting additional taxes. Granting special relief in this case, where a refund was not claimed in the time and manner prescribed by law, would discriminate against other similarly situated taxpayers and would create an undesirable precedent.

Under the circumstances, therefore, I am constrained to withhold my approval of the bill.

On September 22, 1959:

MRS. LOURENE O. ESTES

I am withholding my approval from H.R. 6335, for the relief of Mrs. Lourene O. Estes.

Mrs. Estes, on her income tax returns for 1952 and 1953, reported as income certain disability payments received from her employer. Prior to the time the taxpayer filed these returns, the Court of Appeals for the Seventh Circuit had held that such disability payments were excludable from gross income, although the Internal Revenue Service had ruled to the contrary.

On April 1, 1957, the U.S. Supreme Court decided that disability payments of the type here in question were excludable from gross income. On April 15, 1957, Mrs. Estes filed claims for refund for 1952 and 1953 based upon the excludability of the disability pay received by her. These claims were rejected because filed after the expiration of the 3-year period of limitations prescribed by law for the filing of such claims.

During the last Congress, I approved legislation designed to grant general relief, on a nondiscriminatory basis, to taxpayers who had received disability pay which was excludable from gross income under the Supreme Court decision. This general legislation does not provide relief for taxpayers, such as Mrs. Estes, who did not attempt to protect their rights by filing timely claims for refund.

The statutory period of limitations, which the Congress has included in the revenue system as a matter of sound policy, is essential in order to achieve finality in tax administration. A substantial number of taxpayers paid income tax on disability payments received by them and failed to file timely claims for refund. Accordingly, to grant special relief in this case, where a refund was not claimed in the time and manner prescribed by law, would be to discriminate against such other similarly situated taxpayers and to create an undesirable precedent.

Under the circumstances, therefore, I am constrained to withhold my approval from the bill.

On September 23, 1959:

MRS. MARY D'AGOSTINO

I am withholding my approval from H.R. 1387, for the relief of Mrs. Mary D'Agostino.

Mrs. D'Agostino's claim for gratuitous national service life insurance benefits, filed April 20, 1956, was denied by the Veterans' Administration because it had not been filed within the statutory time limitation of 7 years after the date of death of her son on December 22, 1940. The Veterans' Administration has also determined that, even if her claim had been timely filed, Mrs. D'Agostino would not have been eligible for the benefit because her son's death had occurred not in line of duty and did not meet the criteria specified in the law for such benefits. A subsequent statutory liberalization of line of duty criteria had no retroactive effect.

H.R. 1387, in addition to waiving the time limitation, would retroactively apply to this case the liberalized line of duty criteria enacted in September 1944. H.R. 3733 and H.R. 6529, 83d Congress, also sought retroactively to apply liberalized eligibility standards which, as a matter of law, had only prospective effect. In disapproving those measures I indicated that it seemed to me irrelevant and unwise to accept as justification for those bills the fact that an ineligible beneficiary could qualify under the then existing law which was never intended to have retroactive effect. My view has not changed and applies with equal force to the present case.

Approval of H.R. 1387 would be discriminatory and would create an undesirable precedent. Uniformity and

equality of treatment for all who are similarly situated must be the steadfast rule if Federal programs for veterans and their dependents are to be operated successfully. Approval of H.R. 1387 would not be in keeping with these principles.

On September 23, 1959:

MRS. ELBE HAVERSTICK CASH

I am withholding my approval from H.R. 1434, a bill for the relief of Mrs. Elbe Haverstick Cash.

This bill would pay to Mrs. Cash $5,000 as compensation for the death of her son as a result of maltreatment in a Veterans' Administration hospital in 1955.

Mrs. Cash's son entered a Veterans' Administration hospital in 1943 due to service-connected mental illness. He was hospitalized continuously in VA facilities until his death in 1955. During this entire period, Mrs. Cash received on her son's behalf service-connected compensation ranging in amount from $138 to $190 monthly.

It appears that in February 1955, while attendants were changing his clothes, Mrs. Cash's son became unruly. In the ensuing struggle the attendants set upon him, causing serious injuries from which he later died. Although the attendants involved were found not guilty of criminal acts, they were either fired or otherwise rigorously disciplined for their part in this tragic affair.

In addition to receiving $5,000 under a National Service Life Insurance policy, Mrs. Cash, as a dependent parent, currently receives death compensation at the rate of $75 monthly. This is paid to her under general provisions of law which provide that where a death occurs as a result of hospitalization by the VA benefits are payable as if such death were service connected. Mrs. Cash has no remedy under the Federal Tort Claims Act, since that act specifically bars claims based on assault and battery.

My strong feeling of sympathy for this mother in the unfortunate loss of her son is matched only by my distress that an incident of this kind should happen in a Government hospital. These strong feelings do not, however, alter the fact that there is a generous, comprehensive, and assured system of benefits provided for the survivors of veterans who die, in whatever manner, as a result of hospitalization by the VA. Mrs. Cash is currently a beneficiary of this system.

The situation here closely parallels that resulting when a serviceman suffers a service-connected death. In such cases, regardless of the manner in which death occurs, I firmly believe that the assured and general benefits to which survivors are entitled by law should be their exclusive remedy. This principle has led to the disapproval of other private bills granting special awards in such cases (see H.R. 1315, 85th Cong., "A bill for the relief of Mr. and Mrs. Charles H. Page," disapproved on Sept. 7, 1957). I perceive no basis for reaching a different result under the analogous circumstances of the present case.

On September 23, 1959:

HAROLD WILLIAM ABBOTT AND OTHERS

I am withholding my approval from H.R. 8277, an act for the relief of Harold William Abbott and others.

The bill would direct the Secretary of the Treasury to pay $23,317.61 to 11 individuals in refund of transportation taxes collected after 1945 and before 1952 for transportation in connection with fishing parties. Refund of these taxes has been barred because claims for refund, and appeals from the rejection of such claims, were not filed within the time prescribed by law.

The relief sought in this bill is similar to that sought in a bill which I disapproved last year, H.R. 3193, "For the relief of Toley's Charter Boats, Inc., Toley Engebretsen, and Harvey Homlar."

On March 31, 1953, a Federal court held that the transportation tax did not apply to the type of transportation involved here. At the time of this decision, there remained a period of at least 9 months in which to file timely claims for 1950 and a period of at least 1 year and 9 months in which to file timely claims for 1951. Approximately $10,000 of the amount involved in this bill represents taxes collected during the years 1950 and 1951, which would have been refunded to seven of the claimants except for the fact that they filed their claims for refund more than 2 years after the date of the Federal court decision. The record in this case discloses no reason justifying this delinquency in filing claims.

Refund of a large portion of the amount involved in this bill was barred by the statute of limitations prior to the Federal court decision. The basic purposes underlying the statute of limitations continue to obtain in cases where a taxpayer, after having paid a tax, discovers that the interpretation of the law has been changed by a judicial decision. Granting relief in this case would discriminate against other taxpayers similarly situated and would create an undesirable precedent.

Under the circumstances, I am constrained to withhold my approval from the bill.

On September 24, 1959:

DISTRICT OF COLUMBIA—POLICE FORCE AND FIRE DEPARTMENT

I am withholding my approval from H.R. 3735, an act to increase the relief or retirement compensation of certain former members of the Metropolitan Police Force, the Fire Department of the District of Columbia, the U.S. Park Police force, the White House Police force, and the U.S. Secret Service; and of their widows, widowers, and children.

I am unable to approve the 10 percent increase in relief or retirement compensation which the first section of this bill proposes for its beneficiaries. Policemen and firemen who retired before October 1, 1956, are already receiving much more generous treatment than any other group of retired District of Columbia employees. This results from the Equalization Act of 1923 which provides for an automatic proportionate increase in pensions equal to any salary increases granted active duty policemen and firemen. The equalization feature has operated so effectively that a significant number of these retirees presently receive a larger pension than their annual salaries while on active duty. Also, under the 1923 law these retirees have forged far ahead of District government annuitants subject to the civil service retirement program. In the interests of fairness, the present disparity should not be further increased.

I could readily accept the other provision of the bill which proposes to adjust and improve the benefits payable to the widows and surviving minor children of deceased policemen and firemen who retired prior to October 1, 1956. The circumstances of this group are different and I sincerely hope that the Congress, early in the next session, will enact the improved benefits which this class deserves.

On September 25, 1959:

HOWARD F. KNIPP

I have withheld my approval from H.R. 2068, an act for the relief of Howard F. Knipp.

The bill would direct the Secretary of the Treasury to compute the income tax liamibitl of Howard F. Knipp for the calendar years 1947 and 1948 so that his distributive share of the earnings of the John C. Knipp & Sons partnership, for its fiscal year beginning on February 1, 1947, would be determined on the basis of a full partnership taxable year ending on January 31, 1948.

The records of the Treasury Department show that Mr. Knipp, a calendar year taxpayer, was a member of a two-man partnership which had a fiscal year ending on January 31. The death of Mr. Knipp's partner on November 21, 1947, raised the question of partnership termination on that date. If the partnership terminated on that date, Mr. Knipp had to include in his income for the calendar year 1947 a much greater amount than would have been the case had the partnership continued until the normal end of its taxable year.

On June 2, 1953, the Bureau of Internal Revenue assessed a deficiency against Mr. Knipp on the ground that the death of his partner terminated the partnership and its taxable year. The Tax Court approved the Bureau's position on October 31, 1955, and that court's decision was affirmed by the Court of Appeals for the Fourth Circuit on April 10, 1957. On October 14, 1957, certiorari was denied by the U.S. Supreme Court.

The question of the partnership termination in this case has been litigated before the courts in an orderly manner. Approval of this bill would encourage demands for legislation overruling court decisions in individual cases and would create an undersirable precedent. The bunching of income in this case has admittedly worked a hardship on Mr. Knipp, but this is mitigated to some extent by the fact that for a number of years Mr. Knipp had the advantage of deferring payment of tax each year on 11 months of this firm's profits until the following year.

NOTICE

The last issue of the daily Congressional Record for the first session of the Eighty-sixth Congress will be published not later than Monday, October 5, 1959. It is requested that copy and proofs of speeches withheld for revision, or extensions of remarks as authorized by either House, be submitted to the Government Printing Office or to the Congressional Record Clerk, Statuary Hall, Capitol, before that date.

By order of the Joint Committee on Printing.

CARL HAYDEN, Chairman.

The Report of the United Nations Legal Committee on the Peaceful Uses of Outer Space: A Provisional Appraisal

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to include a very significant speech made by Mr. George J. Feldman at the 10th annual meeting of the International Astronautical Federation. Mr. Feldman is an outstanding American who served at great personal sacrifice last year as director and chief counsel of the Select Committee on Astronautics and Space Exploration. During the present session of Congress, the Committee on Science and Astronautics has paid official tribute to his leadership, judgment, and deep sense of public service. In addition to his unusual personal qualities, he has had a varied and distinguished career in the legal profession and the world of finance.

Mr. Feldman's speech appraises the report of the United Nations Legal Committee on the Peaceful Uses of Outer Space. In particular, Mr. Feldman expresses the view that the peaceful uses of outer space, both in the National Aeronautics and Space Act of 1958 and in the resolution creating the United Nations committee, refers to nonaggressive rather than nonmilitary uses. He suggests a definition of aggressive space vehicles and activities as those than can cause direct harm to objects on the earth's surface, and proposes that this definition, in terms of prohibition, be incorporated in international law.

I commend Mr. Feldman's remarks to everyone who is interested in the exploration and use of outer space:

THE REPORT OF THE UNITED NATIONS LEGAL COMMITTEE ON THE PEACEFUL USES OF OUTER SPACE: A PROVISIONAL APPRAISAL

(Remarks of George J. Feldman at the 10th annual Congress of the International Astronautical Federation, London, England, September 4, 1959)

Hope mingled with satisfaction but tinged with disappointment—those are my present emotions as I look back at the work accomplished by the United Nations Legal Committee on the Peaceful Uses of Outer Space. The committee report[1] is disappointing—not because of anything it says but because of what it fails to say—because its discussions are so preliminary and its conclusions so tentative. The judgment of the committee on its own report was probably summed up by the observation made by the representative of Brazil at the June 23 meeting that "the committee had made only a preliminary investigation of the subject." You know the Latin saying, "Parturiunt montes, nascitur ridiculus mus"—or, as it is usually expressed in English, "The mountains labored and brought forth a mouse."

In May and June of this year (if I may be permitted a brief autobiographical digression), I devoted a large part of my time to the deliberations of the United Nations Committee. Consequently I know some of the difficulties it faced. The subject was new to many of the participants. They had been trained in a variety of different legal disciplines, and they represented diverse national interests. Furthermore, the subject itself is difficult, involving a number of complex problems, and dealing with facts, as well as their scientific, economic, political, and military implications, which are still largely unknown. Unfortunately, a pall was thrown over the proceedings by the refusal of five countries to participate. Considering these difficulties, there are grounds for satisfaction in the limited accomplishments represented by the committee report and the debates on which it is based. The committee succeeded in airing many aspects of the subject, identifying the legal problems that are likely to arise in the exploration of outer space, indicating the significance and priority of such problems, and reaching agreement on general principles to be followed in the future. Lastly, I believe there is reason to hope that the deliberations and the report of the committee will result in a broader understanding by all nations of the practical legal problems involved in space activities, and will provide a firm foundation on which the principles and rules of international space law can ultimately be built.

On December 13, 1958, the General Assembly of the United Nations adopted a resolution reading in part as follows:

"The General Assembly * * * 1: Establishes an ad hoc committee on the peaceful uses of outer space * * * and requests it to report to the General Assembly at its 14th session on the following * * * (d) The nature of legal problems which may arise in the carrying out of programs to explore outer space."[2]

Although the General Assembly resolution followed closely a Soviet draft resolution of November 18, 1958, the Soviet Union refused to participate in the committee's work owing to a dispute over the membership. As a result, four other nations[3] also refused to participate. There is no doubt that the nonparticipation of these nations imposed a serious handicap on the committee at the outset. Nevertheless, the committee meetings were attended and the report was ap-

[3] Poland, Czechoslovakia, India, and the United Arab Republic.

proved by representatives of Argentina, Australia, Belgium, Brazil, Canada, France, Iran, Italy, Japan, Mexico, Sweden, the United Kingdom, and the United States.

Perhaps it is worth noting that some of the members of the committee had already expressed their views on one or more of the legal problems on which the committee was required to report. There had been previous debate in the General Assembly and particularly in the Political Committee (committee No. 1). The various views on space law previously stated by members of the Legal Committee are necessary to a clear understanding of their deliberations and of the report.

Their observations concerned some of the fundamental questions of space law: What legal rules govern events in outer space? The Chicago convention or other international flight agreements? The municipal laws of subjacent st ates? (According to the maxim, cuius est solum, eius est usque ad coelum, national sovereignty would extend into outer space without limit.) In the alternative, is outer space res nullius (i.e., subject to appropriation) or res communis (not subject to appropriation, but free like the high seas)?

During the debate in the Political Committee, the representative of Italy expressed the view that the Chicago convention governs airspace alone, and that there are no legal norms for outer space. The representative of Australia stated that any extension of the usque ad coelum doctrine into outer space would be "absurd." Other representatives seemed to acquiesce in these views. A number opposed the suggestion that outer space may be res nullius,[4] and some explicitly termed it res communis (or res extra commercium).[5]

It is significent that the only nations which, up to now, have ventured into outer space on a large scale—the United States and the Soviet Union—took no position whatever on these fundamental questions of space law. Their representatives had refrained from stating any views on the legal status of outer space.

With this background, it is easier to understand the report of the Legal Committee. In order to keep its task within manageable limits, the committee agreed to consider certain selected (not all) legal problems of outer space, to divide them roughly into two groups (not to rank them individually) according to priority, and to indicate, without recommendation, various means by which answers to such problems might be pursued.

The treatment in the report of the specific legal problems of outer space is not adaptable to detailed analysis in such a brief appraisal as this. My overall judgment, however, is that this part of the report, which includes most of the text, leaves a great deal to be desired. Each problem is stated; the questions it might raise are posed; helpful analogies and related rules of law are mentioned; but almost no attempt is made to formulate solutions or even to analyze legal and practical implications.

The report does, however, state certain general principles, as follows: the United Nations Charter and the Statute of the International Court of Justice are "not limited in their operation to the confines of the earth"; the members of the United Nations, as sovereign equals under the charter, recognize the common interest of mankind in outer space and the common aim that it should be used for peaceful purposes only; air law and maritime law may provide fruitful analogies, but space law is unique because of "many specific factual conditions, not all of which are now known * * *"; and, lastly, a comprehensive code of space law is not practicable or desirable at the present stage of knowledge or development, although there is a need to take "timely, constructive action" and "to make the law of space responsive to the facts of space."

At this point you are probably thinking that the principles stated in the committee report are all very well, as far as they go, but are hardly enough. There is a little more, however, than meets the eye. In the draft report prepared by the working group of the Legal Committee, the fruitful analogies were said to be not only air law and maritime law but "the principles and procedures developed in the past to govern the use of * * * other regions of the earth." At its fifth meeting, held on June 11, the committee unanimously adopted the proposal of the Argentine representative that the phrase "other regions of the earth" be eliminated on the ground that they referred to Antarctica and perhaps to other territories which are subject to national sovereignty, whereas "the general trend of the report was in favor of treating outer space as res communis omnium. * * *"[7]

The action of the committee in striking out the phrase "other regions of the earth" may fairly be interpreted as giving implicit approval to the views expressed by members of the committee in previous debate, rejecting the possibilities that events in outer space may be governed by the Chicago Convention or the municipal laws of subjacent states, or that outer space may be subject to appropriation res nullius.

I should like to make two other comments on the general principles stated in the committee report.

Although the report recognizes that the United Nations Charter is not limited to the earth, some committee members would certainly not agree with this statement as to all the provisions of the charter. Specifically, the representative of Mexico described article 51, relating to self-defense, as a "transitory" provision and not applicable to events in outer space.[8] I take issue on this point. Surely, the right of self-defense does not depend on the United Nations Charter; and, surely, it would be just as valid in outer space as on the earth's surface. There is ample and ancient authority in general international law for nations to take any necessary steps to protect themselves.

Secondly, the report states that "a comprehensive code of space law is not practicable or desirable" at the present time. I agree with this statement if the word "code" refers to a body of detailed and rigid rules, but not if it means the drafting of a legal framework or the outlining of a legal system. The beginning of space law may be skeletal; they may be unilateral; they may even be nongovernmental, like certain unofficial codes of safety standards. In any case, the important thing is to begin now—to conduct research, hold discussions, and work out a basic framework of space law subject to later elaboration as we learn more about the space environment and space activities. The danger is not so much that space law may be formulated prematurely as that it may not be formulated in time. Accordingly, I would reverse the statement made in the committee report. Instead of saying that a code of space law is not practicable or desirable, although there is a need for action, as the report now does, I would prefer to say this: although an immediate comprehensive codification of space law may not be necessary or desirable, the committee recognizes the need for timely, constructive action. The difference is mainly a matter of emphasis, but it is an important difference nonetheless.

The committee report then goes on to list and discuss the urgent legal problems of outer space. Conspicuously missing from this list is the question of where outer space begins, or where the air space ends. This classic problem of space law appears later in the report, among the matters accorded a secondary priority.

Except for this one omission, I would agree generally with the committee that the problems described in the first list are entitled to priority. In addition, they can probably be solved, or at least tackled, without reference to any of the problems in the other list, including the delimitation of outer space. And yet I cannot view with complacency the indefinite postponement of the delimitation problem. It may be true, as the committee says, that an international agreement based on current knowledge and experience would be premature. Again, however, the important thing is to begin now—conduct research, make studies and investigations, and work out the principles on which an agreement may ultimately be based (subject to change in the light of later knowledge). If an agreement must be made tomorrow, the studies must begin today. Since nations are very unlikely to relinquish their sovereign rights in the air space above their territories, any agreement governing space flight will have to be accommodated to the fundamental rules of air law. This will not be an easy task. Preliminary studies will be necessary, and will take time—perhaps years. Can we run the risk that solutions will not become urgent in the meantime?

One other general comment deserves to be made. Perhaps the point can be brought out most clearly by referring to an observation made by the representative of Japan at the June 11 meeting of the U.N. Legal Committee: "* * * if the Committee said that outer space was freely available to all for exploration and use for peaceful purposes, that statement might be interpreted as implying an immediate prohibition of the use of outer space for other purposes. The Committee should not, however, give the impression that it was trying to enter the field of disarmament."[9]

Let me say at once that the Committee was in no danger of giving such an impression in the way the representative of Japan supposed, unless the word "peaceful" is taken to mean "nonmilitary." Unfortunately, the discussion among other members of the Committee, immediately following the observation quoted above, clearly indicates that they also interpreted the word in exactly that sense.

Incidentally, I am not convinced that space lawyers should go to such lengths as they sometimes do in order to avoid the subject of disarmament. During the 121st session of the Nuclear Conference held in Geneva, for example, the Soviet Union agreed in principle to the use of satellites for policing nuclear explosions in outer space. It certainly appears that the use of outer space bears certain direct relations to disarmament, and can provide some of the means by which disarmament could be accomplished.

The word "peaceful" is unfortunately beginning to play the part of a wet blanket upon discussions of space law. It plagued the United Nations Committee on the Peaceful Uses of Outer Space because it appeared in the resolution[10] adopted by the General Assembly, which established the Committee, its name and its mandate. You will recall, however, that the resolution was originally intro-

[10] See note 2 supra.

duced by the United States (on November 13, 1958), with the concurrence of 19 other nations. The word "peaceful" as used in the resolution, therefore, has a readily ascertainable ancestry. In the past few years, it has appeared in Presidential messages and in acts and resolutions of Congress. It is not too much to say that the word has become a term of art in the United States, with distinctive meaning no longer bound by ordinary usage. This distinctive meaning has been fixed, above all, by the use of the word in the National Aeronautics and Space Act of 1958. I served as executive director and chief counsel of the House Select Committee on Astronautics and Space Exploration, which bore the responsibility for that act from its earliest drafts to its final passage. In my opinion, the word "peaceful" as used in the act, means nonaggressive rather than "nonmilitary." That, I believe, was the intent of Congress. The same meaning of the term may be found in international law. It also appears to be the most reasonable interpretation.

I have insisted on this point because I am convinced of its importance. If "peaceful" means "nonmilitary," and outer space can be used for peaceful purposes only, what happens to the inherent right of self-defense guaranteed by article 51 of the United Nations Charter and by general international law? If "peaceful" is understood to mean "nonaggressive," on the other hand, the legal control of outer space will be greatly facilitated. It would certainly not be impossible, or even especially difficult, to distinguish between aggressive and nonaggressive use.

I venture to propose a tentative definition of "aggressive" space vehicles and activities as those that can cause direct harm to objects on the earth's surface. Those would be prohibited. All others would be permitted. This definition might be incorporated in international law by agreement, of course, or even by unilateral declaration and practice. In time, I believe, it would prove its value. Even if it latter had to be modified, it would represent an improvement over the present situation, in which, as the representative of Italy observed during the debate in the Political Committee, there are no legal norms governing events in outer space.

Returning for a final word to the report submitted by the legal committee on the peaceful uses of outer space, I consider that the major shortcoming of the report is its failure to deal with the question whether the word "peaceful," as used in the mandate and proceedings of the committee, should be understood to mean "nonmilitary" or "nonaggressive."

In spite of all criticisms and reservations, I nevertheless believe there is reason to hope, as I said at the beginning of this discussion, that the United Nations report will lead to a broader understanding of the legal problems involved in space activities, and will help to lay a firmer foundation for the ultimate structure of space law. Much study and discussion will be necessary before the rules of outer space can be formulated. The United Nations committee has made a brave beginning. For us, the challenge is not to let it be the end.

Book Listing Removed

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. DODD. Mr. President, Connecticut's insurance commissioner, Mr. Alfred N. Premo, recently discovered that a book which is recommended reading in most States for those wishing to take examinations for real-estate licenses classified deaf mutes along with drunkards and insane persons as "lacking full contractual ability."

Commissioner Premo has removed the book from the recommended list in Connecticut and has received assurances from the author, Robert W. Semenow, that future editions would not contain this reference.

This matter was brought to Commissioner Premo's attention by Mr. Joseph Oquisanti, of East Hartford, Conn., who is now endeavoring to bring this question to the attention of the appropriate agencies throughout the Nation.

I ask unanimous consent to have printed in the Appendix of the RECORD the following article which appeared in the Hartford Times on Friday, August 28, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEAF QUASH UNFAIR REFERENCE: BOOK LISTING REMOVED

(By John K. Borland)

Deaf mutes have won their Connecticut battle against a real estate book listing them along with "drunkards and insane persons" as lacking full contractual ability.

The $6.50 book entitled "Questions and Answers on Real Estate" has been recommended for some time by the Connecticut State Insurance Department for reading by those wishing to take examinations for real estate licenses. But no more.

An East Hartford businessman, Joseph Okie, is credited with detecting the objectionable reference and pressing the fight to have the section corrected and the book eliminated as suggested reading for Connecticut licensure.

Although not handicapped himself, Mr. Okie picked up sign language to be of help to a deaf mute member of the family. Since then, he has helped hundreds of such people with their business and other problems.

Mr. Okie about a month ago thought he could be of more help to deaf people with real estate problems. He applied for a broker's license, and the State insurance department gave him instruction sheets which recommended this book published by Prentice-Hall of New York as helpful reading.

On leafing through the book, he came on page 107 which listed deaf mutes under the section entitled "Insane Persons."

Mr. Okie got fired up in short order. He vowed to do something about this insulting, incorrect reference.

"I've dealt with deaf mutes for years, and they have more on the ball than we do in many ways," he commented to the press. "These people have been contracting for purchases for years, and this is a most unfair blow to their ability and responsibility."

After contacting deaf mute friends, he and others called on State Insurance Commissioner Alfred N. Premo. The latter became incensed, and promptly sent a sharp letter to the book's author, Robert W. Semenow, of Pittsburgh, Pa.

"These people feel that simply because of their physical handicap they should not be classified with insane persons and drunkards," he wrote. "The several thousand deaf mutes in Connecticut are normal in every respect, carry on a livelihood, raise families and live like all physically able people."

Commissioner Premo then added:

"On the basis of these complaints, we can no longer recommend the book."

From Mr. Semenow came an apologetic letter, saying the matter would be corrected in the next published edition. He promised to send free copies of that edition to any libraries designated by Mr. Premo.

While gratified that the reference will be eliminated, Commissioner Premo said he will not change his decision not to recommend the book "while this classification of deaf mutes appears."

Mr. Okie and his deaf mute friends, however, are not going to let the issue rest there. They plan to circulate the story throughout the country through the use of a national magazine for the deaf.

"We want to see that every State which may have recommended this book be warned of the insulting reference, which could make many real estate salesmen reluctant to deal with deaf mutes," he said. "We want to see that deaf mutes everywhere are protected against such a slur on their capacity to make contracts."

In fact, Mr. Okie says negotiating with a deaf mute for a purchase is much more precise than with others. That's because "it's usually conducted in writing between the two parties in the transaction."

A Couple of Ordinary Guys Make History

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. DORN of South Carolina. Mr. Speaker, L. S. Hembree is contributing greatly to the thinking of our people with outstanding editorials.

Mr. Hembree is with an outstanding newspaper, the Anderson Independent, Anderson, S.C.

The following is a classic example of his forthright and timely editorials:

A COUPLE OF ORDINARY LOOKING GUYS, BALD AND AGING, MAKE SOME HISTORY

You sat there before the TV, and you saw the short, chubby, elfin-faced man step down from the huge jetplane and place his foot for the first time on U.S. soil he despises.

You saw the taller, thinner, more grim-faced man who greeted the visitor.

You saw the flunkies and the lackeys scurrying about, just as they have done since man long ago began endowing tribal chieftains, kings, potentates, and chiefs of state with bits of fleeting power.

The two men looked ordinary enough.

Both were bald. And both reminded you of somebody's grandfather, which, in fact, they are.

You saw them ride down the wide streets of this Nation's Capital, the visitor waving his hat and grinning, the host appearing uneasy and slightly on edge.

The waving hat gathered no applause. The smile sparked no cheers.

Over all there was a tenseness, a mass coolness, a feeling akin to that known to any host or hostess forced to answer call of duty and entertain an unwelcome guest.

You reminded yourself the date was September 15, 1959.

It was a date that could go down in history.

Or it was a date that could disappear from history and time, buried in nuclear bomb ashes.

What you saw was historic. No doubt about that.

It was a meeting between two men representing nations harboring the most destructive power of all time.

The short, chubby, elfin-faced visitor, smiling and affable on the surface, is the most powerful and most dangerous single individual and mass murderer in the world today.

Under the bald skull, you reminded yourself, is a cunning, disciplined brain.

It is a reality of our times that the explosion of a tiny blood vessel or the shifting of a cell in that brain could trigger a world cataclysm.

The silence of the watching Americans along the streets of Washington reflected this knowledge. Many of them remember trigger-happy Tojo—he, too, believed he could destroy our beloved Nation.

It was not the silence of fear, despite the man's awesome power.

It was the silence of disapproval and distrust.

Here, the silence said, is a man with blood on his hands.

Here is a man whose life has been dedicated to a cause that has slain, starved, and enslaved millions of people throughout the world.

Here, too, is a man who has promised to "bury" the United States of America.

Why, then, do we receive him, this international Al Capone?

You look again at the grim-faced host. He is the President of a free people. In the dying days of his administration—sorely disappointing years that began with such high promise—he at last has decided to exercise his own power and leadership.

We receive the blustering murderer because he was invited by our Chief of State, who is desperately gambling that by personal diplomacy he may turn the murderer from his ways before it is everlasting too late for all mankind.

You pray that he succeeds. You pray no fool harms the visitor while he is on our soil; that vengeance and retribution come from his own kind in his own land, if such must come.

You see the visitor delivered safely to his first destination, the Blair House. The marching units turn the corner. The bands put away their instruments. The flunkies and the lackeys scurry hither and yon.

The commentator reminds you that you have seen history. You wonder how much of it was inspired by the ambitions of NIXON, who is just back from Russia and wants so much to be President.

The scene fades away on the TV screen, to be replaced by a quiz show.

And you're not sure about the right answers on that show, either.

Hon. Thomas H. Burke

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me on the late Honorable Thomas H. Burke.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR YOUNG OF OHIO

Thomas H. Burke was in his lifetime my good friend. He and I were colleagues in the House of Representatives throughout the 81st Congress. The death of this fine American is not only a loss to those of us who knew him personally and were his friends, but to the entire labor movement and to all Americans.

Tom Burke was a man of unquestioned honesty and integrity, whose life was dedicated to the advancement of men and women who toil. He was an outstanding American labor-union leader in the finest sense of the word. His years of devotion to the cause of furthering social legislation and his faith in the democratic form of government have earned him an honored place on the long list of distinguished Americans.

I am proud that Ohio sent Tom Burke to Congress. I am honored that I was privileged to serve with him. To his family and many friends I extend my deepest sympathy in their great loss.

Challenge in Space

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Appendix of the RECORD a very perceptive and important speech delivered by Dr. Wernher von Braun, at the National Military-Industrial Conference, April 7, 1959, in Chicago, Ill.

Dr. von Braun's abilities, qualifications, and contributions to the cause of freedom are too well known to require comment. His views on the challenge of Soviet space technology and objectives deserve the close attention of every American citizen.

The speech follows:

CHALLENGE IN SPACE

(By Dr. Wernher von Braun, Director, Development Operations, Army Ballistic Missile Agency)

Mr. Chairman, distinguished guests, ladies, and gentlemen, the fifth National Military-Industrial Conference has focused attention upon the Soviet economic challenge to the free world. It is one of the most formidable weapons to be employed against our welfare and security by a ruthless competitor. Not the least significant fact about this situation is the obvious testimony this bears to the degree of success achieved in the Soviet drive toward industrialization. The Kremlin would deny to the Russian people the potential benefits of increasing productive capacity to whatever extent is necessary to exploit the products of that capacity to our disadvantage.

I understand you have been engaged in formulating strategy and tactics by which to defeat this threat in response to the call of our President. He has said that "we must meet it as resolutely and imaginatively as we are meeting the better known military and scientific challenges, through the full use of all our resources, both spiritual and material."

I propose tonight to examine another Soviet challenge. It is directly related in resources to some of those aspects of Russian expansionism explored in your discussions. It is intended to extend Communist influence into areas remote from earthbound relationships. We dare not underestimate Soviet capabilities and objectives in the limitless dimensions beyond the earth's sensible atmosphere. We must understand the total implications to our future welfare if the Soviets succeed in their drive to achieve a dominant position in outer space.

Not many months ago these matters would have seemed incredible to most of our people. Subsequent events have lent substance and credibility to them. No longer do the loud cries of Soviet propagandists disturb our tranquility although they cannot be lightly dismissed because of their impact upon the neutral and uncommitted peoples. Rather, it is the undisputed existence of a substantial capability in space technology and in missile-oriented industry behind the Iron Curtain. In the space of only 17 months, the Communists have surpassed our best efforts.

This is not an isolated phenomenon. It is integral to the Soviet plan to achieve supremacy by defeating freemen in almost every phase of human activities. No single area of that plan for conquest can be evaluated competently without regard to contributing elements. Thus the spectacular demonstrations of Soviet rocketry reflect astonishing progress in many fields: electronics, chemicals, metallurgy, missile guidance, propulsive systems, and others.

The breadth, depth, and momentum of the Soviet space program clearly indicate that it has received and will continue to enjoy the aggressive support of the Communist regime. The results achieved, and the profound influence they have exercised upon the international scene, have given the Kremlin dictators ample opportunity for vodka toasts. We can only guess at the echoes of these technological feats heard in the obstreperous boastings of the Soviet leaders. Not all the repercussions of satellite and space probe launchings are confined to the scientific community.

In the phases of the Russian space ventures about which information is available in the open literature, a close parallel can be found to much of the current and projected space research and investigations of this country. This is by no means surprising. It is as if two nations of widely different political and ideological philosophies decided, almost simultaneously, to explore the same unknown seas. Note that I said "almost"; the advantage of initiative is with the competition. The state of the art compels employment of much the same type of ship. The information available to the shipbuilders and to the crews about winds, currents, reefs, and fueling stations is quite comparable. The differences have to do with propulsion, possibly the navigational equipment, and certainly with the ultimate goals of the explorers and those who expect to capitalize on the fruits of discovery.

Prudence dictates that we should carefully size up that rival fleet and try to determine its goals if we are to avoid Russian custom stations on the Moon and Mars and insure the results of exploration in space will not jeopardize the security of freemen. The Communists have always employed human and other resources to subjugate helpless peoples and to extend their empire. I find no reason to expect any radical change in that strategy with respect to outer space and worlds beyond our own.

A brief summary of what is known about the Soviet program may be helpful. I would qualify it, however, with the observation that the data published in Russia suggests a tremendous, well-coordinated effort and that the disclosures themselves are by no means unpremeditated. They are assuredly intended to convince the unwary of Communist mastery and thus serve its strategic purpose.

The first conclusion which I have already mentioned is that the Russian space program parallels much of the current and planned space programs of this country.

The second is that a substantial part of the Soviet effort is directed toward manned space flight and the eventual exploration of the moon and nearer planets by human crews.

The third is that Soviet scientists and technicians are exclusively concerned with their own work and pay little heed to any possible competition from another quarter.

Finally it must be remembered that Soviet policy is to withhold specifics about any one project until it has achieved success, then to exploit it to the maximum. While they seem ready and willing to boast of the scientific aspects of their program, there is an ominous absence of any reference to possible military implications. Like the iceberg, we only know what the Russians want to tell us—the great mass of their work is shrouded in secrecy.

While we are concerned with the so-called race into space and its ominous portent, the Russians appear so sure of their technological leadership and their ability to retain the initiative that they do not even consider the possibility someone else might beat them to the moon. Frankly, I do not know who could.

I have chosen a few items at random from recent Russian publications to serve as indicators. In December 1958, the president of the Soviet Academy of Sciences, Professor Nesmeyanov, discussed a new 7-year plan for the advancement of science. He pointed out that "considerable attention will be given to the development of new means of astronomical investigations by cosmic rockets and artificial earth satellites."

According to other Russian technical writers, each Soviet orbiter is the product of a continuously elaborated design program which draws upon the experience of previous launchings. More satellites are programed for near and distant orbits, of prolonged and relatively short useful lifetimes, according to the publications.

Much attention is being paid to reentry methods preliminary to manned space flight. Dogs and other animals are employed in these experiments—without criticism, I suspect, from well-meaning pet lovers who decry the same kind of useful studies here. The Russians claim a successful recovery in August, 1958 of a capsule containing two dogs which were carried to a height of 450 kilometers in a payload of over 1½ tons. Whether they acquired the ability to bark at their masters on this short excursion into freedom, the literature does not report.

A recent Soviet book on astronautics talks of permanent earth satellites useful as intercosmic way stations, of manned flights to the moon, of human visits to the nearest and then the most distant planets of the solar system, finally of visits to planets of another system. Russian technicians suggest galactic propulsion systems employing ionic and nuclear energy, even quantum rockets propelled by the flow of electromagnetic waves.

At points as far separated as Franz Josef Land and the Antarctic, Soviet rockets and satellites have been fired that were equipped with instrumentation to study the upper layers of earth's atmosphere and phenomena unique to outer space. We are told that satellite sensors confirmed the distribution of cosmic radiation according to longitude and latitude. This is strongly reminiscent of the Van Allen radiation belt discovered and measured by the Explorer earth satellites and the Pioneer space probes launched by the U.S. Army's rocket team in connection with the International Geophysical Year.

The successful launchings of earth satellites, in thes words of one Soviet writer, "paved a clear road into cosmic space." He said these accomplishments "indicate the regular advance of the level of Soviet science and technology and the might of Soviet industry." I believe much the same thing could and should be said about the space achievements of this country, but for one reason or another too many commentators seem to be so preoccupied with our alleged inferiority as to deprecate some very solid demonstrations of our capabilities.

Other technical papers appearing in Russia of late disclose a keen interest in solar batteries and plans for larger energy sources of this type which would, again I quote, "make possible worldwide transmission of television programs beamed from satellites, the establishment of astronomical observatories beyond the atmosphere, and the continuous observation of meteorological processes." You will find the same applications discussed in the national advertising of the larger missile-related corporations of the United States.

The Soviets claim they accomplished direct measurement of certain atmospheric characteristics with Sputnik III. Also they measured the composition of ionized gases in upper layers of the atmosphere, the concentration of positive ions and the air pressure. These phenomena are important to the calculation of trajectories of space vehicles and to the maintenance of radio contact with them in flight.

Another indicator of the direction of Soviet interest was the claim that Sputnik III carried magneto-sensitive transducers to assist in orienting the vehicle in space. This orientation would be essential to accomplish photography of earth's surface from a satellite, to return satellites to earth, and to assist the navigation of ships, aircraft, or interplanetary vehicles. A Russian writer claimed Sputnik III could carry one or two human passengers and equipment on a 10-day space journey. This vehicle, I might add, utilized thousands of semiconductors and its programing unit was completely transistorized.

I believe this sampling indicates the Soviet program is at least as comprehensive as is ours at this point in time. It makes use of tracking, recording, and experimental stations spotted throughout the Communist world so that the peoples of satellite nations are supposed to be persuaded that they are contributing to it.

The lunik space probe, in the opinion of U.S. rocketeers, proved once more that the Russians have rocket engines of substantially higher thrust than any we have fired. Chances are that for this flight they employed the same booster utilized to launch Sputnik III. An additional stage was probably placed on the two-stage booster to push injection velocity up to the level necessary to break out of earth's gravitational field. The velocity actually achieved may have exceeded expectations. Russian sources reported the final stage weighed approximately 3,000 pounds. The payload itself and its electrical power supplies weighed approximately 700 pounds compared to the Pioneer IV probe of 14 pounds which became the first made-in-the-U.S.A. satellite of the sun.

It is obvious that substantial accuracy was required for the lunik rocket trajectory. We must therefore conclude that the Russians have an impressive long-range rocket guidance system. It may also be surmised, on the basis of the evidence that Soviet guidance systems can constrain rockets carrying warheads over intercontinental ranges and hit cities or relatively small target areas. This is the grim fact and there should be no misunderstanding about it. How many of these rockets may be in the arsenal, I do not know. It should also be kept in mind that due to the geographical situation, the Soviets can exploit medium-range missiles of lesser ranges, perhaps only a few hundred miles, to blackmail our NATO allies.

I am convinced the Soviet intention is to reinforce penetrations on economic, political, and psychological fronts wherever and whenever opportunity affords by the naked threat of thermonuclear destruction instantly available in the guise of missile carriers. Of vastly greater significance in the days and years ahead, they expect to attain dominance in space the better to compel the recognition of Soviet supremacy upon the peoples of earth. Both objectives could, in my opinion, be achieved without ever firing a missile against a target in the free world, or without ever releasing a glide bomb from a military vehicle in space that could be directed to any spot on earth's surface. Remember—whether a satellite carries scientific equipment or lethal warheads is simply a matter of choice exercised by the authority controlling the vehicle.

I say these things are possible and indeed they are. What then is the alternative open to us? It seems quite clear the only recourse, and I do not for an instant believe we intend to sit idly by and await the day of Communist judgment, is to forge ahead with all possible speed and achieve an overwhelming competence in space by the exploitation of our impressive technological and industrial resources. Then even the most ambitious among the Red dictators may be persuaded of our determination to keep space free of political implications and to search out its mysteries and wonders in the best interest of all men. The prospect of communization of other worlds is one from which we can only recoil in disgust unless we assert the necessary leadership.

It is one thing to state this determination and quite another to accomplish it. Admittedly a gap exists between our rocket capabilities and those of Russia in the space area. It is very difficult to say when that gap can be closed because this would require complete knowledge of the competition's resources and the speed of his advance—information we do not have or which is not available for the purpose of this discussion.

I would call your attention to a little matter of history just to afford some perspective. The assumption that nothing was done in this country during the years when the Soviet Union was busily engaged in rocket development climaxed by the sputnik simply does not jibe with the fact. It may be quite true that not enough was done, but let me cite a few statistics from the Army's files about which I have personal knowledge. For example, the first modern U.S. military ballistic research vehicle was fired December 1, 1944. The first U.S. high altitude sounding rockets were fired in September 1945, attaining altitudes in excess of 40 miles. The first American surface-to-surface guided missile was fired in May 1947, over a range of 62.5 miles. The first ballistic missile to attain an altitude of 250 miles was fired in February 1949. In December 1955, we fired over the full range the first inertially guided large ballistic missile, the Redstone, now deployed with U.S. Army troops in NATO. In September 1956, an Army Jupiter C multistage rocket attained an altitude of 682 miles and a range of 3,300 miles, the first deep penetration of space.

The groundwork for space vehicle instrumentation was laid at White Sands Missile Range during the years following World War II. Rockets carried aloft sensing devices, photo cells, density and pressure meters, even live monkeys. When we turned to satellite launchings, beginning with the first Explorer in January 1958, the instrument packages borrowed heavily upon the early knowledge obtained in the period from 1945 through 1949.

We did not work on large rocket engines of the Lunik order for the reason that such powerplants were not required for the military missile systems in development from 1955 on. We are at work now and have increased the speed of our effort. It may still require as long as 5 years to overtake the Soviets and move out in front and stay there. Unless we continue to accelerate our mo-

mentum, I advised the U.S. Senate that within 10 years it will be too late—we could not then hope to catch up and by then the Russian foothold on the nearer planets might have attained stature which could not be challenged.

One of the most vital of the current programs is Project Saturn, a clustered booster we are assembling for the Advanced Research Projects Agency. This will make available a thrust of more than 1 million pounds, twice as powerful as the largest so far fired by our competitors. Saturn is really the first of the second generation of U.S. space vehicles. Those of the first generation, and we are still within that time frame, depend entirely upon existing missile systems developed by the Armed Forces to meet the requirements of national defense. Our space payloads have consequently been limited to the thrust potential of these systems and this situation will obtain until true space vehicles are ready for use.

With the Saturn vehicle it will be possible to launch a communications satellite capable of serving the worldwide needs of the Strategic Air Command of the Air Force, the submarine fleets of the Navy, and the tactical commands of the Army.

The National Aeronautics and Space Administration supports a project aimed at obtaining boosters larger than Saturn. Since this program is essentially new it must recognize the time required for engineering and its availability is a matter of several years away.

Meanwhile, we should be prepared for other dramatic Soviet experiments: man in space, possibly the landing of an instrumented vehicle on the Moon, terrestrial and weather observation satellites, photography and mapping of the entire Earth's surface. We must expect such happenings because they are part of the logical development of that broad program I have described.

Dr. Keith Glennan, the Administrator of the National Aeronautics and Space Administration, recently told the Congress his agency is proceeding at all possible speed with the expanding space program. I can assure you no grass is growing under the feet of the Army team in Alabama, even though, in my opinion, they might move faster if added funds are provided. We would much rather wear out shoe leather now than to be trading in a Soviet state store a generation hence.

Those of us who are closest to the situation sometimes feel our concern is pretty much a private matter not generally shared by the country as a whole. In some quarters this is taken to be a rivalry between competing fireworks manufacturers with little consequence except possible damage to national pride.

I am reminded of the tale from Terence. A certain seer warned Caesar to be on his guard against a great peril on the day of the month of March which the Romans call the Ides; and when that day had come and Caesar was on his way to the Senate, he greeted the seer with a jest and said: "Well, the Ides of March are come," and the seer said to him softly, "Aye, they are come, but they are not gone."

We have not succeeded, I believe, in awakening America to the peril so grave it cannot be overstated.

We should, in my opinion, substantially increase basic and supporting research programs which extend beyond the immediate defense need. A great deal of engineering effort has gone into the exploitation in recent years of the discoveries of science. Rocketry is but one of many areas in which this logical process has occurred. But we have reached that point where the well of fundamental knowledge in the natural sciences is about exhausted, and pitifully few people are trying to refill it. Soon we must reach the stagnation point if everyone continues to take out what he can use and does nothing about replenishing the source.

I have suggested that project funds ought to be increased in all areas to provide money for promising investigations which may crop up in the course of development. No one can anticipate their occurrence or their possible yields, but I believe sizable returns could come out of relatively small investments. Even if many proved unfruitful, we should at least have learned what not to try next time and that negative information would save money and time later.

It is also essential to approach space projects in much the same manner in which we carry on the development of complex weapons systems; that is, by system rather than piecemeal. Instead of developing a booster, then deciding what upper stages will be adapted to it, what guidance system should be used, and what kind of experiment should be launched, the whole project should become an integrated undertaking in the interest of compatible design and telescoped scheduling. The nature of the competition and its momentum do not permit the leisurely approach; we must work with a genuine sense of urgency.

As a final warning I would restate my conviction that this is not a technical struggle between competing teams of rocket builders. We are under heavy attack on all fronts by an energetic and resourceful adversary who has built up a massive technological effort. This is being strengthened by an enormous reservoir of scientific and engineering talent constantly replenished by a state-directed educational program. While the attack has been at least temporarily deterred from military adventure, it is being pushed in all other directions. This is becoming a test of the stamina, the resourcefulness, the courage, faith, skill, and ingenuity of every American. At stake is the future of freedom, human progress, and now the universe itself.

The age of space can for our children become the greatest of all the periods of history, or it can end in catastrophe so terrible that the mind cannot grasp the consequences. The choice is ours to make but only if we exercise our selection in time. A long time ago the philosopher, Machiavelli, said that "God is not willing to do everything and thus take away our free will and that share of glory that belongs to us." Let's get to work.

Imports of Surplus Military Rifles Impair the National Security and Endanger a Vital Connecticut Industry

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. DODD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the following statement which I have prepared concerning the serious damage to our domestic arms industry posed by the large-scale importation from abroad of surplus military rifles.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR DODD

IMPORTS OF SURPLUS MILITARY RIFLES IMPAIR THE NATIONAL SECURITY AND ENDANGER A VITAL CONNECTICUT INDUSTRY

I want to bring to the attention of the President of the United States and to the Members of this body a problem which is most important to the national security of the United States and to the economy of the State of Connecticut.

The problem

This is the problem of hundreds of thousands of surplus military rifles being imported into the United States, sold here as sporting rifles at prices with which the American arms industry cannot compete, and thus threatening to destroy the defense readiness of this industry which is so essential to our national defense.

On June 29, 1959, six of the leading firearms manufacturers filed a petition with the Office of Civil and Defense Mobilization asking for relief against these excessive imports of military surplus. It is my hope that the Director of the Office of Civil and Defense Mobilization will act urgently and act favorably on this petition so that the President will impose quotas on these surplus imports and remove this threat to our national security.

Industry's responsibility

In April of this year, General Lemnitzer, the Army Chief of Staff, told the Senate Armed Services Committee:

"In my opinion, the introduction of the new (nuclear era) weapons in no way diminishes the role of the ground soldier."

As recently as August 3 the Army revealed at the Army Association meeting here in Washington what it described as its "ultimate weapon"; the fighting soldier of the future. This ultimate weapon is to be equipped with all the modern gear science has developed—including the new lightweight M–14 rifle; and it was even announced that the Army is developing an even lighter rifle for the soldier of the future:

"The individual weapon that the soldier of the future carries is the M–14 rifle chambered for the 7.62 mm. round. It is believed, however, that today's technology which is being applied by military-scientific teams will eventually produce for the soldier a weapon extremely light in weight and of high velocity. This weapon, in conjunction with other types now under development, will make it unnecessary for the soldier of tomorrow to clash with the enemy in hand-to-hand and bayonet-to-bayonet type combat."

Of special importance is the fact that it was made clear at the Army meetings in August that the policy of the Defense Department with respect to small arms requirements places major production responsibility on private industry. Modern weapons are developed by a combination of engineering skill in the Government arsenals and the research and production skill of the firearms industry. Industry's first assignment is to participate in the development of the new lighter rifles; industry's second assignment is the production and quantity output of these modern weapons. But increasing military surplus imports have reduced the capability of the American firearms industry to carry out these mobilization assignments and are threatening to cause still greater injury to the small arms industry.

Action is needed and action is needed now.

The industry

The American small arms industry consists of 22 companies with major plants and offices in 12 States of the United States. Its products are distributed through approximately 1,000 wholesalers and over 100,000 retailers located in every State in the Union. Every Senator in this body has constituents

who are affected by this problem. As a part of the mobilization base of the United States, the small arms industry is called on in times of a national emergency not only to produce arms but also to develop new designs for our country and for our allies and to modify existing arms for more economic and speedy production. The technical skill and know-how acquired by this industry from years of specialized experience and given to other industries during wartime is a matter of record, as is the magnificent wartime production record of each company in the industry.

Connecticut's contribution

In the State of Connecticut, I am proud to say, we have the largest concentration of manufacturers of commercial sporting arms. These companies include, among others, High Standard Manufacturing Corp., Remington Arms Co., Inc., Marlin Firearms Co., O. F. Mossberg & Sons, Inc., and Winchester-Western Division, Olin Mathieson Chemical Corp. These companies manufacture a large percentage of the centerfire rifles produced in the United States. The thousands of workers employed by these companies and their suppliers reside in every congressional district in our State and are a vital segment of the Connecticut economy.

These American firearms manufacturers, together with firearms manufacturers in Massachusetts and New York, have the only capacity in private industry for rapid expansion of arms production. The industry's skilled manpower, equipment, and research personnel can be transferred to emergency arms production with minimum leadtime. This defense readiness of the domestic firearms industry is maintained in peacetime by its commercial market without burden on the Federal budget.

Surplus imports threaten defense capability

The industry's defense capability has been severely impaired by increasing imports of surplus military rifles sold at a fraction of their cost. Between 1955 and 1958 surplus rifle imports have increased over 20 times from 8,402 in 1955 to 171,965 in 1958. By 1958 imports actually exceeded domestic sales. In 1959 import figures for the first 7 months indicate that surplus military rifles are being imported at a rate four times greater than in 1958, the record year for surplus imports.

These surplus rifles are coming primarily from Italy, England, Sweden, and Germany. Reports which the industry has received indicate that other countries, including the U.S.S.R., are about to release additional supplies of surplus Carcanos, Lee Enfields, Mausers, Manlichers, and other centerfire rifles. In short, there appears to be no end to the supply abroad; and since the United States is the only major market for these guns—European governments refuse to permit their people to buy these military rifles—the outlook for the American firearms industry is very grave indeed.

The effect to date

The effect to date of these surplus imports on our American industry has been severe:

Centerfire sales: down 50 percent.

Employment: one-third of the skilled production workers lost.

Profits: down 99 percent to eight-hundredths of 1 percent of sales.

Research expenditures: down 13 percent.

This tremendous impact is due to the extremely low prices of surplus military rifle imports. This year their average imported cost has been under $6 after shipping costs, duty, etc. Such rifles sell at prices from $14 to $30 in direct competition with American sporting rifles retailing between $80 and $130.

Connecticut's skilled workers hard hit

Of greatest importance, I believe, is the loss to the industry and thus to the defense readiness of the United States of the many hundreds of skilled production workers, some of whom had 30 years or more of specialized experience in arms production. Many of these laid-off employees have taken other jobs or moved from their communities to other areas and are not, therefore, available for arms reemployment in the event of an emergency. The seriousness of the employment decline cannot, of course, be measured solely in numbers because part of the manpower loss has occurred in job categories for which there are few or no replacements in any industry except the arms industry. Unless this decline is arrested, therefore, the consequences to our national defense posture could be very grave.

Industry supported by peacetime market

Of particular importance is the fact—startling to me—that Government defense contracts do not support this essential industry and make up for displaced sales. From 1950 to 1953, during the Korean war, total firearms sales by these companies to the U.S. Government amounted to $2,075,222. In the 6 years since Korea total firearms sales to the Government amounted to only $839,000. Thus, this industry is self-supporting; it relies almost entirely on its commercial sporting arms market to maintain its plant and equipment, skilled employees, and research and development.

Threat of U.S. surplus

In addition to surplus imports, the U.S. Government owns large supplies of surplus military rifles, the numbers having been estimated at several millions. At the request of the Department of Defense, the Business and Defense Services Administration of the Department of Commerce recently undertook an impact survey to determine the effect of sales of domestic surplus on the American market. Pending the outcome of the BDSA survey, the Department of Defense, I am happy to say, has discontinued the sales of surplus rifles except for small amounts of surplus generated locally at Army surplus disposal depots. I am hopeful that the BDSA report will be favorable to the American arms industry and that the threat of our own surplus will no longer burden this stricken industry.

Proposed solution to import problem

In view of the threat to the industry's mobilization base created by increasing imports of surplus military rifles, the leading manufacturers of the industry filed a petition with the Director of the Office of Civil and Defense Mobilization under the national security provisions (sec. 8) of the Trade Agreements Extension Act of 1958, asking that imports of surplus military rifles be reduced by quotas to their average of 1945–1955. Anyone who has studied the legislative history of section 8 would agree that the American firearms industry was precisely the kind of industry Congress had in mind in providing for administrative relief against excessive imports.

The relief requested in the OCDM petition is, in my judgment, entirely reasonable. It does not embargo all surplus rifles from being imported into the United States—it only reduces them to their historical post-war level: 1945–1955.

Of equal importance: the proposed restriction does not run counter to our international trade policy nor is it inconsistent with our defense objectives.

Imports of surplus rifles make no defense contribution; the importers have no production capacity and carry on no arms research.

Restricting imports of noncommercial military rifles will not affect the economies of our allies and friends since surplus sales make no contribution to the commerce of these nations and are not important to their balance of payments. Surplus rifles are not part of normal international trade.

CONCLUSION

The facts show that the small arms mobilization base of the United States is in jeopardy.

The present and future threat to the defense capacity of the American arms industry is grave.

The national security has been and will continue to be impaired unless relief is granted.

The proposed relief is entirely reasonable and is consistent with American international trade policy.

I urge that the OCDM act favorably and act urgently on this problem which is so vital to our country's security.

The United Nations Report on Space Law

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. ANFUSO. Mr. Speaker, it gives me great pleasure to insert in the RECORD, under leave to extend my remarks, an address delivered at the recent annual meeting of the Federal Bar Association by Mr. Spencer M. Beresford, the special counsel of the Committee on Science and Astronautics. Mr. Beresford is a well-known commentator on space law. His address discusses the United Nations report on that subject, submitted recently to the General Assembly. I believe his remarks will interest everyone who feels concern about the development and evolution of a body of law to govern activities in outer space:

THE UNITED NATIONS REPORT ON SPACE LAW

(By Spencer M. Beresford)

According to legend, an ancient Chinese monk, asked "What is truth?" replied "Yes."

It is difficult to avoid the feeling that the United Nations Committee on the Peaceful Uses of Outer Space has given a similar answer to the question, "What is space law?"

The Committee report does point out a number of legal problems involved in space activities, and poses many questions that the various problems may raise. It even refers to familiar analogies, principles, and related rules of law by which answers to such questions might be pursued. On the other hand, hardly any attempt is made to formulate legal or practical implications or possible solutions. Furthermore, the matters discussed in the report have almost all appeared in earlier writings on space law, often in more detail and usually in greater depth. In short, the United Nations report adds little to previous discussions of the subject, and is descriptive rather than analytical.

At the same time, it may well be that the deliberations and report of the United Nations committee are necessary steps on the road to international agreement. They can serve the purpose of acquainting participants and readers with the subject, and of indirectly informing policymakers and the general public. In particular, the report singles out certain problems as urgent, and indicates their nature and significance. Perhaps it can thus provide a common basis of international understanding for further research, discussion, and agreement. Viewed in this light, the achievement of the United Nations committee was not to solve problems,

but to reach a consensus which can serve as a groundwork of further progress.

As a result of such reasoning, in large part, the American Bar Association Committee on the Law of Outer Space, in reporting to the house of delegates at the 1959 convention, noted with general satisfaction the useful exploration of problems of space law carried out by the United Nations Ad Hoc Committee on the Peaceful Uses of Outer Space.

It is hardly necessary to say that my observations on this subject are personal and not official.

To all appearances, the United Nations committee limited its undertaking by deliberate choice. Its mandate from the General Assembly read in part as follows:

"The task of the Ad Hoc Committee on the Peaceful Uses of Outer Space under paragraph 1(d) of General Assembly Resolution 1348 (XIII) is to report on 'the nature of legal problems which may arise in the carrying out of programs to explore outer space.'"[1]

Without doing violence to the quoted language, the committee could have interpreted this mandate as broadly as any of its members might wish. It chose, however, to interpret the mandate narrowly. Its limitations were therefore self-imposed.

The tasks of the committee as originally proposed by various members[2] exceeded its accomplishments. The first proposed task was to list the legal problems of outer space. The committee listed 10 such problems, assigning priority to 6. Obviously, this list is far from complete. The second proposed task was to indicate the significance, implications and priority of each problem. The committee divided its 10 problems into 2 groups according to priority, but did not rank them individually. It made no serious attempt to analyze their implications. The significance of each problem, in the sense of its relative importance, partly appears from the discussion of its nature and from its assigned priority. The third proposed task was to formulate solutions. In this regard, the committee report is virtually silent. The final proposed task was to formulate relevant general principles. A few general principles are expressly stated in the report; others (discussed below) may be fairly inferred.

The committee report observes that as a matter of principle the United Nations Charter and the Statute of the International Court of Justice are "not limited in their operation to the confines of the earth."[3]

While no exceptions are made in this reference to the Charter, the records of debates reveal that some members of the committee would prefer to exclude the right of self-defense guaranteed by article 51. In the view of the Mexican representative, "* * * his delegation could not agree that all the provisions of the United Nations Charter and the Statute of the International Court of Justice were applicable to the international relations that might develop in outer space. When the first committee had studied those problems at the 13th session of the General Assembly the Peruvian representative had drawn a distinction between the principles and purposes of the Charter, which were general in scope, and the transitory provisions of those instruments, which had been included solely for reasons valid at a given moment in history; it would therefore be better not to bring into the debate transitory provisions, such as article 51 of the Charter, to which reference had already been made."[4]

The quoted remarks of the Mexican representative suggest that the application of the Charter to outer space, affirmed in the committtee report, may be less inclusive than it seems. At any rate, the views of the committee members were not unanimous on this point. The committee agreed in principle, but will its members agree in practice, when specified Charter provisions are invoked?

As for the right of self-defense, there is ample authority in general international law, apart from the United Nations Charter, for nations to take any necessary steps in their own defense, whether on land, at sea or in the air or outer space.

One of the principles affirmed by the committee report is "* * * the common interest of mankind in outer space and the common aim that it should be used for peaceful purposes only."[5]

In the second paragraph of the report, "it was recognized that the terms of reference of the committee referred exclusively to the peaceful uses of outer space."[6]

There is evidence in the committee debates that the members interpreted the word "peaceful" to mean "nonmilitary."[7]

The importance of this point justifies a review of the various contexts in which "peaceful" has been authoritatively used with reference to outer space.

The term first appears in disarmament proposals submitted by the United States to the United Nations Political Committee (January 14, 1957), and then in a resolution of the General Assembly (December 1957). President Eisenhower used it in a letter to Premier Bulganin (January 13, 1958), and in his message to Congress calling for a civilian space agency (April 2, 1958). Finally, Congress declared in the National Aeronautics and Space Act of 1958 that "* * * activities in space should be devoted to peaceful purposes for the benefit of all mankind."

In the same act, however, Congress provided for the conduct of certain space activities by the Department of Defense and the armed services. It thus appears that, in the view of Congress, the "peaceful" uses of outer space are compatible with military uses.

Against this background, on December 13, 1958, the General Assembly adopted a resolution, introduced by the United States in concert with 19 other nations, establishing an Ad Hoc Committee on the Peaceful Uses of Outer Space.[8]

In summary, then: (1) The provision for military space activities and the simultaneous declaration that outer space should be devoted to peaceful purposes, in the National Aeronautics and Space Act of 1958, indicates that the term "peaceful," within the meaning of the act, applies to some military as well as civilian uses of outer space; (2) the term "peaceful" in the resolution creating the United Nations Ad Hoc Committee on the Peaceful Uses of Outer Space was derived from the act, and was therefore presumably intended to convey the same meaning.

As a practical matter, the range of activities in outer space will be narrow indeed, if all that lend themselves to military purposes are prohibited. For example, a radio satellite can relay military as well as prvate and commercial messages. Are the benefits of reliable worldwide communications, and the easing of overtaxed frequencies, to be denied on that account? Are we also to forego the use of satellites for the navigation of commercial ships and aircraft, for weather forecasting and for ice and forest-fire patrol, on the ground that they lend themselves to military applications? Such questions appear to answer themselves.

In a speech delivered at the 1959 annual meeting of the International Astronautical Federation, one of the principal architects of the National Aeronautics and Space Act, Mr. George J. Feldman, observed that the word "peaceful" has become a term of art with a distinctive meaning. He continued:

"In my opinion, the word 'peaceful' as used in the act means 'nonaggressive' rather than nonmilitary. That, I believe, was the intent of Congress. The same meaning of the term may be found in international law. It also appears to be the most reasonable interpretation.

"I have insisted on this point because I am convinced of its importance. If 'peaceful' means 'nonmilitary,' and outer space can be used for 'peaceful' purposes only, what happens to the inherent right of self-defense guaranteed by article 51 of the United Nations Charter and by general international law?"

The American Bar Association committee on the law of outer space, in its report to the house of delegates at the 1959 convention, took a similar view of the term "peaceful" as applied to the uses of outer space as follows:

"In the sense of the charter, and in international law generally, it is employed in contradistinction to 'aggressive.' Thus any use of space which did not itself constitute an attack upon, or threat against, the territorial integrity and independence of another State would be permissible; the high seas, for example, can be used for the maintenance of a naval force in being without any violation of international law, and may be employed 'peacefully' for maneuvers, testing of weapons, and so forth. * * *.

"It is the opinion of this committee that the only uses of space that are prohibited are those that fall within the prohibitions of the charter, and that, until such time as a disarmament agreement dealing with space activities can be arrived at, the United States is fully justified in using space for such military purposes as are consistent with the terms of the charter."

Passing to another point, the United Nations committee report then states that air law and maritime law may provide fruitful analogies but that space law is unique because of "many specific factual conditions, not all of which are now known."

There is no reason to question that judgment. It may be pointed out, however, that air law and the law of the sea, as analogies for space law, would lead to diametrically opposite results. The high seas are free, but every nation has sovereign rights in the airspace above its territory.

Also, the law of the sea is a hodgepodge of rules and rights. Besides the high seas, there are territorial waters, through which a qualified right of innocent passage has long been observed; and there are different rules for certain bodies of water, for the exploitation of natural resources in the sea, and for various other purposes. As for air law, the indefinite extension of national sovereignty into outer space would so restrict space activities that it is very unlikely to gain international acceptance.

With one exception, neither air law nor maritime law can provide any general analogy for the law of outer space. The exception is the regime of the high seas, which could be extended (as many writers have proposed) to outer space in general. Whether it could reasonably be extended to celestial bodies as well is a question that will be considered later.

In many instances, it is true, the legal problems encountered in the use of outer space will resemble problems already settled at sea or in the air, and will lend themselves to similar treatment. Examples are the rights of aircraft forced down on foreign territory and the registration of vessels.

Lastly, the United Nations committee "* * * considered that a comprehensive code was not practical or desirable at the present stage of knowledge and development," although "* * * the committee also recognized the need both to take timely, constructive action and to make the law of space responsive to the facts of space."

Perhaps the emphasis given by the committee to the statements quoted above is misplaced. What deserves emphasis is not

Footnotes at end of speech.

the inexpedience of a comprehensive code but the need for action. Furthermore, whether a code of space law would be expedient at the present time is partly a question of semantics. Space law need not be rigid or detailed, especially at first. It need not be comprehensive. It need not even be a code in the sense of a systematic body of principles or rules. At the same time, as the committee recognized, some rules of law must be applied to human activities in outer space; and they may not be much to our liking unless we act soon to give them shape.

After stating the principles which we have now discussed, the United Nations report sets forth the urgent legal problems of outer space, as follows: liability for injury or damage caused by space vehicles; allocation of radio frequencies; interference between space vehicles and aircraft; identification and registration of spacecraft, and prior notice and coordination of launchings; and, lastly, the reentry, landing, and return of space vehicles together with their equipment and personnel.

All the problems given priority in the United Nations report were listed last year as urgent legal problems of outer space in the "Survey of Space Law" issued by the House Select Committee on Astronautics and Space Exploration.[9] Beyond a doubt, the problems listed by the United Nations committee (and earlier by the House committee) are entitled to priority. There may be some question, however, whether other problems of comparable priority should not be added to the list. For example, the United Nations committee regards territorial claims to celestial bodies as a nonpriority problem. Now that a rocket has landed on the Moon, this problem may deserve priority. Also, the committee mentions near the end of its report, almost as an afterthought, that certain space activities require international measures to insure maximum effectiveness. The need for international agreements for carrying out such activities may be more urgent than the committee seems to think.[10]

The United Nations committee gives no answer to the familiar question, "Where does outer space begin"? The report discusses several possible answers, and refers to the view that it may eventually be necessary to determine the limits of outer space, commenting only that an international agreement on the subject at present would be premature.[11]

The conflict between air law and the legal regime of outer space appears to be an unavoidable problem that cannot be postponed indefinitely. On the other hand, the problem is not yet urgent; it could be settled in any of several ways; and agreement on a solution by all the members of the United Nations committee was hardly to be expected.

Although the United Nations committee deferred the question of national sovereignty in outer space, some of its members made no secret of their views. During previous debate in the General Assembly and the Political Committee, they stated that outer space would be res communis or res extra commercium—free to all nations for all uses, like the high seas.[12]

At the same time, the committee refused to draw a distinction between "open" outer space and celestial bodies.[13] Such a distinction may be necessary in order to provide incentives and safeguards for fixed investment incurred in the development and exploitation of natural resources in outer space. At the very least, the problem deserves further study.

The United Nations report speculates that the overflights of national territory by IGY satellites may have established the rule that outer space is "freely available for exploration and use by all."[14] This may be merely another affirmation that outer space is res communis. It would be difficult to agree, however, that the IGY overflights established any new rule of international law. In fact, the report does not actually say this, but merely suggests it as a possibility. The IGY overflights do not yet constitute such a long-continued accumulation of precedents as is traditionally considered necessary to make a change in international law. Besides, the IGY theory of space law calls to mind the explanation given by Herodotus of the sun's position in winter. Herodotus supposed that the sun moves south in winter, like the birds, in order to keep warm. A less farfetched explanation of the fact that no nation has ever objected to the flight of artificial satellites through outer space above its territory is that satellites are not "aircraft" within the meaning of the Chicago convention.[15]

In a short speech such as this, it would not be practical to discuss in detail all the specific legal problems of outer space listed by the United Nations committee. Rather than touch on each problem without coming to grips with any, the following discussion will deal exclusively with the first problem listed by both the United Nations report and the "Survey of Space Law"—liability.

The problem of personal injury and property damage caused by spacecraft is mentioned in almost all writings on space law. Discussion of the subject has nevertheless been very limited, and has dealt almost exclusively with international and not with domestic claims.

The United Nations report, of course, confines itself to international problems. In giving priority treatment to "liability for injury or damage caused by space vehicles," the report separates it from the subject of "interference between space vehicles and aircraft." For convenience, the same separation will be made in the following discussion.

In the future, personal injury and property damage, especially on the ground, are likely to be caused by spacecraft on a significant scale, even without negligence. For some time to come, the place where spacecraft return to earth will be largely uncontrollable and even unpredictable. In 1956, for example, a Snark launched from Cape Canaveral went out of control and wandered to South America, where it was lost over the Brazilian interior. Some spacecraft will return to the earth without ever leaving the atmosphere, after abortive launchings or other mishaps. On June 19, 1959, for instance, a 2-foot fragment of a Thor missile, destroyed shortly after firing at Vandenberg Air Force Base, narrowly missed a woman working in a flower field; other pieces rained on the California countryside.

Both the rationale of absolute liability and the analogy of aircraft cases suggest the imposition of absolute liability for injury and damage caused by spacecraft.

In Anglo-American law and under the legal systems of many other countries including the Soviet Union, absolute liability is imposed without fault for harm resulting from ultrahazardous activities. The rationale is that certain ultrahazardous activities should be permitted because of their social utility, but only on condition that liability is imposed if harm results. Some examples are blasting, keeping wild animals and, at least until recently, flying airplanes. Similar reasoning could well apply to spacecraft.

At one time or another, 21 States and territories of the United States have adopted section 5 of the Uniform Aeronautics Act, which imposes absolute liability for ground damage caused by aircraft. Today, however, section 5 of the act remains in force in only six States (Delaware, Minnesota, New Jersey, North Dakota, South Carolina, and Tennessee). In most other States, liability for ground damage caused by aircraft is now based on negligence, but with multitudinous variations as to the presumption of negligence and the doctrine of res ipsa loquitur.[16]

For some time to come the only parties responsible for the flight of spacecraft are likely to be national governments, which enjoy some degree of sovereign immunity. In the United States, for example, a citizen damaged by an American space vehicle might not be able to maintain an action under the limited waiver of immunity granted by the Federal Tort Claims Act. Although there is celebrated opinion to the contrary,[17] it seems reasonably clear that sovereign immunity is not waived by the act in cases of absolute liability.[18] Even if negligence is suspected, in an action for damage caused by spacecraft, it will probably be difficult to prove, since the necessary evidence may not only be complex and technical but may be known only to the Government, and protected by rules of military security. To make matters worse, under the Federal Tort Claims Act liability turns upon the peculiarities of local law; section 1346(b) provides that the liability of the United States shall be "in accordance with the law of the place where the act or omission occurred." Another obstacle to recovery is the so-called discretionary function exemption, which excludes all claims based on discretionary governmental functions or duties.[19]

International claims present even greater uncertainties. Diverse solutions may be expected under Anglo-American law and, all the more, under the legal systems of other countries.

The United Nations report poses several questions about injury or damage caused by space vehicles, including the grounds of liability. While it makes almost no attempt to formulate solutions, an incident at the final meeting of the legal subcommittee reveals the prevalence of the view that liability for damage caused by spacecraft should be based on fault. The representative of Belgium objected to a statement in the draft report that damage would be done by spacecraft "despite all reasonable precautions." He argued that the phrase "despite all reasonable precautions" was inconsistent with the text that followed, dealing with the question of fault. As a result of his objection, the phrase was deleted.[20] At the same time, however, the United Nations report refers to the Rome Convention of 1952, which, it states, "could be taken into account, inter alia" in any future study of liability for injury or damage caused by spacecraft. Although it makes no recommendation, the report thus calls attention to an international agreement on ground damage caused by foreign aircraft, adopting the rule of liability without fault.[21]

The other questions on the subject posed by the United Nations report are as follows: For what kinds of injury may damages be recovered? Should a different principle govern, depending on whether the place of injury is on the surface of the earth, in the airspace, or in outer space? Should the liability of the launching state be unlimited in amount? When more than one state participates in a particular space activity, is the liability joint or several?[22]

These questions present no special difficulties. Along with still other questions, they should be taken into account in any international agreement on injury or damage caused by spacecraft.

Finally, the United Nations report recommends that consideration be given to "agreement on submission to the compulsory jurisdiction of the International Court of Justice in disputes between states as to the liability of states for injury or damage caused by space vehicles."[23]

The International Court of Justice has often been proposed as the proper forum for

Footnotes at end of speech.

space litigation. In order to be effective, any international agreement on liability for harm caused by spacecraft, in particular, should provide for the jurisdiction of a court (or courts) and for the enforcement of judgments. Otherwise, the only redress for private citizens, apart from voluntary payment or arbitration, would be the prosecution of their claims through diplomatic channels by their governments. But why should the jurisdiction be limited, as the report implies, to disputes between States? What will happen to the private individuals and corporations that suffer injury or damage from spacecraft?

Apart from judicial remedies, administrative settlement may provide additional relief, even for international claims. For example, some claims for harm caused in foreign countries by American spacecraft could be settled under the Military Claims Act.[34] The maximum payment, however, would be $5,000, and the injury or damage must have occurred as a result of or incident to the noncombat activities of civilian employees or military personnel of the armed services. Also, the settlement provisions of the National Aeronautics and Space Act of 1958 are not limited to claims arising within the United States;[35] but, again, the maximum payment is only $5,000.

Notice that administrative settlement may be made without regard to negligence, local law, or discretionary functions. On the other hand, the maximum administrative settlement for domestic claims under either the Military Claims Act[36] or the Federal Tort Claims Act[37] is only $1,000.

In conclusion, liability for injury or damage caused by spacecraft is still in a formative stage, lacking uniformity even within the United States. Both domestic and international claims are beset with uncertainty and confusion. Since space activities are bound to be nationwide and even worldwide, a satisfactory solution would seem to require both uniform national policies and an international agreement.[38]

Labor-Management and Disclosure Act of 1959

EXTENSION OF REMARKS
OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of the address by President Eisenhower on the need for effective labor reform delivered from his office at the White House, Thursday evening, August 6, 1959, as actually delivered.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, I want to speak to you tonight about an issue of great importance to every man, every woman, and every child in this Nation. It is above any partisan political consideration. It affects every American, regardless of occupation, regardless of political affiliation.

I speak of labor reform legislation.

In these few minutes I hope to place before you some salient facts affecting this matter so that all of us may more fully understand what is at stake.

This Nation needs a law to meet the kind of racketeering, corruption, and abuses of power disclosed in many instances by the Senate investigating committee headed by Senator MCCLELLAN. For 2 years I have advocated such a law.

For many months, newspapers have carried extensive accounts of racketeering and corruption in labor-management matters. Many of you have actually witnessed disclosures of this corruption on television in your own homes. It is a national disgrace.

The legislation we need has nothing to do with wages, or strikes, or problems we normally face when employers and employees disagree. Nor am I talking of any new approach to collective bargaining. Nor about any new labor-management philosophy. I am talking solely about a reform law, a law to protect the American people from the gangsters, racketeers, and other corrupt elements who have invaded the labor-management field.

You know, a great deal is being said and written about this subject. We hear one bill called a weak bill, another a strong bill, and so on. The American people are not interested in adjectives or in labels. They are interested in a law which will eliminate the abuses.

I want only effective protection from gangsters and crooks for the people of America—for the men and women who labor with their hands, their minds, their energies, to make make America a better place for themselves and for their families.

We all know that only a small minority of individuals among unions and employers are involved in corrupt activities. We know that the vast numbers of employers and union officials are honest, and deplore corruption as much as you and I deplore it.

But any corrupt minority is too large.

The damage that such a minority does to working men and women, and to the American public cannot be tolerated.

After all—employers and unions operate in this field under the sanction and protection of Federal law. The people very properly look to their government to pass effective laws to stop abuses.

To date, legislation to correct these deplorable conditions has not been enacted. Meanwhile, the evidence of abuses has continued to mount before congressional committees. Chief among the abuses from which Americans need protection are the oppressive practices of coercion.

Take a company in the average American town—your town. A union official comes into the office, presents the company with a proposed labor contract, and demands that the company either sign or be picketed. The company refuses, because its employees don't want to join that union. And remember, the law definitely gives employees the right to have or not to have a union—clearly a basic American right of choice.

Now what happens? The union official carries out the threat and puts a picket line outside the plant to drive away customers, to cut off deliveries. In short, to force the employees into a union they do not want. This is one example of what has been called blackmail picketing. It is unfair and unjust. This could force the company out of business and result in the loss of all the jobs in the plant.

I want that sort of thing stopped. So does America.

Take another company—let us say, a furniture manufacturer. The employees vote against joining a particular union. Instead of picketing the furniture plant itself, unscrupulous organizing officials, in this case, use another scheme. They picket the stores which sell the furniture this plant manufactures. The purpose is to prevent those stores from handling that furniture.

How can anyone justify this kind of pressure against stores which are not involved in any dispute? They are innocent bystanders. This kind of action is designed to make the stores bring pressure on the furniture plant and its employees—to force those employees into a union they do not want. This is an example of a secondary boycott.

I want that sort of thing stopped. So does America.

The blackmail picket line and the secondary boycott cannot possibly help the working men and women of America.

Another important problem is that of the so-called no man's land. Under existing law, the States have practically no authority over labor cases, according to Supreme Court decision.

Here is a typical example of what can happen in this situation: A labor dispute occurs

at a small plant. The union—or the employer—goes to the Federal Labor Board. The Board says the case is too small for Federal action—because it has only a small effect on interstate commerce. Then the union—or the employer—goes to State officials, but they can't do anything because the States have no authority. That leaves the worker and his employer in this no man's land—cut off from Federal or State help.

What is the result? The disputing parties have no recourse to law. So, all too often, the dispute is settled—if we can use such a word—by force, with a test of strength between them, with damage to one or both, and to the community.

I want the no man's land abolished, because I believe that small unions and small businessmen have rights, just as everyone else. I want to give the States authority to deal with cases the Federal Board cannot and should not handle and, by all means, we must not bring every case to the Federal level, as some have proposed. In this kind of situation the States can act more promptly and more effectively than can the Federal Government.

Now any reform bill worthy of the name must also protect the individual rights of union members—within their unions. It must assure them of fair elections. It must assure them of honest handling of their money—money made up by dues often collected under auspices of Federal law. It must also give to the Government effective authority to investigate and enforce these provisions. Unless it does these things—and deals effectively with the problems of coercive picketing, boycotting, and the no man's land—it is not a reform bill at all.

Now let us examine what Congress has done so far this year. Has its action measured up to the minimum requirements I have outlined to protect the American people? I regret to say that, as yet, the answer is no—definitely no.

The bill which passed the Senate in April is not effective. It does not deal with or curb the picketing or boycotting practices I have described. And while it purports to deal with the no man's land, it gives no real relief.

In the House of Representatives, the Labor Committee bill is even less effective than the Senate bill. It, too, fails to deal with picketing and boycotting practices I have described. Its provisions relating to the no man's land go precisely in the wrong direction. And it actually exempts about 70 percent of all unions from reporting on their finances. It even removes criminal penalties against those who violate the rights of union members.

Neither the Senate bill nor the House committee bill will really curb the abuses the American people want to see corrected.

However, Congress need not limit itself to such a choice.

The administration bill is still before the Congress. There is also before the House a bipartisan bill jointly sponsored by two members of the House Labor Committee—Mr. LANDRUM, of Georgia, a Democrat, and Mr. GRIFFIN, of Michigan, a Republican. The Landrum-Griffin bill is a good start toward a real labor reform bill, containing many of the corrective provisions I have urged.

Again I emphasize: Labor reform is not a partisan matter. Further, I don't come before you in any partisan sense. I am not a candidate for office. In this or other issues, I do not seek the support of any special interests. I am only trying to make sure that American workers and the public get the kind of protection that Americans deserve.

Nearly 100 years ago Abraham Lincoln in his memorable address spoke of the sacrifices made so that, in his words, "government of the people, by the people, for the people, shall not perish from the earth." That was the question he posed to our Nation in his generation.

In our lives and actions, the people of America, in private and public sectors, daily face millions of choices with this continuing question always in the background.

As the Congress prepares to vote on labor reform, this great question is still, as always, with us. In the basic sense, the issue is: Shall the people govern? If they do not, crooks and racketeers could prevail.

This business of government—including this question of labor reform—is your business. It is every citizen's business.

Americans want reform legislation which will be truly effective. It is my earnest hope that Congress will be fully responsive to an overwhelming national demand.

Thank you and good night.

Third-Class Mail Rates

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. CARLSON. Mr. President, in the Postal Rate Readjustment Act of 1958 the Congress very wisely approved a provision which directs the Secretary of Commerce and the Small Business Administration to conduct surveys to determine the impact of bulk third-class mail increases on small business firms and the economy as a whole. These surveys are being made at the present time.

Third-class mail is the principal advertising tool of tens of thousands of firms in the United States, the overwhelming majority of them small operations. Since 1952 the bulk third-class rate has been increased 150 percent. Many witnesses appeared before the Senate Post Office and Civil Service Committee during the prolonged rate hearings to testify against such a burdensome hike in one of their main costs of doing business.

On the other hand, the Post Office Department claimed that the 2½-cent minimum piece rate which it recommended would have no harmful effects. The burden of the Department's argument was that the increase would have the salutary effect of reducing the volume of third-class mail while increasing its revenues.

A speech delivered by Mr. Horace Hart, Director, Printing and Publishing Industries Division, Department of Commerce, delivered in Montreal at the annual meeting of Associated Third Class Mail Users, discusses in some detail the steps being taken by the Commerce Department to fulfill the task assigned it in the last rate act. Since no State or congressional district is without its share of the 235,000 third-class bulk mail permit holders, all Representatives and Senators will be interested in the progress of this particular economic impact study. At long last the Federal Government will have gathered valuable data regarding the Nation's second largest advertising medium. When the surveys of the Commerce Department and the Small Business Administration have been submitted to the Congress we will be in a far better position to judge the wisdom of rate increases already legislated on bulk third-class mail and the desirability of reducing or further increasing them. The information which Secretary of Commerce Mueller is gathering will be of tremendous assistance to us in making sound decisions in the complex postal rate field.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech by Mr. Hart.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF COMMERCE STUDY OF THIRD-CLASS BULK MAIL RATES—PROGRESS REPORT

(By Horace Hart)

I would like to begin by telling you why the Printing and Publishing Industries Division of the Department of Commerce has the assignment to study the impact of postal rate increases of bulk third-class mail. This survey was authorized by the 1958 Postal Rate Act.

The Commerce Department's primary function is to foster and promote commerce and industry. It does this in many ways. The Weather Bureau, Patent Office, Bureau of Public Roads, Coast and Geodetic Survey, Bureau of the Census, Maritime Administration, and the Bureau of Foreign Commerce are all a part of the Department of Commerce and engaged in activities that affect the business community in some way. In addition, there is the Business and Defense Services Administration, whose principal duty is to serve business and act as a link between business and Government.

When directed by Congress to find out how the third-class rate increase affected the business community, the Secretary of Commerce turned to his Business and Defense Services Administration. The BDSA through its 25 industry divisions serves industry and trade, the general public, and economic researchers. Twenty-four of these divisions are cooperating in the postal rate study as representatives of industries that use direct-mail advertising. The 25th, the Printing and Publishing Industries Division, which represents industries that produce, as well as use, this advertising, has the prime responsibility of conducting the survey, evaluating the returns, and reporting its conclusions.

In our work to date we have been impressed with the enormous importance of direct mail. When we began to assess its coverage we learned that there is scarcely a product or service which is not being sold either directly or with the aid of direct mail. We have been impressed too with the willingness of top management to come to Washington when necessary to further the progress of our survey. Many keymen from your industry have given this program their undivided attention.

Statistics in this field have been notably lacking. Basic information we needed from the Post Office has already led to their expending thousands of man-hours to give us correct answers.

Most significant, the survey has emphasized the importance of the direct-mail industry.

With so many different industries and businesses represented in this audience, I should like to tell you about some of the services—of which the bulk mail survey is an outstanding example—that BDSA performs. Besides providing numerous services to the general public and economic researchers, the 25 industry divisions I mentioned

serve and represent some 500 production or manufacturing industries. We in the Printing and Publishing Industries Division, for example, are responsible for some 20 industries, including newspapers, periodicals of all kinds, book publishing and book manufacturing, greeting cards, business forms, the several printing industries, and the allied typesetting and platemaking industries.

Although BDSA emphasizes service to business, it has certain broad responsibilities under the Defense Production Act. These include the development of measures to insure the continuity of production and management in the event of emergency. Since almost no activity can proceed without printed material of one kind or another, our part of this program has been to locate and identify printing and related equipment that could be used to turn out Government orders, forms, labels, training manuals, ration books, and the host of items needed in a wartime economy, as well as those essential to civilian welfare. We are surveying all printing plants employing 50 or more people in order to obtain a national inventory of equipment. The information will be tabulated, coded, and made available in the several regional offices throughout the country for the confidential use of Government officials engaged in mobilization planning.

We are recruiting a corps of industry leaders in all parts of the country to be trained for Government service as an Executive Reserve in the event of an all-out attack on the United States. I find this program particularly impressive because of the quality of top-level executives who have volunteered for service and whose interest has been so evident during the modest amount of time they spend with us annually for training. These Reservists would staff the operation of an emergency production agency.

When Government is asked for some study or service, it brings to bear on the problem all of the research time, talent, and resources it can muster. Almost without exception our services stem from a request to meet a specific need. Among our programs are broad-gage economic studies, such as the bulk third-class mail survey, usually initiated at the request of some group or agency outside BDSA. Some of you may be familiar with the pulp, paper, and board supply-demand study completed in 1957. Undertaken at the request of the House Committee on Interstate and Foreign Commerce, it included projections of demand for the major grade groups of paper and board through 1965. The study has been updated annually and includes data on production capacity, revised to include all newly constructed projects.

The use to which industry puts reports of this kind may be illustrated by two examples. After the initial report was issued, the balanced supply-demand picture for some grades of paper showed that there was no immediate need of added capacity. Consequently, expansion plans of certain producers, plans which involved the expenditure of $50 million, were postponed. Another result of the study has been increasing attention on the part of the paper industry to the amount and kind of printing papers that will be needed in the years ahead for books, periodicals, advertising matter, and other commercial printing.

There is a tremendous amount of information available from Government sources that has a real dollar-and-cents value to you—a fact that I wish I had known when I was in the printing industry. An easy way to locate the material or get the answer to an immediate problem is through the BDSA industry divisions. Among the most interesting requests we received in recent months was one from the director of the American exposition in Moscow. No doubt you have read of the electronic computer that supplies answers to questions asked by Russian visitors. All of the data relating to American industry was supplied by BDSA. It included 100 questions and answers on American advertising and marketing methods. When he punches the proper buttons, Ivan Ivanovitch can become reasonably well informed on direct mail advertising and selling.

I said earlier that BDSA serves as a link between the business community and Government. As such it is in a unique position to advance industry's point of view in Washington. Currently we are consulting with the Copyright Office regarding its study of the copyright law, and with the Tariff Commission regarding comprehensive changes in tariff classifications which it will recommend to the Congress. We have cooperated with the Department of Labor in some of its industrial studies, and we have pressed the industry point of view with many agencies whose regulations affect advertising.

We have also acted as a spokesman for industry with respect to legislation, either by preparing proposed comment for the Department on individual bills that affect specific industries, or by recommending support in the Department's annual legislative program of measures that will help the industries for which we are responsible.

I have thought it worthwhile to give you this background before discussing the bulk third-class mail rate study.

We have three great aims in this study. First of all, we want to develop information that will assist Congress in its future deliberations on third-class mail rates. Second, we want our report to be objective, one that is completely unbiased, one that will be respected by all interested parties because it is based on facts. Third, we want to provide information, heretofore unknown about an important segment of the economy.

Keep in mind that our assigned task is to determine the impact of the increased bulk third-class rates on the economy. To do this we must first know the part that bulk third-class mail plays in the economy, who uses it, the extent to which they use it, how they use it, and the measure of goods and services sold primarily by such advertising. We hope we may be able to come up with important information on trends and developments in this field. In any event, we want the report to be a thoroughly constructive document, one that contains important new information about this advertising medium that has significance over and above the limited area of ratemaking.

I want to emphasize the care taken to use sound procedures and scientific methods in this study. The first of its kind, we wanted it to be a model for others that may be necessary in the future to guide the decision makers.

Very early it became evident to us that the information we needed could only be obtained firsthand from users and producers of third-class mail. We decided to obtain some of the data through a series of questionnaires. In addition, we agreed that case histories, obtained through personal interviews, would be necessary to supply valuable background material and permit analyses in depth of various situations that would be useful in evaluating the purely statistical results of the questionnaire survey.

Our first difficulty came when we began to prepare the questionnaire. As pioneers in this field, we did not know exactly what information individuals and companies could supply. So we did what many of you do: We tested a limited group of mailers. The results of the test questionnaire were then tabulated and became the basis for the final questionnaires.

You may be interested to know how we fared with this test. Approximately 85 percent of the questionnaires were returned. While not all of the questions were answered, we were extremely pleased with the results and expect to do even better on the actual survey. The Bureau of the Census cooperated in developing the questionnaire and the mailing list. Census will also tabulate the returns. Generally speaking, Census wants a return of not less than 90 percent on a voluntary questionnaire, such as we are using.

At a recent meeting with members of your organization in Washington, we were told we could not get figures on net profits. However, this question was answered on 65 percent of the test questionnaires. Respondents have confidence in the Bureau of the Census. That agency may not disclose individual company information, under penalty of fine and imprisonment. Information supplied on individual questionnaires will be seen only by Census agents. The information supplied to us will be a composite of individual returns, tabulated according to our specifications. We will have no information about individual firms, nor do we want any. Therefore I hope that no one included in the survey will have any qualms about answering the questions.

Now as to the questions to be asked: There are the usual ones about kind of business, principal activity, method of selling the goods and services of the establishment, gross receipts, operating income, and personnel. These, of course, identify the business by type and size and tell us how the establishment operates. In addition, we are asking about total advertising expenditures and expenditures for bulk-third-class mail other than the cost of postage. There is a question about the purposes for which third-class mail is used—to obtain direct orders, to obtain prospects for followup by salesmen, to obtain outlets or distributors, for general advertising, and so on.

Another question concerns the percent of gross receipts traceable directly to third-class mail. Still another deals with the shift of mail from first or fourth class to third and the possibility of advance mailings to beat the January 1959 deadline. One of the most important questions deals with operating changes resulting from the increased rates. In other words, we want to know what you are doing about mailing lists, the number of names on mailing lists, the number of mailings, the number of pieces that make up an individual mailing. We are asking about the use of other advertising media, changes in the selling prices of goods and services, and changes in the quality of the product or service.

Two periods are covered by the survey, one before the first one-half cent rate increase went into effect and one after. We had little choice in this matter. The increase to 2 cents went into effect January 1, 1959. Since we were not to begin the actual survey until July of 1959, we had to compare the first six months of 1958 with the first 6 months of 1959. While it might have been better to use 12-month periods, we could not have done so and meet our deadline of March 1, 1960. As it is, we are comparing two like periods; and although we have missed the holiday season of 1959, we also omitted it from 1958.

I want to tell you something about the procedure used in setting up the mailing list for this questionnaire. Our universe, as the statisticians say—and I feel that this is a most appropriate term to use in connection with direct-mail advertising—consisted of the 235,000 firms that paid the bulk third-class fee in 1958. From these permit holders the Bureau of the Census, which was the prime initiator of scientific sampling techniques in the early 1930's, selected a sample of 18,000 firms to receive the questionnaire.

The sample of firms and organizations was a two-stage sample. In stage 1, a sample of the 36,000 post offices in the United States was drawn; in stage 2, a sample of bulk mailers within the post offices was drawn.

First, the post offices were classified into nine groups according to their annual receipts. In the top group were all post offices with annual receipts of $15 million and over. All 22 in this size class were included in the sample, as were all 298 in the next size class; that is, post offices with receipts ranging from $1 million to $14,999,999. The other 700 post offices in the sample were random selections at various rates from 1 in 2 for the third-ranking class to 1 in 500 for the smallest post offices, those having annual receipts of less than $1,500.

All of the post offices selected for the sample were instructed to (1) provide an alphabetical list of all firms that paid a bulk fee in 1958; (2) assemble and sort by name of sender all mailing statements turned in to the post office by the mailer during the first 6 months of 1958; and (3) for each of the 160,000 names, give the amount of postage spent in the first half of 1958 on bulk mail.

To supply this information, post offices had to sort 1,500,000 mailing statements, the individual pieces of paper completed by mailers when they deposit shipments of bulk mail.

From the 160,000 names supplied by the post offices, the Census Bureau designated a sample of 18,000. The sample included (1) all bulk mailers reported by post offices in the five smallest groups; that is, post offices whose annual receipts were less than 200,000; (2) all mailers reported by the top four groups of post offices who spent at least $20,000 on bulk third-class during the first half of 1958; and (3) a selection, based on variable sampling intervals, of the remaining names supplied by the top four groups of post offices.

Interestingly enough, while the number of post offices drawn into the sample is only 3 percent of the total, the number of bulk-fee payers reported by these post offices is 68 percent of the total. Furthermore, 1 percent of the post offices in the sample—those whose total annual receipts are $1 million or more—contain 60 percent of all bulk-fee payers.

This panel will be supplemented by about 2,000 firms which paid the bulk fee for the first time in 1959, this portion of the sample also being drawn from names supplied by the post offices.

In addition to the questionnaire for users of bulk third-class mail, we also have a separate questionnaire for producers and processors of the advertising, that is, the printing industry and the lettershop industry.

The question has arisen as to the possibility of a strong impact on these industries because, of course, one way of compensating for the increased third-class rate would be to reduce the cost or volume of the printed material. A significant reduction of this sort would affect industries already operating on a low margin of profit.

I wish to make it quite clear that I am not saying that has happened, but rather that the possibility has caused special attention to be given to these industries. Consequently, a special questionnaire was designed for them and will be mailed to a carefully selected sample.

The questions include the ones needed to identify and classify the activity—kind of business, number of employees, and gross receipts. Respondents will also be asked to give the percentage of gross receipts attributed to production and processing of direct-mail pieces in each of the two 6-month periods surveyed. Other questions cover changes in the size, weight, and grade of paper used; changes in envelopes; changes in the use of color and methods of reproduction; changes in processing methods; and changes in volume.

I might add that we also have a special questionnaire for governmental users of bulk third-class mail. As you probably know States, cities, counties, and other governmental units are substantial users of bulk third-class mail.

The personal-interview portion of the survey is already underway and will continue for some time. It is, of course, not possible to cover all the industries and companies that we would like in this way, but we will interview enough people to obtain additional information about direct mail, how it functions, what it attempts to do, and what part of our economy it represents.

We called upon the heads of the 25 industry divisions in the Business and Defense Services Administration, as well as of other Government agencies of long experience with industry, to aid us in selecting companies for personal interviews. These case histories are not to be used for drawing general conclusions but rather to supply background material.

We have received splendid cooperation from the people we have already seen. The information obtained in the interviews will be held in confidence. We will not publish company names, and we expect to show to the people interviewed a copy of the material pertaining to their companies before it is used in the study. While this is largely background material, we believe it will be helpful to anyone interested in gaining a fuller understanding of the direct-mail advertising.

If the direct-mail industry and the Congress wish it there is little doubt in my mind that the statistics developed through this survey can be kept current, no matter what the future rate picture may be. The importance of this industry would argue in favor of such action.

The economic climate today is far different from that in which the legislative language was drafted. This is bound to have its effects on the results we obtain but we will do our best to weigh our findings so that they will be valid no matter what course the economy takes.

I hope that I have given you a better underatanding of the role the Business and Defense Services Administration plays. We cannot be an effective link between Government and industry without mutual cooperation and exchange of information. We want you to bring your problems to us and to keep us informed of trends in your industries. We hope that we can call upon you for information, advice, and assistance; that the link between us will be a two-way street.

One of our most helpful and useful sources of information are the trade associations located in Washington. I could not but help being aware of the role that was played by your organization, demonstrating the need for this study. By the time it has been completed—hundreds of men in industry and Government will have participated in making it as complete, as reliable, and as constructive as possible.

In closing I would like to say this to all of you: Consider the Printing and Publishing Industries Division of BDSA your home in Government. When you are in Washington, I hope you will call on us.

Milk Industry Problems

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. STEED. Mr. Speaker, I desire to commend my colleague from Colorado, Mr. JOHNSON, and to take this opportunity of again thanking him on behalf of the subcommittee studying milk industry problems for his cooperation during the time we have worked on the situation in the Denver area.

The consumers in his State have a champion who has been most effective in looking after their interests, both for the present and for the long range. Our work has been made a great deal easier and certainly more effective by his timely, able, and courageous assistance. He is due much credit for the progress already made.

I also want to commend Mr. Scott Daniels, executive director of the National Independent Dairy Association, for the great help he has rendered this committee. In Denver, as in many other areas, his help has made important and essential contributions to the work of the committee. I have come to know him as another true champion for the American free enterprise system in its finest sense.

We know from the overwhelming facts that have been given to us that our dairy industry is under heavy pressure toward monopoly. If this trend is not stopped, the time is coming when milk consumers will be at the mercy of monopolistic interests. Milk is far too important to be permitted such a fate. Men like Congressman JOHNSON and Mr. Daniels are greatly needed in our endeavors to keep the milk industry on a free competitive basis.

Statement Concerning Gering Valley

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to comment briefly on one of the most important projects in Nebraska contained in the recently approved public works appropriations bill. I refer to the Gering-Mitchell Valley flood control project for which at long last the Congress has appropriated $341,250 to start construction work.

This project has been authorized for 15 years. Its construction is long overdue.

Mr. Speaker, had the Congress acted 4 years ago to provide construction money, this project would have cost less than $1 million. As it is we will have to expend in the vicinity of $4 million to complete the project by beginning now. In the event flooding conditions come during the construction period it is possible that these costs would rise rapidly.

During the course of hearings on the public works appropriation bill, information was brought out both in the House and before the Senate that if this project is not started now and completed within the next 3 to 4 years, it will be too late to do anything at all about the Gering Valley. A great deal of very valuable, very productive land will be

washed away completely. The property will become completely valueless. And in an era when our population increase foretells of a time when this Nation will be a have-not nation as far as food production is concerned, the loss of this valuable land would be a national tragedy instead of merely a local one. We cannot allow that to happen.

The U.S.A. From the Air

EXTENSION OF REMARKS
OF
HON. GALE W. McGEE
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the April 1950 issue of Harper's magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE U.S.A. FROM THE AIR

(By Wolfgang Langewiesche) [1]

I

I used to think of the U.S.A. as one thinks of a golf course. It was simply terrain on which to practice your technique. The technique was "cross-country flight"; XC for short, when you wrote it up afterward in your log book. Flight was much newer then, in the early 1930's. Merely to circle the airport still filled you, every last cubic inch of you, with a sensation that was like nothing else. And to quit circling, to head out straight cross-country—that was flight, raised to the second power. Boy.

I used to look down, in those ancient days, and watch my fat little rubber tire hang idle over the depth. It went across somebody's roof: no jolt. Treetops; a highway; then a river. You flew out from over land to over water; no sink. No coolness. Imagine that: walking on land and water like a god. What a machine. And what a pilot (me). Bring on your skyscrapers, so I can top them. Bring on your hills, so I can cross them. Bring on your distances, and I shall eat them up. Bring on your country, and I shall ignore it.

Well, you find out.

I remember my first flight over New England. Ignore it? I wished I could. Instead, I thought: "What horrible country." You see, the thing about XC was—that fat little tire was always looking for a field to roll on. The engine might quit any time: that was official doctrine. It never did quit, even then—much less now. But the fear of it was carefully drilled into you. Any time at all, in the midst of the most delicate figure 8, when you were trying to make some farmer's barn hold still off your wing tip, bang, would come a tremendous silence as your instructor pulled back the throttle and said: "Forced landing." Then you quickly picked a field (really you were supposed to have one all picked out: always have a field in mind) and you went gliding down in a long S-turn—through the key position—down across the trees—down into the field—down until the grass began to tickle your tires. Then he was kind enough to open the throttle for you and let you climb out. To shoot a good forced landing was considered about three-quarters of the art of flying. And so you judged country mostly by its fields.

New England rated low indeed. Those gloomy hills, all wooded. Those nasty little pastures with the naked rock poking up right through the middle. Those ugly stone walls around every plot of land—just imagine you overshot and rolled into one of those. Horrible country. Not a decent field in sight. Then I caught myself: What are you saying, man? You are supposed to find this charming. Don't you have any education? This is the cradle. * * * Hell, you know it's charming. Look at that white steeple nestled in the green. Trouble with you, you can't take it; you're scared. But of course I was right in the first place: it was a horribly tough country they picked to settle; there was no decent field, nor a flat place to put one. They themselves called it a howling wilderness, and it very nearly starved them to death. Besides, most of them left it, first chance they got, for points west.

How different North Dakota felt. I had spent a week flying in the canyons of Idaho—a mountainside off each wing tip, a wild river below—with the thought of engine failure strictly repressed, of course: no use thinking about it where you simply can't afford one. I had flown down into North Dakota through night, a black night, with nothing visible but the beacons along the airway; and again the forced landing idea had been switched off—there are lots of badlands on that route. Toward morning, not to get too low on gas, I had sat down on an auxiliary field to wait for daylight. It was deserted. (Those fields are not built to serve a town, but to serve the airway—they sit there, every 100 miles or so, their boundaries outlined by lights, just in case.) Parked there under the beacon tower, I had fallen asleep right in the airplane.

I woke up, and it was daylight. I started her up, and took off. Still dull in mind, I cleared the fence. There it was: landings unlimited. You cleared the fence, and you had cleared everything. As far as the eye could see, big fields—flat as a table and bigger than airports. And smoothly cultivated: where farm machinery can roll, an airplane tire can also roll. It was fall, and most of them were stubble. The nice, combed-looking stubble of machine-sown wheat: a guaranteed surface, along with unlimited room.

"This," I thought, "is 100 percent OK. This is the rose without the thorn; this is the meal that is all dessert; this goes in easy." In fact, I swear I had a strong sensation as if I were a little boy again and had just been handed a dish of whipped cream with chocolate.

"I think I'll just roll my wheels on that one." I had only flown a minute, but why not? "I'll fly straight for exactly 3 minutes, and then close my throttle." Nothing to it—just glide straight ahead. I thought it would be fun to roll up to a fence and jump it and sit right down again, so I did. Why not? "I think I'll spiral up to 1,000 feet and cut my ignition and stop my prop." Done.

Now, I don't claim it is a red-hot and brand-new idea that North Dakota is different from New England. I tell it to show you how a pilot reacts to the country; he does react; he can't help it. And not as a tourist; he is not ever "just looking." He has business with the country, and the country with him.

I once had a piece of business with the Missouri River. I had undertaken to fly a small seaplane from coast to coast; up the Missouri, down the Columbia. Don't ask me why; I guess it was to prove it could be done. It was a short-range ship. You had to gas up often. Each time, you became a boat. For a little while you were a river pilot, back in Mark Twain's day. True, Mark Twain piloted on the Mississippi. But he himself says that the Missouri is twice as tricky, and a Missouri pilot twice as much of a pilot.

"The river was an awful solitude, then," wrote Mark Twain in 1883, as of the early French explorers' day. "And it is now, over most of its stretch." It still is, old man. Flood plain with willows; for miles on either side, it's empty. I would always land near a bridge, because only for a bridge would a road come to the river; and only on a road could I hope to get to a filling station—a 5-gallon can in each hand. But a bridge is an obstruction, and near it may be that fearful seaplane trap, an electric wire strung across the river. (Hard to see.) So I would land a little way off, or what looked from the air like a little way. Once on the water, I would be deep in that solitude, the bridge out of sight around the bend.

The water was silent, oil-like, smooth, a very thin mud. How muddy it was. You got your hands wet, handling the ropes; then the western air would dry them, and they were suddenly caked with a thin layer of dry mud; you'd rub your hands, and it would come off as a fine dust.

Now to get back to the bridge you had to "read the river." But from 5 feet up, not from the lordly pilothouse atop the Texas deck. Those ripples, did they mean a puff of wind or a shallow place? This upwelling here, that was a log stuck under the water. It might rip your pontoons open. (You call that a sleeper.) There was also the kind of log that is caught on one end; the other end slowly comes out of the water, and then the current pushes it down again. (That you call a sawyer.)

My pontoons drew about 8 inches of water—about the same as the old river steamboats. I ran aground many times. The old steamboats did, too. They would then walk—put a spar overboard and stem it against the bottom and push. I did much the same—rolled up my trousers, waded out, and lifted on one wingtip to push one pontoon forward a few feet; then waded over to the other side and pushed the other one forward. Hard, wet, slow work. "Mark Twain?" I used to think: "Mark O-point-twain."

So, deep in the 20th century, air age and all, you personally met this continent: Its mountains, plains, rivers. You were an emigrant, thinking about decent fields. You were a river pilot or a canal man or a wagoner or a mountain man. You walked down Fifth Avenue thinking—hey, you people, I know a way to get across the Rockies with one single hump that you can clear at 6,000 feet. (Maria's Pass, up near Glacier Park—I had dragged that seaplane through there.) Of course nobody cared—you were a hundred years out of step.

For instance, about the Alleghenies. To us they still were what they once had been to everybody—a big barrier. They are not high, but if there isn't some weather cooking on one side, its' cooking on the other, or on the ridges; they get moisture from the Atlantic and the Great Lakes and the gulf. In those days, few pilots knew how to fly blind; none of us small fry did. So, when the clouds were down on the ridges, the barrier was closed.

I remember my first trip over the Hell-Stretch—where the New York-Cleveland airway goes across the ridges. (The early air-mail pilots had called it that.) That day, a low, gray, ragged ceiling kept us low. In the low perspective, the valleys and the towns are hidden. You don't realize there are really quite decent fields down in the river bottoms. All you see is an endless forest, coming at you in waves—a green blue, melancholy. Some of the waves were high. We

[1] An early light-plane enthusiast and now a research pilot for the Kollsman Instrument Division of Square D Co., Wolfgang Langewiesche came to America from Germany in the twenties. He has written 17 articles for Harper's since 1941.

tried to climb, and bits of cloud started slapping us in the face. It was not good.

Well, it's not supposed to be good. I found this later in a book. Talleyrand had once traveled this same stretch. He had crashed through these very woods under us. The branches slapped him in the face as the clouds now slapped us. He lost sight of his servant. He called out, "Are you here?" And the fellow answered, "Unfortunately, my lord, I am." That seems to be the built-in feeling of that country. I now looked at my passenger, sayings, with my eyebrows: "Are you still with me?" He pointed down, he pointed all around, and then held his nose.

You discovered anew, for yourself, things that once had to be discovered. For example (still talking about the Alleghenies), that you could fly at water level from the seaboard to the Middle West: you got right on top of the historic Erie Canal. That way, you could squeak through under clouds that were solid on the hills. Another bad-weather route went through Pennsylvania. Up the Susquehanna River to Lock Haven; up another valley to Altoona. This far, you could fly even if perhaps it was like a tunnel, valley sides with the ceiling across it: there were nice long fields along the river. At Altoona you sat down.

You had now only one ridge between you and Johnstown, which is the headwaters of the Ohio. So, you sat and smoked cigarettes and watched the ridge. When it came out of the clouds, you hopped into your ship, spiraled up at wide-open throttle, and went for that ridge. On top, you picked up the main line of the Pennsylvania railroad. You got right on the quadruple rail and scooted down the incline into Johnstown. There, you got on the river and wound your way out to more open country. Clever, isn't it? Well, I found out this was exactly the idea of the old Pennsylvania Canal—an engineering wonder that flourished just before the railroad age. They took the barges to the very same spot. Then they had a marine railway that hauled the barges bodily up that same ridge, and down that same incline on the other side. There they could float away to points west. It goes to show: a place sends out something like a magnetic field—a field of ideas. You fly through there, and those ideas generate in your mind.

II

Now, flying has changed. You have more speed, more radio, perhaps two engines. Even with only one, the forced landing obsession has faded out. You try again to treat the country with contempt. You try to think of it as pure expanse—graph paper, yours to make lines on. But it still doesn't work out that way. The country still makes itself felt. In fact, speed sometimes makes you feel it more. It's like a phonograph record: the needle has to slide to bring out the tune.

I like to see east change to west. I like that moment, on the New York-Pittsburgh-St. Louis route, when you get to the last ridge, called Laurel Ridge. There, at the end, the dislikable Alleghenies are almost real mountains. On the brow of the ridge, facing west, there is a bald, stony strip, scoured clean by the west winds and the sleet and the rain. An airway beacon stands up there, alone. Then the stuff falls steeply away under you. You slide out across there, and you enter the Middle West. It feels different. It feels easylike. Not that the country turns nice right away. Right around Pittsburgh, it is a tortuous jumble—small, steep hills, slag fields, deep-cut railroad tracks, lots of smoke. But you know it will calm down. A pilot gets the habit of thinking ahead of the airplane. The now and here is no longer so important in the faster airplane: Now and here, the engine percolates, the weather is OK, the gadgets work, you have lots of gas. What's ahead is what matters. And so you study cloud shapes, listen to weather reports, and feel out the situation ahead. And there, you know, comes flat country, come open fields, come comfortable cities, big airports, runways with clear approaches. The squeeze, that makes the easterner elbowy and unfriendly, squeezes also in flying. In the East, airports are small, obstructed by power lines, hills, gas works, squeezed in between the cemeteries and the insane asylums. West of the Alleghenies, they give you room.

So now, if the ceiling is low, you can stay under it and push on; you know the terrain gets better all the time. Or you can go on top of the overcast; you know that when you want to get down, no hills will stick up into a low ceiling. And so you feel, ahead of time, way up in the air, that certain ease and plenty of the Middle West.

Presently, you pick up the section lines. Now that is something. It is really one of the odd sights of the world, and it is strictly an air sight: a whole country laid out in a mathematical gridwork, in sections 1 mile square each; exact, straight sided, lined up in endless lanes that run precisely—and I mean precisely—north-south and east-west. It makes the country look like a giant real-estate development, which it is. One section has 640 acres. A quarter section, 160 acres, is the historical homestead. You sold your goods, you crossed the sea somehow, and they gave you that. "Land-office business" used to be done in this matter, and no wonder.

Get this right. These section lines are not something that an attentive eye can distinguish in the landscape. They are the landscape. Compared to this gridwork, the natural landscape—flat here, a little rolling there, a river valley, a pond—just can't quite catch your attention. In fact, the natural landscape has long fitted itself to this scheme. A man has a wood lot, his neighbor a cornfield; the boundary between woods and field is, of course, the fence line; but the fence line is part of the grid. More than people know, all their coming and going is channeled by that grid. Their roads—except for the biggest highways—run and jog along the grid. In fact, from the air, the lines are mostly marked by roads.

For flying, the section lines are wonderful. They make this country in reality just what a pilot wants country to be—graph paper. You can time your shadow with a stopwatch across two lines, and get your exact speed. You can head the airplane down a section line and check your compass. But you hardly need a compass. You simply draw your course on the map and see what angle it makes. Then you cross the sections at the same angle. You can't miss. If you want to go exactly west, you get on a fence and follow it. The fence presently leaves off; the line becomes a highway. The highway curves off, but the line goes on as a fence again, as a lane between fields, as a farm road, then perhaps as the main street of a town, a highway again. It is easy on the brain.

It's true what the foreigners say—it all looks pretty much alike. A town comes out of the haze, moves through below you, falls back—only (you sometimes think) to run through some secret passageway and plant itself again in front of you.

Flying, you tell these towns apart as you tell stars—by constellation. This one, of about the fourth magnitude, with a smaller one to the north of it—that must be this one on the map. Those three-in-line, that's those.

What is it like, this American town? Well it isn't crowned by a castle, that's for sure; nor by a cathedral either. By an insurance skyscraper, more likely; or by a hotel, perhaps; but most likely by nothing. It is not fortified, and never was: no crowded old town, no ring-shaped boulevard where the walls used to be. Neither is it like a town I once saw in the South—a company town with a street plan like the branches of a tree with the mill at the root. And it is not a village.

It is always a small city. It is laid out with streets at right angles, and has at its center a little downtown, perhaps only two streets crossing each other, perhaps a few blocks. In there, it's naked and stony; it achieves a certain businesslike ugliness. There is a well-developed parking problem. And at night, that downtown core glows with bright lights and red neon signs, where the seller entertains the buyer and the boy the girl.

The rest is quiet streets with little houses and lots of trees. It fades out into the farmland in an indifferent way—streets and avenues already marked out on the ground, but still empty. You can tell—it expects to grow. Add a few blocks on the outskirts, and the downtown gets a bit more stony. Keep adding, and Farmerville becomes Bloomington, Bloomington becomes Springfield, Springfield becomes, say, Indianapolis.

There is always a wrong side of the tracks to the town. In the thirties, when the price of paint made a bigger difference, this used to show up plainly. There is always a giant high school, and certain other standard furniture—a gasoline bulk plant, race track, institution (may be a veterans' hospital, may be a teachers college, may be a county poorhouse). These things are marked on the flying maps, not because it is remarkable that a town should have them, but because it helps you tell the towns apart. This town has its high school at the east end. If this is the town I think it is, there should be an institution on the north edge. Sure, there it is. You make a pencil mark on the map and fly on.

Somewhere now, about a third of the way across the country, you notice something has changed. The fields are bigger; the air is clearer. Things have opened up. There is less junk around the landscape—I mean by junk, I guess, things of which a pilot cannot immediately see the sense and purpose: a clump of trees here, a different-colored patch of field there, an old abandoned factory building—that sort of thing. The landscape is tidier. Each farmhouse sits on its land as if it had just been set there; each fence shows straight and strong, as if it had just been strung. Each town seems to say, "Look, I am a town." Things have a sharper edge to them.

What's happened is that you have crossed the line between the forest and the prairie—the line that was there in Indian days. The white man has cleared the forest and plowed the prairie, and has made them both superficially alike—both farmland. But still the difference shows. Maybe it's the different color of the soil. Maybe it's that up to here, the country has been darkened by the last poor remnants of the old dark foreste—a clump of trees, a wood lot—and here the trees leave off. Maybe it is simply the drier, clearer air. At any rate, you have moved one more notch west.

Here, in the less cluttered country, your map reading must change. A town may be so small that it would rate only a circle, o, further east—here it gets the full treatment. The map shows it as a yellow area, shaped like the town's built-up area. A town may be so small that further east it wouldn't be on the map at all—here it gets at least an o, and a name. This I like. It reminds you of the way each person counts for more out West. Go west, young man, and put yourself on the map.

And I like the names of those towns. It used to be that a prince would graciously call a town after himself—Williamstown or Fred-

ericksburg or Charles' Rest, or what not. Out here, the ordinary man sat himself down, founded himself a town, and named it, by gosh, after himself. I like to check them as I fly. Here comes Charlie. Howdy, Riley. Wie geht's, Hoehne. Hello, Kline. Landusky, Henderson, Milliken, Goessel, Weir, Swink, McPhee, how are you doing?

Or the man would name the town after a woman of his: Beulah, Maybell, Dolores. I had often flown over a town named Beatrice, Nebr., and I had thought: "Poor Beatrice, whoever you were (farmer's wife? railroad president's daughter?)—that really wasn't much of a present to give a woman." It is a nice town, and all that, but it isn't exactly—you know—it hasn't got glamor, out here in the sun-blasted country between Omaha and Wichita. (It hasn't got glamor if you were over Manhattan yesterday and will be over the Hollywood hills tomorrow.) Well, I came over Beatrice again one night. Now people don't know this, but a town at night is the most beautiful thing made by man in the past hundred years—especially an American town, where they don't spare the current. A brave sight, too, out there, where towns are far apart, with a lot of darkness in between. People went out into this vastness, built a home town here, and lit all those lights. A proud sight, just by being there. And I thought: "Beatrice, wherever you are now, you ought to be proud. It looks real nice."

Now, halfway across the country come the Great Plains. It happens fast, in a matter of minutes. A grassy butte sticks up right through the fields. A bit of badlands shows up. The pattern of the farms opens up to detour around it and comes together again. A gully shows up—Grand Canyon in miniature. You know the signs. You are getting west another notch. You hitch yourself up in your seat and take new notice.

Ahead the country rises a step, and the step is a bluff: its face is eroded; it grins at you like the teeth of a skull. As you pass over, the farms fall back. The last you see of them is a mile-square wheatfield draped over some hump, abandoned. It reminds you of a wrecked ship on a beach—tried to go where it should not be, and got in trouble. Ahead are the vast khaki plains, rising toward the west. There's nothing to see but vastness, clarity of air, distance. The sun glistens on a window of some ranch house 50 miles away. A train, very far away, is a small black thing under a smoke plume, like a ship at sea.

You head straight out there, and the world fades out: badlands, the dry, bare hills. That fellow yammering about the "lone prairie"—he's been there. You suddenly remember you have no water aboard, no strong shoes, no big hat. You are lucky if you see a ranch hidden deep down in some secret canyon in a patch of green. More likely, you see next to nothing; a barbed wire fence, some cattle, a windmill pumping beside a water hole.

You fall in line and follow the railroad. Everybody and everything else does, in that country; even the civil airways. Now the U.S.A. slenders down to a mere strip—river-plus-railroad-plus-highway. Along this strip are the irrigated fields, the towns, the airports. And the railroad is the great sight—doubly great by default of everything else. Its long straightaways and mathematical curves, the way it goes on and on through empty country up toward the West.

Finally these bright yellow-green plains rise under you like a wave about to break; over the crest comes a white spot that turns out to be snow. There, between two high mountains, is a gateway, where the river comes out. Toward this gate you have been steering all along; so was the railroad; so was the highway; so were the radio beams along the airway. You go in through that gate, and East has changed to West.

III

The air view is an honest view: "You can't kid me" is your attitude as you look down. "So that's how it is." For example, the great famous dams—Hoover, Norris, Grand Coulee. In the ground view, the thing you marvel at is how big they are. The glamor photographs show them that way—small human figures, dwarfed by this gigantic wall behind them. Well, from the air, it's the other way round. It strikes you how small they are. Hoover Dam especially—it's actually hard to find. The eye sweeps all over the naked rock and the shores of Lake Mead before you find it—hidden down in a gulch. It makes you smile. Some boy has jammed a rock into this stream at just the right spot—and has managed to dam up one hell of a big lake. Small cause, big effect: clever little devil. And that, I'm sure, is the correct view. An engineer would say so. He would always try to build the smallest possible dam, not the biggest.

Or, New York City. What's it all about? On the ground, why you know: Time, Life, Look, Quick, Flair, and Harper's; Batten, Barton, Durstine & Osborn; Merrill Lynch, Pierce, Fenner & Beane; NBC, CBS, ABC; words, ideas, paper of all sorts. But, from the air, I regret to state, New York looks like a place where steamships tie up to piers. The piers catch your eye, not Radio City or Wall Street skyscrapers. Manhattan, with all those tentacles sticking out into the water, looks like some biological exhibit—some organ specially developed to draw nourishment from the sea.

The foreground doesn't hide the background. Looking down at a place from the air, you see everything, literally, that's there. You may not notice everything; you may not understand the half of it; but at least you've seen it. What's this? Why does it look so odd? It's been amusing, for example, to watch the college campuses; the old fake Gothic, ivy-covered; the stadium with its vast parking space; the new research factory; the rows of quonset huts. 'Taint Oxford, brother. You run your own private census all the time. This thing—why do I see more and more of this? Not much can happen in the country that you don't notice, often ahead of the papers and magazines. For example, much will be written soon about our cities, how they have grown in area, not to say exploded; how the FHA town, way out on the potato fields, is taking the place of the tenement; and so on. Why sure: pilots have seen that grow for years.

Everything people do, and perhaps everything they think, makes its mark sooner or later on the ground. (That's what reconnaissance is all about.) I used to amuse myself, looking down at Washington, by tracing the idea of checks and balances in the city plan and the shape of buildings. I've seen, in the South, a little country church with a swimming pool behind it: a fine point of theological doctrine—baptism by total immersion—clearly written into the landscape. That is the kind of writing you try to read.

The American landscape is a palimpsest. Underneath what is written in it now, in concrete and barbed wire, there is older writing.

To bring out old writing, a man might photograph a document under trick light. The same in flying. Over the forests of New England, winter light is best. The trees must be bare, so the eye is not stopped at the tree-top level. There must be snow on the forest floor, because that lights up the inside of the forest and makes it easier to look down into it.

Then you see, underneath the present-day forest, the farms of long ago. They did have decent fields there after all. Not decent to land on, but lovingly made, cleared out of the forest, carefully fenced by stone walls. Each rock once was picked up by hand, carried out of the field, carefully placed. It's said they made their children do that, to make them hard-working and God-fearing. Stern stuff. It's all under the forest. The forest is still only scrubby; but already it is full of dead trees helter-skelter, like virgin forest. The 1938 hurricane put them down, and nobody cares. History did a high-speed job here.

The second layer in this palimpsest is in strong plain writing: those section lines are the main part of it. I believe this was written by Jefferson and perhaps Rousseau, but I don't know. About this, the main feature of the U.S. landscape, it is curiously hard to find anything in books. But I have often admired this scheme. Remember—it was drawn up on paper before the country had even been explored. The lines were run before the people came: so it was literally a blueprint for a future society. I think it is a diagram of the idea of the social contract: homestead by homestead, men would sit each in his own domain free and equal: each man's domain clearly divided from his neighbor's.

I mean, it wasn't the only way they could have parceled out the country. They could have gone out there with manor houses, each with a bunch of cottages around it. (You do see some of that in the South.) They could have built villages nestling around a commons and a church. They might have built forts. Today, I think, we would build a headquarters first. There would be a row of houses; a communal water tower, housing for bachelor workers, a hospital, a recreation area. Radiating out, I imagine, would be roads, and off the roads would be the fields. The whole development would be star-shaped, and right in the center would be of course the administration building.

But they picked the layout where every man is his own boss. Even now, this is the main feature of the American landscape: The square-cornered parcels, big in the West, small in the East, big in the country, small in the cities, of which each means a man. I realize they rent 'em, they are mortgaged, they grow the stuff by Government subsidy, all that; but it is still true—the design of the landscape, seen from the air, is a design for independent men.

In the years I've been flying, I have seen the American landscape being redrawn. A third set of lines has begun to show up on top of the others—a new style. Contour plowing is an example. It makes the marble-like pattern of fields and furrows, dictated not by property lines, but by the terrain. It is a new thing—and the new thing goes right across those straight, right-angled fences. Two farms that are divided by a section line are drawn together by this joint pattern. You can tell—two men, one plan.

Strip farming, too. I remember one evening on the Montana prairie. The whole plain—those parts that were tilled at all—was in a strict rhythm of dark strips of fresh-plowed earth, yellow strips of stubble, alternating bing-bong. The sun shone on this pattern, and it almost dizzied the eye—like some fantastic checkered fabric.

That does not just happen by the chance judgments of independent operators. You could see a marshaling force at work. It was, in style, like those newsreel shots you used to see before the war, from countries since gone under, where "the youth" was doing calisthenics on the parade field. "One," and an acre of humanity was heads; "two," and it was tails. I hurry to say that I have nothing against contour plowing or strip farming. Flying gives you too vivid a view of erosion, of blowing dust, of destroyed land. I remember the first time I

saw really eroded farms, out in Nebraska, in the dry years. I said practically out loud: "Well, this, of course, has to stop." But that's just it—you see these changes in the landscape, you understand why they are made, and you can't mistake the meaning. New ideas of society are cooking here, and a blue pencil works, redrawing the old designs.

You see the same thing going on in cities. Those "housing projects." You can tell someone thinks the human resources should be stored in bins more orderly, more manageable. And bins are all they are. But the funny thing about such architecture or city planning is: It makes a lot of sense in the air view. Seen from above, straight down, the dreary mass takes on a certain rhythm, an order, even a wit. This block here, this block there, the star-shaped thing in the middle. This building brackets that one, which brackets that, and so on. The reason is, I think, that such things are conceived, sketched, approved, by someone who looks at humanity in a perspective much like a pilot's: He is way up, on the policymaking level, and he looks down on a desk.

IV

What kind of country is this, anyway? There is always a lot of fresh dirt dug up, wherever you look. Old Alexander Botts gets around with his earthworm tractor and fixes the place up to suit himself. The whole country bears the tracks of the caterpillars, the bulldozers, the listers, the middlebusters, the ditchdiggers, the power shovels, the dredges, the pipeline-laying outfits.

A superhighway goes hellbent. I mean, you can see it go. It's got this far with actual pavement, actual traffic; for another 70 miles, it is fresh-dug dirt. For still another hundred miles, it is a trace through the farmland; it's started pushing over trees, moving houses, cutting hills in two: look at it go. It gets to a river, 10 miles broad—really a branch of the ocean; you can see it's going to walk right across. The steppingstones are already laid.

Doughty said of his Arabs that they were "unfeaty." Well, then, the word for those people down there is "featy"—big operators. Even the farms are all power and precision; nothing yokelish, nothing idyllic. I like to watch the plowing as I fly over. The plow moves fast—faster than any animal could pull it. The fellow rides on it. He leaves six furrows at a time. You see results even during the brief minute that you can keep a field in sight. A brush seems to be drawing fresh brown paint across the green. The other day, 3,000 feet somewhere above the Corn Belt, we smelled something peculiar. Hot wire? Insulation searing? Quick now, check switches, check fuses, check meters, check the map for the nearest airport—shucks, it was pigs. Must have been lots of pigs, somewhere below. That's how they operate. When they raise pigs, they raise pigs.

They make mistakes too; they make big ones—and are not afraid to write them off. Witness those dead wheatfields on the plains, those ghost towns, those abandoned railroads. There's a canal across Florida—a big, deep, ship canal. Only it doesn't really go across, it exists only in sections. They changed their minds.

They get big results. At least they get big production. I remember India from the air. India is one of the few other places in the world that has any real farmland. (Most of the world, after all, is desert or mountain or jungle or ice or ocean.) Well, it was all there: the fields, vast plains of them, just like here. The furrows, weakly scratched perhaps and a bit wavy, but just the same, it was careful, painstaking farming. It was all there but the product. No corrals full of cattle; no grain elevators; hardly any roads to carry the stuff away: most of the stuff gets eaten right in the villages; there is not enough net production to make visible signs in the landscape.

Over here, you can see the stuff: the wheat of the prairies shows even in upstate New York, along the St. Lawrence, in huge grain elevators with steamships docked at their base. Through much of the West, grain elevators stand like skyscrapers. Cattle? Acres of cattle, brown and white mottled, in the corrals and stockyards. Fruit? By the trainload, going east from California. Cotton—bales in huge piles. Iron ore: All the railroad tracks near Lake Superior are covered with the rust-colored dust, spilled off the cars; on the Great Lakes, the ore boats make a steady procession all summer long.

It is a shirt-sleeve country. Gracious living, so-called, has made few traces in the landscape. You do see places on the eastern seaboard that make you think: "Hey, Mack, who do you think you are? Come out from behind that chateau. I knew you when you used to eat down at Joe's Diner." Well, half an hour west of tidewater, all nonsense stops, and it doesn't start again till you reach Hollywood.

The cities, too, such monsters as Chicago, turn out to be, when you fly over them, still mostly earth, with light, wooden, modest houses on it. Sometimes this still strikes me: If you had asked me when I was a boy in Europe, I would have said that the Americans (such as are not cowboys) must of course live in some superurban way, in penthouses among the skyscrapers. Somehow it pleases me that they don't. Those factories that glow from inside at night with bluish light; those highways—the masters of them live in little houses up some tree-lined street.

The Outlook for Legislation That Will Affect Business in 1960

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. WILSON. Mr. Speaker, one of the most articulate spokesmen in the field of economics is our esteemed colleague from Missouri, the Honorable THOMAS B. CURTIS. Mr. CURTIS recently reviewed the legislative action we have been engaged in during this session of the 86th Congress and speculates on what we might expect in the next session.

Mr. Speaker, under leave to extend my remarks, following are the remarks by the gentleman from Missouri which I am sure will be most interesting and informative to all:

THE OUTLOOK FOR LEGISLATION THAT WILL AFFECT BUSINESS IN 1960

(By Hon. THOMAS B. CURTIS of Missouri)

I am always hesitant about making any political forecasts partywise or legislativewise. What happened and, more startling, what didn't happen in the almost adjourned 1st session of the 86th Congress makes me more hesitant than ever about predicting what the 2d session of the 86th Congress will do.

However, one does have a better idea of what a second session of a Congress will do than a first session, if only for the reason that a second session begins where the first session left off and does not start anew. Bills that were introduced in the first session do not have to be reintroduced. Bills that were reported out of committee or passed by one body remain in status quo and do not have to retrace again their legislative steps.

A great deal of what will happen depends upon the economic condition of the Nation. Those who erroneously judged what the first session would produce, I believe did so because they had not anticipated the rather unexpected rate of recovery from the recession. However, there is little question that this rapid recovery enabled President Eisenhower to maintain his position of cutting back on new appropriations contemplated by the Congress and took the steam out of the bold and imaginative program that majority leader Senator LYNDON JOHNSON announced for the Congress in January 1959.

A great deal of what the next Congress will do depends upon the concern and interest shown by the people. Certainly there would have been no Landrum-Griffin Labor Act if the people, by and large, had not shown an unexpected interest in anti-labor-racketeering legislation. I used the adjective "unexpected" advisedly, because for several months the Congress dragged through its hearings and its marking up a labor management bill without any political leaders of the Congress seemingly aware of the fact that the people were deeply concerned about what the Congress was or was not doing. It is perfectly true that President Eisenhower, the press, and radio and television commentators did an unusually good job of simplifying in a rather accurate manner what the true and somewhat complicated issues were, but if the people had not been interested in the matter I am satisfied that the news media would have drifted off to reporting other issues with which they thought the people might be concerned.

I take the trouble to develop this thought a bit because you gentlemen here, and your counterparts throughout the Nation, have it in your power to no little degree to determine what the legislation affecting business for 1960 will be.

Business (as a whole) showed no concern about three pieces of legislation passed in the last session of the Congress which, in my opinion, deeply affected all American business. The only concern shown was by the businesses immediately affected by the three pieces of legislation. The complexion of the private enterprise system was considerably affected by these measures.

As a politician and a legislator, I have become quite conscious of a politically active and surprisingly powerful group who do concern themselves with the more lasting effects of specific pieces of legislation upon the complexion of the private enterprise system. The difficulty is, as far as I am concerned, that this group believes that a federally planned economy is necessary to cope with the problems that our society faces today and, accordingly, it promotes any bit of legislation which moves our society closer to this goal. I think it is necessary for those who believe that better economic decisions are reached through the interplay in a free and competitive marketplace than through bureaucratic planning and decision to be more politically active in promoting this basic idea. To do this, proposed legislation must be analyzed to determine whether it is good or bad in attaining this goal and the analysis publicized for political effect.

The first law was the increase of taxation on the life insurance companies by about 90 percent. Why does this concern the private enterprise system? Because the pressures on the Congress to expand the social security program by increasing benefits and increasing social security taxes to pay for these benefits are directly related to the extent to which the private insurance companies can handle the job of providing for

the retirement of our people and spreading the risks to them from death and disability. There is no question that the ability of the private insurance companies to meet the social problems I have referred to has been seriously cut down as a result of this tax increase. The insurance industry can live with the taxload, but it will find it difficult to keep pace with the growing needs of our people in these areas. In essence, we are merely substituting Federal Government capital formation and bureaucratic administration for private capital formation and private administration.

The second law was the extension of the Renegotiations Act. Why did this law effect the private enterprise system and not just the aviation companies who claimed to be hurt by its existence and its administration? Because this law sets the entire climate for doing business with the Military Establishment which spends the bulk of the Federal moneys for goods and services. The present procurement practices of the Federal Government, affected as they are, by the Renegotiations Act are not in accord with the basic principles of a free and competitive market. Indeed, they tend to weaken and destroy competition in the marketplace and substitute in its stead competition in a bureaucracy.

The third law was the cut in the excise tax on telephones. Why should a relatively minor cut in an excise tax in an isolated area affect all business? Primarily because it was one other break in the line against tax reduction until basic reform and tax reduction can be brought about. Last year it was the railroads and the truckers who broke the line; this year the telephone companies. Are we to presume that these two excises were the most economically damaging taxes or tax rates in our Federal tax system? Or are we to conclude, as I am afraid we must, that these were the two taxes concerning which the most political pressure was generated for their easing? Secondarily, the telephone excise-tax cut, like the freight excise-tax cut the year before, was accomplished at the sacrifice of important constitutional and congressional procedures which, from a practical standpoint, means much to business. Both of these cuts were accomplished by an amendment in the Senate to a House tax bill on another subject. Under the Constitution, the House alone can originate tax legislation, and, under proper congressional procedure, only amendments germane to that House bill can be made by the Senate. Under Senate procedures, there is no way of protecting a tax bill on the floor of the Senate, as there is in the House, through the granting of the traditional closed rule against all amendments by the Rules Committee. The floodgates of Senate-originated tax legislation through improper amendments to House bills have been opened up by both the railroads and the telephone companies in their ill-considered haste to help their own causes. Along with the Senate amendment to cut back the telephone excise tax, another Senate amendment to eliminate the stock-dividend credit almost prevailed. If this had been accomplished, the limited good attained in shifting some investment capital in the private sector of our economy would too quickly have been lost. I know nothing that would have been more damaging to the private-enterprise system if this had occurred. Business should examine congressional procedures and also the composition of the present 25-member House Ways and Means Committee to determine whether it is to their interest to continue to undermine the time-tested and beneficial procedure which vests the taxing powers essentially in the Ways and Means Committee of the House of Representatives.

To recapitulate, what happens in the 2d session of the 86th Congress which affects business depends greatly upon the economic well-being of the country. It also depends upon what businessmen themselves do or do not do.

There are some small clouds on the horizon which should alert us to the possibility that 1960 will not be the great boom year presently predicted. However, if 1960 does live up to its expectations, I do not believe there will be very much legislation which specifically affects business passed. There will be no tax revision or tax reduction of any consequence. I regret to make this prediction, because I feel very strongly that tax revision is badly needed. Indeed, if basic tax reform does not come soon, we are going to have another recession, largely as a result of our tax structure. The hearings on basic tax reform this year that the Ways and Means Committee has scheduled this fall will be as unproductive legislative-wise as were the hearings the committee held the first session. The Treasury Department still remains unconvinced that there is such a thing as the law of diminishing returns in taxation and looks at each proposed tax revision which lowers a rate or removes an item from the tax base, even though the rate or the item clearly impedes healthy economic growth, as a loss of tax revenue. Even though our knowledge of economics is still quite primitive, surely the gross underestimates and overestimates of Federal revenues by the Treasury Department over a period of years, resulting from its failure to estimate economic growth or recession accurately, should convince Treasury that economic growth alone produces billions of dollars of additional revenue and recession cuts out billions of dollars of revenue.

There is no question in my mind that the Congress will take the interest ceiling off long-term Federal bonds. Possibly we may not even wait for the second session of Congress for this to come about. The money market may become so acute in the next month that a special session will be called to accomplish this purpose. The failure of the Congress to act responsibly in the field of Federal debt management by giving to President Eisenhower the power he requested to sell long-term Federal bonds in the marketplace has produced one of the clouds on the economic horizon that I mentioned.

It is fantastic that the Democratic leaders of the Congress should be willing to risk the economic health of our country in the hopes of maintaining a public image they believe their party has of being against high interest rates. In the first place, if this image exists, it is based upon illusion—not reality—and, therefore, cannot long remain. In the second place, refusing to face up to reality will cause higher interest rates than necessary. The large Federal debts resulting from continued deficit financing cause high interest rates, and further deficit financing will make it worse. Yet, up to the present, a do-nothing course is the one the Democratic leaders of the Congress have steered.

I have mentioned the pressures on the Congress to expand the social security program. There are two basic areas in which the increase will come about: (1) Raising the base wage upon which social security taxes are based. The theory is that since the program was first enacted the average wage in the United States has increased greater than the previous increase made in the social security base wages; (2) extending the coverage to include hospitalization and medical costs (the Forand bill). At the present time I regretfully predict that legislation along both these lines will probably be enacted at the next session of the Congress. Social security taxes will be increased, the increase—as usual—to go into effect after the 1960 elections, the increased benefits to go into effect shortly before. All of this increased tax will, of course, be reflected rather quickly in an increase in the cost of living index.

Inflation is apt to be out in the open before the second session is too far along. In this event stand-by controls over credits and some prices probably will be voted. The President probably would veto the bill and the veto be unsustained.

New Federal appropriations will be stepped up and the Federal expenditure rate will be increased. Through juggled bookkeeping, however, a semblance of a balanced budget will be presented. The net result, however, will be inflationary because expenditures will exceed revenues.

There will probably be some legislation liberalizing the tax treatment on foreign investment, but there will be no extension of the Western Hemisphere Trading Corporation Act with its 14 percent tax differential to others areas of the world.

Regrettably, there still will be no sensible farm program. Nor will there be coordination of the various foreign aid programs. There may be some real steps taken toward military unifications in the procurement and distribution field, but there will be little movement of the Federal Government and, in particular, the military out of the fields of private enterprise they have usurped. Twenty-six and one-half billion dollars of military surpluses will be dumped at the same time we are generating more surpluses through inefficiency and triplicate procurement procedures.

There probably will be a correction of the Small Business Lending Corporation Act to permit holding companies to enter the field. There probably will be an extension of the investment trust tax treatment to include equity holdings in real estate.

There probably will be some increase in minimum wage and some extension of it. After all, this is an election year and the party in control of the Congress will go a long way to smooth down the ruffled feathers of the powerful national labor leaders. The only factor that might change this picture is our export-import picture. Competition in foreign trade is reaching the point where the national labor leaders are becoming concerned about whether our costs will hurt us in the foreign market. The attitude of the labor leaders in Western Europe where competition in the foreign trade market has always been a powerful economic force toward increased labor costs should give us an indication of what the attitude of our own labor leaders might be.

There will be great pressure basically to alter the unemployment compensation program to federalize it. I do not believe this pressure, even under the climate of an election year and the desire to placate the labor leaders, will be sufficient to change a system which has proven to be quite successful in three recessions. However, a downturn in the economy and an upturn in unemployment could rapidly change this picture.

I believe something will come out of the studies the Joint Economic Committee is presently engaged in, into the problems of price stability, maximum employment, and economic growth. My own hopes are that something will be done in the area of anti-trust legislation and not in the area of credit and price controls. I think those who believe in the private enterprise system must recognize that if the marketplace is not kept free and competitive the pressures on the political government to regulate prices administratively are vastly increased. Much is gained through self-discipline, but I find entirely too little self-discipline in our society in all phases of social and economic action.

To sum up, I think the second sessions of the Congress will produce little legislation that will affect business, primarily because President Eisenhower will veto most measures that the Congress would pass through

the political pressures that I have mentioned and, in most instances, I believe the Congress will sustain the vetoes. On the other hand, I believe there are so many basic things that need correction, to recapitulate: Tax laws, farm program, military unification, fiscally sound foreign aid—that business and the economic welfare of the Nation will be adversely affected by the predicted inaction of the second session of the 86th Congress.

Import Restrictions

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. CARLSON. Mr. President, on previous occasions I have discussed with my colleagues here on the Senate floor the problem of excessive oil imports, a matter of continuing concern to this Nation and particularly to my State of Kansas. As you know, following many, many months of careful study and deliberation, President Eisenhower instituted the mandatory oil import program under authority granted him by Congress by the so-called National Defense Amendment—section 8 of the Trade Agreements Extension Act of 1958.

The program has now been in operation about 6 months. Although it has not solved all of the problems of the independent oil producer arising from excessive imports, it has reversed the dangerous trends that were leading this Nation down the path of complete dependence on foreign oil.

Not long ago I received a copy of a letter addressed to some of my distinguished colleagues from New England in which the Independent Oil Men's Association of New England, Inc., referred to my remarks made here on the Senate floor regarding the operation of the import program.

The New England group was somewhat critical of my appraisal of the program, particularly as it applies to imports of residual fuel oil.

Understandably, there are differences of opinion on this important issue. For that reason, I wish to place in the RECORD copies of this exchange of correspondence in order that my colleagues may have the benefit of the two points of view. Also I would like to include for the RECORD a recent letter to the membership of the Independent Petroleum Association of America from its general counsel, Russell B. Brown, covering the latest developments on this matter.

Again, let me say that the program has stemmed the tide of excessive oil imports and in my opinion, is serving the overall best interest of the security and welfare of the Nation.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SEPTEMBER 8, 1959.

Senator GEORGE D. AIKEN,
Senator PRESCOTT S. BUSH,
Senate Office Building
Washington, D.C.

MY DEAR SENATORS: On page 16 of the August Oil Producer's Independent Petroleum Association of America trade magazine, there appeared an article which referred to both of you specifically.

This article claimed that Senator CARLSON's remarks on the floor of Congress were effective in reducing opposition to the mandatory oil import program, and that New England Congressmen were "reassessing their ideas about the import program." While I feel that you were probably unimpressed, although courteously attentive to the Senator's arguments, I should like to react to it in the hope that, by such, you can more easily substantiate your current position.

Senator CARLSON bases his arguments on the premise that the Presidential order of March 10 is in the best interests of national security.

We in New England do not agree with the premise and feel that the President was misinformed; hence, do not agree with the conclusions which Senator CARLSON reaches.

I should like to reiterate that oil has international significance, and in times of emergency the whole must be considered. Certainly, this is a basic tenet of any discussion of our national security needs.

Several facts indicate that the United States needs healthy available imports equally as much as, if not more than, a government dominated and protected domestic oil industry.

First, to protect our allies, the U.S. oil industry in the past, in cooperation with Venezuela, supplied oil-short Europe with product during the Suez crisis. In the future, it is entirely possible that the United States, especially (being a net importer of petroleum products), may be required to rely heavily upon neighbors for fuel, as they have on us. To ask these neighbors to find new markets now may mean that such fuel may not be available at a future time when we need it most. Obviously, we cannot even now produce all we need, let alone in such an emergency.

Second, so far as the east coast is concerned, it is shorter from Venezuela to Boston than it is from the gulf, and since neither the existing pipeline facilities nor any other means of transport are adequate to carry the needed volume of fuel, it must be concluded that the shortest line may well be the safest, in the interest of national security, so far as the industrial east coast is concerned.

Third, since the United States of America is not living in a vacuum (a fact long acknowledged by expenditures of billions of dollars, starting with the Marshall plan), we must continue to support our neighbors and help their economies flourish. The United States of America encouraged foreign investments by U.S. oil concerns, asked that these concerns be treated equitably, and cannot pull out without disrupting the economies of U.S. citizens and foreign nations.

The biggest apparent contradiction which I find in the Senator's remarks is that he credits the mandatory controls system with increasing U.S. drilling activity (manifestly because producers will get greater dollar recovery because of the import system), then turns and states there has been a net reduction in dollars recovered, and assures readers that Government surveillance will keep prices just and reasonable.

These statements do not appear to be compatible.

I also question the Senator's price analysis. He mentions the average price of all products, say in Boston. I do not know what this is, and anything short of a system whereby the price of each product sold times the number of gallons of products sold at that price in Boston, weighted properly, then grouped by refinery recovery on each product, would seem to be worthless.

I do not know where such sales figures are available on a daily basis, which is what would be needed to do the analysis properly, and I'm not sure that this procedure of adding apples and oranges is significant to the argument.

Looking at his price comparison, I should like to use figures seasonably comparable, rather than taking a February price and company it with a June price. Also, since residual oil now costs New Englanders 10 cents a barrel more today (when there is a glut of oil on the world market) than it did before the import controls (or the Senator's speech), I shall use September 1 figures for the last several years:

No. 6, Boston, tank car: 1953, $2.29; 1954, $2.19; 1955, $2.69; 1956, $2.83; 1957, $2.96; 1958, $2.46; 1959, $2.56.

While the Suez crisis understandably bid the price of No. 6 to a high level, it is equally understandable why after the crisis, under free competition, it would normally seek somewhat lower levels. What is alarming, however, is that No. 6 price should jump 10 cents a barrel between 1958 and 1959, at a time when oil is flowing out of everyone's ears. Clearly, the mandatory program is the basis for the increase.

As to the director of the program determining if price increases are just and proper, I take the liberty of stating that Uncle Sam has been unsuccessful in finding a price that is just and reasonable for the gas producer, since the famous Phillips decision of 1954 (in which 8 prior years of litigation failed to also set successful criteria for judging what is just and reasonable).

This editor sympathizes with the marginal farmer and the oil producer. However, the sympathy should end when we must support marginal operations which cost us so heavily in subsidy and control, which becomes a burden to our total citizenry, and also has the effect of stifling progressive domestic producers who cannot get themselves extricated from Government control and grow normally. This helps neither the producer nor the consumer in the long run.

Cordially,
INDEPENDENT OIL MEN'S ASSOCIATION,
WILFRED H. HALL, *Executive Secretary.*

Mr. WILFRED H. HALL,
Executive Secretary, Independent Oil Men's Association of New England, Inc., Boston, Mass.

DEAR MR. HALL: I appreciate your sending me a copy of your letter of September 8 to Senator AIKEN and Senator BUSH, wherein you take issue with my contention that the Presidential order of March 10 limiting oil imports is in the best interest of national security.

At the outset, I would like to point out that perhaps no issue has had such careful study and consideration on the part of Government as that of oil imports. You may disagree and it may be that you have information superior to that available to the Government but both the executive branch and the Congress, after several years diligent study, have concluded that it is essential in the interest of national security to encourage the exploratory and development efforts of the domestic petroleum industry and that to do so, it is necessary to place a reasonable limitation on oil imports.

The action taken by the President is extremely moderate. It is not drastic or precipitate in degree. This is evidenced by the fact that total petroleum imports during the last half of this year are estimated to average 1,630,000 barrels daily as compared with 1,750,000 barrels daily for the last 6 months of 1958. It is obvious, therefore, that any contention of drastic effect either here at home or abroad cannot be attributed to the President's oil import program.

In your letter you refer to the United States as "being a net importer of petroleum products," and conclude that as a result the United States in the future may be required to rely upon outside sources for its petroleum requirements. You further state: "Obviously, we cannot even now produce all we need."

It is true that the United States is now a net importer of petroleum products but it is erroneous to conclude that this is evidence that we are not self-sustaining. The fact is that domestic production of crude oil presently is substantially shut-in. Almost 3 million barrels daily, approximately one-third of our productive capacity to produce crude oil, is shut-in for lack of market. This is more than total imports. Of course, no one is advocating that all oil imports be eliminated.

Further in your letter you state: "We must continue to support our neighbors and help their economies flourish." I fully agree with this general proposition but in applying it I feel that we must use a degree of reason. In the first place, the domestic petroleum industry has made a very substantial contribution in carrying out the objective you state. Since World War II oil imports have roughly tripled. An examination of what has happened since 1955 is further revealing. Since then domestic production has been almost static whereas most foreign areas have enjoyed substantial increases. For example, comparing 1958 production with 1955 production, the picture is as follows:

	Percent
United States	−1.5
Venezuela	+20.5
Middle East	+31.0
Far East	+21.5

During this same period, imports into the United States from each of these areas have increased very substantially.

It seems to me that these facts demonstrate that the domestic petroleum industry has made a substantial contribution to the economies of the other oil-producing areas in the world.

You state that you find an apparent contradiction in my statements that U.S. drilling activity has increased since the mandatory oil limtation was imposed and that stability in the producers' market is still lacking. I believe that you will find that these statements are compatible. Statistics indicate that there has been some improvement in drilling activity as reflected by the fact that during 1959 the total wells drilled is some 6 percent above 1958. I am confident that this increase in activity is due to an anticipated improved market situation on the part of oil producers. It is true, however, that so far under the oil import program domestic production has not increased as expected and crude prices have declined. For these reasons, domestic producers have not had the improvement in market outlet which is essential to a sustained expansion of drilling activity.

In your letter you further state that you question my price analysis and cite the fact that residual fuel oil in September 1959 sells in Boston at $2.56 as compared with $2.46 in September 1958. You overlook, however, that the September 1959 price of $2.56 continues to be substantially below the $2.96 price in September 1957, the $2.83 price in September 1956, or the $2.69 price in September 1955. I doubt that you will find many other commodities which are selling substantially below their price of September 1955.

It appears to me that there is ample evidence that the President's oil import program has not operated to impose unreasonable prices upon consumers.

Very truly yours,

FRANK CARLSON.

INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA,
Washington, D.C.

To the Members of the Independent Petroleum Association of America:

Despite a marked improvement in general business conditions during the past year, the domestic petroleum industry continues in an unhealthy state. Low production allowables, uneconomic refinery runs, burdensome inventories of refined products and weakening prices are evidence of the industry's problem.

Although the present situation is serious, the outlook is not hopeless. No one doubts the demand for oil will increase in the future. This requres a healthy, expanding industry—not an industry weakened by depressed prices and reduced output.

Looking ahead, there are certain encouraging factors that could provide a basis for a renewed confidence and a further realization of the domestic industry's potential. The problem of burdensome inventories is being corrected by restricting crude oil production, but there is an urgent need for a more realistic level of refinery operations. An improved inventory position and increasing seasonal demands within the next 60 to 90 days should result in a substantial recovery in crude oil production from the present depressed level. It is essential that prices also recover to meet the higher costs of providing additional supplies.

Looking ahead, the mandatory import program is one of the encouraging factors. Under the program for the remaining months of this year, total imports of crude and products are scheduled to be about 200,000 barrels daily less than during the same period last year and at least 500,000 barrels daily below what they would have been had import trends continud.

Experience may prove that the current import limitations are not adequate to accomplish the long-range objective of maintaining a healthy domestic industry. Progress has been made, however, with imports no longer taking an increasing share of the market in the United States.

The need to continue the import program on a firm basis has become increasingly obvious. It is disturbing, therefore, to be faced with widespread attacks on the program and efforts to undermine its effectiveness. During recent weeks, much of this effort has been directed at the limitations on imports of residual fuel oil.

Public statements as to possible shortages of residual fuel oil have been made by officials of importing companies, such as the address last week at the meeting of the Texas Mid-Continent Oil & Gas Association by Mr. M. A. Wright, a director of Jersey Standard.

Mr. Wright stated: "The members of the oil industry who are in the heavy fuel oil business anticipate a difficult time in supplying their customers this winter. Present forecasts indicate sizable shortages under the existing import allocations."

One effect of statements such as the one above is to scare the public and thereby lessen confidence in the industry. Here is an official of one of the largest suppliers of this product telling his customers there will be a shortage. A Washington newspaper reported that Mr. Wright had "warned the country" regarding this shortage.

The loss of public confidence from such statements is reflected in the fact that Congressmen and Senators from various New England States have expressed concern as to possible residual fuel oil shortages to President Eisenhower.

I do not believe it is either justifiable or constructive to create fear and doubt in the minds of the consumers as to the ability of the industry to meet our oil requirements, particularly by people who have it within their power to avoid such shortages.

It was both gratifying and commendable that Capt. M. V. Carson, Jr., Oil Import Administrator, quickly pointed out that there is no evidence indicating any shortage will occur.

In report No. 795 of June 11, 1959, I pointed out that the evidence clearly showed there was an ample supply, rather than a shortage, of residual fuel. This was supported by the fact that residual fuel prices had declined by 20 to 30 percent during the past 2 years. Developments since June substantiate the conclusion that adequate supplies of residual are available under the import program. Further, these developments support the Government's policy of maintaining the limitations on imports of this product.

For example, prices of residual fuel continue at relatively low levels. This is reflected in the following table:

U.S. refinery market	Residual fuel oil prices per barrel				
	Feb. 1, 1957	Feb. 1, 1958	Feb. 1, 1959	June 1, 1959	Sept. 1, 1959
Gulf coast	$2.75	$2.35	$2.00	$2.00	$2.00
New York	3.30	2.75	2.37	2.37	2.37

Source: Platt's Oilgram Price Service.

These low prices are inconsistent with the existence, or even the threat, of shortages. Likewise, inventories of residual fuel oil are adequate. In fact, these inventories exceed the "desirable" levels as submitted to the Texas Railroad Commission by the executives of 24 companies including Jersey Standard last March. This testimony showed a desired level of about 50 million barrels of residual fuel stocks as of November 1, 1959. Actual inventories on September 11, when residual stocks normally are less than on November 1, amounted to 59 million barrels, or 9 million barrels above the consensus of the 24 companies as well as Jersey's own estimate.

Imports of residual fuel oil during July (the latest month for which official figures are available, provide further evidence that there is no threat of shortage or need to increase import quotas. In that month, according to a recent analysis by the Interior Department, less than 12 percent of the total allocation for the last 6 months was imported. In contrast, July imports amounted to 14 percent of the 6-month total import volume in 1957 and 1958. In other words, imports of residual fuel oil have been less than normal. This indicates there was no fear on the part of importing companies at that time of any impending shortage.

Finally, the basic purpose and underlying intent of the import program is the assurance of adequate supplies of all petroleum products for the American consumer. The program specifically guards against shortages or unreasonable prices.

There are means within the current program which assure petroleum consumers of adequate supplies at reasonable prices. They are:

1. A provision which gives the Government flexibility on a month-to-month basis to review the existing residual fuel oil allocations and revise them upward or downward as demand increases or declines.

2. Importing companies can bring in more low gravity crude and process it for a higher yield of residual.

3. As Captain Carson stated, companies which have imported their maximum under the Government's allocation could, should a spot deficiency occur, purchase residual from other importers or domestic refiners.

We have suggested that, if and when circumstances might change so as to justify increased imports of residual fuel, it would be desirable to provide that each importer having an allocation to import crude oil would have the option to import residual fuel on a barrel-for-barrel basis to be charged against his crude oil allocation. The large importers of crude oil (who generally are the large suppliers of residual) would then be in a position to provide additional residual fuel at any time at reasonable prices.

The fundamental problem today is surplus, not shortages, depressed prices, not unreasonable prices. Restoring the industry to a healthy condition, capable of meeting the increasing demands of the future, is the real matter that should be of mutual concern to industry, Government, and the general public.

Very truly yours,

RUSSELL B. BROWN,
General Counsel.

The United Nations Ad Hoc Committee on the Peaceful Uses of Outer Space: Accomplishments and Implications for Legal Problems

---

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. JOHNSON of Texas. Mr. President, under leave to extend my remarks, I present an address given by Mrs. Eilene Galloway, special consultant of the Senate Committee on Aeronautical and Space Sciences, at the 10th Annual Congress of the International Astronautical Federation. The address was given at the second space law colloquium held on September 4, 1959, Lincoln's Inn, London, England.

The address follows:

THE UNITED NATIONS AD HOC COMMITTEE ON THE PEACEFUL USES OF OUTER SPACE: ACCOMPLISHMENTS AND IMPLICATIONS FOR LEGAL PROBLEMS

(An address by Eilene Galloway, special consultant, Committee on Aeronautical and Space Sciences, U.S. Senate, presented at the 10th Annual Congress, International Astronautical Federation, Space Law Colloquium, Lincoln's Inn, London, England, September 4, 1959)

THE CHALLENGE TO THE LEGAL AND SCIENTIFIC PROFESSIONS

Since the International Astronautical Federation held its first colloquium on the law of outer space at The Hague in 1958, historic steps have been taken by the United Nations toward the objective of an orderly development of the international forces released by the space age. It is important to include an account of these recent U.N. activities in the proceedings of the second space law colloquium because of their significance both to the IAF as an organization and to its members as individuals.

That the talents of lawyers and scientists should be brought to bear simultaneously upon the problems of outer space was recognized by the United Nations in its first organized approach to this subject. The work was facilitated by the solid background of analysis which the international legal and scientific professions had furnished through the years. The foresight revealed in the studies on space law which were published during the decade prior to the launching of the first earth satellite meant that future courses of action could be charted with much greater assurance than would otherwise have been possible. Close coordination between scientists and lawyers enabled the working committees of the United Nations to estimate the probable consequences of successful space exploration for mankind as a whole.

The need for foresighted thinking directed toward the rational solution of space age problems will continue to be a challenge to individuals and organizations during a period of rapid scientific and technological progress. Laws, treaties, and conventions could restrict or encourage space projects. Unregulated activities could ultimately defeat their own ends in vital segments of space activities, e.g., in the use of radio frequencies for obtaining satellite data. The protection of the common interest of mankind in space activities will require continuous and harmonious working relationships between the professions of science and law.

If we are to make a maximum contribution toward the solution of these problems during the forthcoming year, we must know what progress has been made thus far; what questions require study and analysis on a priority basis; and how we can work effectively through official and recognized nongovernmental organizations to achieve the benefits of international cooperation.

UNITED NATIONS AD HOC COMMITTEE ON THE PEACEFUL USES OF OUTER SPACE

On December 13, 1958, the General Assembly of the United Nations passed a resolution establishing the Ad Hoc Committee on the Peaceful Uses of Outer Space.[1] The common interest of mankind in the exploration of outer space was recognized, and the use of this new environment for peaceful purposes was stressed. The General Assembly especially wished "to avoid the extension of present national rivalries into this new field" and commended the pattern of scientific cooperation so successfully developed in the program of the International Geophysical Year. Attention was called to the provision of article 2, paragraph 1, of the United Nations Charter which provides that "the Organization is based on the principle of the sovereign equality of all its members." The point of view of the General Assembly was that the most complete information concerning the problems involved in the peaceful uses of outer space would have to be obtained before specific programs could be recommended.[2]

The membership of the ad hoc committee represented 18 nations from widely distributed parts of the globe: Argentine, Australia, Belgium, Brazil, Canada, Czechoslovakia, France, India, Iran, Italy, Japan, Mexico, Poland, Sweden, Union of Soviet Socialist Republics, United Arab Republic, United Kingdom of Great Britain and Northern Ireland and the United States of America. The committee was requested to submit its report to the 14th General Assembly whose meeting would be held in New York in the autumn of 1959. Full information was requested on the following subjects:

(a) The activities and resources of the United Nations, its specialized agencies and of other international bodies relating to the peaceful uses of outer space;

(b) The area of international cooperation and programs in the peaceful uses of outer space which could appropriately be undertaken under United Nations auspices to the benefit of states irrespective of the state of their economic or scientific development, taking into account the following proposals, among others:

(i) Continuation on a permanent basis of the outer space research now being carried on within the framework of the International Geophysical Year;

(ii) Organization of mutual exchange and dissemination of information on outer space research; and

(iii) Coordination of national research programs for the study of outer space, and the rendering of all possible assistance and help toward their realization.

(c) The future organizational arrangements to facilitate international cooperation in this field within the framework of the United Nations;

(d) The nature of legal problems which may arise in the carrying out of programs to explore outer space.[3]

The Soviet Union, Czechoslovakia, and Poland decided not to participate in the work of the committee, the reason advanced by the Soviet delegate, Mr. Sobolev, being that "its membership has a one-sided character and is not consistent with an objective consideration of this important problem." He thought the ad hoc committee could not undertake any practical tasks without Soviet participation and that as a consequence not a single step forward would have been taken in a year's time.

The U.S. Ambassador to the United Nations, Hon. Henry Cabot Lodge, replied that—

"The composition of the Ad Hoc Committee on the Peaceful Uses of Outer Space is more than fair to the Soviet Union and its adherents, and, in spite of the differences which have developed, we still hope that the Soviet Union will recognize these facts and ultimately decide to participate. The work of the committee will proceed in any event, but we hope that it can proceed cooperatively.

"The proposed ad hoc committee has important work before it. The Soviet Union can make a great and unique contribution to its work. In spite of the differences which the Assembly has witnessed here tonight, we still hope that the Soviet Union will not withhold the great contribution which it can make to international cooperation in this field. The United States, for its part, pledges wholehearted cooperation in the future work of this committee."[4]

By the time the ad hoc committee began its work on May 6, 1959, the United Arab Republic and India declined to participate in the study and formulation of the report requested by the General Assembly. Disappointment regarding this situation was expressed by a number of representatives of the 13 nations engaged in collecting factual information, and they hoped that the absent members would ultimately decide to join in the effort to lay the cornerstone for international cooperation in space exploration.

The ad hoc committee elected Dr. Koto Matsudaira (Japan), as its chairman, and Dr. Mario Amadeo (Argentina), vice chairman. Mr. Joseph Nisot (Belgium), was elected rapporteur. To facilitate the proceedings, two committees of the whole were established: the technical committee with Dr. D. C. Rose (Canada), as chairman, and the legal committee whose chairman was Prof. Antonio Ambrosini (Italy). These committees held altogether 25 meetings during which working papers and discussions resulted in separate reports on the problems under study. The Secretary-General submitted a report on United Nations organisational resources and activities considered pertinent to the studies under way. After careful consideration of all this information, the report of the Ad Hoc Committee on the Peaceful Uses of Outer Space was adopted unanimously on June 25, 1959.[5]

Footnotes at end of speech.

PROBLEMS OF ORGANIZATION

The legal problems of outer space, which are of primary concern to those participating in the space law colloquium, are an integral part of the total international space situation which also includes science, technology, and appropriate organizational arrangements. The facts in these related fields must be obtained before the area which can be regulated by international law can be determined. For example, the high-priority problem of allocation of radio frequencies to space vehicles requires the simultaneous collation of facts concerning the technical limits of the radio spectrum, the most suitable form of international organization for handling the assignment of frequencies, and the practicability of devising regulations to which national governments will adhere.

The task of determining the most appropriate type of international organization for handling outer space problems is similar to that of a nation faced with the necessity of organizing its own internal resources for exploration. The main requirement in both cases is that of coordinating existing facilities, resources, and personnel before adding whatever elements may be lacking in order to achieve specific space objectives.

Coordination is the key organization problem because space exploration depends upon the successful combination of scientific and engineering disciplines which were organized in various patterns within nations and on an international scale long before the advent of the space age. There is no separately identifiable space science which dictates its own easily organized national or international institution; instead, there are new applications and developments of known disciplines: physics, chemistry, astronomy, physiology, and psychology, each of which includes many specialized branches. In addition, there are engineering problems whose solution also depends upon bringing together and expanding a number of technological fields.

In connection with this complicated situation, the U.N. ad hoc committee had two directives from the General Assembly to study and report on existing and future organizational arrangements for international cooperation in space activities for peaceful purposes.

Under the directive to explore "The activities and resources of the United Nations, of its specialized agencies and of other international bodies relating to the peaceful uses of outer space," the ad hoc committee surveyed both nongovernmental and intergovernmental organizations.

The major scientific fields concerned with experimentation in outer space were found to be already organized in a number of nongovernmental unions designed to promote and coordinate research, exchange information, and publish reports. Coming within this category are:

International Astronomical Union (IAU).

International Union of Geodesy and Geophysics (IUGG).

International Union of Pure and Applied Chemistry (IUPAC).

International Scientific Radio Union (URSI).

International Union of Pure and Applied Physics (IUPAP).

International Union of Biological Sciences (IUBS).

International Union of Theoretical and Applied Mechanics (IUTAM).

International Union of Physiological Sciences (IUPS).

International Union of Biochemistry (IUB).

The International Union of Mathematics (IUM) was found by the Committee to have some interest in space research, while three of the unions were not included in the space field: the International Geographical Union (IGU), International Union of Crystallography (IUCr), and the International Union of the History of Science (IUHS).[6]

The International Council of Scientific Unions, whose General Assembly is composed of national representatives from 45 nations as well as from 13 scientific unions, has successfully demonstrated its capacity to coordinate voluntary scientific activities on a worldwide scale. The ICSU maintains relations with national governments represented on its Council, and also with the United Nations, particularly the United Nations Educational Scientific and Cultural Organization (UNESCO) from which it receives an annual grant of approximately $200,000.

The outstanding results of the International Geophysical Year, particularly the space research program and type of organization followed by the Special Committee for the IGY (CSAGI) are evidence of what can be accomplished by a nongovernmental institution such as ICSU which draws its strength from highly professional and enthusiastic individuals. The continuation of this work has been provisionally entrusted by the International Council of Scientific Unions (until December 31, 1959) to the Committee on Space Research (COSPAR) whose purpose is "to provide the world scientific community with the means whereby it may exploit the possibilities of satellites and space probes of all kinds for scientific purposes, and exchange the resulting data on a cooperative basis."[7]

The ad hoc committee considered that three nongovernmental organizations which do not have an affiliation with ICSU are of significance to the development of international space activities: The Council for International Organizations of Medical Sciences (CIOMS), the Union of International Engineering Organizations (UAIT), and the International Astronautical Federation (IAF). Of the latter, the committee report states:

"The International Astronautical Federation (IAF) was founded in 1950 by representatives of a number of national societies interested in rocketry and space exploration meeting in the first International Astronautical Congress. The constitution of the IAF, adopted in 1952, states that the purposes of the organization are to promote and stimulate the achievement of space flight as a peaceful objective, to secure the widespread dissemination of technical information, to stimulate public interest in space flight through the major media of mass communication, and to foster research and development."[8]

When we add to the nongovernmental organizations the list of those intergovernmental agencies whose work is essential or related to the full development of space activities, it is even more evident that coordination is the key requirement of organization in this field. In accordance with its charter, the United Nations has developed numerous methods of promoting the harmonious solution of international economic and social problems, including those of a scientific nature.

Joint programs have been promoted and developed by the General Assembly, the Economic and Social Council, and the Secretary-General. From the coordination of the activities of specialized agencies there may emerge substantive proposals which enable the General Assembly to carry out its responsibility for the development and codification of international law.

The ad hoc committee concluded that the intergovernmental organizations which now have a substantial interest in space activities are as follows:

United Nations Educational, Scientific, and Cultural Organization (UNESCO).

World Meteorological Organization (WMO).

International Telecommunication Union (ITU), and its two technical committees:

International Telegraph and Telephone Consultative Committee (CCIT).

International Radio Consultative Committee (CCIR).

International Civil Aviation Organization.

Those organizations which do not now have space programs but are likely to develop related projects in the future are:

International Atomic Energy Agency (IAEA).

World Health Organization (WHO).

Intergovernmental Maritime Consultative Organization (IMCO).[9]

A detailed study of any one of these organizations reveals that the problems relating to the exploration of outer space (and to its use for peaceful purposes only) are integral parts of programs which include many other factors. Outer space has simply been added as a new environment into which existing and projected human activities are being extended. For example, the World Meteorological Organization was already engaged in establishing a network of stations for observations, in promoting standardization, and in applying the benefits of more effective weather data to shipping, aviation, and agriculture. As the ad hoc committee indicated, "The existing WMO concern and responsibility in the design of codes for the worldwide exchange of data and the coordination of meteorological telecommunications could readily be extended to deal with satellite data."[10]

Similarly, the International Telecommunication Union has been engaged for some years in drafting regulations for the use of all forms of radio communication whether by telegraphy or telephone, television, or radar. Since rockets and earth satellites equipped with radio transmitters may cause interference, or be interferred with, in communications, it is inevitable that the function of allocating radio frequencies must be extended from existing facilities to include the new projects designed for outer space.

The logical spheres of activity in space research of each intergovernmental and nongovernmental organization cannot be divided into neat compartments because they are interrelated and constantly producing reactions upon each other. Many of these reactions are the natural result of rapid advances in the applications of science and technology; others stem from scientific facts to which adjustments must be made in determining effective organizational structures and practicable international law.

In considering the future organizational arrangements which could be undertaken within the framework of the United Nations, the ad hoc committee concluded that this was neither the time to establish a new autonomous intergovernmental agency nor would it be practicable to delegate the overall task to one of the existing specialized organizations. The continuance of present procedures was favored, together with the suggestion that information on space activities be included in the reports of the specialized organizations to the United Nations.

For the present, the report suggested that the General Assembly might wish to establish a committee whose membership and terms of reference would be similar to those of the ad hoc committee. In addition, the Secretary-General could create a small representative unit of experts within the Secretariat as a focal point for studying ways and means of bringing about international cooperation and resolving legal problems.

RESULTS OF THE TECHNICAL COMMITTEE

It is significant that even that portion of the report of the ad hoc committee which

---

Footnotes at end of speech.

was primarily devoted to the scientific and technical aspects of the peaceful uses of outer space also emphasized problems of organization. Almost half of the final report was based upon the study and survey made by the Technical Committee which had been given the task of delineating what programs could appropriately be undertaken by the United Nations with particular reference to continuation of the IGY-type of space research, mutual exchange and dissemination of information, and coordination of national research programs in outer space.

There are many scientific and technological characteristics of space activities which create an actual requirement for organized international effort. Cooperation is not only a desirable objective in promoting worldwide understanding and peaceful relations, but also a necessity if certain objective experiments are to result in specific applications for the benefit of mankind. With the substance of such matters we must become entirely familiar if we are to develop a body of law and regulations for their control.

The orbits of earth satellites are truly international paths, not limited by national boundary lines and yet affecting all nations in the uses of outer space and the problems thereby created. The people of all lands have a stake in the improvement of weather forecasting, radio communications, geodetic and mapping surveys, navigation satellites, manned space flight and exploration.

The nature of the scientific and technical problems underscores the need for international arrangements for their orderly development. Tracking stations must be located in many places on the face of the earth if data is to be effectively received and efficiently evaluated. The ad hoc committee has pointed out that "No single country extends over a sufficient range of latitude and longitude to be able to track earth satellites adequately from its own stations." [11]

The limitation of the radio spectrum is perhaps the outstanding scientific fact which dictates the necessity for agreement between nations on practicable controls for radio frequencies. The judgment of the ad hoc committee, based upon the findings of its technical committee, is that "* * * the availability of radio frequencies which will not be interfered with by terrestrial radio transmissions is a matter of life and death to the progress of space activities." [12]

International consideration must be given to the problems of reentry and recovery, especially of manned space vehicles. The return of equipment to the launching nation will require some type of agreement, as will the necessity for identifying space vehicles, determining liability for damage, and preventing contamination of celestial bodies.

The committee report emphasizes that progress in space exploration depends upon the contributions of experts in science, engineering, and supporting research fields wherever they may be found throughout the world. No nation could have a monopoly on space activities which depend upon many types of participation, some of which do not require the great economic effort involved in launching vehicles, e.g., the design and production of equipment for satellites, tracking facilities, and analysis of findings. The committee also recognized—

"That the great forward surge of space activities may also tend to widen the gap between the technologically advanced nations actively launching vehicles into space and other nations watching and wishing to take part in space activities, but feeling unable to do so. The problem is to make available and to exploit the possibilities that exist for participation by nations at all levels of development, from supporting research or operation of tracking stations to launching small vehicles or joining with others in more advanced undertakings. A related problem lies in arranging the sharing of basic scientific information and topical data so that widespread participation is possible." [13]

The conclusions derived from the study of technical subjects are concerned with the ways and means by which we can achieve an orderly future development of all the factors essential for success. In summary form, the conclusions which will be presented to the General Assembly for determination are as follows:

1. An international agency for outer space is not yet needed, but international cooperation and coordination of existing resources, facilities, and personnel should be encouraged and supported by the United Nations.

2. Immediate international action is required in the allocation of radio frequencies for space vehicles. This should be accomplished by the International Telecommunication Union and the states which are members of the 1959 Administrative Radio Conference in order to assure adequate bandwidths for the next 3 years. The ITU should also study such problems in connection with communications satellites.

3. An international center related to the United Nations is needed to serve as a focal point for cooperation in the peaceful uses of outer space.

4. The United Nations should review progress and plans in this field in approximately 1 year.

5. International cooperation in the conduct of space activities can be achieved in such areas as the use of radio frequencies, central registration of orbital elements to identify space vehicles, termination of radio transmissions which are no longer needed, destruction of recovery of spent satellites, identification of space vehicles, the return of equipment to launching nations, and avoidance of the dangers inherent in the contamination of celestial bodies.

6. International cooperation in joint projects could be furthered by programs which would emphasize simultaneous launchings of sounding rockets; international use of launching ranges; the creation of international launching centers for sounding rockets; contributions from the scientists of many nations in the instrumentation of satellites; international systems for tracking and telemetering, data processing, interpretation of data and its exchange; educational programs of the type in which UNESCO has had great experience; sponsorship by the United Nations or ICSU of an international team to launch satellites and space probes; using world data centers for space information; and encouragement of national committees on space activities in individual nations.

7. The areas of space activity in which international cooperation should be strengthened include the development of national scientific capabilities; improvements in the exchange of information; the encouragement of individual specialists and ororganizations; support of programs whereby nations launching satellites could include space experiments of other countries; and the development of space activities by established intergovernmental agencies so that they may become increasingly subject to international agreements.

It is apparent even from this greatly reduced and concentrated list of subjects that the technical committee provided a thorough background for problems of organization and the law of outer space.[14]

RESULTS OF THE LEGAL COMMITTEE

Under the chairmanship of Mr. Ambrosini (Italy), the legal committee held five meetings, considered the working papers which were submitted by the delegations from Italy, Mexico, and the United States, and maintained a liaison with the technical committee as well as with various representatives of specialized organizations with space programs. The final report of the legal committee was incorporated into that of the ad hoc committee and unanimously approved on June 25, 1959.[15]

The task of the legal committee was to analyze and submit to the full committee "The nature of legal problems which may arise in the carrying out of programs to explore outer space." This assignment was necessarily related to the terms of reference of the entire resolution passed by the General Assembly (1348, XIII), and therefore was concerned solely with the peaceful uses of outer space. There was considerable discussion, however, as to just what would be involved in reporting adequately on this matter, and three points of view were put forward.

One viewpoint was that the committee should confine itself to identifying and listing legal problems without offering solutions.

A second school of thought favored adding to the list the reasons why the problems were significant and arranging them in order of priority.

A third view was that legal problems could be studied in accordance with general principles of justice from which deductions could be made and applied to specific space laws.

The prevailing opinion was that the committee should proceed with caution and patience, Mr. Ambrosini pointing out that "the legal committee, by the very nature of its functions, would not be working on as firm a basis as would the technical committee, especially as the sphere of work assigned to it was often affected by political considerations." [16] The lack of sufficient experience and scientific information was given as the reason for not being too ambitious. There emerged a consensus that since it was obviously impossible to define all the legal space problems that might arise, the committee would proceed by identifying and classifying problems on a priority basis, distinguishing between those which would respond to early treatment and those whose solution appeared to be in the more distant future. Furthermore, it was decided that the determination of priorities would include some analysis of how the problems could be met, but would not involve recommendations for their solution.

Some general observations were made by the committee which considered that the United Nations Charter and the Statute of the International Court of Justice were not confined to the earth and that their provisions could be extended to include activities in outer space. Special attention was called to the fact that the United Nations is based upon the sovereign equality of all its members and that the General Assembly had expressly resolved that international space programs for peaceful uses should be considered in connection with the benefit of States irrespective of the state of their economic or scientific development.

Opinion was unanimous regarding the necessity for studying the principles and procedures which apply to the sea and to airspace in order to determine their relevancy for outer space regulation. Various types of space activities by governments and private groups might engender different kinds of legal problems—administrative, procedural, and regulatory.

There was a firm commitment to the idea that it is neither practicable nor desirable at the present time to devise a comprehensive code of space law. The committee report stated that "* * * the rule of law is neither dependent upon, nor assured by, comprehensive codification and that premature codification might prejudice subsequent efforts to develop the law based on a more complete understanding of the practical problems in-

Footnotes at end of speech.

volved." [11] At the same time, it is necessary to keep the law in pace with the facts and to insure close cooperation between scientists and lawyers. The committee suggested that its list of legal problems should continually be reviewed by whatever means the General Assembly should deem fitting.

Six problems were listed by the committee as being susceptible of priority treatment.

First, the committee came to the conclusion that the satellite programs of the International Geophysical Year were based upon the premise that nations had permission to launch such vehicles even though they traversed an orbit above national boundary lines. It was concluded, therefore, that within the context of strictly peaceful uses, "with this practice, there may have been initiated the recognition or establishment of a generally accepted rule to the effect that, in principle, outer space is, on conditions of equality, freely available for exploration and use by all in accordance with existing or future international law or agreements." [12]

Second, the problem of liability for injury or damage caused by space vehicles raised a number of legal questions. Answers are needed to such questions as the type of injury and kind of conduct which should establish liability. Should the fact that damage occurred on land, in airspace, or in outer space be a governing factor? Should a launching nation be liable for unlimited damages? Should joint international projects carry with them liability that is joint or several? On the question of who will determine liability and insure payment for damages, the committee considered that study of an agreement providing for compulsory jurisdiction of the International Court of Justice should be given priority. Also, the experience of the International Civil Aviation Organization on such matters should be analyzed to determine to what extent the Convention on Damage Caused by Foreign Aircraft to Third Parties on the Surface could be applied to space vehicles.

Third, the problem of the allocation of radio frequencies to space vehicles follows the scientific and technological evaluation of this important matter. The legal committee called attention to the fact that the International Telecommunication Union is already qualified to function in this area, and that documents concerning frequencies for earth satellites will be considered by the Administrative Radio Conference of the ITU which opened in Geneva on August 17, 1959, for meetings which are expected to last for several months.

Fourth, the avoidance of interference between space vehicles and aircraft is a problem whose legal implications require early study by governments.

Fifth, the identification and registration of space vehicles and the coordination of launchings would necessarily imply the formulation of rules and regulations of vital interest to the legal community.

Sixth, the reentry and landing of space vehicles will create the necessity of making arrangements with nations affected by the descent and landing. Multilateral agreements would be desirable to take care of situations involving accidental landings. The committee also thought that the rules of international law which now apply to aircraft landing in distress might also be made applicable to space vehicles.

In addition to these six top-priority problems, the committee analyzed a number of other areas which can be expected to involve legal measures. Official definitions of airspace and outer space were deemed premature at this time, and the committee believed that the problems to which it had given highest priority did not depend for their solution on a legal distinction between these two areas in the space environment. It was suggested, however, that one approach to the problem would be to establish the limits of airspace and outer space within a practicable range. Another idea which could be explored is use of the type of space activity as a basis for legal control.

The legal questions which might arise in the exploration of celestial bodies were not ranked with high-priority problems at this time, but a number of interesting suggestions for meeting this situation were advanced: That sovereignty should not be claimed by a nation over celestial bodies; that such areas should be used solely for mankind's benefit; and that an international administration might handle such matters.

The committee believed there was not much present danger in space vehicles interfering with each other, but thought this was a future possibility. The rules and regulations which now apply to air traffic might be related to space travel.

And, finally, the committee thought that international legal measures might be required to handle technological achievements, particularly in the case of meteorological satellites.

IMPLICATIONS FOR THE LEGAL PROFESSION

The ad hoc committee report has made a significant contribution toward the orderly development of science and law in the peaceful uses of outer space. From this report scientists and engineers can be apprised of the legal problems incident to space exploration; and the legal profession has been given the latest scientific and technological evaluations to assist in advancing solutions to present and future problems. Both groups may profit from the description and analysis of the international organizations now operating in this field and determine ways in which coordination can best be achieved.

The report has delineated a rich field for research and analysis which can be of practical value to the International Astronautical Federation in considering the appointment of committees to study the problems of space law. The way is also open for individuals to contribute their thinking to the first historic guidelines for international cooperation in outer space.

The main legal problems which might arise in space exploration and require study directed toward their solution have been identified:

1. To what extent is the recognized international law of the sea and in airspace analogous to the problems of outer space, and in what ways is the space environment unique?

2. What can we learn from the administrative and procedural methods of existing intergovernmental organizations which might have an application to space activities?

3. How can it be determined whether the practices established and observed by the International Geophysical Year may have resulted in international recognition of the freedom of outer space for exploration under present and future international law?

4. What are the advantages and disadvantages of the various proposals made for the solution of the problem of liability for injury or damage caused by space vehicles?

5. Should the International Court of Justice be given compulsory jurisdiction over disputes between nations concerning liability for damage from space vehicles?

6. Is the experience of the International Civil Aviation Organization concerning surface damage caused by aircraft applicable to space vehicles?

7. What contributions can be made by the legal profession to the International Telecommunication Union in dealing with the problem of allocation of radio frequencies to space vehicles?

8. What proposals can be made for the solution of the problem of interference between aircraft and space vehicles?

9. What legal factors are involved in the identification and registration of space vehicles and the coordination of launchings, both for individual nations and for international arrangements?

10. What rules of existing international law might govern the legal problems which are likely to arise in the reentry and landing of space vehicles? What are the areas in which new substantive agreements between nations may be needed?

11. Is there a requirement in terms of national sovereignty for differentiating between airspace and outer space, and, if so, what are the advantages and disadvantages of the various proposals which can be advanced to meet this problem?

12. What are the international legal implications of the task required for the formulation of safeguards against contamination of celestial bodies and the earth as a result of space exploration?

13. What is the relation of the concepts of national sovereignty to the exploration and exploitation of outer space, and what proposals would have to be considered in arriving at a solution of the problems involved?

14. What legal arrangements of administration, regulation and control would be involved in meeting the problem of coordinating existing international organizations which have space programs or whose activities can logically be extended to include space activities?

The Fight in 1959 for Freedom of Information

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 14, 1959

Mr. MOSS. Mr. Speaker, the year 1959 saw the present administration

carry secrecy to unprecedented lengths. Officials in the executive branch far down the administrative line from the President have taken it upon themselves to deny information requested by Congress and its agent, the Comptroller General. The denials were in violation of duly enacted laws, including the Budget and Accounting Acts of 1921 and 1950 and the mutual security authorization of 1959. Administration officials, with increasing frequency during the year, claimed a privilege beyond the law to determine what information Congress—and therefore the public and the press—shall have about the operations of executive departments and agencies.

Congress, and the House Government Information Subcommittee in particular, have been challenging administration officials to cite statutory authority for withholding information. In many documented cases, information has been released after it was shown that there was no authority for secrecy. Such progress, slow and painstaking, has been recorded in reports of the House Government Operations Committee based on the subcommittee's work.

At the same time, however, officials, unable to produce statutory authority for the secrecy they are imposing, have found it handy to claim an undefined, unlimited "privilege." Research has shown conclusively that such a sweeping claim is recognized by neither the Constitution, the statutes, nor the courts.

Administration officials argue that the only information they withhold is advisory material, consisting of "personal opinions." How a document, written by a Federal official as part of his official job, can be a personal matter has never been explained. Nevertheless, subcommittee hearings have shown that information withheld from the Comptroller General included blank forms and the table of contents of a report on procurement activities of the Military Sea Transportation Service. By no stretch of the imagination can such material be considered personal opinions to be hidden from congressional or public view for fear that the official involved may be inhibited from expressing the truth as he sees it. The doctrine of secrecy has been extended so far that the head of the International Cooperation Administration which administers the foreign aid program testified that he believed he could withhold from Congress any document in possession of his agency.

Unfortunately, the most flagrant abuses of the claim of privilege have occurred when Congress has sought to examine the efficiency in the use of tax funds in the field of defense, space research, and foreign aid—each an area of immense importance and immense cost.

Fortunately, Congress served notice this year that it will no longer tolerate the unbridled imposition of secrecy by thousands of satellite presidents in the executive departments and agencies. The Mutual Security Appropriations Act of 1960 provides that if information is refused about a foreign aid project, funds for that project will be cut off automatically unless the President personally supports the refusal and sets forth his reasons for so doing. This is but a first step in the reassertion of the constitutional rights which are basic to a democratic society and a representative form of government. But it does place the issue of secrecy squarely in the hands of the President. What he does about it will determine whether the Government of the United States follows the constitutional principles or whether Congress must take further, more drastic steps to prevent government in secret.

Foote & Jenks, of Jackson, Mich., Celebrate 75th Anniversary—One of Nation's Oldest Flavor Houses

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, September 14, 1959

Mr. HART. Mr. President, this year represents the 75th anniversary of one of Michigan's outstanding firms, Foote & Jenks, Inc., of Jackson, Mich. Foote & Jenks was founded in 1884 and is not only one of Michigan's oldest manufacturing concerns, but one of the Nation's oldest flavor houses serving the food and drug and beverage industries of the Nation.

We in Michigan are proud of the outstanding long service of this firm. I ask unanimous consent that there should be printed in the Appendix of the RECORD a brief history and outline and description of the work of this famous concern.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SOME EARLY HISTORY

Two enterprising young men, Charles E. Foote and Charles C. Jenks, graduate pharmacists from the University of Michigan, pooled their modest savings and opened a retail drug store in Jackson, Mich., in 1884. This was the beginning, modest to be sure, but these were men of vision, restless and energetic, made of the stuff that forecasts progress and growth.

They found their great interest to lie in the backroom, rather than behind the counter and it was there that they began the first experiments and discoveries which led to the existence of the present firm of Foote & Jenks, Inc.

The ensuing 75 years has seen the realization of a dream in the best American tradition of free enterprise. The founders invested their young manhood, their energy, and what little money they had in this small business. They hopefully looked beyond its walls. They followed their noses into the perfume business and through it into the flavor field. In doing so they got themselves into the complicated and difficult realm of the manufacturing business, with help to pay, inventory to finance, and competition to conquer. Their early struggles are a matter of record and the business today is a monument to their imagination, their ambition, and their sacrifice.

RESEARCH BRINGS PROGRESS

For 46 years the original building, plus a multiplicity of rented warehouse spaces, housed the firm while its stature grew 10 times. In 1947 the business was moved into America's newest and finest manufacturing laboratories, a spacious one-floor, day-lighted brick and glass building, with its own sidetrack facility, set in beautifully landscaped grounds which provide space for plant additions as wanted.

In this building are to be found the most up-to-date instrumentation, automatic equipment, and custom-built machinery existing anywhere in the flavor industry. Consistent and constant improvement of equipment is reflected in complete changes in tankage facilities which were once entirely of wood, become all glass-lined metal, then became wholly monel metal and, today, are 100 percent stainless steel.

Production machinery in the manufacturing laboratories includes high-speed colloid mills, homogenizers of 3,500 pounds capacity, ultrasonic emulsifying devices which were the first to be used for the purpose in America, an ion exchange water purification system, 10-ton refrigeration connected to hermetically sealed agitation chambers, power and gravity filtering equipment, and power and gravity conveyors to all warehouse areas.

Production is governed by a control laboratory, the instrumentation of which is modern right up to the point of the newest chromatographic analysis devices. In this laboratory batch samples of every product are retained on file until evidence exists that the batch has completely passed into customer's food and beverage products and has been consumed with gusto by the American people.

Development and research activities are a daily, monthly, yearly, and "forever must" in the research laboratory. Inclusion of ample funds for this activity in budget thinking has made the company pioneers in the production of new flavors as well as in the consistent improvement in form of old favorites—as required by the constantly growing and improving industries which provide the country's foods and beverages.

The management attitude toward constant change and improvement and its acceptance of modern methods is reflected in office operations where every department is fully equipped with up-to-the-minute business machines, including a punchcard operation which provides source material for electronic integrated data processing.

THE CORPORATE STRUCTURE

The founders incorporated the business in 1893 and established the policy of employee ownership and management which endures to this day. Ownership in the form of shares of stock is vested entirely among current employees. Directors of the company are elected by the employees and the board of directors elects the officers. Individual length of service of employees ranges from 1 year to 40 years with a current average tenure of 16 years. Employees share in profits, stock dividends, and in benefits provided by the company in the form of group insurance and pension plans.

THE OFFICERS AND DIRECTORS

Paul W. Thurston, who was hired by the founders in 1919 to wash bottles, rose through shipping, purchasing, advertising and sales activities to the presidency in 1957. He is the third president of the company, succeeding H. L. Jenks, retired in 1957 who in turn succeeded C. E. Foote, one of the founders.

John L. Laughlin, vice president, research and development began in 1940 as a laboratory assistant and became the corporate officer in charge of the department in 1957. He is a charter member and a director of the Institute of Soft Drink Technicians, a member of the Institute of Food Technologists and chairman of the research committee of the Flavoring Extract Manufacturers Association.

Worth Weed who became treasurer in 1956 was employed as a salesman in 1946. He has served as president of the Michigan Dairy Boosters, president of the Michigan Allied

Dairy Association and long-time member of the floor committee of the Dairy Industries Supply Association.

Don C. Jenks, grandson of the founder, joined the company in 1940 and worked through manufacturing, laboratory, accounting and purchasing to be elected secretary in 1951. He has served two terms as president of the Flavoring Extract Manufacturers Association and is a member of its board of governors. The company's officers are directors and the directorate is completed by Harry C. Devlin who was employed in 1925 as a manufacturing assistant and became superintendent of manufacturing in 1956.

TWO NEW DIVISIONS

In 1958 the Pharmaceutical Flavor Clinic, Division of Foote & Jenks, Inc., was formed with a nationally recognized pharmaceutical authority, Dr. Sereck H. Fox, as its consulting director. Dr. Fox is an adviser to the U.S. Pharmacopeia, to the British Pharmacopeia and is a fellow in the New York Academy of Sciences. Specialized laboratory personnel work under his supervision on projects for the manufacturing pharmaceutical industry in the task of making bad-tasting medicines taste good—or at least acceptable to patients of all ages.

A wholly owned subsidiary, the Needs Corp., was formed in 1958 for surveying diversification opportunities in both allied and unrelated fields. Officers are Thurston, Laughlin, and Jenks with I. Z. Mathany (F. & J. advertising manager) and K. R. Wright, who is F. & J. packaging and shipping superintendent, completing the Needs Corp. directorate.

THOSE WE SERVE

Foote & Jenks, Inc., serves the ice cream manufacturers, the confectioners, the baking industry, the pharmaceutical manufacturers, and the soft drink bottlers. F. & J. research has provided these industries with flavors that have long enjoyed a nationwide reputation for sheer excellence.

Sales are made direct to customers in 47 States and 26 foreign countries with contact maintained by a force of 14 sales and service representatives plus an export office in New York City. Presently the company has direct representation covering special assignments in Hawaii, Latin America, and Europe. Licensed manufacturing is done in Canada with a special staff contacting the trade there.

The company's personnel take greatest pride in the fact that many customers have been served for more than 25 years, including 194 for more than 40 years and 27 for more than 50 consecutive years. Many of these long-time customers also boast of business lives consisting of 75 and more years.

THE RAW MATERIALS

From the spice markets of the Orient, from the exotic, romantic green islands of the South Pacific, from far away places with strange sounding names come the materials which the F. & J. flavor specialists expertly process and blend. The finished product enables those we serve to market products which bear famous brand names and enjoying countrywide recognition for highest quality.

ORCHIDS FOR INDUSTRY

Not all diamonds are set in wedding rings. Many are used by the tool and die industry for cutting purposes. Similarly, not all orchids go to the junior prom. The industrial orchid, botanically identified as Vanilla planifolia, is a tropical vine, its flower a beautiful orchid, its fruit the vanilla bean. The vanilla bean has been a major import item of Foote & Jenks, Inc., for 75 years. Careful selection and processing of the vanilla bean provides the delicious flavor for ice cream, cookies, cakes, and desserts, to mention only a few. The pharmaceutical industry uses the extract to impart good taste to medicinal products. Substantial portions of the world supply are grown by natives of Mexico and Madagascar, whose annual crop may amount to those beans which can be carried to the market in the growers' hands. The green beans, similar in appearance to the catalpa pod, are cured by the heat of the tropical sun to develop the naturally delicious aroma. Thousands of natives thus are required to provide a single ton of beans which is a batch size purchase for Foote & Jenks, Inc.

OUR 75TH YEAR

In observance of its 75th anniversary the firm has been honored by recognition from the President of Mexico and the President of the Malagash Republic (Madagascar) through their Ambassadors in Washington, as well as by the American Vanilla Bean Association, for its activity, leadership and growth in the production of pure vanillas made from vanilla beans grown and cured abroad.

Similar recognition has been tendered by the International Association of Ice Cream Manufacturers, the National Association of Retail Ice Cream Manufacturers, the American Bottlers of Carbonated Beverages, and the National Confectioners Association. The White House is included by virtue of a complimentary and encouraging citation over the signature of Presidential Advisor David W. Kendall.

LOOKING AHEAD—IN RETROSPECT

Annually all employees meet together to review the year just closed, plan for the future and break bread together in traditional friendship and good will. This all-hands meeting follows the annual meeting of stockholders at which it is always pointed out that all stockholders are employees and that most employees are stockholders. At the last such meeting, Thurston, the president, noted that in comparatively recent years the business had built, equipped and paid for its modern buildings; had enabled its employees to own over a hundred thousand dollars worth of automobiles—at least a quarter-million dollars worth of life insurance—more than a half-million dollars worth of homes. He stated that dollars earned and spent in the birth, rearing and education of children—together with expenditures for the comforts which go with today's high standard of living run to sums which may well be a matter of conjecture. In referring to the founders he said, "74 years of company history lie behind us. That period of time has seen the realization of a dream in the best American tradition of free enterprise. Our sound position today is a monument to the imagination, ambition and sacrifice of C. E. Foote and C. C. Jenks who had the vision to found this company in 1884 in trust and confidence that the American competitive system would reward a closely followed policy of good goods and honest dealings. Time has justified their faith and our duty lies in the continuance of that policy to the end that our customers are well served and that free, competitive enterprise may continue to offer its rewards for both vision and hard work."

Technological Advance and Farm Policies

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, September 14, 1959

Mr. CARLSON. Mr. President, I ask unanimous consent to include in the RECORD a recent report made by the National Planning Association on "Technological Advance and Farm Policies."

The National Planning Association is a nonprofit, nonpolitical organization, established in 1934, devoted to planning by Americans in agriculture, business, labor, and the professions. This report, presented by the Agriculture Committee, states that the crux of the farm policy problem as it has emerged in the last 6 years is overrapid technological advance and that farm price and income trends will continue to worsen unless producers find some acceptable means for balancing supplies with markets available at reasonably satisfactory prices. It is an important contribution to obtaining a clearer understanding of the complex problems which must be dealt with by new farm legislation at the earliest possible moment.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

TECHNOLOGICAL ADVANCE AND FARM POLICIES

Technical advance in agriculture has been of untold value to this country. We are the best fed of all nations. Food is cheaper in relation to workers' earnings than in any period of our history or in any other country in the world. Technical advance also has released millions of workers from agriculture for productive employment in other lines of activity, thus making an important contribution to our rapid growth. But farm technical advance is now proceeding at such a pace that it prevents the usual supply and demand forces from stabilizing supplies and prices at reasonable levels.

Each year for the past 6 years $1.5 billion to $2.5 billion of farm products have been removed from commercial markets by the Government loan, storage, and surplus removal opertaions. Furthermore, there is an upward trend in these overabundant supplies, for in the last 2 years the amounts removed would have been even greater except for the soil bank program. Through its acreage reserve features this prorgam has idled 17 million acres of land formerly devoted to the allotment crops—corn, cotton, wheat, rice, and tobacco. An additional 10 million acres of land formerly devoted to general crops were idled in 1958 by the conservation reserve features of the soil bank.

An exploration of the economic relationships between technological advance and farm price support policies must start with this recent economic history.

It is evident that if farm production were brought into balance with commercial market outlets at recent price levels, farm income would be reduced by the amount of these recent annual surpluses. That is, farmers would not receive the $1.5 to $2.5 billion they have been getting from sales of products to the Government. (Government payments, largely for the soil bank program, totaled an additional $1.1 billions in 1958.)

If the supplies now diverted to Government storage and disposal, plus the potential supplies held in check by acreage allotments and the soil bank, were channeled through commercial markets, market prices would be much lower. Statistical analyses of farm prices and supply relationships indicate that farm income including Government payments would drop by $4 to $6 billion.

Farm leaders and farmers have been greatly confused on this. Continued loan, storage and surplus disposal operations, combined with the acreage allotments and the soil bank in recent years, have prevented increased supplies—equivalent to 6 to 10 percent of annual farm output—from glutting commercial markets.

Two items of recent history are informative on the subject of price changes associated with moderate changes in food supplies. Meat animal marketings on a weight basis were reduced 4 percent in 1958 as compared with 1957. Most of this reduction was in beef cattle marketings. The demand for beef is less inelastic than for most livestock products. However, these 4 percent smaller meat animal marketings (mostly beef cattle) sold for about 16 percent higher prices and producers received almost 15 percent higher gross receipts in 1958 than from the larger supplies in 1957. Consumers' disposable income was approximately the same in both 1957 and 1958. The usual annual growth in demand for meat resulting from the upward trend in consumer incomes was absent in 1958 because of increased unemployment.

Another example of the relation between supplies and prices for foods is the frost damage to the citrus crop in Florida in the winter of 1957–58. Citrus fruit and frozen orange juice are products with a less inelastic demand than most foods. Moderate changes in supplies usually have been accompanied by moderate changes in prices. Yet, Florida citrus producers who marketed 13 percent less fruit than a year earlier because of the frost damage in 1957–58, received prices 47 percent higher and gross receipts 27 percent higher than a year earlier.

These two items of recent economic history are not conclusive. But they strongly support the conclusions of economic analysts who estimate that if the potential 6 to 10 percent more products had been channeled into consumption through commercial markets in recent years, prices would have been 15 to 40 percent lower than they were. Conversely, if market supplies were reduced 6 to 10 percent, farm income from commercial sales would rise, by 15 to 40 percent.

Farmers and farm leaders have been inadequately and often erroneously informed regarding the economic effects of recent price support policies. Widespread lack of information among farmers on the extent to which existing price policies have prevented the increased output from depressing current farm income, prevents them from making a sound appraisal of alternative farm policies.

IMPLICATIONS OF FARM TECHNOLOGICAL ADVANCE

The crux of the farm policy problem, as it has emerged in the last 6 years, is that output-increasing technical advances are being adopted at a rate which causes total farm output to increase faster than the demand for food and fiber is expanding. Utilizing both a smaller crop acreage base and a shrinking labor supply, farm output increased 23 percent between 1950 and 1958 (and would have been even higher except for the soil bank program and other acreage restrictions), while population increased only 15 percent.

The economies of this rapid rate of farm technological advance and its relations to farm price levels all too often have been presented to the public in a most confusing manner.

In the first place, most new technologies are output increasing. Farmers adopt the new methods in order to lower unit costs of production, but they usually expand volume in doing so. It is possible for a new method to lower costs without expanding volume, but that has not been the case with most modern farm developments.

Farm technological advances usually are irreversible in the aggregate. Once adopted they continue to be used. One reason for this is that many new technologies require special capital—large investments. For example, new special machinery, or feed handling buildings and equipment, or production of hogs with year-around farrowing. Once the capital investment is made, the new production methods are continued even though prices fall.

Another reason why technological advances are irreversible is the fact that they usually are cost reducing. Even though prices decline due to the increased volume, the individual farmer makes more income (or loses less) by continuing the new method with the larger volume. Examples of such cost-reducing, supply-increasing advances are the new additives in mixed feeds, new fertilizer, new chemical compounds in pesticides and weed killer, improved strains of seed or breeding animals.

A lack of understanding of these aspects of aggregate technological advance is responsible for many mistaken views with respect to expected shrinkage in total farm output under the influence of lower price levels. Most expansion in total farm output in recent years has been the result of technological advance. And, since technical advance is largely irreversible in the aggregate, lower farm prices in the short run will contribute little toward correcting the current imbalance in supplies in relation to available markets at reasonably stable prices.

Relatively favorable farm prices and incomes, the healthy financial position of most agricultural producers and their higher level of education in recent years, all have speeded the adoption of technical advances. An agricultural industry lacking capital accumulations, with inadequate credit facilities, experiencing low prices and managed by entrepreneurs with a low level of competence would have been unable to make the investment necessary for much of the technological advance in recent years.

But it is equally important to observe that the availability of the new technologies for adoption were largely the result of our scientific research and educational programs, supported to a considerable extent by public funds.

PRICE LEVEL ONLY ONE OF MANY FACTORS IN TECHNICAL ADVANCE

Given the present backlog of new technologies now available or in the testing stage, and given the present educational level and financial position of agricultural producers, farm output will likely continue to expand faster than available markets for an indefinite period, even though farm product prices decline substantially.

The adoption of efficient multiple farrowing equipment by hog producers at present is not likely to be stopped by lower hog prices in the future. It is not likely that the prospects of lower milk prices will reverse the upward trend in artificial insemination of dairy cows or the trend toward year-round feeding of dairy cows in dry lots.

Lower corn prices will not slow down the trend toward growing corn continuously on the most productive soils. Improvements in seed strains of hybrid grain sorghums cannot be stopped by low prices.

New short-strawed strains of wheat, yielding twice as many bushels per acre as those now in commercial production, are reported in the quality improvement stage. Even though wheat prices drop to feed grain levels, farmers will adopt these new higher yielding strains as soon as they become available.

Some people have assumed that moderately lower farm prices would result in a decline in fertilizer use. Yet, technical studies in the Department of Agriculture indicate that at the levels of use of fertilizer in 1954 farmers were receiving marginal (additional) returns of $3 per dollar spent on fertilizer. With a slightly higher rate of fertilizer use in 1959 and somewhat lower farm product prices, marginal returns from fertilizer use may have dropped to $2.50.

With widespread returns from fertilizer use at this level there is little reason to expect a decline in aggregate fertilizer use even though farm prices decline substantially. There is no reason for farmers to use less nitrogen on their corn until corn prices drop to about $.80 per bushel since the marginal cost of the corn produced by the nitrogen is probably 60 to 80 cents a bushel.

Few developments can be predicted with certainty in the economic world. Such evidence as can be assessed, however, suggests that, because of the rapid rate of technical advance, recent supply, price and income trends will continue to worsen unless producers find some acceptable means for balancing supplies with markets available at reasonably satisfactory prices.

COMPETITIVE POSITION OF LARGE FARMS

Many farm leaders believe that the larger, more efficient farms would be able to continue profitable business operations even though all current restrictions on production and marketing of farm products were eliminated and prices dropped accordingly.

Under such conditions they assume total farm income would be lower. But they believe that the number of farm families would decline faster than the decline in total farm income so that average farm family incomes might even be higher under these conditions than in recent years.

This might occur if the rate of technological advance slows down. However, production costs on the larger farms with considerable hired labor do not appear to be substantially lower than those on the more efficient family farms. Furthermore, the backlog and oncoming stream of new technologies, including the possibilities for further substitution of capital for labor, are so great that their adoption is expected to continue to expand output faster than markets expand. This too-rapid rate of output expansion, fueled by competitive efforts to survive under falling prices and rising costs, may well continue even though the number of farm operator families in agriculture drops by one half or more.

With free competition prevailing in agriculture, it is profitable for individual farms to adopt new technologies even though farm prices continue to fall. Fully as important, most of the resources previously committed to agriculture—tractors, improvements in land, specialized machinery and much of the previously committed labor—cannot shift to alternative employment—hence these resources continue to be used in agricultural production throughout their working life in spite of low returns from their use.

With these economic forces in mind, prices can be expected to fall faster than costs can be reduced even on the larger, more efficient farms, as well as on the smaller farms.

THE LIMITATIONS OF MARKET EXPANSION

Many farm and nonfarm people mistakenly believe that there are great possibilities for expanding the markets for food. There has been far too little critical evaluation of the economic possibilities of expanding profitable markets for food and fiber in the industrialized countries of the Western World, and far too much unfounded hope of solving the problem created by rapid technical advance by the traditional business practice of expanding markets.

In the United States, for example, consumers' diets now contain about 30 percent more animal protein than in 1935–39. As compared with 20 years ago, consumers on a per capita basis are now eating 36 percent more animal proteins from meats, poultry, and fish. Per capita consumption of these products is 15 percent higher than 10 years ago. These trends show that consumers can and will eat more meats and other livestock products. But they will do so only at the expense of other foods and at a sharp reduction in prices.

To solve the current feed grain-livestock situation by increased feeding and marketing of livestock, the rate of marketing would have to be increased 10 to 15 percent immediately. Then marketing would have to increase on an annual basis at a rate equal to about twice the rate of population increase. Crop production and gains in efficiency in feeding livestock are both increasing at about the current rate of population increase. Together, this means an expansion in livestock output twice the rate of population growth. Given the high current rate of consumption, further increases to this magnitude can only be achieved by selling the products at sharply reduced prices.

There is wide agreement among economists and statisticians who have studied recent trends that the demand for food in the industrialized nations of the Western World is increasing very slowly. It is increasing by the amount of the population increase each year plus a rate equal to 10 to 20 percent of the increase in real per capita income.

There is no evidence that increased promotional efforts in recent years have expanded the total food market in these countries beyond its natural growth resulting from increases in population and real income per capita.

LIMITATIONS OF FOOD FOR PEACE AS A SOLUTION TO OVERRAPID TECHNICAL ADVANCE

In each of the past 4 years $1 to $2 billion of surplus agricultural products have been exported to needy people in other parts of the world under Public Law 480. There is general agreement that these exports, outside commercial market channels, have been of great benefit to the peoples receiving them. There is also general agreement that programs fo this type should be continued in the future.

Some, however, believe that little good has been accomplished by substantial portions of these exports and that future programs should be on a more limited and a more closely supervised basis.

Others foresee immense benefits flowing from greatly expanded special food and fiber export programs in the future. They take the position that all our present surpluses could be utilized effectively in foreign economic aid programs.

It appears unnecessary here to attempt a reconciliation of these widely different views. Sufficient stocks are on hand to permit an expansion of Public Law 480 programs if a determination is made that such an expansion is desirable. But it appears most unlikely that foreign economic aid programs could effectively use foods at the rate of even $2 to $4 billion a year to say nothing of greater quantities.

CONCLUSIONS

In view of the conditions outlined above, it is doubtful that any farm program can do more than slow down the rate of increase in farm output and slow down the decline in farm prices and income. But in terms of equity perhaps that is all that is needed. Technological advance lowers costs, hence in equity it should lower prices. Perhaps the most that any government policies could or should attempt, is a sufficient increase in the bargaining power of farmers to permit a sharing of technical advance between producers and consumers. Before even these limited and wholly reasonable objectives can be achieved, however, the current widespread mistaken diagnosis of the price problem in agriculture must be corrected and a massive educational program based on the relevant issues must must be inaugurated.

The Crisis in Outdoor Recreation

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, September 14, 1959

Mr. CLEM MILLER. Mr. Speaker, the Outdoor Recreation Resources Review Commission—ably led by Mr. Laurance Rockefeller, as chairman, and ably guided by Mr. Francis W. Sergeant, as executive director—has now begun the critical task assigned to it by the last Congress.

Under terms of the act this task includes:

To inventory and evaluate the outdoor recreation resources and opportunities of the Nation and to determine the types and location of such resources and opportunities which will be required by present and future generations.

To make comprehensive information and recommendations leading to these goals available to the President, the Congress, and the individual States.

The Commission's report—under terms of the act—is not due until September 1, 1961. Action based on its recommendations cannot be expected until 1962. Meanwhile, the squeeze on existing outdoor recreation facilities constantly grows more acute. We have a serious national shortage of the first magnitude on our hands now. And we are falling further behind each year.

One of the most respected workers in this vineyard is Marion Clawson, director of studies in land use and management for Resources for the Future, the nonprofit corporation established with cooperation of the Ford Foundation.

In a paper published in the March 1959 issue of American Forests magazine, Dr. Clawson warns that we are working up to a grade A crisis in outdoor recreation, "unprecedented both in size and character"—CONGRESSIONAL RECORD, March 23, 1959, pages A2548–A2551.

He concludes that within the next 40 years a combination of growing population, rising family incomes and increases in leisure time and travel might raise total demand for outdoor recreation to about 10 times the present level.

He also suggests that the pressure will be felt differently on the three main types of recreation land, with perhaps a fourfold rise for user-oriented areas like city and county parks, sixteenfold for such intermediate areas as Federal reservoirs and State parks, and as much as fortyfold for resource-based areas like the national parks and national forests.

In a subsequent paper, published in last April's National Forests, he lays out a few of the specific, immediate problems and suggests some of the ways they might be resolved.

Because of its pertinence and because of the urgency of the problem, under consent to extend my remarks, I include Dr. Clawson's commentary in the RECORD:

THE CRISIS IN OUTDOOR RECREATION—II

(By Marion Clawson)

From all indications the present congestion in the national forests, National, State, county, and city parks, and other outdoor recreation areas is not a case of temporary growing pains, but rather a mild taste of a real crisis.

What are some of the specific, immediate problems growing out of the snowballing demand for outdoor recreation? What can we do about them? What are the prospects of success?

To tackle the last question first, I believe that the prospective huge increase in recreation demand can substantially be met, though probably not entirely, and certainly not altogether in ways that most of us are used to and would prefer. Only through fortunate coincidences of history and geography have we in this country been able to make such gains in population, prosperity, and urbanization without, until quite recently, feeling a squeeze on open space. Now that events have caught up with us we must pay the price of maturity—greater costs (whether borne by individual users or by all the taxpayers) and greater formality in arrangements. Never again will it be as easy as it used to be to go outdoors and get away from it all.

Within these limitations it still should be possible to satisfy at least the greater part of the coming demand for outdoor recreation, without too oppressive a system of regulations. But this can't be accomplished automatically by going along as we are now, or even by stepping up the scale of present efforts. Today's activities, useful as they are, are not only too small, but too scattered. The greatest need of all is for a more coordinated attack on the whole problem of outdoor recreation.

The best way to grasp the necessity of a comprehensive approach is to look first at the various pieces of the total situation. This method may sound like a paradox, but it will show better than any other way that there is no satisfactory separate solution to the worst of the trouble spots.

PROSPECTS FOR USER-ORIENTED AREAS

First, let us glance at the prospects for user-oriented recreation areas—the city and county parks that are designed almost entirely for the use of people living quite nearby, usually in densely settled communities. There are about 750,000 acres of such land today. Under the standards agreed upon by most park specialists, about twice as many acres are needed now to take care of present demand in anything like an adequate manner. Assuming a fourfold increase in demand, about 5 million acres would be needed in the year 2000. Between 1950 and 1955 new lands of this kind were being acquired at the rate of about 20,000 acres a year. Even if this rate were to be sustained for the next 40 years, less than one-fifth of the necessary new land would have been acquired.

A big jump in purchases of user-oriented recreation land is clearly called for. This is especially true because of the special needs of the fast-growing suburbs that have sprung up around the built-up cores of older cities. Beset with pressing problems of schools and paving and sanitation, few of the new suburbs have done must about providing public

space for recreation. With each passing year the land that might be bought for parks grows scarcer and more expensive. It may well be that the combined acreage of city and county parks will not be expanded to 5 million or even 3 million acres by the year 2000. Suitable land in or near many of the older cities is simply no longer available. Fortunately, not all of the prospective demand will have to be met by adding space. Much pressure can be taken off by additions and improvements in special facilities like swimming pools, small children's playgrounds, baseball diamonds, tennis courts, and the like, and by better scheduling and supervision of play. If people are willing to pay the cost—which will be considerable, with new land averaging perhaps several thousand dollars an acre to buy and perhaps equal sums to improve—a combination of more land and improved facilities should enable us to keep up pretty well with the demand for user-oriented recreation areas.

INTERMEDIATE AREAS ARE MOST FLEXIBLE

Second, there are the intermediate recreation areas. These comprise about 9 million acres—5 million in State parks and 4 million used for recreation in Federal reservoir areas. At least another million acres, and perhaps as many as 5 million, are needed now to meet fully the present potential demand. (This is a particularly hard estimate to hazard, because the national totals hide so many regional differences; some parts of the country have more than enough of the intermediate type of recreation land to fill current needs, while other sections are critically deficient.) A demand in the year 2000 of 16 times the present level would not bring a need for 16 times as much intermediate recreation land, which is just as well, for the multiplication works out in the neighborhood of 200 million acres. But a total of 70 million acres would not seem to be excessive, and 35 million acres would be a rock-bottom minimum, calling for far more careful scheduling and intensive use than we have today.

The chief impediment to filling the demand for this kind of public recreation land is cost, for the requirements of type and location of acreage are not excessive. Although scenic beauty and other natural advantages are desirable, almost any kind of land will do. With the aid of a few dams to make artificial lakes, and some plantings and other simple improvements, land that is of low value for either agriculture or forestry can be made into quite acceptable sites for all-day picnics, swimming, and boating, overnight camping, and other intermediate recreation uses. And, since there is so much flexibility in selecting locations, the actual cost of land might be only $300 to $500 an acre. If we really want to, we can meet the need for intermediate recreation areas.

RESOURCE-BASED LANDS WILL SUFFER MOST

For the third category, the resource-based recreation lands, the story is entirely different. Here the prospective increase in demand between now and the year 2000 is the greatest; perhaps as much as 40 times the present level. But the possibilities of increasing present acreage are decidedly limited, because the bulk of the lands of outstanding natural beauty or historical interest are already available for recreational use. (In the West much of the land in private ownership, in national forests, and even in national parks is nearly identical in character and appearance.) The total amount of Federal land devoted primarily to recreation now comes to about 40 million acres. This includes all of the national parks system—nearly 25 million acres—and around 14 million acres of the national forests (about 62,000 acres of improved camp and picnic sites, with the rest studiously unimproved wilderness areas). In addition, the remaining 165 million acres of national forest lands are open to recreationists, and are increasingly used for that purpose. About half of the 60 million visits to the national forests last year were to areas not formally set aside for recreation.

In recent years there have been small gains in acreage of the national park system, and small net losses in total acreage of the national forests. Any large future increase in either class of lands is unlikely. Even if there should be a substantial increase in Park Service funds for buying new land (the present figure is only $1.5 million a year), the net additions to resource-based recreation land still would be a drop in the bucket. Whatever additions are made will probably be either for buying up privately owned pockets within present boundaries of national parks and monuments or for acquiring some of the few miles of ocean beach that have thus far been overlooked in active private development. No matter how hard we try, it is difficult to see how more than 10 to 20 million acres can be added to the present total of 230 million acres of public land potentially available for resource-based recreation.

And this is not all. The recreation lands where the increase in demand will press most heavily are, by reason of their unique qualities, the very ones that will suffer most through overcrowding. Suppose that somehow it were physically possible to get 40 times as many visitors in and out of the resource-based recreation lands: long before that unlikely goal could be reached, the special attractions that draw people to the parks and forests would be gone. The one-time grandeur and quiet, the sense of being close to nature, would retreat in the face of paved roads and parking areas, trodden vegetation, and human bustle. And I am not considering here the specialized problem of preserving truly primitive areas, which in itself, as every Congressman knows, is no mean question, with important values at stake on both sides. I am thinking rather of the lands intended for wider use.

THE THREAT OF OVERUSE

Defenders of the parks and forests are constantly on guard against the threat of mining, lumbering, and other commercial exploitation of our best-grade recreation lands. There has been justification for these fears and there still is, though not as much, I think, as in the past. The greatest threat in the future will come from the recreationists themselves. Overuse can ruin a recreation area as thoroughly as a bulldozer, partly through actual physical damage (though there the bulldozer is more efficient) but mostly through destroying its capacity to provide intellectual and emotional experience. Those of us whose memories run back 30 years or so have seen how crowding has changed some of the Nation's best-loved recreation spots—Grand Canyon, where attendance increased 15 times between 1920 and 1956; Yellowstone, where the gain was 18 times; Glacier, where it was 33 times; and many others. What will be the effects of increases to 10, 20, or 40 times present levels?

Since the resource-based lands are so clearly going to be the real trouble spot of the future, it might seem best to concentrate our planning and action on these lands and let the rest take care of themselves. That is what many people do think, and there is much commonsense in their instinct. Nevertheless, it seems to me that the only way out of the growing dilemma is a comprehensive effort that will include all three categories of recreation land.

To be sure, there are many things we can do about the resource-based lands themselves. For example, we can undertake further development work on a considerable scale. While a comparatively few famous areas in the parks and forests suffer from overuse, there are other potentially attractive areas that are hardly used at all. But there are strict limits to this kind of expansion. There are not many sites that can be heavily used, and even they must have wide buffer zones of land where people are scarce. Furthermore, recreation is sometimes incompatible with other essential uses, to which preference must be given in the overall public interest. Secondly, we can do more to space out use of recreation lands over the year instead of bunching it up in short summer seasons. Rising interest in winter sports and all-weather camping already is bringing some improvements, but here again the possibilities are limited. Thirdly, we can put top limits on attendance in the areas that are under the greatest pressure, either by requiring reservations in advance or by simply closing the gates whenever capacity is reached. Defenses of this kind are probably inevitable for some areas, but as widespread policy such rationing of top-quality outdoor recreation would be little better than an admission of defeat, and hence no solution at all.

USE OF PRIVATE LANDS

Another way to ease the pressure is to make more recreation use of private lands. One hopeful sign is the way that the large timber-owning companies are opening areas to vacationists. At least 65 of these firms maintain at least 137 private parks. No doubt there are more; complete statistics have never been gathered. Some public utility companies also provide parks. More of this kind of thing can be expected, partly because of its sound public relations value but mostly, perhaps, because of a real sense of public obligation felt by owners of large tracts of good recreation land. But there are limits to such expansion; only a relatively few private landowners can afford such a sense of noblesse oblige. Most of the smaller owners, who hold most of the private land, are not in a position to provide campgrounds and other facilities for public use. Also, the person who freely offers the use of his acres for hunting, fishing, or other uses runs real risks of damage to the land or its resources.

Does the public have a right to expect access without charge or for only a nominal fee? Perhaps ways can be devised, either privately or with the assistance of local or State governments, by which associations of sportsmen or other recreationists can make fair arrangements with groups of landowners for specified uses of good recreation acreage.

Between them, these two ways of expanding recreation on private lands may be equivalent to adding many million acres to the resource-based public lands. But there is little chance that such gains will fill more than a minor portion of the total increase in recreation demand. By far the greatest present use of private lands is in small tracts off in the woods or on lake or ocean shores. This kind of use is becoming more and more expensive. Even if it did not dwindle, it would not meet much of the new need for space, for in terms of persons served per year it is an extremely inefficient use of recreation land.

So the quest for a large-scale solution comes back to public land. And it is painfully clear that the measures we have mentioned, though useful and necessary, won't be enough to do the job.

THE COMPREHENSIVE APPROACH

Suppose that instead of looking just at the resource-based public lands, we look at all public recreation land; then the future prospect is not nearly so gloomy. As we have seen, the acreage and capacity of the intermediate recreation areas like State parks can be increased by just about any amount the American public is willing to pay for; and considerable expansion of user-oriented areas, at least in the form of county parks, is also possible. If the potentialities of these

two types of areas are developed to the full, the distinctive resource-based areas will be freed to perform the task for which they are uniquely fitted, instead of also bearing, as they do today, much of the load that the user-oriented and intermediate recreation areas could carry.

Most of the answer to the critical problem of the national parks and national forests lies in improving the capacity of all recreation lands. This is our best hope of not being swamped by the rising tide of recreation demand. That is why the city and county parks, which usually are considered as quite a separate problem of urban development, and the State parks, which sometimes are considered separately, have received so much attention here. That is why, too, the comprehensive approach is essential to meeting the outdoor recreation problem of the future.
